Looking now to the domestic side of the picture, we find that if through promotional activities planned by the National Cotton Council, the domestic consumption of cotton per capita per day

should be increased to the extent of fourteen one-hundredths of an ounce, 10 percent, we would increase our annual domestic consumption 750,000 bales, which, added to our last year's consumption of 6,858,426 bales, would bring our domestic consumption to within a few bales of an all-time high record.

That such an increase is possible through promotional work outlined for 1940 is obvious. Since November 1938 the council has engaged in the most extensive promotional campaign in the history of the cotton industry. For the first 5 months of the current crop year domestic mill consumption has been 3,312,000 bales, an increase of 18 percent over last year. Assuming normal conditions for the next 6 months, we are warranted in anticipating a domestic consumption this year of a minimum of 7,750,000 bales, a consumption equal to that of 1936–37. This has not been the result of an accident. It has been the direct and provable result of a Nation-wide effort to promote the use of cotton.

That the supply of ordinary cotton clothing of the average American family is woefully inadequate is best shown by the fact that men's and boys' dress shirts average for persons of the age who wear these shirts two and two-thirds garments per person; sheets, four per family; men's overalls, one and one-half suits per worker; towels, eight per family; work pants, one and one-half per worker; men's underwear, two and one-half suits per man.

In every field where cotton is used much greater usage can be expected if proper promotional activities are pursued. It is such a promotional program which the cotton industry is preparing to launch.

Cotton is the great natural American fiber. Twenty-five million people are directly dependent upon its production for a livelihood. Other millions are supported by having the benefit of the buying power of those dependent upon cotton. The great manufacturing centers of America find their best markets in the Cotton Belt of America. Millions of dollars are invested by trust companies and others in securities dependent directly upon cotton for servicing as to principal and interest.

It is only through the efforts of the cotton industry itself that cotton's battle will be won. Cotton men are beginning to realize the fundamental soundness of this statement. With a continuance of the principles and policies newly adopted, the industry and the Nation will within a relatively few years see the consumption at home of a minimum of 10,000,000 bales and an annual export of a minimum of 6,000,000 bales of cotton.

America's Foreign Policy

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY W. W. WAYMACK

Mr. HILL. Mr. President, I have before me a speech delivered by W. W. Waymack on the subject of American foreign policy, delivered by him over the radio on May 15, 1940, from Chicago, on the American Retail Federation Forum, which I ask unanimous consent to have printed in the Appendix.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

First of all I want to insist that the common differentiating between some problems as domestic and others as international is not only largely meaningless but that it is mischievous if taken seriously.

A blazing and exploding Europe today, not to mention Asia, is so obviously a concern of ours that words are not needed to prove that. The uncertainties about tomorrow are such that we know now perfectly well that we may even be drawn into the hell. We hope, pray, and intend that we shall not be, but surely all can see by now that the illusions of safe detachment "though the Heavens fall" that have been preached to us have been reduced to a wisp of smoke. If we have a grain of realism in us, we shall reassess today our concepts of what foreign policy means for us, shall consider the role that we want America to play on the stage of the whole world.

Isolation and internationalism have unfortunately become epithets. That is the usual thing. Words get polarized. And from that moment on they appeal to emotions instead of sense. So, not because as words they are in any degree better but wholly because they are different words, therefore not yet emotionally charged, I shall put the question this way: Shall American policy toward world problems henceforth be participationist or nonparticipationist?

Now, the moment we get out of the epithet atmosphere, I think we find that the area of agreement is wider than is commonly assumed. For instance, we know, and no matter what else they say practically all political leaders on both party sides concede it, that America is part of the world. We know, as a result of the first World War, of the great depression, and of the present war, that we are inevitably and drastically affected by what happens elsewhere. We know that is true economically. We know it is true politically and socially. We know it is true culturally and spiritually. We know it is perfectly impossible for this country ever so to insulate itself that we can have economic soundness and a rising standard of living, which in turn is essential to all our ideals, if the rest of the world destroys itself.

We know we can never so insulate ourselves as not to be vitally affected in the long run by the philosophies that prevail elsewhere in the world.

We know that the only nation which, in modern times—using that term very broadly—has ever insulated itself from the rest of the world, either as to economics or as to ideas, was Japan; that Japan did this for three centuries, before steamships and railroads and submarine cables and telephones and radio and airplanes, before "the machine age," in short, and did it only by virtue of a complete hermit life—nobody coming in, nobody coming out; no trade, no ambassadors, no information, and no ideas coming in or going out. We also know that it was we of America who jerked Japan into the modern stream; and the moment we reflect we know that America was but the agent of forces as wide as the world, as deep as the ocean, incapable of being resisted.

Nothing that men can count upon, in heaven or on the earth, can prevent America from being concerned in its own interest, for all the tomorrows, with what happens in Europe, with what happens anywhere. We shall be moved by economics. We shall be moved by moral judgment. We shall be moved by considerations of the preservation of our free way of life.

We know, in short, that we are not going to be nonparticipationist in determining world affairs. We know, despite our brief experience as a "great power," that both our ideals and our material resources make us, whether we will or not, one of the world's determining factors, possibly the greatest. Everyone of intelligence among us knows that no matter what policies we pursue, whether they be affirmative or negative, whether they be thought-through and guided or 100-percent drift, whether they be action or inaction, they will affect the course of events. We are participationist, of necessity, even if our decision is just a refusal consciously to participate. To do nothing is to do something, and that something is just as likely to be determining as any other something.

So the question is not whether America shall be participationist in world affairs. The question is purely as to how we shall participate, when we shall participate, whether we shall participate intelligently and constructively or otherwise.

Broadly speaking, it is a question as to whether we shall throw our weight, or even let our weight fall, eventually on the side of the forces that make for peace, stability, economic opportunity, and what we believe to be the true values, or, contrariwise, whether by action or inaction we reinforce the opposite things.

It may seem very foolish, I grant you, to talk of an eventual peace now, in the face of the news of the terrific battle that is developing in western Europe—a battle of such violence and desperateness, of such possible vast consequence as this one may have. Particularly it may seem untimely since the battle is not going too reassuringly.

Yet there must be either peace ultimately or no peace. We are able to see now, surely, what no peace, or a mock peace, would inevitably involve for America. The great illusion that we can afford to "let the rest of the world go hang," or even, by declining to cooperate for a better order, sabotage the chance of a better order, is surely exploded now.

The dreamiest of all the dreamers have been those who for 20 years told us that our immunity from risks lay in attempted secession from the planet. That thing cannot be done.

Meantime there are the problems at home, some of which may be made by war impossible of solution in the democratic way. They are not impossible of that kind of solution now. And the major ones all are involved in the question whether democracy can maintain itself against the totalitarian idea.

Even a casual study of the means whereby the totalitarian idea is made to take root in additional countries will convince any sensible man that the principal means is a breaking down of confidence—at a certain stage the deliberate fomenting of this collapse of confidence—in the capacity of any great people to solve its social problems well enough and fast enough by democratic processes.

Both fascism of all varieties and communism feed on discontent and democratic defeatism. They interfere with the solution of problems, then use the nonsolution to promote democracy's overthrow.

And the Fascist brand of antidemocratic revolution, though it does not omit to appeal to narrow and stupid men of property, is just as dependent upon mass grievances and mass support as the Communist brand is. Both are revolutions from the bottom, make no mistake about that. Both appeal to unhappy youth, to classes and groups of huge size that are either oppressed or can be made to believe that they are oppressed. Both promise security, stability, a better day to great strata near the bottom.

And either, once established, becomes a complete dictatorship dedicated ostensibly to the interest of the common man, founded on mass support, utilizing all the enginery of suppression against every possible kind of ideological dissent, including religious, and each proceeds to tax and confiscate utterly without limit for "welfare" purposes. The most significant thing about the two revolutionary menaces is the ease with which they have been able to merge, as far as nationalist interests make it expedient, on the ideological base of a joint contempt for "pluto democracy."

The principal reason for facing starkly all the important, unsolved economic and social problems we have is because doing something convincing about them is indispensable to the preservation of all our freedoms here.

We cannot shut ourselves up and ignore the wars. Everything that we do domestically will be affected favorably or unfavorably by the wars. Nevertheless, a primary necessity for the defense of all the values of a free society—which, after all, is our real objective—must be an honest and intelligent attempt at intergroup cooperation to put our domestic problems definitely and perceptibly in the course of ultimate solution.

To the extent that we can do that, and only to such extent, we can become mentally easy about the mongers of hate, prejudice, passion, and violence in our midst. Insofar as we progress in this line, and only insofar, the manufacturers of "personal devils," be those "devils" Jews, international bankers, atheists, or whatnot, will be made futile mountebanks incapable of inflation into "fuehrers" or their equivalent.

Let me add that the antidemocratic ideologies and systems not only promise security and an economic lift to the masses that they enslave, but they also make tremendous use of a sense of national unity. The emotional appeal of this in the world at its present stage is enormous. If democracy permits this to be monopolized by totalitarian regimes, the conflict is most unequal. The question here is whether democracy, too, in its own free way, cannot also create a national unity of its own free kind, into which enthusiasm and the zest of accomplishment for great ends can be thrown.

The New Deal and the Negro

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ADDRESS BY DR. WILLIAM J. THOMPKINS

Mr. TRUMAN. Mr. President, the Honorable William J. Thompkins, Recorder of Deeds of the District of Columbia, made a speech at a meeting in Chicago of the United Colored Democratic Association of Illinois. I ask unanimous consent to have it inserted in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

As each election year approaches we find numerous prophets in both of the major political parties who contend that their political party is going to win in the national election. During the last three national elections there has been a miraculous drift of Negro votes to the Democratic Party. The change of Negro voters from the politics of the Republican to the Democratic Party is due its share of credit for the success of the Democratic Party in the last two national elections.

As both parties map plans for their national conventions the question has reached a new high, with the Republicans contending that the New Deal has done nothing for the Negro which would justify his remaining with that party. They contend that the Negro is no better off than he was before he left the Republicans, and that his only salvation lies in a return to that party.

It is my opinion that the Democratic Party will not only hold every Negro vote it now has, but that the benefits Negroes have derived from the New Deal administration of President Roosevelt will win for the party thousands of additional Negro votes. For 65 years the Negroes perpetuated the Republican Party in office. This was conclusively shown by the lily-white organization started by Taft, down through the grand finale of the Hoover administration, which divorced the bulk of the Negroes from the Republican Party. Recent elections in such cities as Kansas City, St. Louis, Chicago, Philadelphia, and Indianapolis where the Negro wards showed a much larger Democratic vote proportionately than the white wards, give evidence that peace and contentment in the Democratic Party are on the upward trend with assured permanency. The treatment which the race has received at the hands of Democratic administration justifies its continued support of that party.

For the first time in the history of our country it has given us a colored man in the White House on the secretarial staff—absolutely unprecedented. It has given us representation as economists in the National Recovery Administration. It has given us several architects and engineers in the Subsistence Homestead Division of the N. R. A.; it has given us representation on the legal staff of the Public Works Administration and in the Post Office Department; it has given us a representative in the Farm Credit Bureau of the Agricultural Adjustment Administration to look after the needs and opportunities of the colored farmers of the country; it has given us a clearing house in the Department of the Interior, presided over by a highly efficient representative of the race, assisted by a competent staff, to promote the economic status of the race; it has given us representation in the vast welfare operations of the W. P. A. under Colonel Harrington; it has given us significant representation in the Department of Justice, and in the Office of the Recorder of Deeds of the District of Columbia; it gave us our first Federal judge, in the person of Wm. H. Hastie, and upon his resignation, Attorney Moore, of Chicago, was appointed as his successor; it has given us 25 outstanding high-salaried posts of distinction, including representation among the conciliators of the Department of Labor and an advisor to the Secretary of Commerce on racial matters.

It has given us $2,000,000 for improvements at Howard University and Freedmen's Hospital; $262,000 to Virginia State College; $87,000 for Lincoln University in Missouri; $500,000 for the Wendell Phillips High School at Chicago; $40,000 for West Virginia State College; paid $100 per month to 114 colored school teachers in Chicago engaged in the work of reducing adult illiteracy, and has extended this benevolent aid in other directions.

According to the 1930 census Negro youth represented 11 percent of the total youth population between the ages of 16 and 24. It is estimated that in January 1940 approximately 82,800 Negro youths were employed on N. Y. A. programs. This was 11.1 percent of the total employment on these programs, or almost exactly the same proportion which Negro youth of this age bears to the total youth population.

It has done more than any other administration to eliminate the slum districts of our great cities through its public-works program, and that work has but begun. As a result of this program low-cost housing projects have been completed or begun in such cities as Atlanta, Washington, Chicago, New York, Nashville, New Orleans, Newport News, and others.

This record excels that of all previous administrations—Democratic or Republican—and there is nothing the Republicans have done in the past 8 years, or is there anything they are likely to do, to offset the benefits which the race has received from the New Deal.

There can be no doubt that the New Deal, under Franklin D. Roosevelt, holds out greater promise to the Negro than the Old Deal under Taft, Harding, and Hoover. Beginning with the Taft administration, through the Harding, and with the tragic ending of the Hoover regime, all of these administrations showed the descendency or the decline of the Negroes in Republican politics. These administrations disqualified the Negro and annihilated him, politically and economically. The New Deal under Franklin D. Roosevelt has given him new hope and a representative place in every department of the Government. Never before in the history of our Nation have Negro scientists, architects, engineers, and educators been given even the semblance of an opportunity such as has been given scores of the members of the race. In fact, the Taft, Harding, and Hoover administrations offered us nothing but platform promises which were forgotten as soon as they were made.

The New Deal has brought and is calculated to bring more economic and industrial benefits to the Negro. More than 45,000 Negroes in the C. C. C. camps have been taught to read and write. Thousands of Negroes have been employed in the scientific and industrial projects throughout the country, to the point of developing themselves into the classes of skilled tradesmen and artisans. This opportunity, which has come for the first time, has lifted them to a higher efficiency, has enabled them to meet the economic and industrial requirements of the present better, and has strengthened them to meet competition in a bigger way in the future, whereby they are enjoying more freedom and more representation in the councils of labor.

Much has been said about the political and civil rights of the Negro in the South and what the President has failed to do in promoting them. No statesman can fail to be pragmatic if he would be of service to his day and generation, and, as "actions speak louder than words," we can say that President Roosevelt has advanced the economic and social welfare of the race immensely in the South and, indeed, all over the country by setting the example in very practical ways of demonstrating his allegiance to constitutional government. As evidence we have several of the Southern States encouraging Negroes to assume and maintain their political and civil responsibilitiles in the councils of Democracy. This policy of the President has been far-reaching, bursting even the confines of the Democratic Party, brushing aside old southern traditions with astounding amazement. Only recently Negro athletes were invited to Texas and competed with whites in Dallas. Negro pictures and classics are appearing in southern newspapers. Texas, Alabama, Georgia, North Carolina, and Virginia, as well as Oklahoma, recently competed with Negro athletes in the Pennsylvania, Iowa, and Kansas relays. In every phase of our national life, Roosevelt's policies have lifted the race higher.

The continued ascendancy of the Democrat in national politics with the aid of millions of colored voters is breaking down the spirit of southern intolerance and is raising the status of the Negro as a whole. The Negro must profit, however, by the mistakes of this Negro Republican leadership. He must rise to the occasion of assuming and maintaining his due social position. He must practice loyalty, unity, and impress upon the race the necessity of sharing the responsibilities of the party as well as the assets. He must be taught to pay the poll tax and register. He must be taught that which he has never been taught by the Republican Negro leadership—that citizenship carries with it the responsibility of financial support, effective organization, and activities just as strong on the "givers" end; yes, stronger than on the "receivers" end. To achieve you must serve. To receive you must give. With these principles, advocated and practiced, there will be no adverse status.

Frequently I have been asked my opinion concerning the relative attitude of the old-line bourbon Democrats of the South and the new issue of lily-white Republicans of that section. My answer has been that the old-line bourbon Democrats of the South live in the realm of their traditions and retain their traditional pride. However, back of this, they like the Negroes and long for them to be one of them, but they cannot rise to the occasion to ask him. Thus they ask no grounds and give none to those who have opposed them for 64 years. The lily-white Republicans of the South are the selfish offsprings of the old carpet baggers—the dregs of the bourbons; they have no traditions, no special respect for the South as is, nor for the North; but are rather opportunists and wolves in sheep's clothing, who want the support of the Negroes in the party but are not willing nor have they any intention of sharing the legitimate spoils of office with them. They have no principles and little respect. They have failed in their own ranks and are constantly hoping to share the spoils alone when the opposite party is in power. The lily-whites are the Negroes' most despicable opponents, far worse than the most rabid bourbons. They will seek and use you and then desert or destroy you, while the bourbons ask no grounds and give none.

Certain sources are conducting a whispering campaign to smear all that the New Deal has done simply because the Senate has not passed an antilynching bill. For 25 years the Republican Party bluffed about the Dyer antilynching bill, and it was never brought to discussion in the Senate, notwithstanding the Republicans had the House, the Senate, and the Supreme Court for more than a half century. At the first opportunity where voting cloture would have ultimately brought the antilynching bill to a successful end, the Republicans declined to vote because they knew that the Democrats would have been given credit for the passage of the bill. In the beginning many of the southern Senators did not think that the antilynching bill would have failed, and as filibuster was approaching its end, the late Senator Borah's speech did more to rejuvenate the filibuster than anything else; and he is, perhaps, the person most responsible for the defeat of the bill. The status is almost a stand-off with the exception that the Democratic Party made a more persistent effort for its passage than was manifested in any other session of Congress; when the Republicans were overwhelmingly in the majority. When the crucial test came the Republicans failed.

The Negro knows that the New Deal has been his salvation during these days of turmoil, strife, and depression. He knows that his continued salvation lies not in switching from a party that has been truly a party of the people by the people and for the people but in remaining in the Democratic Party that has thrived on deeds, not on broken promises.

This race will stand firmly faithful and loyal to democracy and the New Deal in helping to achieve even greater goals for all people.

Greenland, Denmark, and the United States

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Times-Herald of April 13, 1940, entitled "Greenland, Denmark, and the United States."

In this connection I may say that Iceland is also part of the Western Hemisphere, 180 miles from Greenland, 700 miles from Norway, and 600 miles from Scotland. The island of Jan Mayer, near Iceland, is an American island. We must own and control all these territories in the interest of American defense. These islands furnish ideal naval and air bases. If we want defense, here is real defense for the American Hemisphere.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Times-Herald of April 13, 1940]

GREENLAND, DENMARK, AND THE UNITED STATES

OUR "KEEP OUT" SIGN

The United States Monroe Doctrine, as set forth by President James Monroe in 1823 and extended by later interpretations, puts the United States in the position of (quoting the Britannica)—"being opposed (1) to any non-American action encroaching upon the political independence of American states under any guise, and (2) to the acquisition in any manner of the control of additional territory in the Western Hemisphere by any non-American power."

Many are the European raids, conquests, and plots against Western Hemisphere nations that this doctrine has prevented or nipped in the bud. The most notable instance was that of Maximilian in Mexico.

DENMARK GETS GREENLAND, 1814

The big island of Greenland was discovered by Viking sea rovers early in the tenth century and was explored and colonized by Eric the Red, a Norwegian, beginning 982 A. D. Leif Ericson brought Christianity to Greenland about 1000 A. D. Ericson did a lot of voyaging westward from Greenland and, in all probability, colonized a bit of the North American mainland, most likely near New Bedford, Mass.

When Norway and Denmark split apart in 1814, Denmark got Greenland, Iceland, and the Faroe Islands as colonies. Denmark recognized Iceland as a sovereign state, united with Denmark under the Danish King, in 1918. Greenland went on being a Danish colony.

Denmark was occupied early this week by Adolf Hitler's armies, blitzkrieging their way toward Norway.

GERMANY GETS DENMARK, 1940

Greenland is in the Western Hemisphere.

That fact, as soon as Hitler's occupation of Denmark was accomplished, raised the question: What about Greenland now?

The British have occupied the Faroe Islands, promising to restore them to Denmark when and if Denmark is restored. Iceland has said it will carry on on its own, though there is talk of the British forcing a protectorate on it. But how about Greenland?

WHO GETS GREENLAND?

Greenland is an Arctic and sub-Arctic island of great size—about 740,000 square miles, the main drawback being that about 705,000 of these square miles are capped with ice averaging 1,000 feet thick.

Greenland's population, about 16,600, lives on the fringes of the great island. Its big mineral export is cryolite, of which it has the world's largest deposits; and it ships considerable fish, fur, and graphite. The island's trade has been a Danish monopoly since 1776.

Greenland's coast has various fjords which could be used as submarine bases or hideaways; there are some flat areas which might be turned into air bases.

WE'D BETTER TAKE IT OVER

All this makes us feel that the United States had better lay plans for assuming protection of Greenland until and unless Denmark regains enough independence to claim it back. The same arrangement, we mean, as the British have made about the Faroe Islands, or much the same.

The object would be frankly to keep the Monroe Doctrine sovereign in this hemisphere, and to keep grabby European hands off Greenland.

We don't want any European nation planting air bases or sub bases on Greenland. There will be much less danger of that if we take over Greenland's protection than if we leave it lying around loose for any nation to pick up.

Whatever we do or don't do about Greenland, it looks more and more as if the rights of small nations are reaching the vanishing point.

UNITED STATES AS "SUN" OF THE WEST

Denmark, for example, may be resurrected by the Allies, and so may Norway. But that will only mean that these Scandinavian nations, instead of being German protectorates, will be British protectorates. It looks to us as if the world is moving toward a few big planetary systems of nations, with various small nations drawn into the orbit of the biggest nation in each system, and a good deal of free trade and pooling of natural resources enforced inside each system.

The logical "sun" for the Western Hemisphere nations to revolve around is the United States.

A Program and Market for Farmers

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ADDRESS BY GOVERNOR AIKEN, OF VERMONT

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which was delivered on Tuesday, May 21, by Governor Aiken, of Vermont, in Springfield, Ill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To be here in Springfield at the home of the greatest of our Presidents, Abraham Lincoln, is an inspiration. Whenever I think of Lincoln's leadership, I also think of the men among whom he grew up, the men who first rallied around him as a public figure and whom he typified.

Those who swayed the destiny of our Nation at that time were men who labored long and hard wielding the ax and following the plow from sunup to sundown. They knew poverty and hardships that are almost mythical today. Yet they were the strength of America, and the future of the Nation is ever dependent on such as they. Much of the greatness of Abraham Lincoln rested on his ability to understand and serve the needs of those people who lived by the labor of their hands.

Today we must not forget that the Americans who work in farm and factory are still the backbone of our country and that they view the national scene and recognize that many problems of a critical nature in America today are not being solved. Some of these problems are regional, such as a lack of balance in economic activities in the South, the industrial readjustment of New England and the regional agricultural problem of the "dust bowl."

It is only natural that each individual or each group or each subarea feels that his or its own problem should receive first attention. We often hear the South called the Nation's number one problem.

The labor leaders will tell you that unemployment is our number one problem. Get a group of businessmen together, and they will tell you with feeling that taxes and overbearing Federal regulations are the number one problem.

We folks who are engaged in farming feel that we have the right to call agriculture the number one problem.

In size, agriculture is our greatest occupation. Besides being the greatest body of consumers of manufactured goods, we produce many of the raw materials that keep the wheels of our factories turning, and we supply most of the food which our population consumes.

But we know that there is no single "number one problem" in this Nation, because to the welfare of the country as a whole, all are interrelated and are equally important. All must have a reasonable solution before economic and social conditions in the United States can be readjusted to their rightful places. These joint and several problems can be resolved into four main objectives which the American people are seeking.

First, peace. Peace with ourselves and with the other nations of the world. Second, an adequate and profitable employment for American men and women. Third, due reward for the days of toil on the farm. And last, but by no means least, the preservation of our cherished heritage of liberty.

Concerning the first, the balance of peace or war is precarious, not because of any doubts in the minds of the American people, but because it is wholly possible for a small group or for a single individual possessing power and authority, to disregard the wishes and welfare of our people and plunge us into international conflict.

Billions of dollars have been poured out to overcome unemployment. Still we have, according to Federal figures, nine million unemployed, humiliated by a relief status while the Nation staggers under an ever-mounting tax and debt burden.

Farmers have received in exchange for loss of their market, billions of dollars in the form of "hand-outs" or subsidies. And still after years of this, we cannot break even without accepting Government donations and Government domination.

The bureaucratic centralization and direction put upon us in the name of benevolence and social justice has not permanently alleviated the lot of the underprivileged. Unless checked before it goes any further, our legacy of liberty will be a hollow vestige.

These are the problems which still face us. Most of them are in a more aggravated form after several years' tampering by an administration that was entrusted with national power because its promises and professed leadership renewed the hope of a discouraged Nation

We have tried this program for 7 long years. We have given it every opportunity to work. Now if we would preserve to ourselves those liberties earned with a century and a half of sacrifice and toil, if we would give to millions of our people the full and satisfying realization that they are independent and earning their own living, if we would keep from our borders the specter of war and poverty and pestilence now haunting the minds of all the people of the world—then America must turn to another kind of program—an American program conducted in an American way.

We must devote ourselves to a task which seems difficult, if not almost superhuman. We must unite among ourselves with the strength that will overcome the forces that have brought so many to dependency and despair. We must make up our minds at the start that in getting behind the program that will restore Americans to their rightful status, we must, above all things, be sincere and honest.

Let's talk about farming today. I have never lived off a farm except for the time I have been in the service of my State government. My interest through life has been primarily concerned with the land and its uses.

Farming is the largest of our occupations. It is the greatest in inherent difficulties. For a century it has been the main source of population for our industrial nation. In considering agriculture, we are starting from the ground up in attacking our national problem.

What has happened to this most individualistic occupation in this individualistic Nation? During the last few years, we have been precipitated into the chaos of artificial price fixing, of loans on crops above market prices, of a thinly disguised political soil conservation program, of crops plowed under, and the slaughter of beef and hogs while millions of people unemployed or on relief were without proper food.

We have wandered through a maze of imposed production control. We have seen Government subsidies for the farmer pushing the national debt higher and higher, but only making up a small part of the income we would have received from the sale of our crops in a normal market. These attempts made by political farmers have brought to the practical tiller of the soil, the following results:

The American farmer has lost his place in the agricultural markets of the world. The cotton farmer especially has seen these world markets plowed and traded out from under him, until today one South American country has come into cotton production to capture many foreign markets which previously and properly belonged to our southern planters. This permanent loss of our markets has been partially made up by subsidies paid from the earnings of our lowest-paid industrial workers.

The hungry people of our Nation have seen American crops dumped upon foreign countries at a price far below that which they have been compelled to pay unless they have been willing to admit pauperism and accept certified charity.

We have seen the Agricultural Department and the agricultural services fathered by a great Senator from the State of Vermont, Justin Morrill, develop into a maze of political bureaucracies far removed from the original and legitimate purposes of a Department of Agriculture and become involved among quota cards, work sheets, and benefit checks. And in this expansion of bureaucracy we have seen the disastrous effects of mistakes and wrong guesses magnified to a Nation-wide scale.

Futile efforts have been made by white-collar farmers in Washington to devise programs, national in scope, to fit the needs of the citrus-fruit growers of Texas, the vegetable growers of California, the corn producers of Illinois and the tobacco growers of the South all at one and the same time. The real farmer who knows the problems of his own community and of his own production has been expected to say "yes" and sign on the dotted line.

Don't think that I am advocating a return to the days of a generation ago when every farmer worked out his salvation for himself. It goes without saying that almost every farmer in the United States demands that constant efforts be made to bring American agriculture out of the present chaos, rejecting methods that have been tried and failed and applying properly and efficiently methods that promise to succeed, and thus to build a sound program for agriculture.

Farmers realize changing conditions in our Nation. We realize our obligation to social betterment. We realize that for our welfare, we are dependent not only upon each other but upon other groups of labor, industry, and the professions as well.

But we are getting sick of having agriculture made a political football with bribery here and threats there. I think it is time for the 30,000,000 farm dwellers of the United States to rise in their might and demand that an agricultural program be promulgated and administered by men motivated by something more than good intentions or political expediency, and so to restore prosperity and pride and independence not only to our own group but to others as well.

What kind of a program would we suggest? A prominent Grange leader when asked what the farmer needs most today, promptly answered, "to be let alone." Anyone can sympathize with the inner feelings which prompted this reply. Perhaps his suggestion might work if the business of the world were conducted purely on

a supply and demand basis. But when that basis is disrupted by man-made regulations in the marketing field, those disruptions compel artificial adjustments for producers also.

Any kind of a program, no matter how well devised, will fail—if it is not wisely and efficiently and intelligently handled. Every man who works the soil with his own hands knows that you can't apply in detail the same methods to Oklahoma cotton that you would to Connecticut Valley onions.

But I feel safe in saying that most farmers of America can and will support a program which embodies the following:

For those crops which we produce for domestic consumption, such as meats, cheese, casein, and grains, and which are meeting heavy competition from federally encouraged imports, we would provide effective and reasonable protection either by tariff or treaty. By the same means we would encourage the production of crops which could be economically and abundantly produced here except for foreign competition with its low-cost labor. In this field particular reference is made to fats and oils.

There are, however, American farm products of which we produce an exportable surplus and the price of which is made in the world market, such as cotton and wheat. The present administration has attempted to eliminate this surplus through arbitrary crop reduction and control. The results have been disheartening.

On those crops whose price is made in the world market, and on which direct protection would not avail, we would guarantee the farmer a fair return on that part of his crop needed for domestic consumption. He could grow as much more as he wished and take his chances on the world market for this surplus.

This would necessitate a domestic allotment plan for these crops, and sometimes a subsidy to be paid directly from the Treasury instead of from processing taxes. With American industry demanding and receiving protection from cheap labor and world-wide competition, no one can honestly object to equitable protection being given the American farmer.

We would continue the principle of the ever-normal granary. In view of the year-to-year variations in crop prices and yield, American farmers deserve a moderate average return adequate to meet the normal costs of production instead of taking the losses in low-price years and seeing speculators reap the benefit of high prices.

Individuals and cooperatives that have adequate storage and preservation facilities should receive loans on their crops at moderate prices on the sole condition that they must market these crops before they deteriorate. The farmer should decide when to dispose of his surplus on which he has a moderate loan. He should decide this on his own opinion, warranted by local or national or personal conditions.

This is better for the national economy and more democratic. The consensus of opinion of tens of thousands of farmers throughout the country is much safer and much more likely to be right than a large-scale decision of a single individual or small group of Government employees, who have previously demonstrated an uncanny ability to guess wrong.

The American farmer favors a soil-conservation program, but not a general and blanket policy to be used as a thinly disguised political subsidy. We want soil conservation in places where it is needed to remedy bad conditions.

The farmer of today realizes that there are vast areas of land designated as submarginal that are not yielding proper returns and ought not to be used for the growing of crops. When practicable, such land should be retired from cultivation. But when it is economically occupied by free-born Americans, they should not be forced to give up their homes, which mean liberty to them, and submit to resettlement under a burden of debt from which they can never escape merely to satisfy the whims and hallucinations of a Government bureau.

Submarginal land can be temporarily retired and used for a generation or 10 generations for forestry or other purposes. It can be put into the public domain, local or State or national. But it should always be kept available for reoccupation as homes should the needs of the future so dictate. It is far better to own a home on poor land than to own no home at all.

The American farmer believes that with a national crop surplus as a problem that no further extension of vast and expensive irrigation projects should be undertaken unless it is clearly evident that Government investment can be repaid dollar for dollar from project income on a basis that users can afford to pay. It is just plain folly to use taxpayers' money to build up one section of the country to destroy the agricultural prosperity of another.

We believe today, and I say this with the feeling that it does represent the opinion of several million American farmers, that we should encourage family agriculture in every possible way. It should be made possible to secure a living from the land wholly or in part without the factory methods used in large-scale commercial, specialized agriculture. Millions of farmers or part-time farmers engaged in general family agriculture make up a backlog of security and prosperity and happiness for our Nation.

This kind of agriculture is a means to an independent living and is conducive to good citizenship. I never knew a man and woman living in a home of their own with rambler roses growing on the porch and a garden behind the house that were interested in overthrowing a government of the people. The United States Government should encourage self-sufficiency and part-time agriculture to the fullest extent.

Facilities of the Extension Service should be made available to these people. County and home-demonstration agents should be given full opportunity to help them, instead of having to take all their time filling out millions of cards which furnish names of voters to headquarters in Washington.

Every farmer in the United States would encourage the diversification of agriculture by farm and by region to an extent that would insure greater security. By every means we should encourage the organization of cooperatives where small-scale farmers can pool their interests in order to deal more successfully in the market and to secure services which would be impossible to them acting as individuals. Even on a national scale, cooperatives which are suited to the individualistic natures of a group of farmers might well prove to be an alternative to Government regulation.

We do not approve in any way of political manipulations which seek to take over control of cooperative banking or any other cooperative enterprises. We farmers consider our cooperatives as our own organizations, and not company unions of the Government.

Part-time and cooperative agriculture, properly encouraged and fostered by the Federal Government, but without the menace of Federal domination attached, would go far toward solving the rural problem and make farm life attractive to young people. Government might well provide financial assistance at the start, as it helps young people in the cities with the National Youth Administration.

The future welfare and the security of our Nation depends largely upon maintaining a proper balance of farm and industrial population. Through the generations of our history we have learned that the farm is the source of supply for new leadership for industry and new population for the city.

As substitutes are found for farm crops in certain fields, and as uses for these crops become obsolete, a broad and legitimate field for government appears. It is the field of research.

Industrial chemistry, agriculture, and government should unite in an effort to find new uses for agricultural products and new methods of economical production. Research will prove mightier than regulation in cutting down surpluses, enlarging farm markets, and providing greater national stability.

For centuries nations have tried to legislate agricultural prosperity, and every success attained by this means has been only temporary. Economic evolution and research eventually prevail.

The present administration has done everything, almost, for the farmer except to give him a market. Without that he cannot be self-sustaining or even self-respecting.

This greatest need is not being met now. It is our job to enlarge and protect his markets. It is also our job to see that our monetary system is managed so as not to bear with greatest unfairness on the producers of basic commodities.

May I in closing sum up the points which I believe that farmers themselves would incorporate in a national agricultural program:

1. Effective tariff protection to carry tariff burden of farmers' purchases along with a domestic-allotment plan.

2. Individual farmer-controlled program of loans for carry-over of crop surpluses.

3. Real instead of political soil-conservation program.

4. End to competition from uneconomic expansion of subsidized irrigation projects.

5. Expansion and improvement of general family farming as a means of living for thousands of families, assisted by expansion of the cooperative movement.

6. More aggressive research for industrial agricultural products as a sound and effective method of eliminating crop surpluses.

7. Expansion of home market for agricultural producers; most important of all is a market which can be created to a large degree only through industrial prosperity.

These things we ask for American agriculture. These things could restore the purchasing power of the farmer. These would create jobs in industry, for all the foreign trade of the world cannot restore industrial prosperity as can a prosperous agriculture at home. More jobs in industry mean better markets for crops, both as raw material for manufacturing and food for human consumption.

May we never forget the interrelationship of agriculture, industry, and labor. They are necessary to one another; and prosperity cannot permanently return to one group alone.

The Federal farm "planners" do not understand the individual character of the farmer. They do not see why the needs of Texas, Illinois, and Maine cannot be met by blanket regulations. Their misguided efforts leave discouragement in their wake.

The spirit that prompted men and women to leave their overseas homes in search of freedom and face the perils of a new world for independence' sake still lives on the American farm.

Let us resolve that the thrift, the self-reliance, the charity, and the will to sacrifice which typified the character of the pioneer shall be sustained. Our farmers are chattels of no government; they are pawns of no sovereign. As free-born Americans they stand, the backbone of a nation, deserving the destiny of their heritage, determined to preserve a government by the people, and ready to do their part in an American program.

Eyes on Britain's Fleet

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ARTICLE BY HARLAN MILLER

Mr. GILLETTE. Mr. President, on the 23d of May there appeared in the Washington Post a very excellent article by Harlan Miller headed, "Eyes on Britain's Fleet." I ask unanimous consent that it may be printed in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OVER THE COFFEE

(By Harlan Miller)

EYES ON BRITAIN'S FLEET

(England's $10,000,000,000 sea power, safe from Hitler, would give American defense extra years of grace.)

In the Capital's highest official circles a single anxiety has during the last 24 hours emerged with overwhelming force from the vague forebodings of the last 10 days—that the British Fleet must at all costs be preserved and kept out of Hitler's hands, no matter how complete the Nazi victory.

To put it with total candor: There are some high officials who obviously feel in their heart of hearts—but who still find it impolitic to say so aloud—that our immediate declaration of war on the side of the Allies would not be too high a price to pay for the fleet. Any help short of war, they feel, would be a cheap price to pay for it.

The fog has cleared away. The wishful thinking that the Nazis can't smash to victory this summer is dying. With it has passed any doubt that Hitler will demand the fleet.

There is no doubt that he will enforce this demand with the most brutal threats of mass murder and devastation in England.

And there is no longer any doubt here that he will carry out these threats, even if it means the demolition of every great English city and the destruction of millions of English lives—men, women, and children.

In a sardonic vein, an observer here told a high official that his most optimistic mental image for the last week has been one of the British Fleet steaming desperately westward across the Atlantic with the Nazi bombers in swift pursuit beyond Ireland.

"That is an optimistic dream," said the high official grimly. "If Hitler demands the fleet, and if the alternative is a brutal and murderous assault on a defenseless England, there is little reason to think that the British won't surrender it."

"But what of the Empire? Wouldn't Britain preserve its fleet at any cost to preserve its Empire?"

"There is little reason to think so," he replied. "The fleet belongs to England, and it would be English lives and possessions at stake."

"But is the British morale so low?"

"For the last decade," he answered, "English morale has decayed more and more swiftly. Today it is a question whether England could stand up to such a threat from Hitler—knowing he would execute his threat."

With the British Fleet intact, and based either in Canada or the West Indies or at Singapore, leaving our fleet undivided either in the Pacific or Atlantic, this country would have several extra years to prepare for any assault on the Western Hemisphere—assaults by trade pressure with political strings attached, by "fifth columns" or by Nazi-inspired revolutions in South America or by armed forces.

Without the fleet in his power, any demands by Hitler for Allied possessions in the Americas would be mere empty bluster. At worst, he'd need 5 years to build one.

With the British fleet he might conceivably be able to seize some of them—Bermuda, Nassau, Jamaica, Trinidad, Nova Scotia—within a year.

Our fleet could not cope with him and Japan simultaneously; our air force is still insufficient to resist; even the Panama Canal would not be safe.

There are, of course, some (the Chamberlain type) who think we should let England worry about her fleet and the possible seizure of her American possessions by Hiter; that two wars in the bush are better than one in the hand.

As an incredible footnote, but one which few here are now willing to disbelieve, the story reached Washington this week that English-speaking German officers with the Nazi army of occupation in Poland have received circulars from Berlin asking them to volunteer for duty in England and America.

This story comes through official channels.

"What possible help now would assure the retention of the British fleet in British hands?" was the final question.

"Adequate assurance that whatever sacrifices the British might have to make to retain it would lead eventually to the preservations of England and the Empire."

These are the views of a highly placed and responsible American official who has never, to my knowledge, talked through his hat.

The British navy is now the most important pawn in world politics.

The "Fifth Column"

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ARTICLE BY WILLIAM RANDOLPH HEARST

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article which this morning appeared in the columns of the Washington Times-Herald under the heading of In the News, by the pen of Hon. William Randolph Hearst pertaining to the "fifth column," which in more well-known terms means principally alien enemies, Trojan horses, Nazis, Fascists, and Communists, and all other "isms" that are foreign to our American form of government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of May 27, 1940]

IN THE NEWS

President Roosevelt sent a fine and timely message to Congress, aimed at "those aliens who conduct themselves in a manner that conflicts with the public interest."

The President said:

"The startling sequence of international events * * * has necessitated a review of the measures required for the Nation's safety."

The President's plan is to transfer the Immigration and Naturalization Service from the Labor to the Justice Department.

He declares that—

"Much can be said for the retention of these functions in the Department of Labor during normal times.

"I am convinced, however, that under existing conditions the immigration and naturalization activities can best contribute to the national well-being only if they are closely integrated with the activities of the Department of Justice."

The need for the transfer is described by the President as "pressing."

In the Senate, Majority Leader BARKLEY declared that a resolution would be offered to make the transfer immediately effective, and Senator REYNOLDS, calling Harry Bridges "one of the stallions in the herd of Trojan horses grazing in this country," endorsed a bill by Representative ALLEN of Louisiana to deport Bridges to Australia.

There is no question that the President's proposal of reorganization is pressing and necessary.

The only possible criticism is that the recommendation should have been made and the action taken a long time ago.

That, however, is mainly a good reason why the action should promptly be taken now.

The traitorous betrayal of their own countries by Communists in Finland and Norway, and probably in France and Belgium as well, has shown how dangerous the treasonable activities of these "fifth column" disloyalists can be in time of war.

Their activities are not quite as spectacular but almost as dangerous in times of peace.

We do not observe the effects of their sapping and mining operations as clearly in peace, but we come to note a yellow streak of disloyalty cross-cutting the honest Americanism of our youth, a subversive sentiment demoralizing some of the citizens of our Nation and permeating certain political and social organizations.

Gradually the institutions of our free country are weakened and undermined.

Then, when the stress of war comes, or any stress that requires the resistance of a sound body politic—of a sturdy patriotism—the structure of our society collapses.

The termites have done their work. The cohesive construction we depended upon is nothing but an empty shell.

The time to have begun the crusade against subversions was some years ago.

But our house has not fallen yet, and there is still time to strengthen it at every crucial point before any stress or strain of unusual severity shall find its weaknesses.

Over 5 years ago your columnist began an attack against the coddling of the communism of Russia or of its activities in this country.

On January 6, 1935, your Demosthenes delivered the following philippic over the radio—rather rhetorically, perhaps, but with all truth and earnestness and sincerity:

"Well, citizens of free America, do we want the cruel class rule of the proletariat in our country?

"Do we want a dictatorship based upon force and limited by no kind of law and absolutely no rule?

"Do we want to see the violent overthrow of the entire traditional social order?

"Do any genuinely American workers want to see the American working class led toward revolutionary class struggles?

"Do our farmers want to be starved to death to support a "red" army, a blood-stained army, which will murder them?

"Do our competent businessmen, who have built the wealth of this Nation, want to be plundered and driven out of business by a thriftless and shiftless crew of organized incompetents?

"Do our orderly political leaders want to be replaced by a revolutionary band of ruthless assassins?

"Does anybody want the bloody despotism of communism in our free America except a few incurable malcontents, a few sap-headed college boys, and a few unbalanced college professors, who teach the young and inexperienced that the robbery and rapine of communism is—God save the mark—ideology?"

On March 3, 1935, the writer of this column published in a signed editorial the following impeachment of fascism and nazi-ism:

"In Italy the Fascist government has suppressed all freedom of thought and expression, has drilled and dragooned all independent industries and all prosperity out of the country, and has utterly impoverished the people in order to gratify the Government's imperial ambitions, and to maintain the nation in arms.

"In Germany not only is all liberty lost but all modern ideas of freedom of thought and speech and publication ended, but as further evidence of complete return to the Dark Ages the Nazi government has revived medieval methods of execution and political processes of wholesale assassination."

At that time these indictments of the activities of communism in Russia and of fascism and nazi-ism in Italy and Germany, and of their reactions in this country, were considered extravagant and unwarranted.

There was little realization of the conditions of oppression which existed in these despotisms or of the subversive situation that existed here.

Since that time a gradual awakening to the danger of all disloyal activities has occurred among our people; and since that time the menace of fascism and nazi-ism has become as great as that of communism.

Now communism and nazi-ism are doubly dangerous because they are united.

They stand today revealed as twin tyrannies, brought together not only by the desire for conquest but for the purpose of proselyting through treasonable propaganda.

The time when these two dangers to democracy could have been pitted against each other for their mutual destruction has passed.

The clumsy diplomacy of France and England has lost that wonderful opportunity.

Now the one thing left us is to guard against them—to protect ourselves, not only by military preparedness against possible attack, but by every sound precaution against the contamination and contagion of disloyal propaganda.

A good beginning could be made by exterminating the Communists and Fascists in the public service.

An equally important step would be the suppression of all political parties and organized movements whose avowed object is the destruction of American institutions.

Another necessary move is the elimination of disloyal teaching and teachers from the schools.

And of course there should be the general arrest and deportation of those aliens who conduct themselves in a manner that conflicts with the public interest.

Your columnist confidently believes that the attitude of the United States Government in regard to alien enemies is more nearly vigorously and rigorously right today than it has been at any time in the last 5 years.

With high hope and some satisfaction he repeats, as the conclusion of this column, the policies here signed and outlined on June 13, 1938:

"The fundamental policy of the Hearst papers is to keep America out of war.

"Keep it free from foreign entanglements.

"Keep it free from foreign propaganda.

"Keep it free from communism, bolshevism, fascism, nazi-ism, and all class antagonism.

"Keep it free from anarchy on the one hand, or autocracy on the other.

"Keep it free from racial prejudice and religious intolerance.

"Keep it free from the hateful causes of war, and the dreadful consequences of war.

"Keep it free.

"WILLIAM RANDOLPH HEARST."

Articles on the Youth Problem in Oklahoma

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ARTICLES FROM THE ST. LOUIS GLOBE-DEMOCRAT AND THE COUNTRY HOME MAGAZINE

Mr. THOMAS of Oklahoma. Mr. President, in current literature I have found two very interesting and, I think, valuable articles relative to our so-called youth problem.

One of the articles, entitled "Keeping Youth at Home," appeared in a recent issue of the St. Louis Globe-Democrat, and the other article, entitled "Banking on Youth," appeared in the Country Home Magazine.

The articles refer to the development of youth policies in two towns in my State—the towns of Jay and Cyril, Okla.

I ask that the two articles be printed in the CONGRESSIONAL RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Louis Globe-Democrat of May 5, 1940]

KEEPING YOUTH AT HOME

However generously Oklahoma-at-large may have contributed to the wandering migrants who have come to be known as Okies, it is not likely that many of them come from Jay, which is in Delaware County. Anyhow, not many of the younger members of footloose America.

Jay, it seems, has a way of keeping youth at home and satisfied with home opportunities. It is a matter of training. Jay B. Earp, 36-year-old superintendent of schools, figures that most of his 714 present pupils will spend their lives in the community and he goes to lengths to fit them accordingly. With the aid of the National Youth Administration, several State agencies, and a group of Jay businessmen, the program has been under way for 7 years and as a result, Superintendent Earp says, there have been fewer and fewer persons leaving town. Through training and opportunity they are given something to do at home.

The program reaching through 7 years has included the construction of seven community buildings, with the labor performed by high school and N. Y. A. youths. The buildings contain shops, recreational facilities, libraries, and other departments in which young people are learning occupations which will permit them to help build up their town and provide for themselves. Maintenance of school busses, for example, provides an excellent laboratory for the training of automobile mechanics. There is metal working, carpentry, leather craftsmanship, and many other stated activities. Agriculture training is given on a 117-acre farm, the gift of businessmen of the town, with boys spending half of each school day on the farm. Girls are schooled in home economics, sewing and household maid service, learn to cook on wood- and coal-burning stoves as well as gas ranges, to wash and scrub and plan.

The Jay program is pridefully generous and worthy of any forward-looking community, larger or smaller than Jay. It is said that unemployment has been greatly reduced in the community and that persons who might otherwise have traded their possessions for the open road have found jobs for themselves at home because they have the training needed to find jobs and are of a community which is chock full of neighborliness and cooperation.

[From the Country Home Magazine]

BANKING ON YOUTH

(By Don Eddy)

In 8 years T. D. Call, the town banker of Cyril, Okla., has transformed his community from a region of run-down farms and dispirited farmers into a bustling, progressive district. When Call took over the bank in 1931, he found $90,000 worth of farm loans on its books—this at a time when farms were being abandoned wholesale and the scrubby range cattle were starving. Call tried

to get the farmers to borrow money to buy blooded stock and rotate crops on scientific lines, but they showed little interest. So he arranged to have the school boys and girls taught scientific agriculture, and loaned them money for stock raising. When young Bob Mosier borrowed $45 to buy a pedigreed brood sow and sold the first pigs for considerably more than any local farmers had ever received for shoats of the same age, his father, who had refused Call's offer of a loan to improve his cattle, became interested. He went to the banker, and, with his help and that of his several sons, put his farm on a scientific basis, and was soon on the way to financial independence. That, in a nutshell, is how Cyril was rejuvenated.

Call has loaned more than $12,000 to Cyril boys and girls, with a high of $4,175 for 62 projects last year, and has never lost a penny in his dealings with them. The livestock population of Cyril has increased 42 percent in value; milk and cream output has gone up 300 percent. At San Francisco's Golden Gate Exposition last summer 50 of the 51 Oklahoma hogs exhibited won prizes, and 40 of the prize winners came from Banker Call's county. The $90,000 worth of loans has shrunk to $50,000—"every cent good," says Call. He charges interest on his loans to youngsters, but every spring he spends the interest on a banquet for them and their families.

Let Us Not Fool Ourselves As to What We Lack, What We Need, or How To Get It

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

WHAT WE LACK

Mr. HOFFMAN. Mr. Speaker, appearing before the Senate Subcommittee on Military Appropriations, the Army high command, on May 17, told us that the United States was wholly unprepared to meet the test of war; that it had neither plans, equipment, ammunition, ordnance, nor the men necessary for defense. That was the substance of the testimony of Gen. George C. Marshall, Chief of Staff, who told us that we lacked men; of Maj. Gen. H. H. Arnold, Chief of the Army Air Corps, who informed us that our airplanes were inferior, that to send the Army's best bomber "against modern equipment would be suicide"; of Maj. Gen. C. M. Wesson, Ordnance Chief, who disclosed the lack of ordnance.

We should be prepared. As Colonel Lindbergh asked, prepared for what? Prepared on the first line of defense which, as the President once said, was on the Rhine? Or prepared, as all of us agree, to defend America from invasion? We cannot prepare and, in my judgment, we should not think of preparing, to send an Army or a Navy abroad. No American who loves his home, his family, his country, should for a moment hesitate to give everything, to do his utmost, in the defense of our Nation. We should not seek war; we should avoid it; but be ready if it comes to us.

WHAT WE NEED

In view of Hitler's overwhelming victories; with the knowledge that, in other countries, so-called fifth columns have been a potent force in the destruction of the existing governments; that in our midst are similar forces with a like purpose, we must have guns, motor transportation, aircraft, forts, and warships, and, in addition, a live, alert patriotism that will seek out and render incapable of action every subversive group and influence, every disloyal individual.

HOW TO GET IT

Long have we prided ourselves upon the fact that we are the richest nation in the world. We have a store of billions of dollars' worth of gold. We have mammoth factories, with mass production; almost inexhaustible resources. But our gold will not buy, and our factories cannot create, the guns or the aircraft, the munitions of war, the warships, which are necessary to defend us, should Hitler decide to come to our shores. Only through cooperation between industry and labor, between the Government and business; only by the self-sacrificing efforts of all of our citizens can we hope to so prepare that even a Hitler, triumphant over all the rest of the world, would hesitate to undertake the task of imposing his brutality upon us.

This means that ambition, not only on the part of every petty officeholder, but on the part of the President of the United States, must be thrown aside. It means that the manufacturer's desire for profit must be limited; that the worker's hope of an ever-increasing wage and shorter hours cannot be realized. It means that each and every one of us must make sacrifices. The manufacturer must give up the expectation of becoming a millionaire. The worker must forego for the present his desire to labor but 30 or 40 hours per week and to receive a wage like unto that paid during the first World War. You and I—yes, each one of us—must be ready and willing, and begin, to give up some of the luxuries which heretofore we have regarded as necessities; to get back to a simple life, to longer hours of toil, to a whole-hearted devotion to our country.

The Government itself—and by the Government I mean the administration—must cease playing politics, catering to pressure groups for political support, assaulting business and businessmen in the hope of catching a labor vote, for, just as surely as we continue, as we have in the past, to waste our national income for things which, while desirable, are not necessary, we shall find ourselves, when the day of reckoning comes, at the end of the present war or a few years thereafter, as unprepared as were the Belgians, the folks of Holland, and of those other nations which have been wiped out of existence, and we will meet a like fate.

The Townsend Plan

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

LETTER FROM R. H. WEAVER TO PITTSBURGH POST-GAZETTE

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, there is herewith inserted the following letter written to the editor of the Pittsburgh Post-Gazette, Pittsburgh, Pa., and appearing in that newspaper on May 10, 1940.

The writer of this letter, Mr. R. H. Weaver, DuBois, Pa., is treasurer of Townsend Club No. 1, of that city, and is one of the most energetic Townsend workers in the Twenty-third District of Pennsylvania, where 87 clubs are flourishing with thousands of active members.

The letter follows:

EDITOR PITTSBURGH POST-GAZETTE,
Pittsburgh, Pa.

DEAR SIR: Under date of May 4, as reported by a news item in your paper, President Roosevelt challenges candidates for the Presidency, daring them to tell how to balance the Budget. This, our President could do himself, if he would consider the needs of the people of our country more carefully, and get behind bill H. R. 8264, General Welfare Act. I am no candidate for office, nor am I a politician, but I believe that balancing the Budget could easily be accomplished.

If bill H. R. 8264 were passed and put into effect, this depression or recession would cease in 2 years' time.

It is my opinion that every Congressman or Senator not in favor of said bill is indirectly guilty of the crimes and starvation we are now experiencing in this country. Some of our Congressmen and Senators seem to forget who sent them to Washington, after they are in office.

We must have forced spending to bring us out of this depression. Townsend bill H. R. 8264 would do this.

Respectfully yours,

R. H. WEAVER,
Treasurer, Townsend Club No. 1 of Dubois, Pa., 437 Reams Street, Dubois, Pa.

Editorial Comment on Purchases of Silver and Strategic Materials

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

EDITORIALS FROM CURRENT PUBLICATIONS

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD several editorials on our purchases of silver and strategic materials.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 26, 1940]

THREADBARE PRETEXT

When the Townsend bill suspending purchases of foreign silver was passed by the Senate it was freely predicted that it would be shelved by the House. It now looks as if these pessimistic predictions are about to be fulfilled. For Democratic leaders are urging a return of the Townsend bill to the Senate on the ground that it is a revenue measure which should have originated in the House.

Some faint color of reason is given to this contention because the bill provides for the repeal of a tax on profits derived from silver transfers. However, a tax-repeal measure can hardly be regarded as falling within the scope of the constitutional mandate concerning bills for raising revenue.

Moreover, the silver-purchase bill was never intended to raise revenue. Senator GEORGE rightly declares that "it is stretching the Constitution beyond all reason to say that merely because an incidental tax feature is involved, one Chamber can't express itself on a broad question of policy."

The real purpose of this maneuver is clear. The House leaders, knowing that the administration is opposed to the Townsend bill, are merely seeking an excuse to bury it. A vote for the resolution to return the bill to the Senate will, therefore, be tantamount to a vote to continue buying overvalued foreign silver in pursuance of an unattainable monetary objective.

Congress ought to abandon this futile and dangerous experiment without further delay.

[From the Washington Times-Herald of May 25, 1940]

THE MEXICAN MYSTERY

In this crisis, we feel that it is no time to pin-prick our Government. And that is not our intention.

Nevertheless, we have long been puzzled by the present Government's policy toward Mexico—or lack of policy, maybe. Our bewilderment is renewed and refreshed by Hal Burton's series of articles on Mexico, now running in the Times-Herald and New York Daily News, and full of interesting and alarming material.

Soon after he was inaugurated in 1933, President Roosevelt announced the good-neighbor policy. It was to apply to all Latin America, which, of course, includes Mexico. About the same time, our Government began buying silver from all comers at inflated prices, the object being to give the western silver producers an economic boost and to help certain silver-standard countries, notably China.

In March 1938 the Mexican Government seized about $450,000,000 worth of oil properties in Mexico belonging to various American, British, and Dutch companies, and undertook to run those properties on its own.

Our State Department filed various protests, which were received with extreme politeness by the Mexican Government. But the story President Cardenas' press agents and newspapers told the Mexican people was that the United States Government approved the oil grab. And the Mexican Supreme Court O. K.'d the oil grabs.

We went on buying Mexican silver at inflated prices, and are still doing so. That had and has the effect of staving off a complete financial break-down in Mexico—though Cardenas' government is having pretty tough going nevertheless.

Cardenas is selling the expropriated oil wherever he can find buyers or swappers; and those buyers and swappers were chiefly German and Italian before the war and are chiefly Japanese now.

In short, we are subsidizing with silver purchases a government which takes the property of Americans and sells or swaps it to governments which are less our friends than any other first-rank governments in the world.

"FIFTH COLUMNS"

We've heard it asserted that this United States super-good-neighborliness toward Mexico was at bottom a New Deal effort to pay off its political debt of the 1932 campaign to John L. Lewis, who contributed about $500,000 of his United Mine Workers' funds to the Democrats that year and who is very friendly with Vincente Lombardo Toledano, Mexican labor leader. We have no reason to believe that there is anything in this charge, no way of verifying it. But it has been whispered about, nevertheless, and has apparently convinced some people.

Our softheartedness toward Mexico now begins to threaten to kick us in the face.

As Mr. Burton reports, the coming Mexican Presidental election has already fanned up a revolutionary situation in Mexico. Cardenas' candidate, Manuel Avila Camacho, and the conservative candidate, Juan Andreu Almazan, are making ready to contest the election with guns, whichever way it goes. The result may be a dangerous explosion to the south of us, at a time when Europe is exploding to the east of us and Asia to the west of us.

Even worse than that, to quote Mr. Burton:

"The 'fifth column' is closing ranks in Mexico, facing north toward the American border. Germany has 200 busy agents at work—more than in World War days, when Carranza maintained a dubious neutrality.

"Russia, too, is busy behind the scenes. Native Communists and fellow travelers run many of her errands. Some of the anti-Franco refugees from Spain do the rest. Japan hovers on the side lines, distributing discreet largess in the form of investments that never will pan out."

That is the kind of country to which we go on being a good neighbor by buying its silver at uneconomic prices, then burying the silver at West Point, where it does us no good.

Mexico is already on the ragged edge of complete communism, its Government having taken many a lesson from Leon Trotsky, its long-time-honored guest. Nations unfriendly to us are already using Mexico for purposes best known to themselves. It is conceivable that Mexico may sometime be used as the jumping-off point for an invasion of the United States—or at least for some kind of violation of the Monroe Doctrine.

To repeat, we cannot understand why this Government goes on being such an extra good neighbor to Mexico.

[From the New York Journal of Commerce and Commercial of May 24, 1940]

STRATEGIC RAW MATERIAL RESERVES

"During the war the country was constantly threatened with a shortage in available supply of nitrogen, manganese, chrome, tungsten, dyestuffs, coal-tar derivatives, and several other essential materials * * *. The Government should devise some system for protecting and stimulating their internal production."

This statement was one of the key conclusions reached in his final report on American Industry in the War by Bernard M. Baruch, chairman of the War Industries Board. Since 1921, when Mr. Baruch wrote his report, this country has ceased to be dependent upon imported supplies of a number of the commodities he specified. Particularly in the case of nitrogen, dyestuffs, coal-tar derivatives, and other chemicals, American manufacturers can now supply not only our own requirements, but in many cases have a surplus available for export which can be diverted to defense needs if necessary.

On the other hand, this country remains dependent upon imports of rubber and a number of nonferrous metals, among which tin and manganese are the most important for national defense. The substitution of domestic products for these materials has hitherto proved impractical for one reason or another. The troubled situation abroad has directed attention to an increasing extent to the need for accumulating within this country large reserves of at least the strategic raw materials which enter directly into the production of war materials, as an elementary precaution in the event that overseas sources of supply should be cut off. A program involving the expenditure of $100,000,000 for this purpose over a 4-year period has been advanced by the administration, but only $10,000,000 was actually appropriated by Congress early last year. The President has since asked for additional appropriations of $60,000,000 to be spent during the coming fiscal year, but Congress has yet to act upon this request. In addition, relatively small reserves of rubber are being obtained through barter against cotton with Great Britain.

A vigorous attack upon the dilatory manner in which this program has been pursued to date was made by President Ernest T. Weir, of the American Iron and Steel Institute, before the annual meeting of that body here yesterday. Mr. Weir favored the investment of at least $800,000,000 in the accumulation of important raw materials as soon as feasible.

Mr. Weir properly pointed out that this problem cannot and should not be solved by industry alone. The investment required is often too great. The reserves are needed for the general welfare perhaps even more than to assure continuity of operations of individual concerns. If any one company should accumulate large stocks of some raw material so that it owns most of the available supply in times of emergency, charges of restraint of trade and monopoly may be leveled against it. Finally, such commodities as rubber and tin are marketed by Government-dominated cartels,

and only the United States Government can negotiate effectively with the foreign governments concerned for added reserve supplies.

On the other hand, the accumulation of large reserves of strategic raw materials as a national-defense measure must be carried on with suitable safeguards, if mischievous consequencies are to be avoided. The possession of large reserve stocks of such materials by the Government may undermine market stability, unless the release of such supplies is permitted only under stated conditions specified in advance, such as the outbreak of a war or the cutting off of normal sources of supply. For example, a policy of releasing supplies out of such reserves capriciously, to check what are regarded by Government officials as excessive price rises, could work serious injury to the industry.

In carrying out a program of building up reserves of strategic raw materials, as in other phases of the vast national-defense effort that is now taking shape, only close and intelligent cooperation between Government and industry, based upon mutual respect and trust, will assure sound results.

[From the New York Journal of Commerce and Commercial of May 24, 1940]

OPPOSITION TO SILVER LEGISLATION

Despite the fact that not a single persuasive argument has yet been advanced for retaining the Silver Purchase Act of 1934 on the statute books, cessation of purchases of foreign silver by the United States Treasury appears to be as far away as ever. The Senate has passed the Townsend bill to halt the buying of silver abroad, it is true, but the House Ways and Means Committee proposes to kill this measure for all practical purposes by taking the stand that it is a tax bill, and as such should have been originated in the House. It seems quite doubtful that a new bill originating in the House will be passed at this session.

The chief reason advanced for continuing the purchases of silver is the desire to maintain American exports. It is claimed that the United States may hurt its exports if the Treasury stops buying silver abroad, however useless this metal may be. This contention would be just as valid if it were asserted that the Treasury should buy trainloads or shiploads of gravel from some foreign country at an artificially high price, in order to give that country buying power for our goods.

In point of fact, the desire of the Administration to continue the silver-purchase program reflects its failure to evolve an effective foreign policy with regard to Latin America. The good-neighbor policy, well-intentioned though it was, failed to bring about that close economic and political collaboration between the United States and Latin American countries which was desired. Fearing to antagonize Mexico, despite the cavalier treatment accorded by that country to a number of American interests, the administration has fought for a continuation of the silver-purchase program, which benefits Mexico far more than any other country. It has vague fears that to do otherwise might cause Mexico to draw closer to authoritarian regimes abroad.

The United States should cooperate wholeheartedly with Latin American countries especially now when defense of the hemisphere is a practical issue. Sound relations will not be promoted, however, by favoring nations which trample on American interests and discouraging those which are ready to cooperate on a reasonable basis with us. A firmer attitude toward Mexico, for example, and a friendlier policy toward Argentina, which has sought in vain to negotiate a reciprocal-trade agreement with the United States, would be far more likely to promote sound Pan American relations.

Defense of America

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. BURKE. Mr. President, on May 25 the junior Senator from Florida [Mr. PEPPER] delivered a very able and inspiring radio address on the subject Defense of America. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, tonight I wish to speak to you as a citizen and as a Senator about the defense of America.

I believe in the democratic principle of taking the people into confidence about America's defense. I am not afraid to ask the people of America to make decisions about America's defense—courageous, bold decisions. Nor am I afraid to say that every minute decision is delayed may be a tragic moment lost when split-second decisions are determining the fate of the world.

Only one purpose is as close to my heart as the defense of America and that is to keep the war over there. The people of America do not want our fair land ravaged with the fiendish, devilish machines of modern war; our great institutions torn to shambles by the vultures of the air; our innocent children strafed by machine-gun fire, or stifled by poisoned gas.

Accordingly, I have pending before the Senate Foreign Relations Committee a resolution which, in plain American language, says that it is wise, it is in the interest of America's defense, it is helpful in keeping war away from America, for us to sell to the Allies here, for cash, at a fair price, certain of our war machines and war materials where they will do the greatest good in the shortest time—to help the enemies of Hitler crush Hitler, over there.

The wisdom, of course, of carrying out this resolution, of determining what airplanes, what war materials we can spare without imperiling our own defense, is left to the President, who can be trusted to act as the Commander in Chief of our Army and Navy only in the interest of the national safety. You know, and I know, that if this resolution were adopted and the President were given this authority he would not send one single airship, one cannon, one old ship which would imperil our national defense.

Under the terms of the resolution, the President would let no nation have such war equipment or materials unless it had first authorized the President to replace any material he might let them have out of any construction which might at any time be in progress in the factories of this country for the account of such parties abroad.

As a selfish American, I speak. One old plane at the front in Flanders now may be worth a hundred planes, maybe a thousand, a short time from now if Hitler becomes the greedy master of the Old World. A few cannon, which it takes time for the Allies to bore and deliver at the front now, may mean a thousand batteries later upon the Rio Grande or the border of Canada or elsewhere. A few older ships which are being put back in commission in our Navy in the English Channel in the next few days might mean more to save our country and our people from the iron heel of Hitlerism than a new fleet a few years from now.

Time is of the essence. The Allies and the whole civilized world are threatened as never before in the memory of men living. The Nazi military machine, with typical Nazi thoroughness and ruthlessness, has rolled in the unimaginable period of 2 weeks across four countries, and today the mighty empires of Great Britain and France literally totter upon the precipice of destruction. Fortresses, canals, rivers, forests, everything that responsible statesmen and experienced soldiers have counted upon to save their countries and their peoples, have collapsed almost like match boxes, under the mailed Hitler fist. These armored, steel-clad monsters, these military Frankensteins, are reaching out to crush every defense that the courageous defenders of Holland, Belgium, Luxemburg, France and Britain, and Britain's associated nations, in desperate defense and counterattack, have been able to interpose. The next hour may bring the news that whatever we may do is too late; that Hitler could not be stopped in Europe; that these years of ruthless and unscrupulous preparation with but a single aim—to make nazi-ism the master of the world; that these hundred billions of dollars that he has spent; the one-third of the German citizenry which he has used in the building of a war machine the like of which the world has never even dreamed of, has made him invincible.

In all history, not until Hitler, was there an instance of where a man coldly, calculatingly, unabashed, and unashamed declared in an authentic book like Mein Kampf that his single aim was, by every perfidy known to a mad genius mind, to conquer the world. An aim declared so openly, so utterly devoid of any sentiment of the civilized world, based upon a method more devilish than any fiend had ever been able to conceive, made little impression on the world because it seemed like the rantings of a drug addict. The world couldn't believe that it could happen. Austria, Czechoslovakia, Poland, Denmark, Norway, Holland, Belgium, Luxemburg, France, Great Britain, Chamberlain didn't think it could happen. Yet tomorrow the old world into which you and I were born, in which we grew up, which the sacrifices of the Master and the martyrs and the heroisms of 2,000 years of patriots we thought had made secure, may breathe its last choking, sobbing breath.

There are still many "Chamberlains" in America. There are some in Congress—honest, sincere, conscientious, deluded men. They have not even read Mein Kampf.

It is not really their judgment—if they could take their thoughts apart and look at them—that tell them that if Hitler crushes the Allies in Europe and becomes the master of the Old World, with his alliances with Mussolini, Stalin, Franco, and Japan, the master of three-fourths of the world's area and over four-fifths of the world's population, that he would sit idly by while we built 50,000 fighting planes, trained 50,000 pilots, built a new Navy, created and trained an Army of one to two million men, fortified our coasts and the islands of the Atlantic and Pacific, established air and fleet bases throughout the Western Hemisphere, stifled the "fifth column" and the "Trojan horse" in every nation in the New World, including our own, aided the nations of the Western Hemisphere in the building up and in the training and direction of their own armed forces—

our leaders really do not believe that a dominant Hitler would let us do that. They, just like hopeful Mr. Chamberlain with his umbrella, somehow hope and pray that he would not.

Some of our "Chamberlains" buttress their hope and their wishful thinking with legal arguments about international law not permitting us to do anything to help the Allies, short of war, in Europe because we would be violating a fine theory of international law.

I say international law as to whom? Have they forgotten the unprovoked aggression of the Nazis upon Czechoslovakia and Poland? Have they forgotten the scrupulous and strict neutrality of the Scandinavian countries and the Dutch who stayed out of Europe's wars for over a hundred years, of the Belgians, who would not even let the Allies, upon whom they knew they would have to depend for their defense, send a single soldier or a single airplane to the border that lay next to the massing Germans, even after they knew they were going to attack? Have they forgotten helpless, unarmed, little Luxemburg, with an army of only a few hundred, defended only by the integrity of nations' vows and the decent principles of what was international law?

Have they forgotten that Hitler, and we, and Great Britain, and France, and many of the ravaged nations of Europe were all parties to the Kellogg Pact which prohibited war as an instrument of national policy? Do they seriously mean that Hitler, who has not declared war upon a single nation which he has either conquered or attacked, could claim the benefit of a civilized principle of international law against signers of the Kellogg Pact trying to defend, by methods short of war, other signers of the Kellogg Pact in resisting unprovoked and unjustified aggression from Hitler, whose government itself was a signer of the Kellogg Pact?

What troubles me is that some of our Chamberlains don't seem to understand this mad world in which we today are living. Hitler has destroyed our old way of life. He has not only murdered helpless men, women, and children, he has murdered international law and the things that restrained the brute forces of the world; he has crushed every fine, fragile thing that the spirit lived by.

It is a part of his technique to assume that his opponents will fight by the civilized code while he fights by the jungle code.

I see so-called statesmen in the Congress heave and croak like a bullfrog full of buckshot, at some technical, legalistic fear that the United States, if it adopts my resolution of doing what it can now short of war to resist Hitler, is committing a breach of international law which will get us into war. That is what troubles me. The idea that they seem to have that what Hitler does against us and the Western Hemisphere will be based upon the way we legally behave. It is not that the argument itself is so bad. It is the symptom of a tragic, pathetic, misunderstanding of the whole nature of the vulture which even now turns his covetous eyes toward our rich and unprepared Nation.

In these brief moments, I cannot draw for you the outlines of the horrible picture of the future America from the day Hitler might win the war in Europe. We have spent $3,000,000,000 in less than a week upon our national defense, and we have only begun. Money will flow like water. Every energy of our national life will be centered upon one thing—warlike preparation. In the sky of every new day, the cloud of inevitable war will hang like a pall over everything that we do. Every boy will know that some day he will probably be in his country's Army. Private enterprise, free initiative, American lives, will be demanded by their country to meet the inevitable day when Hitler will come.

I see that. You see that. You know that to be true in your heart. You must let the Chamberlains of your country know that you do see it and that you will to act in the many ways we can effectively act without war—now.

Every other nation has waited while the tragic sands of time have fallen through the hourglass. They believed Hitler, with his lying assurances, and they waited. They believed the Baldwins and the Chamberlains who said "we can appease his ravenous appetite"—and they waited. They believed the lawyers and the legalists who talked about international law and declarations of the League of Nations and civilizing restraints—and they waited. They believed those who said it was so monstrous it could not happen—and they waited. Even while others were being devoured before their very eyes—some waited.

Now, some ask us to wait for the same reasons that the others waited. Wait, they say, because we must not violate international law. Wait, because we want peace. Wait, because maybe Hitler will not want what we have. Wait, because maybe the leopard will change his spots. Wait, because we believe in isolation. Wait, maybe we can make Hitler like us. Wait, maybe a miracle will happen and other boys by dying in Europe, other nations by giving up their treasure, will save us.

Hitler marched into the Rhineland, they say, with orders to go back if the Allies resisted. But the Allies waited. He armed the Rhineland, when a few divisions might have sent him scurrying back to Potsdam—but they waited. He took Czechoslovakia, which had a brave and strong army, great munitions plants, and a fortified frontier, when they might have held him back—but they waited. Each nation, in turn, thought maybe somebody else would fight its war.

Finally, a few are left to fight. Now there are no rules. There are no neutrals. The few fight for life or death. The few fight to save our way of life—the American way. Armageddon is being fought. We know in our hearts it is Armageddon and yet they say, "Wait."

The judgment of history will be upon those who lead today. Generations yet unborn shall look back into our faces to see in what direction they were pointed; to see the look in our eyes, the stuff we had in our souls. The traditions of America will rise up to confront us. America's dead in Flanders fields, who are now being desecrated by the relentless military machine which they fought in 1917–18 without even a protest from their country, will rise up in the silhouettes of the dead to ask if we have forgotten them. Those who have given their lives for an ordered world where things of the mind and the spirit might grow into a rich fruition, they, too, will come back to ask if we have forgotten them. If America has a rendezvous with destiny, the next few weeks will determine whether or not America keeps it.

American Aviation Moves Forward

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1940

ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the opening session of the National Aviation Forum, Monday morning, May 27, 1940, at Washington, D. C.:

Mr. Chairman, ladies, and gentlemen, I am genuinely grateful for the opportunity of welcoming all of you to this opening session of the National Aviation Forum. I feel I express the appreciation of everyone when I sincerely congratulate Thomas H. Beck, the distinguished general chairman of this great gathering; energetic and able Gill Robb Wilson, president of the National Aeronautic Association, and all the coworkers, who have formulated what promises to be an interesting and profitable program.

COUNTRY WATCHES PROGRESS

You have come to Washington at a time when the people of the United States, and the world for that matter, are watching closely the appraisal and further development being made of our aviation strength and security. It was my pleasure a little less than a year and a half ago to speak at the opening session of the 1939 forum. If you will pardon a reference to my remarks at that time, I should like to recall that I said on that occasion:

"This Nation has endured as a monument to peace and to democracy, and the teeming millions of our continent propose to maintain that monument in the centuries to come.

"Our first duty, therefore, is to assure that we shall always possess the means to defend that monument. On the sands of Kitty Hawk a new means for that defense was given birth, but so also was a new means for attacking our ocean-lapped citadel.

"So with new weapons of defense we must combat new weapons of attack, the possibilities of which are as yet quite unplumbed. We cannot sit by and permit others to explore those possibilities while our wings grow rusty and our propellers idle.

"We must be alert to take every advantage of the air, to fill the heavens with pilots and with planes, to provide the factories and the technicians which we need, to inform our people of the myriad purposes which aeronautics may serve, to encourage them to use and to enjoy the benefits of flight. And with an aeronautical industry thus assured, we may face the future with confidence. Let the genius of an enemy do its worst—we shall match him and surpass him."

My friends of aviation, those words are double true today as we enter the "flying forties," with the prospects for aviation staggering our imagination.

We who have watched closely the day-to-day development of this great new industry oftentimes find it difficult to stand apart and survey the broad sweep of America's advance in its conquest of the clouds. It is true that anecdotes from hardy pioneers of the airways sometimes recall sharply to us the dramatic progress which we have made. More revealing, however, is an analysis of the cold figures showing the extent of our aviation activities at the beginning of the decade just closed and the figures describing those same activities during the last year of the 1930's.

Let us glance hastily at the advances made by the domestic air lines alone during those 10 years.

AIR LINES MOVE AHEAD

In 1930 they carried less than 350,000 passengers. In 1939 the number had grown to approximately 2,000,000. With the enormous rate of acceleration during the past year it is apparent that, long before the "flying forties" have ended, the figures for 1939 will seem tiny, indeed. With the increase in the number of passengers there

has been an increase even more sharp in the passenger-miles operated. In 1930 our domestic air lines operated less than 85,000,000 passenger-miles; in 1939 they operated nearly 750,000,000 passenger-miles.

Another figure which is particularly significant is that showing the average trip per passenger. During the early years of aviation and even during the first 3 years of the past decade average trips were relatively short. With the development of a more extensive air-line network the average trips rapidly increased in length. In 1937 the average reached its peak of 432 miles. The preponderating development of long-haul traffic was not, however, altogether healthy. The air lines cannot subsist solely on long-haul traffic. The great bulk of the travel market is within the range of shorter trips. The steady development of smaller air lines, including the feeder and pick-up systems, reaching into every corner of this vast country, upon which the future welfare of our Nation so heavily depends, marks a wholesome movement for American aviation.

It has been a happy and promising sign that during the last 3 years the average trip per passenger has steadily fallen. In the year just gone the average trip was actually less than it was in 1934. In fact, surprising as it may seem, the average air-line trip in the United States is less in length than the average trip of railroad Pullman passengers. Few recent developments indicate more clearly the sound and permanent base upon which scheduled air transportation is developing.

AIR MAIL ON INCREASE

The air-mail service has made a remarkable advance during the past 10 years. At the beginning of 1930 there were less than 15,000 miles of domestic air-mail routes, but at the end of the decade 37,000 miles of air-mail routes were used in this country. In terms of pound-miles of performance our domestic air-mail system has grown apparently by more than 300 percent. This growth has been accompanied by a gratifying increase in postage revenues in relation to payments to the carriers. At the beginning of the decade postage revenues were only a little more than one-third of payments. But even before the end of the 1930's the revenues had overtaken the payments to the carriers and today, despite necessary increases in the payments made, the postage revenues and payments approximately balance.

Similar advances have been made in the development of air express. The air-express revenue during 1939 was more than 25 times the revenue from air express in 1931.

With this remarkable advance the safety of operations has increased even more rapidly. In 1930 the domestic air lines operated only 3,500,000 passenger-miles per passenger fatality. In 1939 that figure had increased to more than 80,000,000 passenger-miles, and we are now in the fifteenth month without a single fatality or a serious injury—a record of accomplishment never achieved by any other form of transportation.

There is one portion of this great country of ours which promises a more significant and important development of air transportation than will perhaps be witnessed in any other part of our land. I refer to Alaska. The vital location of that vast section from the standpoint of our national defense is being slowly realized. The development of aviation has increased the importance of that Territory incalculably. At some day of doom in the future it may prove to be the vital key to our national security.

ALASKA IS IMPORTANT

It is indispensable that aviation should stride ahead in Alaska even more rapidly than it advances in the States. Fortunately the great development of the 1930's did not pass by Alaska. In terms of passenger freight and mail traffic, aviation there leaped forward. In 1930 there were only 24 planes operating. By the end of the 1930's that number had increased more than 700 percent, with a resulting jump in plane-miles flown from 338,000 miles to more than 3,200,000. Passenger-miles flown increased from 684,000 to more than 5,200,000, and a great development in freight traffic, which doubtless will be of vastly increasing significance in the future, is demonstrated by the jump from 103,000 pounds of freight carried in 1930 to more than 4,100,000 pounds of freight carried in 1939. Great, too, was the increase in the amount of mail transported. In 1930 just over 17,000 pounds of mail were flown in the Territory, but in 1939 the amount had increased to nearly 550,000 pounds.

These dull figures tell a story that is packed with drama when we look behind the statistics to the efforts of the thousands of men and women who have made this record possible. Both in private fields and in government an increasing army devoted to the cause of advancing aviation has been working steadily and patiently, overcoming handicaps that would discourage the faint-hearted, all united in the common aim to achieve for this country an aviation industry which will carry our flag to heights unequaled by any other nation on the globe.

If, in picturing this advance I have referred to the records made in air transportation, I do so only by way of illustration. The air lines are not alone in exploiting the vast potential of the heavens. Shoulder to shoulder with them the charter and miscellaneous commercial operators have marched forward. The private fliers, too, have contributed enormously. The close observer of aviation must conclude that we are on the threshold of a development in the field of private flying which will dwarf the accomplishments in commercial aviation.

Slowly our Government has come to realize its responsibility for providing encouragement and the means for sound development of all phases of aviation. Slowly our Government has come to realize that we must advance on all fronts steadily and surely. Fitful, sporadic, vacillating half measures must be abandoned in favor of a long-range policy that holds firmly in view the goal of absolute supremacy in civil aviation.

AIR SUPREMACY NEEDED

We who have known civil aviation so intimately of course understand why it is that absolute supremacy is of such importance. Gradually there is dawning upon the entire country a similar realization. But there are still those among our countrymen who question our efforts to push civil aviation ahead. There are still those who question the importance of this activity, who think of aviation as a luxury or as merely a thrilling sport. But they are fewer each day.

To them we can say only that the prophecies of a few years ago that aviation is changing the very face of the globe have already come true. Conquest of the air has shaken ancient faith. An insular nation can no longer rest in peace within the embrace of an encircling sea. Barricades of mountain ranges are no longer impregnable. Noncombatants cannot live securely behind the front lines of fighting. Even the laws of nations fail to impose rules upon warfare. The strangling tentacles of conflict now reach from the skies and snatch away the security which those who have failed to understand the place of aviation had foolishly thought they had achieved. This fact, made so starkly clear in Flanders' fields, has aroused from lethargy our whole Nation. A few months ago the slogan Flying Forties was used by only a few of the aviation fraternity. Today that slogan takes on new meaning as an awful understanding of its implication dawns upon us all.

I had hoped that we could keep inviolate the prophetic lines of Tennyson, penned a hundred years ago:

"For I dipped into the future,
Far as human eye could see,
Saw the Vision of the world,
And all the wonder that would be.

"Saw the heavens filled with commerce,
Argosies of magic sails,
Pilots of the purple twilight,
Dropping down with costly bales."

But as I speak these words I recall the further horrible prediction in the same poem:

"Heard the heavens filled with shouting,
And there rained a ghastly dew,
From the nations' airy navies
Grappling in the central blue."

AVIATION OPENS NEW RICHES

To those who still question our efforts to push civil aviation, we can point in justification to the miserable state of the European nations which have failed to build their fortresses among the clouds.

But there appeals to me, and I am sure to all of us, a value in our efforts to develop civil aviation which transcends security in time of war. The promise which aeronautical development holds for increasing the happiness and welfare of our people in the ordinary pursuits of peacetime life is quite as great as was the promise of railroad transportation a century ago. Then the grasp of railroads brought to the hands of our people the bounty of a continent. But today and tomorrow, if we will but recognize the fact and act accordingly, the grasp of aviation can bring to our people the riches of a hemisphere.

Aviation is moving forward the world over. Due to the foresight and fidelity of a few people in our own Nation, progress under our flag has led the world. But our leadership is challenged. And with the holocaust in Europe giving new release to inventive genius and to destructive energies we cannot afford to rest content with the laurels we have already won. American aviation is poised for successful flight into the Flying Forties. It is my high hope that this forum will serve as the take-off for that journey.

Parity Prices for Farm Crops

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM SIOUX CITY (IOWA) TRIBUNE

Mr. GURNEY. Mr. President, out in our country we have a very practical man, who does some clear thinking on farm

problems. I ask unanimous consent to have printed in the Appendix of the RECORD a very forceful editorial on parity in respect to farm crops in our country, written by Mr. O. L. Brownlee, editorial writer for the Sioux City (Iowa) Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Sioux City (Iowa) Tribune of May 17, 1940]

PARITY A WINNING ISSUE IF G. O. P. WILL ADOPT IT

There is one issue which, if taken up and met squarely in the coming national campaign, will not only insure a Republican victory but the economic and perhaps the political salvation of America. That issue is parity—parity prices and parity tariffs—equality for all Americans.

A clear-cut Republican declaration for parity prices and tariffs not only will carry the Republicans to victory in Iowa but in every middle-western State.

A survey made by a Virginian recently in the South indicates that a clear-cut parity platform would enable the Republicans to carry at least six southern States.

We refer specifically to the State of Virginia, Tennessee, North Carolina, Kentucky, and Florida.

This reference to the six States just named is not based on surmise or hearsay, but on a careful inquiry made by a competent investigator.

Parity will open the way for Republican gains in the South which, if ever won over to the Republican cause at all, will have to be won on an economic program that will appeal to the pocketbooks of southern people.

We know, of course, exactly what the Republicans are up against. They have a divided house on the parity question.

The principal beneficiaries of the Hawley-Smoot high tariffs, which the New Dealers have not molested, and the big-shot bankers, whom the New Deal has enriched, are on one side of the question.

The millions of raw-materials producers—farmers, miners, forestry operators, fishery interests, common labor, organized labor, and small-business men—generally are on the other side.

We know, too, that the tariff beneficiaries and big-shot bankers are among the most liberal campaign contributors. But they don't have the votes. And it takes votes to win elections.

Forty of the forty-eight American States are primarily engaged in the production of new wealth—farm products, minerals, forestry, and fishery products.

The people of these States are overwhelmingly for parity prices and parity tariffs. They must have them if this Nation shall be preserved.

We must price our primary wealth adequately and the American market must be restored to Americans.

Imports of farm products now amount to more than the total wealth production of Montana, Wyoming, Idaho, Utah, Colorado, New Mexico, and Arizona.

What are the Republicans going to do about it?

Farm imports alone amount to more than the total wealth production of Texas.

The southern cotton States know that the New Deal has lost them their foreign market for cotton, that it is letting in jungle fats and oils to drive cottonseed oil and peanut oil and other southern products out of the American market.

They know—they can't help knowing—that there is no relief in sight for them unless it can be obtained through a political change.

Great mines, entire industries like lead and zinc and manganese are prostrate because of the Hull policies. Other industries, such as coal, machinery, tools, etc., languish because these industries are stifled or suppressed and because all production has been slowed down.

Will the Republicans heed their appeal for price parity with industry and tariffs to protect them equally?

The tariff beneficiaries and the "big shot" bankers are not friends of the Republican Party. They have always used the Republican Party in the past to promote their selfish ends.

But they're getting more out of the New Deal now than they ever got out of the Republicans.

If the Republican Party writes a platform that suits these elements, it really should nominate Cordell Hull as its Presidential candidate. He is the greatest and most effective living exponent of what the "big shot" bankers and tariff-fed industries favor.

Will the leaders of the Republican Party be "saps" enough to listen to this group?

The American banker bund and the American tariff bund prefer Roosevelt or Hull to any man whom the Republicans might name—unless it would be BOB TAFT.

They don't want Tom Dewey or Arthur Vandenberg or Jack MacNider or Styles Bridges or any Republican whom they suspect they couldn't control.

They want the Republican Party to adopt a "weaseling" platform and to nominate a "weaseling" candidate. They really don't want the Republicans to win at all. They are supremely satisfied with what they have. They're afraid the Republicans would molest their sacred ox.

This is no time for "weaseling" or "pussyfooting" or obedience to the commands of the short-sighted economic dumbbells who run the international banks and industries and who for almost a century have used the Republican Party to serve their selfish ends.

Gentlemen of the Republican Party, the opportunity is yours to do for this Nation the things that must be done.

You have it within your power to end the disparity in the exchange value of factory goods and raw materials by means of which so much of the wealth produced in the past has been siphoned from the pockets of the producers.

You have it within your power to start American farms and mines producing wealth at full capacity once more, thereby transferring men from the relief rolls to pay rolls and freeing them from bondage to an undemocratic bureaucracy in Washington.

You have it within your power to dry up the pools of mass poverty where subversion is being bred by making it possible for men to earn their livings in the traditicnal American way.

You have it within your power to open the doorways of opportunity for our young men and young women whose slogan is "We want jobs," not "W. P. A., here we come."

The eyes of the real honest-to-God American people who want to work and live in the American tradition are upon the leaders of the Republican Party.

The producing masses who toil on the farms, in the mines, who labor at the hard, dirty jobs; those who are skilled workers in the factories; those who believe that the mission of man is to produce—they all look to the Republican Party this year.

The Democratic Party is helpless. It has been kidnaped by the new dealers.

Millions of rank-and-file Americans want a change. They are willing to vote for a change, especially those who reside in the 40 raw-materials producing States.

They ask for the bread of parity; will you give them a stone? They ask for words of meaning; will you give them weasel words? They ask for constructive Americanism; will you give them destructive internationalism in the Cordell Hull and Des Moines Register pattern?

Think, gentlemen, think seriously. You dare not equivocate or evade the issue.

Victory will be yours, but you must deserve it. If you win by default, America still may be lost.

Unprepared

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

Mr. HOFFMAN. Mr. Speaker, with news from Europe indicating that France and England may be dominated by Germany, Italy, and Russia; with the knowledge that Hitler has no conception of the rights of other peoples; aware that Germany has great influence in Mexico and some South American countries, it is essential that the American people, keeping their feet on the ground, their thinking clear, join as a unit to meet whatever may come when the war in Europe ends.

Hitler may demand, if his present drive succeeds—and it may have succeeded as you read this—as the price of peace and in return for withholding his bombing squadrons from London and Paris, that France and England turn over to him their entire navies. He may also demand that Britain cede to him her colonies in the Western Hemisphere. Successful in this, we might find him within striking distance of North America; hence the necessity for sane thinking, for quick, effective, and united action for preparedness.

The President told us that we were unprepared. If we are unprepared, as, in view of Hitler's successes, we seem to be, the present administration is responsible. The President, during 7 years, has been given all the money for which he asked—all of the authority which he said was necessary for the preservation of our Nation.

His failure to prepare for the present situation, knowledge of which was available to him through his special agents abroad, is water under the bridge or over the dam. Full realization of the extent of his incompetency is of value to us only as a guide for the future.

The President asked for $1,182,000,000 for national defense. That and any other sums for which he may ask will be given

him for that purpose. But money alone will not remedy the situation. Men—trained men—soldiers and pilots—are not obtained in a day or in a year. Battleships and planes cannot be bought at the "5 and 10"; nor can they be produced, except by skilled mechanics—competent, thoroughgoing executives.

Nor should it be forgotten that more than one war has been lost because of the unsound financial condition of a country. The past 7 years have added $20,000,000,000 to our national debt. Adequate national defense, which we must have, means oppressive taxation, overwhelming financial burdens, which must be endured patiently and uncomplainingly.

There is a limit to our resources. Sometimes we may have cake and ice cream, meat, bread and butter, and pie. Some people have been known to live on bread and butter—some live without the butter. We propose to spend $975,000,000 in 8 months for relief; $297,000,000 for parity payments and purchase of surplus commodities; other millions or billions for other purposes.

Airplanes, battleships, trucks, munitions of war, we must have. Would it not be wise for this Nation, as a nation, to quit spending for purposes which, however desirable or beneficial, are not absolutely necessary to the preservation of our Nation and to see to it that the money appropriated for that purpose all goes, without waste, corruption, or the granting of excess profits, for that purpose?

UNITY

The President pleads for unity. He said:

The Congress and the Chief Executive constitute a team where the defense of the land is concerned.

No truer statement was ever made; and to him as quarterback, calling the signals, every patriotic American, every Senator, every Congressman, will give his undivided support on any program for our national defense.

But the President is not the whole team. There is no reason why, unless he desires to follow in Hitler's footsteps, he should assume to carry the whole load—ignore the people and their representatives, the Congress. Nor is there any reason why he should obey signals called from the opposition team.

As the Dies committee has so thoroughly revealed, Hitler and Stalin have their emissaries, their agents, in this country. About that there is no longer any controversy. Communists have control of our merchant marine through the crews and the radiomen who are operating those ships. There are Communists in more than one department of the Government. They are the American "fifth column." Some are on the Federal pay roll. Let the President and the First Lady denounce these subversive groups and oust them from positions of influence in our Government.

In preparing for national defense, the country and the President need our industrialists—men who have operated and who know how to operate factories, to produce motor transportation, airplanes, cannon, munitions of war. These men can only be of value if the President gets rid of men who, like some in the employ of the National Labor Relations Board, are doing their utmost to strangle business.

Yes, we are all behind the President in this preparedness move; and the quickest, surest way to banish all political, partisan interference is for the President to announce frankly and quickly that he will not be a candidate for a third term.

Not long ago Dorothy Thompson made the suggestion that, under the circumstances, there should be no election in November next. We are not quite ready to give up our right to elect our rulers, and if Dorothy has become either so frightened by or so lost in admiration of what she is seeing in Europe that she no longer has faith in a republican form of government, where the people rule, she is no safe adviser for us to follow.

Let us proceed under our Constitution to select our representatives, our Chief Executive, as we have always selected them, for, in the past, to meet every emergency America has produced the man, and at no time in her history has she found but one man available for the job.

In the middle of the night, not so long ago, the President aroused the newspapermen to tell them that he had no desire to be a dictator. That act on his part proved that he realized that in this country there was a deep conviction that such was his purpose.

Now, with his political satellites insisting that he run for a third term; with a nationally known columnist suggesting that he be continued in office without an election; if he wants to allay all suspicion, if he wants to render unselfish, patriotic service in the greatest possible degree, let him follow the example of Washington, and say in unequivocal terms that he does not want, he will not seek, a third term; that his sole purpose is the preservation of our Nation.

Louisiana State University

EXTENSION OF REMARKS

OF

HON. RENÉ L. DEROUEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

ADDRESS BY THE GOVERNOR OF LOUISIANA

Mr. DEROUEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech delivered by Governor Jones, of Louisiana, before the graduation class and cadet corps of Louisiana State University on May 21, 1940.

Governor Jones is my constituent. He is young, has courage and ability. I have every confidence his administration will be successful.

The speech is as follows:

It is with a feeling of gratitude to you for the splendid example of service that you have set by your 4 years' devotion to the task of preparing yourselves for our Nation's welfare, of rejoicing that I share with you the heritage of a great university's traditions, culture, and training, and of hope and belief that you are ready, willing, and able to play your part, be it large or small, in the solution of the multitude of problems that face a free people in this loftiest and mightiest democracy, that I appear before you today, knowing that I shall draw inspiration for my own task from any contact with so fine an aggregation of young Americans, and sincerely trusting that I may be able to convey a few thoughts that may justify my appearance.

I am privileged to be here today primarily because the commanding voice of a majority of the people of the State of Louisiana, made conscious of their rights and of their obligations to themselves and to you, the citizens of tomorrow, decreed that there should be an end to that shocking period of our State's history in which democracy was almost crushed beneath the dictators, and, by their votes, assigned to me the task of assisting in restoring the State to its former proud position as a Commonwealth of free men.

I have been appalled but inspired by the situation in which I have found myself—appalled by the chaos which has resulted from the willingness of public servants to plunder and despoil that which they are sworn to protect, but inspired by the readiness of thousands of citizens to devote themselves unselfishly and without hope of material reward to the rehabilitation of the State. To me has come the great honor of being the chief executive of my native State, a distinction which I deeply cherish, but it is with no feeling of personal importance that I have assumed the office. I feel rather that I am one of the agencies through which my fellow citizens are striving to find the way back to the principles of our forefathers, principles which have made and preserved us a Nation.

MIST DISPELLED

But it is not merely as your Governor that I am participating in these ceremonies. I look back constantly with pleasure and appreciation on the years that I spent as a member of the student body and cadet corps of the Louisiana State University and one of the great debts which I hope, through my service, to pay our State is that due it for having afforded me an opportunity of being taught and trained by the devoted, skilled, and earnest men who directed its destinies and presided over its classrooms.

The mist which for a while lay so heavily over our beloved school has been dispelled by the sincere efforts of the same type of leaders that made the institution possible, and I rejoice with you and the State in the realization that the whole world may once more see the academic splendor of an institution of higher

learning, directed by executives of unquestioned integrity which truly seeks to fulfill its declared purpose of preparing its students both to face life's battles and to be true American citizens.

And I am here today also because, being privileged like you to wear our country's uniform, symbolic of service, I desire, as a sort of big brother, to congratulate and greet you who have assumed the great responsibility and duty of being prepared to answer America's call, if necessary. Hating war and loving peace, nevertheless, I felt, when the World War ended, and still feel, that devotion to country should be something more than lip service. I applied for and received a commission in the Reserve Corps of which you are likewise to be a part, convinced that America owes it to herself to be prepared, not for aggression but for protection and the maintenance of her rights, and that, despite our avowed purpose, religiously adhered to, of attempting to live as friends with all nations, we may not, in the light of history, emphasized by the contemptible, incredible, and nefarious chapter, written during the last few months, predict what attitude other nations may take.

To envelop ourselves in a nebulous veil of security because of our own devotion to and belief in principles of international fairness, and because of our seeming remoteness from sources of danger is to render ourselves impotent and to subject ourselves to the ambition of those whom love of power and possession has made mad. That great American and lover of mankind, Benjamin Franklin, summarized the wastage, the mischief, and the misery caused by war in these words: "There never was a good war or a bad peace." But that paragon of common sense also saw the other side of the picture and is credited with having emphasized this piece of sound advice, imputed to an earlier philosopher: "Love your neighbors, yet pull not down your hedges."

STRIVE FOR PEACE

Strive for peace, my friends, but do not blind yourselves to facts or allow yourselves to be blinded by even the most ardent crusader, for even a crusader may be sincerely wrong. The will for peace did not prevent the swastika from supplanting the white cross of Denmark. The hatred of war could not turn back the Nazis from the lands of the liberty-loving Dutch. My prayer, then, is that you may never be called upon to know the horror of war; my hope is that should a call ever come you will be prepared.

I have, therefore, a threefold interest in you, as the Governor of the State of Louisiana, as an alumnus of the Louisiana State University from which you will soon graduate, and as a fellow member of the Officers' Reserve Corps of the United States, and because I have this interest in you and in the several thousand young men and women that compose the Louisiana State University student body, I have the right to talk frankly and freely to you and to them.

If belief that the United States of America is the greatest of nations and that it is a privilege to be one of its citizens, to enjoy its blessings, its freedom and its bounty, to be able to participate directly in the formation of the rules by which one is governed, to have one's vote counted in the selection of those by whom one is to be governed, and to be assured that there is recourse to the courts for the protection of one's rights is mere sentimentality, then I must plead guilty to being a rank sentimentalist, even if it should be claimed that sentimentality constitutes a vice.

But, my young friends, granting, as I do, to every man the right to voice his own opinion, and admitting that no government is perfect, since it must depend on the human element with its attendant frailties and tendency to err at times, I say to you that history has never presented a more magnificent and inspiring picture of a nation devoted to the welfare of its people, to the assurance of social and political security for them, to the development of happiness, to the perpetuation of peace, national and international, and to the evolution of a true brotherhood of man than that which bears the title "United States of America," a picture made possible, not by the work of one man but of countless thousands who have been willing to add their mite, or who have been equally willing to subordinate themselves to those more capable of adding the master strokes.

It is easy for the cynic to deride patriotism, to classify any sincere attempt to re-create and review the story of a nation's accomplishments as a mere resort of hokum, but I say to you, my compatriots, that it is wise for us to have flashed upon the screens of our minds a moving picture of America, her principles, her opportunities, and her greatness, which it is our duty to maintain.

PRAYER OF THANKSGIVING

Weaknesses there are, lapses from correct ideals have occurred, enactment of measures of which many have not approved has taken place, adoption of policies that have proved fallacious has been recorded, but America epitomizes free government, with the maximum blessings that flow from such a government, and each of us may well utter, not a pharisaical prayer, expressing gratitude because we are not like others, but a solemn prayer of thanksgiving that it has been vouchsafed to us to live in this land of freedom where each has a duty to perform for the common welfare and the corresponding privilege of benefiting from the efforts of others, and where each must live within the law, but where each may carve out a future for himself, unhampered by tyranny and oppression. It is a great land: Love it and serve it, my young friends.

And what a broad field for service there is. To bear arms in the event of a conflict is only a part of an American citizen's duty. Even above this, as I see it, is the willingness to strive steadily, consistently, unselfishly, and uninterruptedly to perpetuate the freedom which was so dearly acquired for themselves and posterity by our forefathers, who, neither supermen nor demigods, but plain, determined men, with human vices and virtues, were inspired to sacrifice themselves and their gods for the establishment of a free nation. The nation which was founded was not a perfect one, but through the years earnest, sincere men have striven assiduously to improve it.

A nation's laws must be changed to meet shifting conditions, and in every emergency that has arisen America has produced leaders who were able legitimately to solve her problems through orderly changes in the laws. I do not hold with those who would stifle public discussion of our Nation's affairs and who look upon every suggestion for improvement as a manifestation of communistic tendencies. I do warn you against those who have a sugar-coated panacea for every ill, or who advocate revolutionary schemes as an easy means toward the attainment of the millennium. America is a land of law and order: It must be kept as such.

AWAKENED IN TIME

But, my friends, do not ever allow America to drift into stagnation and darkness. A superabundance of good things often develops laziness of the body and of the spirit, a willingness to allow things to drift, and a desire to bask in the light of a fickle sun. Sometimes too late men are awakened to the fact that what seemed prosperity was merely a fleeting bounty, and that darkness follows the setting of the sun. Our own State suffered from such a condition as I have described. Lulled by the glib promises of men primarily interested in serving their own ends, furnished only a part of the loaf which their own labor and means had produced, while their self-styled benefactors, who labored not, reserved the remainder for their personal uses, led away from the basic precepts of honesty and fair dealing by the degree of opulence attained by the leaders who had betrayed their trust, too many of our citizens dwelt in this deceptive and enervating atmosphere of plenty. The awakening was rude, but fortunately it came in time and Louisiana today has thrown off the shackles of lethargy which she had permitted false leaders to rivet upon her, suffering, it is true, from the chains she wore, but working and striving to remedy the harm that had been done, with a determination to see that her betrayers pay the price they owe to society.

Such an orgy as our State unfortunately experienced must never happen again. Attention to public affairs, an analysis of the actions as well as the words of those who lie to please the voters, a direct participation in the solution of the social, economic, and political problems that constantly present themselves, and a refusal to be browbeaten by self-appointed leaders are demanded of you if you are to justify the privilege you enjoy of being American citizens. Don't let your State and Nation down.

No one has the power to hold up to you the magic mirror of the future, and no one in the light of history and common sense may truthfully say that each of you will have the sole power to create the reflection that will eventually appear therein, but we know that concerted action, earnest cooperation, devotion to the common welfare, attention to public problems, subordination of personal ambition and constant vigilance on the part of its people will help to perpetuate a nation and insure to a great extent the happiness of its people. I cannot and do not tell you that all of you will be leaders, but I do wish to impress upon you that each and every one of you will count in determining your future and that of our Nation. The attitude you are to take is largely of your choosing. On you rests the decision. Your records show that you have been ready to play your part. It is my belief that your State and your Nation may safely rely upon your expectations. In the name of the State of Louisiana and in my own name I congratulate you heartily upon your accomplishment, and thank you for this early manifestation of your realization of the obligations of citizenship.

Bart B. Howard, Editorial Writer of St. Louis Post-Dispatch, Awarded Pulitzer Prize

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

SEVERAL EDITORIALS COMMENTING ON AWARD

Mr. COCHRAN. Mr. Speaker, there are many outstanding contributors to the editorial pages of our metropolitan

newspapers but none superior to Mr. Bart B. Howard, of the St. Louis Post-Dispatch.

Mr. Howard has just been recognized for distinguished editorial writing by being awarded the Pulitzer prize. The greater part of his 70 years has been devoted to newspaper work. Known throughout the country and appreciated by all who have been so fortunate as to have the privilege of reading his editorials, his friends by the hundreds have showered him with congratulations.

Mr. Speaker, under leave to extend my remarks I include several editorials commenting upon the award. They follow:

[From the Birmingham Age-Herald]

FAME—AND THE DAY'S WORK

The national fame of a Pulitzer prize comes to Bart B. Howard just as he approaches the beginning of his seventieth year. He was born May 13, 1871. And while this editorial writer for the St. Louis Post-Dispatch has borne many important responsibilities and known many rich experiences in his long life, he has not been used to national acclaim. Now, that such notice has come to him, we imagine he will feel a certain satisfaction, but will smile somewhat skeptically, wondering how soon he may return to comparative obscurity.

For, nearing 70 and a newspaperman since youth, Bart Howard, we imagine, does not overestimate fame. It is pleasant to have this tardy recognition, to be sure, but it so easily might never have come. So, for how much does this happy chance really count?

It is his work itself that has mattered through the years to Bart Howard, and it is to his work that he will continue to look for his enduring and deepest satisfactions.

A sketch of this newspaperman's career, up to this hour of glory, reveals a life that might have ended its days in the limited recognition he had hitherto known and in the anonymity of the editorial writer.

You won't find Bart Howard in the latest Who's Who. He was not even the chief of the editorial page on which he worked.

Born in New England, he was grounded in the classics at Phillips Exeter Academy and Williams College. He still follows an Exeter professor's rule of memorizing a passage from a favorite author each day.

But Bart Howard is no withdrawn scholar. He played professional baseball—a left-handed second baseman—to earn enough money to enable him to start work as a cub reporter in Schenectady, N. Y., at $6 a week. He has been a sports writer, feature writer, columnist. His interest in the contemporary is keen and universal, as his work shows.

He was editor of two papers in Joplin, Mo. He was managing editor of a paper in Columbus, Ohio. It suspended publication. He held several jobs on the old St. Louis Republic. He wrote editorials for 3 years for the Daily Oklahoman in Oklahoma City. He returned 20 years ago to St. Louis, where he has since served on the editorial page of the Post-Dispatch.

A newspaperman's career. How many others have been in outline similar to it?

And now comes this high honor. A full half of the editorial page of his paper is given to reproduction of his 4 prize-winning editorials. Bart Howard's picture is seen in papers throughout the country, probably for the first time—maybe for the only time.

But, nice as it is, all this, we suspect, does not matter so very much to Bart Howard. It is still the work that counts. On the day of the announcement of his selection for the Pulitzer award, when his paper proudly reprinted his winning editorials, his picture, and a story of his life, there was still work to be done. There was another editorial page to be got out.

Bart Howard's fame is fine and fitting. But it is, after all, his work that matters, with or without the fame.

[From the Wayne County Record, Fairfield, Ill.]

EDITORIALS THAT SPARKLE

Bart Howard, editorial writer of the St. Louis Post-Dispatch, won the annual Pulitzer award for the best newspaper editorial work. Day in and day out, the Post-Dispatch editorials truly sparkle.

Sometimes this writer thinks the Post-Dispatch editorial page is unkind, if not actually unfair, to the Democrats and their achievements and aims. Then editorials appear that make our Democratic heart proud indeed of our Bryan and Wilson teachings. So it must be, we can't help but conclude that Post-Dispatch editorials hew to the line, and it is only when a chip strikes us instead of a Republican that we do not think they are fairly written.

On other matters of public interest, on almost any subject you can name from serious international affairs to the monkeys in the St. Louis zoo, Post-Dispatch editorials contain help toward understanding, thoughtfulness, humor, kindliness, sometimes a club, but always the obvious thoughtfulness of intelligent men.

[From the Indianapolis News]

A DESERVED HONOR

As a rule, few things get stale so quickly as an editorial on international affairs. World events move at so terrifying a pace that one who writes today an analysis that will be usable tomorrow is taking chances. When one wrote a piece for the Ides of March 1939 that rang true when the Pulitzer-prize judges came to read it at the end of the year and even fits the conditions in May 1940, when the award is made, he deserves that honor, and more. The Pulitzer prize went this year to the author of such an editorial—Bart Howard, of the St. Louis Post-Dispatch.

His article of March 17, 1939, Europe's Emperor, is the editorial of the day for May 1940. As Hitler invades Belgium and the Netherlands and as his partner, Mussolini, is said to be ready to strike in the Mediterranean, few words in Howard's dirge for the Czechs would have to be changed to bring it up to date.

[From the Fort Wayne (Ind.) Journal-Gazette]

NO SURPRISE IN CHOICE

No alert American will be surprised that the award for distinguished editorial writing went to Bart Howard of the St. Louis Post-Dispatch, that Edmund Duffy, of the Baltimore Sun, copped the prize for the best cartoon, or that the Pulitzer judges cited the graft exposure campaign of the Waterbury (Conn.) Republican as outstanding among journalistic crusades.

The Pulitzer prizes not only help transform deserving products of typewriter and pen into American institutions. The Pulitzer prizes are also institutions themselves, deserving and obtaining increasing amounts of public attention from year to year.

[From the Arkansas (Little Rock) Democrat]

AMONG THE COLOSSI

When Bart B. Howard, of the St. Louis Post-Dispatch staff, was awarded the 1939 Pulitzer prize for distinguished editorial writing, one of the ablest editorial writers in the Nation finally was given the public recognition he has so long deserved.

Not that he has not been appreciated by readers of the Post-Dispatch, but, because editorial writers have their say anonymously, as individuals, they receive no public recognition. Nor do they ask it. Their award is in doing their daily chore without violation of their conscience. Bart Howard was so inspired.

So far as his ability as a writer is concerned, every editorial writer in the Nation who has read his editorials, has recognized that he has that which most of them envy—the ability, or you may call it genius, of being at all times "human." Whether Howard is writing about economic questions involving dollars or on the glories of the Ozarks, he makes his subject readable. A dogwood blossom is as appealing to Howard as an editorial subject as were the iniquities of the Pendergast gang in Kansas City.

If true tribute is to be paid to Bart Howard, he should be compared with such recognized colossi as William Allen White, who has received the public recognition which heretofore has not been given Mr. Howard. He has truly taken up the torch of the early Pulitzer tradition.

LITERATURE AS A DAILY STINT

(Walter M. Harrison, in Oklahoma City Times)

When Bart Howard was voted the Pulitzer award for consistently outstanding work as an editorial writer, I was just about as proud as if a member of our own staff had won the guerdon.

Howard is a graduate from the staff of the Daily Oklahoman; hence, it is fair to claim an interest in him, although he has been on the editorial page of the St. Louis Post-Dispatch for the last 20 years. It was a shock to me to realize that Bart is getting on toward the 70-year mark, but when I recall that he was touched with gray when he came down with us from Joplin, Mo., in 1918, is follows brutally that he is older now.

Those were the days of the black-out ball at the statehouse, Governor Robertson's $50,000,000 bond issue, the red war's flare, and the bitter Gore-Ferris campaign. Through tragedy and comedy, politics and piffle, Howard limned his way with an inspired pen that made the columns of the editorial page of the Daily Oklahoman glitter with a luster that lured him to larger fields. His move from Oklahoma City to St. Louis was his last one.

Generally, the Pulitzer award for editorial writing has gone to the author of one bell-ringing editorial. Howard often has had consideration in that field. This award is won for day-in-and-day-out delivery, for consistent excellence. Many anonymous scholars on the editorial side occasionally turn out an epic, but few type literature as a daily stint.

Howard has a marvelous versatility. A leader on Pendergast will sting like an adder and hit with a bludgeon today, and tomorrow that same mind will fashion a satirical whimsey on Dizzy Dean or sweet cornbread that makes the lay reader wish to know who wrote it.

The only signs of age in his work are elements of profound knowledge. His métier is as fresh and breezy on occasion as that of a sophomore. This prize is a grand gesture to a nobleman of the newspaper profession, and I think the Pulitzer board honored itself as much as Howard was honored in the selection.

[From the Denison (Tex.) Herald]

A NATIONAL REPUTATION

Bart Howard, who won the prize for distinguished editorial writing, is a member of the staff of the St. Louis Post-Dispatch. His attacks upon graft in that city and in Kansas City have won him

a national reputation during the past year. And, of course, his editorials have brought the wrath of the politicians down upon his head.

The Pulitzer awards are not large, but they are given only in recognition of outstanding service rendered during the year. For this reason the Pulitzer awards are more coveted and more appreciated than many prizes that carry with them larger honorariums.

Who Is Playing Politics?

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

Mr. MUNDT. Mr. Speaker, there recently appeared in the Daily Argus Leader, of Sioux Falls, S. Dak., a straightforward and significant editorial written by Mr. Fred C. Christopherson of that newspaper. That editorial was entitled "Who Is Playing Politics?", and I have secured consent of the House to include it as a part of these remarks. I commend it to the reading of every Member of the House and Senate.

Inasmuch as I was among those who hoped and believed that the President would use the occasion of his fireside speech last night to assure America that he had no intention of using the present European situation for partisan purposes in promoting a third term for himself, I have withheld reprinting this editorial until after the President's Sunday night radio speech. Unfortunately for the welfare of this country and the solidarity which should be manifest in our determination to develop an impregnable program of national defense, the President did more to confirm than he did to contradict his third-term aspirations in that speech.

His description of the "iffy" national defense—if we had it and if we had it paid for—which is presently America's quoted many interesting statistics about the equipment which we have "on hand or under order" but it left entirely unanswered the legitimate question which Democrats and Republicans alike are now pointedly asking about his own political ambitions. Americans, generally, want to prevent any invasion of one-man government from abroad and with equal unanimity they want to avoid any ascendancy of one-man government from within. The President's description of our existing national defense, in terms of its ability to offset the machines and methods of modern warfare, was very disheartening because as an editorial in today's issue of the Washington News says:

> He lumped weapons on hand with weapons under order, whereas there is a real difference between a loaded gun in your hand and a picture in the catalog. The Army and Navy usually have to wait a year or more to get deliveries on their orders.

His speech also failed to meet the major issues of the day head-on.

This is a time for national unity of purpose in defending the blessings of democracy in the United States. That there is unity of purpose in Congress to that end was demonstrated Friday when every Republican in the House joined with every Republican in the Senate in voting in favor of the new defense appropriations. The discord and disunity which seem likely to imperil rapid progress in modernizing our national defenses does not exist between the two major parties in the Senate and the House—it exists, rather, between those who would use a world crisis as a cloak to disguise a third-term drive and those who feel that now, as never before, America should be assured that the President will not permit personal ambitions to disrupt hallowed American traditions of self-government. The President alone can remove that cause for disunity and discord. He can do it in five words wherein he could say, "I will not run again." He could have done it in a third of the time he took explaining to Alf Landon why he was too busy to answer the question about his third-term intentions. The following editorial states the case clearly:

[From the Sioux Falls (S. Dak.) Daily Argus Leader]

WHO IS PLAYING POLITICS?

Something highly to be desired by those in office in Washington now is the development of a national psychology in which criticism of the President would be regarded as out of place.

Those who are interested in this objective are making constant pleas for national unity, for a coalition government, and the sidetracking of what they term politics.

Credit must be given to Alfred M. Landon, the Republican candidate for the Presidency in 1936, for bringing this subject out into the open for dissection and analysis.

In a statement to reporters in Washington, following a luncheon with President Roosevelt at the White House, Landon said that Republican leaders could not at present enter into any coalition arrangement without making themselves a party to the third-term movement—a movement which he said was not compatible with the basic principles of a democracy.

Shortly thereafter a statement came from the White House. It said: "The President regrets that he has no time, just now, to give to the preparation of political statements. He is too busily engaged with problems of far greater importance."

The President's statement is vapid and evasive. In less time than it takes to light a cigarette, the President could say "Yes" or "No" to a third-term inquiry.

But, obviously, it doesn't serve his purposes, whatever they may be, to express himself on that point now. So he takes refuge in the dodge that he is too busy, and at the same time he seeks to create the impression that there is something impertinent and low about the presentation of the topic.

The President's reply to Landon was cheap. It was tawdry as well. It was, as a matter of fact, political in the worst sense. He is eager to push the minds of the people away from the third term and the national elections just now. Landon, however, believes that in this democratic Nation our elections are important and that the issues involved should be subjected to a frank discussion.

SENATOR TAFT'S UNANSWERED CHALLENGE

Mr. Speaker, because the following quotation from Senator BOB TAFT'S recent address in St. Louis, Mo., is in such close harmony with the sentiment expressed in the preceding editorial, I am citing it here for the further consideration of the Members of this House at this time. BOB TAFT on May 20 had this to say:

> The Republicans are accused of partisanship when they criticize the foreign policy of the President. If there could be any course more selfishly partisan than that which seeks to use a great world crisis to boost a third term, I don't know what it could be.

Members of the House, do you?

Dead Sea Apples

REMARKS
OF
HON. STEPHEN BOLLES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. BOLLES. Mr. Speaker, many years ago as a reporter in Cleveland, Ohio, I attended a meeting of anarchists. Among the other things stated was this sentence uttered by a man named Gorsuch, "What this party wants, what we desire, is a land without law, without government, and without God." That sentence has stuck in my mind ever since in connection with this recrudescence of atheism as fathered and fostered by the successor to the anarchist party, the Communist Party.

In the audience that evening was a young woman. A few days ago she, a dumpy, fat old lady, died in Toronto, Ontario, an expatriate from her own country, a participant in many, many activities subversive to the United States Government. Having taken up her residence in Russia, she found that the utopia she had sought was simply Dead Sea apples in her hands. [Applause.]

That was Emma Goldman, for 20 years the chief anarchist of the United States, militant evangelist of the anarchs, with preachments that spawned a Berkman who shot Henry C. Frick; the woman who stirred the addled brain of

Czolgosz, assassin of President McKinley; the woman who finally went to prison and later landed in Russia only to discover that the beautiful Communist utopia of her dreams was a sordid, vicious, selfish world and a bitter disillusionment. When she saw the fingers of her Communist heroes dripping with the blood of thousands who had objected, she turned to longing for America and the little house on St. Joseph's Street in Rochester, N. Y., only to die in unmolested frustration.

She had been wrong in vision; she had seen only its distortions. The mirage had turned out to be an enveloping desert even as all persons today, seeking to overthrow this America, will find themselves at the end of the road, standing on the brink of the chasm of unrealized hope.

Keep America Out of Europe and Europe Out of America

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

RADIO SPEECH OF HON. HAMILTON FISH, OVER THE COLUMBIA BROADCASTING SYSTEM, SUNDAY, MAY 26, 1940

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio speech delivered by me over the Columbia Broadcasting System, Sunday evening, May 26:

It has been rumored around Washington for the past 2 days that President Roosevelt will, in his fireside chat tonight, renounce any ambitions he may have to seek a third term for himself, in the interest of the Nation and in order to remove politics from the national-defense program.

If these rumors are correct, it will be to the lasting credit of the President. He has an opportunity tonight such as few men have had in the history of our country to render a patriotic service to the Nation, by definitely disclaiming any ambitions to make this a one-man Government patterned after the Old World totalitarian systems.

This is no time for toying with the destiny of 130,000,000 Americans or with American traditions and democratic institutions.

I shall stress national defense tonight, as it is uppermost in the minds of the people, and defer presenting a detailed Republican peace program until June 22 over the N. B. C., although I will outline general principles.

The Congress of the United States, representing the will of the American people and confronted as they are by a world ablaze with war and destruction, is determined to appropriate every dollar necessary for adequate national defense, but not one dollar to send American soldiers to fight and die on foreign battlefields.

The Congress will within the next few days appropriate billions of dollars to defend our shores and make America invincible from any foreign attack. It is the will of Congress that these huge sums of the people's money should be for purposes of defense and not for aggression. The Congress should stay in session during the existing emergency.

The Republicans in Congress will stand as a unit for preparedness and peace, and for keeping America out of all foreign wars unless attacked.

There is something rotten about the state of our national defense. The Congress has appropriated $7,000,000,000 since 1933; what has happened to it? Judging from results, some of it must have gone down the proverbial rat hole.

President Roosevelt, the Commander in Chief of our armed forces, is largely responsible for the deplorable condition of our Army and its lack of modern weapons, for deficiencies that exist in our reserve supplies, and for the small number of trained air pilots in both the Army and the Navy. We should train 10,000 pilots immediately for both the Army and Navy Air Corps. It may take 2 years to equip and qualify them as combat pilots.

Just why President Roosevelt should be given credit for his belated efforts as Commander in Chief to provide adequate national defense is beyond human comprehension. He has failed with national defense as he has with our other vital problems of industry, employment, agriculture, and prosperity.

Instead of being commended, President Roosevelt should be condemned for failure to safeguard the interests of the Nation by providing proper equipment for our Army and air force.

I specifically exempt the President and the Congress from any blame as to the size or efficiency of our Navy. Many of our citizens, due to the vast amount of war propaganda, are in a state of jitters and fail to realize that we have the greatest and most powerful Navy in the world and intend to keep it so. I repeat, without fear of valid contradiction, that we already have as our first line of defense the best Navy in ships and personnel.

Any navy or combination of navies would have to be three times as powerful as ours to even come over to attack us, as modern navies lose 20 percent of their efficiency every thousand miles from their base. Today our Navy is six times as big as the German Navy and growing larger every day as German and English warships are sunk or destroyed. If the war continues, our Navy will soon be larger than the British and German Navies combined.

We are not next-door neighbors to Germany, like Denmark, Holland, Belgium, or France, but over 3,000 miles away, and no German airplane has been invented that could bomb our cities and get back to its base.

Fostered by the White House and the interventionists, a war hysteria is sweeping the United States, which is as insane as was the Salem witchcraft. How mad it is to instill fear in the hearts and minds of the American people about Germany attacking us, when it has practically no navy, nor could its airplanes bomb American cities. Germany is within 300 miles of London and 200 miles of Paris, yet is desperately trying to shorten this distance in order to use its air fleets effectively against British and French seaports and Paris and London.

While Europe is in the midst of a "blitzkrieg," we in America are in the midst of a "hysteria krieg," or war hysteria, aided and abetted by President Roosevelt and many well-known columnists and eastern newspapers, including the New York Times and Herald Tribune. The American people are nervous and jittery, and afraid of an invasion of the United States by some foreign foe, all because of the constant spread of inspired propaganda, hysteria, and warmongering by the interventionists who want us to police and quarantine the world with American blood and treasure.

Any American who dares to expose the false and vicious interventionist propaganda and hysteria, like Col. Charles Lindbergh, is denounced as being either pro-Nazi or as being un-American and part of a "fifth column."

Colonel Lindbergh rendered a great service to the American people when he said, "Let us stop this hysterical chatter of calamity and invasion that has been running rife these last few days. * * * The only reason we are in danger of becoming involved in this war is because there are powerful elements in America who desire us to take part. They represent a small minority of the American people, but they control much of the machinery of influence and propaganda. They seize every opportunity to push us closer to the edge."

Never were truer words spoken. Every poll shows that 95 percent of the American people insist on staying out of foreign wars, but the 5 percent of interventionists are using every possible means to inflame the passions of our people, incite fear of invasion, and generally promote war hysteria in order to break down the will of our people for peace and against participation in foreign wars.

When Colonel Lindbergh publicly stated a year ago that the Soviet aviation was inefficient, and that the German airplanes were the best in the world, he was derided as being pro-Nazi. Everyone knows now that he knew what he was talking about, but his warning was not taken to heart.

Senator BYRNES assailed Lindbergh for daring to express his views. The pity of it is that there are not more Lindberghs to tell the truth to our people before we are eased into another foreign war. Who knows more about aviation, Lindbergh or his critics, including Senator BYRNES, of South Carolina?

The American people are entitled to hear from such aviation experts as Lindbergh. I believe in the fullest freedom of speech and that all phases of national defense and keeping out of war should be presented to the people over the radio. We are not yet a totalitarian state, and I hope we will never be.

The best assurance against a dictatorial government is to tell the people the truth, and, as Lincoln said, the country will be safe.

It is utterly un-American and undemocratic to impugn the motives or question the patriotism of American citizens such as Lindbergh with whom administration supporters may disagree. He proved he was right about German and Russian aviation, and he may be right as regards our own.

We want no Trojan horses of war in America, or that war is inevitable. The Trojan horses of communism and nazi-ism require investigation and constant vigilance, but they are as nothing to the dangers and menace of the Trojan horse of the internationalists and interventionists, who, by intrigue and secret diplomacy, would involve us in war.

We know about the Trojan horse of Woodrow Wilson. We should beware of the Trojan horse of Franklin D. Roosevelt. It is a far more powerful and destructive horse than that of the Communists and Nazis. The modern American Trojan horse is a war horse in disguise. We are even now being jockeyed into the bloody shambles of war under the pretext of making the world safe for democracy, when even England has entered the ranks of dictatorial nations.

Why not try to establish air bases in Latin America, as suggested by Colonel Lindbergh, for a united defense of the American Continent? I go even further and urge the cancelation of the war debts owed to us by Great Britain and the payment of substantial sums of our idle gold to her in return for Bermuda, Nassau, Jamaica, and all her islands and possessions in the Caribbean Sea. They are of no particular advantage to her and would be useful to us as air and submarine bases for defense of our coasts.

These islands are off our shores and within our sphere of influence, and should belong to us. The sooner we take proper steps to bring this about the better it will be for Great Britain and ourselves. Neither Canada, the United States, nor Latin America would want these islands to fall into the hands of another European power.

We should likewise purchase Greenland from the Danes, Curacao from the Dutch, and Guadeloupe and Martinique from the French. I have urged the acquisition of all these islands and European possessions for 15 years in the Congress, and believe the time is propitious for favorable action.

I want to go on record for giving Secretary Ickes $1,000,000 to erect a tin smelter on our eastern seaboard in order to refine tin ore from Bolivia. The only smelters are in England and Holland, and they have a virtual monopoly which might be serious under war conditions. I also favor appropriating $1,000,000 to be turned over to Secretary of Agriculture Wallace to ascertain the best lands in Latin America to grow rubber for commercial use. We are now dependent on the East Indies for our rubber. Both of these proposals are in the interest of national defense, and would provide more jobs for American citizens.

As one who approved of the President's appeal to prevent the bombing of civilians and nonmilitary objectives, I can understand why so many Americans were horrified when he stated at a press conference this week that the Germans were "bombing some three to five million fleeing old men, women, and children" in northern France. The charge, coming from the President of the United States, if true, calls for the strongest kind of official protest to Germany and to all nations. The bombing of defenseless cities and the slaughter of women and children is a crime against humanity and civilization. But if the charge is false and made for propaganda purposes in order to add fuel to the flames of war hysteria, then he should be publicly rebuked as an interventionist and warmonger.

Let us always remember in these dark and trying times that if there is any country worth living in, it is the United States of America. We propose at all costs to maintain our democratic institutions and our constitutional form of government against both our enemies from within and from without. We must not tolerate or compromise with disloyalty or subversive activities anywhere within our own country.

The Congress should pass my bill prohibiting the arming, drilling, and uniforming of un-American groups, such as Communists, bundists, and curb the activities of the "fifth columns" by making America safe for Americans. "Fifth column" alien agitators, Communists, and Nazis should be deported immediately.

Let us stop bluffing and get on with our defense program to make America so powerful that no nation or combination of nations will dare to make war on us.

Theodore Roosevelt used to say "speak softly, but carry a big stick." Franklin D. Roosevelt bluffs and threatens but has carried only a twig or a splinter which has been no more effective than Chamberlain's umbrella.

The Republican Party must stand for preparedness, peace, and prosperity. We have had none of them under the New Deal. The Republican Party must adopt a peace or antiwar plank into its platform at the Philadelphia Convention next month. If the Republican Party will take the war issue to the people of keeping out of European and foreign wars and keeping Europe out of America it will sweep the Nation.

If, however, it compromises on American neutrality, intervention, and our traditional foreign policies of no entangling alliances, it will fail in its duty to present to the American people a clear-cut referendum on the greatest of all American issues—keeping out of foreign wars.

The President should remember that although the American people are 90 percent in favor of the Allies, they are 95 percent against having their sons plowed under on foreign battlefields. They know that our participation means the black-out of American liberties and our free institutions, the creation of a dictatorship as bad as the Nazis or Communists, and debts, taxes, and virtual bankruptcy.

Let us put an end to war hysteria and war talk and make America invincible from attack on land, sea, or air.

The National Defense

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

ADDRESS OF HON. JOHN M. VORYS OF OHIO

Mr. CLEVENGER. Mr. Speaker, the President in his fireside alibi last night tried to minimize the deficiencies in the defense which he has procured for our country with the billions voted for the purpose by listing arms on order as if they were on hand. He fails to explain away the deficiencies we in Congress have recently discovered. These deficiencies are pointed out in the speech of Representative JOHN M. VORYS, speaking before the second annual convention of the War Veterans' Republican Club of Ohio Saturday night, May 25, at Memorial Hall, Columbus, Ohio:

In this crucial time in world affairs our enemies are indifference, hysteria, and politics. Our slogan must be, "Wake up, America; keep your shirt on, America; put patriotism above partisanship."

The President is Commander in Chief of our Army and Navy and has sole responsibility under our Constitution for the conduct of foreign affairs. National defense and foreign affairs are highly technical subjects, involving much that is confidential and secret. The War, Navy, and State Departments are the only branches of our Government who can say to the people and to Congress, "We know but we won't tell; it's a state secret, a military secret." The President can conceal foreign or military information saying, "It's too secret—you might tell," or "It's too technical—you wouldn't understand."

To find out where we are going on foreign affairs and national defense, let's find out where we are and how we got there.

Both Hitler and Roosevelt came into power in 1933. Since then the President has controlled the Army, Navy, and State Departments. Every Budget request, every appropriation has been controlled by him and his party. We have spent seven billion eight hundred million for national defense, and the President has had two blank checks for relief and recovery of three billion three hundred million and four billion eight hundred million which were available for national defense. What have we gotten? We are told—

First. We have the best navy in the world.

Second. We have a reorganized, streamlined Army under a great Chief of Staff, General Marshall.

Third. We have the best bomb sight in the world.

Fourth. We have the best antiaircraft gun in the world.

Fifth. We have airplanes whose performance is the best in the world.

In 1937, the President made his speech about quarantining aggressors. In January 1939, he made his measure-short-of-war speech. In September 1939, when war came and he called a special session to deal with conditions created by the war, we received no message as to national-defense needs, although the military and naval affairs committees were idle for weeks during the neutrality debate. In January 1940, we received a national-defense budget which we had a right to assume was adequate. On May 16, 1940, we received the emergency national-defense message asking for a billion dollars for 50,000 planes and saying the situation had changed since September.

Upon reviewing our national defense, we find:

First. We were building destroyers that were top-heavy and our fleet must be remodeled to resist aerial warfare.

Second. We have about 500 up-to-date naval planes, only 192 less than a year old.

Third. We have 1,500 Army combat planes of which only 58 are said to be reliably up to date.

Fourth. We have 28 light and medium tanks—no heavy tanks. Both sides have lost more tanks than we have, in the last few days in a single raid.

Fifth. In antiaircraft guns we have fifteen 37-mm. and need immediately 1,423. We have no 90 mm. guns and need 317.

Sixth. In artillery we have no 105-mm. or 8-inch Howitzers and no 8-inch railway guns.

Seventh. We have no private powder plants in the United States and no factories to load shells.

Eighth. Our national debt is so high and our cash is so low that we cannot legally buy the arms that we need and additional taxes or debts will seriously affect our economy.

I feel we have a right to say to the President, "Why didn't you tell us about this before? In January? Last September?" We are told that it wouldn't have been popular to do so. What we need is leadership that will tell us what we need to know, not what we want to hear. After we have been told, the responsibility is ours. Until we have been told, the responsibility lies on him who has technical or secret information he refuses to divulge for fear it would be unpopular. The Commander in Chief of our Army and Navy has failed in his duty.

We now find that if we carry out the President's defense message, we won't have 50,000 planes but 1,400; that to build and operate 50,000 planes will cost possibly $7,000,000,000, and that we don't need 50,000 planes anyhow.

Teddy Roosevelt used to say, "Speak softly but carry a big stick." We find that Franklin D. Roosevelt's policy is, "Talk big and carry a switch."

What lies ahead of us? Many factors are uncertain and confused but certain things seem clear:

First. It will take us, not months but years, to build the national defense we need.

Second. We couldn't give effective military aid to the allies in the present crisis if we wanted to.

Third. We are in no immediate danger of invasion, no matter what happens in Europe.

Fourth. Our real national-defense problem is industrial and financial. Soldiers and politicians are not much good at organizing or running industry, but the President has so far refused to let industrial defense get out of the clutches of the New Deal.

Up to date the Navy Department has no head, its Secretary having resigned to run for Governor in New Jersey. Woodring, Secretary of War, is reported not on speaking terms with his assistant, Louis Johnson; is known in the New Deal and throughout the country as a "weak sister" or worse. Morgenthau, Secretary of the Treasury, during our years of frenzied finance, has been put in charge of airplane production. The President, from the air-mail cancelation down through the C. A. A. transfer and up to the publicity meeting last Monday, has shown a consistent desire for personal and political domination of our aircraft industry.

The New Deal has shown by its action in the past few days that by coalition they don't mean teamwork but single-party government. They consider criticism is treason and are determined to use national defense as a slogan to silence all New Deal criticism.

In this situation we should profit by the experience of France and England, two democracies which are tottering because the oppcsition remained silent too long while the Government pursued a fatally wrong course. If the opposition in France and England had spoken effectively before war came, they would not have been forced to change leadership during the war.

We have a subtle and difficult problem to contend with in combating the "fifth column." We must keep the F. B. I. and the Dies committee on the job. On the other hand, we must watch their activities unceasingly and we must beware of the activities of amateur and self-appointed spy hunters. Again we must avoid either indifference, hysteria, or politics. We want to suppress spies, Nazis and Communists, but we must be everlastingly careful to avoid saying that everyone who disagrees with us is a member of the "fifth column."

In a modern nation national defense is not merely a matter of appropriations, but a way of life, a form of organization of the country's resources. I think we can do this in America without sacrificing our form of government, but it will involve intelligence and patriotism and self-control and self-sacrifice. Already selfish swarms are descending on Washington, seeking jobs and contracts, peddling lands, materials, factories. We can't afford to do this in the good old-fashioned way that characterized the Civil War and the World War. We dare not let national defense become New Deal patronage. This time there must be no slackers and no profiteers. National defense should not be a New Deal proposal or a Republican issue, but an American achievement if we are to have peace.

Rules and Regulations of Federal Communications Commission

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

REPORT BY THE COMMISSION

Mr. HILL. Mr. President, on the 29th day of February last the Federal Communications Commission issued certain revised rules and regulations governing television broadcast stations. Subsequently, on April 8, the Commission held hearings on the revised rules and regulations. The hearings have been completed. Today the Federal Communications Commission made its report as a result of the hearings on the revised rules and regulations. I ask unanimous consent to have printed in the Appendix of the RECORD the report of the Commission. The report is the unanimous report of the Commission.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

[Federal Communications Commission. In the Matter of Order No. 65, Setting Television Rules and Regulations for Further Hearing. Docket No. 5806. Report, May 23, 1940]

By the Commission:

On April 8, 1940, a hearing was begun by the Commission to obtain information relative to certain problems connected with television broadcasting which had arisen subsequent to the promulgation by the Commission on February 29, 1940, of its revised rules and regulations governing television broadcast stations. The issues which are at this time presented for Commission determination are those involved in that hearing. In the main they involve questions as to the wisdom (1) of selecting and setting at this time a single uniform system of standards for television transmitting equipment and (2) of continuing television broadcast licenses on an experimental as distinguished from a commercial basis. These issues can be adequately considered only against the broader background of the Commission's functions in relation to the development of television.

The Commission, in addition to being charged with the duty of licensing radio transmission stations, has the obligation to promote experimentation in radio, encourage its wider use and "regulate the kind of apparatus to be used" by sound and television stations. Those powers are set forth in section 303 of the Communications Act which provides:

"The Commission, from time to time as public interest requires, shall—

"Study new uses for radio, provide for experimental uses of frequencies, and generally encourage the larger and more effective use of radio in the public interest; * * *

"Regulate the kind of apparatus to be used with respect to its external effects and the purity and sharpness of the emissions from each station and from the apparatus therein; * * *.

"Make such regulations not inconsistent with law as it may deem necessary to carry out the provisions of this act."

No party to the proceeding has challenged the Commission's jurisdiction in this matter. On the contrary, Manton Davis, general counsel of the Radio Corporation of America, the chief protestant of the action of the Commission, conceded its jurisdiction by the following statement at the April hearing:

"Most certainly we do not challenge the jurisdiction of the Commission to fix any standards with respect to transmission of broadcasting, television, or any other transmission signals. Moreover, we do not challenge the jurisdiction of the Commission to make any investigations or to collect or correlate any facts that might be helpful to them in that endeavor."

From the duty to regulate the kind of apparatus to be used by broadcasting stations stems the duty to fix the transmission standards of such stations. Transmission standards may be simply defined as engineering rules governing the characteristics of the radio signal transmitted by the operation of radio apparatus. Such standards as a practical matter must require a fair degree of efficiency and assure to the public in basic outline a single uniform system of broadcasting which will enable every transmitting station to serve every receiver within its range.

In its regulation of television in the public interest the Commission, in the light of the evidence before it, has set as its goal unfettered technical development and engineering advance. In dealing with the problem of setting television-transmission standards the Commission has therefore sought to avoid action which would freeze the state of the art at an unsatisfactory level of performance. As a necessary corollary, it has sought to avoid action which might result in the freezing of standards by the industry itself. Hence, as evidence bearing on the issues at the hearing, the Commission has considered the effect which a widespread distribution to the public of television-receiving equipment currently available will have on the future improvement of television-transmitting systems.

PREVIOUS COMMISSION ACTION WITH REGARD TO TELEVISION

The art of television has been under development for more than a decade. During this time the Commission has issued a number of licenses for experimental purposes looking toward the development of the science to the point where the Commission could be reasonably assured of television's readiness for a competitive public service upon a sound technical basis and upon a single uniform system.

Throughout this period the Commission has carefully observed and studied television's technical advancement and problems and has kept abreast of engineering developments in the field. On September 10, 1938, there was submitted for the Commission's consideration a proposed set of television-transmission engineering standards which had been adopted by the Radio Manufacturers' Association, a trade association of radio manufacturers.

On January 3, 1939, the Commission appointed a committee, consisting of Commissioners Craven, Brown, and Case, known as the Television Committee, which was charged with the duty of investigating and submitting recommendations with regard to the fixing of television broadcasting standards by the Commission and the disposition of a number of pending applications for television experimental licenses.

In order to secure information as to the nature of the proposed standards, and the effect of such standards upon the future development of television as a service in the interest of the public, the Television Committee met with representatives of the industry, visited various television laboratories, and conferred with several organizations concerned with the development of television from both the manufacturing and operating standpoint. The results of the committee's studies were embodied in a public report dated May 22, 1939, in which particular emphasis was laid upon the vital questions of public interest which were inherently connected with the Commission's duty to prescribe uniform transmission standards in the television broadcasting field. The bearing of the peculiar "lock and key" relationship between television transmitter and receiver upon the Commission's duty to set uniform transmission standards was sharply manifested in these words:

"However, a serious question of public interest would arise in the future if the Commission should specify external transmitter performance capabilities differing from the operating capabilities of receivers in the hands of the public. This is because of the re-

sultant possibility that the public's receivers would be incapable of receiving programs emanating from transmitters licensed by the Commission."

The committee's studies disclosed that technical advancement of the art had not progressed to the point where it would be in the public interest to adopt any transmission standards for television broadcasting. In the light of the demonstrated fluidity of the art and its current movement toward a higher level of efficiency, it was recognized that the acceptance of any fixed set of standards would entail the undesirable consequences of checking or retarding meritorious research. It was, therefore, the committee's recommendation that pending further studies upon the progress of television experimentation and research, no standards be adopted by the Commission.

On November 15, 1939, a second report submitted to the Commission by its television committee was made public. In this report the committee noted that certain progress had been achieved in television experimentation since the date of its previous report. It was felt by the committee that, although the television industry had not advanced beyond the experimental stage, it had arrived at the point where more rapid progress could be expected by the licensing of a class of station to render sponsored programs to the public on a limited basis. A revision of the Commission's rules to make this proposal effective was recommended. It was the conviction of Commissioners Craven, Brown, and Case, in making this recommendation, however, that the development of television was still in a rapid state of flux and the committee asserted that therefore—

"No interests should be permitted to raise public hopes falsely nor to encourage public investments where the state of scientific or economic development leaves any doubt that such hopes and expenditures are justified for the use of the public property in the radio spectrum."

On December 22, 1939, the entire Commission tentatively adopted the rules recommended in this second report of the television committee, with minor modifications, and on the same date all interested parties desiring to be heard with respect to these proposed rules were invited to participate in a public hearing on January 15, 1940, before the Commission.

Pursuant to the Commission's invitation leading concerns engaged in experimentation and research in the television field appeared and gave evidence upon the matters under investigation. Included among the parties who submitted evidence at this hearing were the Radio Corporation of America, a company engaged in the development, production, and sale of radio and television transmitting and receiving apparatus and the licensing of such production pursuant to its patents, and in conducting sound and television broadcasting through its wholly owned subsidiary, the National Broadcasting Co.; Philco Radio and Television Corporation, a company engaged in the development and production of radio and television receiving apparatus and in the operation of an experimental television broadcast station in Philadelphia, Pa.; Allen B. DuMont Laboratories, Inc., a company engaged in the development and production of television apparatus, and in television broadcasting; Farnsworth Television and Radio Corporation, a radio and television manufacturing organization; Zenith Radio Corporation, a manufacturer of radio and television apparatus; Columbia Broadcasting System, Inc., and Don Lee Broadcasting system, broadcasting concerns in the radio and television fields; and numerous other manufacturers and broadcasters in the radio and television fields.

The January hearing extended over a period of 8 days. The voluminous evidence presented by the parties included an expression of the views of different members of the industry with respect to the Commission's proposed rules, and extensive testimony of the industry's leading television engineers concerning the technical status of the television art, and the desirability of the adoption of television-transmission standards by the Commission.

DIFFERENCES OF ENGINEERING OPINION WITHIN THE INDUSTRY

The hearing revealed a serious conflict of engineering opinion upon the question of standards among the representatives of various responsible elements in the industry engaged in important research and experimental work in the television field. Dissatisfaction with standards which had been submitted by the R. M. A. on September 10, 1938, was expressed by Zenith Radio Corporation, and also by the Allen B. DuMont Laboratories, and the Philco Radio and Television Corporation who were engaged in research on alternative proposals for which marked advantages were claimed. Defense of the R. M. A. standards was assumed chiefly by the Radio Corporation of America and the Farnsworth Television and Radio Corporation, who claimed superiorities for the R. M. A. system over other known alternatives. It is important to note that both DuMont and R. C. A. hold patents covering the proposals which they respectively supported.

In order to make clear the nature of the controversy within the industry a brief explanation of the basic television methods employed and of the terms used is necessary. A complete scene cannot be transmitted instantaneously by presently developed television methods. Therefore, it is necessary to transmit the picture by small successive elements, in a manner comparable to the eye reading the printed page of a book. This procedure of breaking the scene down is begun at the television camera by a process known as scanning. The picture at the receiver is made up of a single dot, caused by a stream of electrons, moving very quickly and continuously across the screen to form lines. The entire process is so rapid that the resultant mosaic is perceived as a complete picture because the eye retains or carries over the original impression caused by each position of the dot.

Increasing the number of elements and scanning lines in the television picture increases the detail and distinctness. The detail capability of the television system is therefore in part dependent upon the number of lines transmitted.

The "memory" of the human eye is, however, limited and therefore it is necessary to scan each scene completely in a fractional part of a second and in rapid repetition in order that the eye may perceive the series of individual pictures as a single, continuous, flickerless picture with continuous motion. The rate at which the complete scanning of a scene is accomplished is called the frame frequency, and means merely the number of times the complete scene is scanned per second. If the frame frequency is too low, the reproduced picture will have flicker and the motion will be jerky; if the number of lines is too small, the picture lacks clarity and detail. In general, it may be said that an increase in the number of lines can be made within a given band width of frequencies only by reducing the frame frequency.

Two of the important television problems outstanding are to develop (a) a better picture with more detail and greater clarity and (b) a larger picture. If the screen is enlarged with a given frame and line frequency, the quality of detail and clarity diminishes. An increase in the number of scanning lines is the only known method of satisfactorily accomplishing either of the desired ends. This could be most easily accomplished by increasing the band width of frequencies employed by each station. Each of such stations, however, already requires a large segment of the radio spectrum, a band of 6,000 kilocycles, which is 600 times the width of that necessary for a standard broadcast station. The number of radio frequencies being severely limited, it is regarded as essential to explore all possibilities of improving performance within the present 6,000 kilocycle band assigned. Since within any given channel an increase in the number of lines entails a lower frame frequency—fewer pictures per second—the problem of flicker and jerky motion is raised.

Considerable research has been carried on in recent years to accomplish a lowering of frame frequency without injury to the quality of the picture. Screens with "memory," or a chemically retentive quality, have been developed to a substantial but not to a satisfactory degree. Progress has been made, but no one yet claims the answer.

In the transmission of the picture units, it is essential that the receiver follow the scanning process at the transmitter so that the picture elements reproduced will have the same relative position. In order to keep the receiver locked to the transmitter, it is necessary for the transmitter to transmit keying or synchronizing radio signals in order to maintain the relationship of the transmitted picture units. These signals are known as synchronizing pulses and enable the receiver to be synchronized with the transmitter. In the development of television, a number of different pulses have been under study. It is the synchronizing pulse which is the foundation of the lock-and-key relationship between television transmitter and receiver.

The dispute brought into light at the January hearing centered mainly around proposals regarding frame frequencies, numbers of lines, and the character of the synchronizing pulse of transmission. A further difference of opinion involves polarization and is related to the type of antenna to be used.

Upon the question of frame and line frequencies, the R. M. A. proposal of a frequency of a fixed system of 30 frames per second and 441 lines per frame was attacked upon the grounds that it does not permit of sufficient picture detail, that pictures so produced are unsatisfactory for public use, that the development of larger pictures is precluded by such a standard, and that the scheme lacks flexibility. Alternate proposals suggested by the critics of this proposed standard involved (1) a flexible frame frequency range of from 15 frames to 30 frames and a range of between 441 lines and 800 lines per frame, and (2) a frequency of 24 frames per second with 500 lines or more per frame. Proponents of the R. M. A. proposals on this question characterized the foregoing alternatives as unsatisfactory for the reason that low-frame frequencies create the problem of flicker and smear in reproduction. It was admitted, however, that an increased number of lines produces more desirable picture detail but that an increase in the number of lines to as much as 625 lines necessarily requires reduction in the number of frames to 15 per second with its concomitant problem of flicker and smear. The admitted advantages of increased number of lines and testimony to the effect that further research was in progress toward the development of retentive screens designed to eliminate objectionable flicker and smear, indicated the desirability that the fixing of standards should await the results of such research.

Upon the question of synchronizing pulses DuMont contended that the RMA pulse would not permit automatic reception by receivers of increases or decreases in frame frequencies, which might be found desirable for varying types of programs. He urged as the fundamental essential of flexibility a synchronizing pulse having characteristics enabling automatic adjustment by receivers to various frame frequencies being transmitted. The evidence on this question indicated to the Commission that research directed towards the achievement of such flexibility should go forward.

Philco Radio and Television Corporation opposed the R. M. A. recommendation of horizontal polarization. Many advantages were claimed by Philco for the system of vertical polarization on which

research and experimentation were still being conducted. Enough was said in evidence to convince the Commission that further research upon the matter of polarization was necessary.

Although a divergence of engineering opinion existed with respect to the merits and demerits of the various systems in question, the members of the industry appearing before the Commission were in substantial unanimity on the need for the possibilities of improvement in these basic aspects of the television art.

REPORT OF FEBRUARY 29, 1940

On February 29, 1940, the Commission issued a report embodying its conclusions upon the problems raised during the January hearings. In making this report, the Commission adopted with few changes the rules which it had previously approved tentatively. Sponsored program service for one class of stations (Class II) on a limited basis was to begin on September 1, 1940.

The keynote of the Commission's report and the policy underlying the Commission's rules was that television broadcasting was still in an experimental stage and that, in view of evidence revealing a substantial possibility of significant improvements in the art, "research should not halt" and "scientific methods should not be frozen in the present state of the art." The Commission expressed the belief that the crystallization of standards at the current level of the art, by whatever means accomplished, would inevitably stifle research in basic phases of the art in which improvement appeared promising.

Recognizing the danger that research in television might be unduly retarded by immediate promotional activities for a single fixed system prior to the Commission's establishment of standards for this new art, the Commission's unanimous report of February 29, 1940, urged restraint in such activities in order to avoid consequences inimical to the public interest. The report stated:

"The issuance or acceptance of transmission standards by the Commission, especially in combination with the more extensive experimental program service which will in all probability develop under these rules, would have a tendency to stimulate activity on the part both of manufacturers and the public in the sale and purchase of receivers for home use. It is inescapable that this commercial activity inspired and then reinforced by the existence of Commission standards would cause an abatement of research. To a greater or less extent the art would tend to be frozen at that point. * * *

"The same considerations which demonstrate the unwisdom of the Commission's promulgating standards at this time dictate the undesirability of the industry itself attempting to impose such a code on all points. The Commission therefore recommends that no attempt be made by the industry or its members to issue standards in this field for the time being. In view of the possibilities for research, the objectives to be attained, and the dangers involved, it is the judgment of the Commission that the effects of such an industry agreement should be scrupulously avoided for the time being. Agreement upon standards is presently less important than the scientific development of the highest standards within reach of the industry's experts."

THE POSITION OF THE INDUSTRY ON SETTING STANDARDS

The objectives outlined in the February 29 report were a reflection of the almost unanimous opinion of the industry as expressed at the January hearing that standards should not be fixed if research was to go forward and the science developed in the public interest.

The Radio Corporation of America appeared to be in accord with these objectives as is demonstrated by the testimony of E. W. Engstrom, its chief engineering witness, and the statements of its counsel, F. W. Wozencraft. Engstrom testified as follows:

"I, as an engineer, am not recommending that standards be frozen in the term that I believe has been discussed at this hearing. I think that everyone should have an opportunity to work through the systems in which they are operating."

Wozencraft stated:

"I am advocating only that the Commission permit applicants to proceed experimentally, using certain standards which the Commission will permit the applicant to use. I think the Commission's position should be kept entirely flexible and I * * *. As far as R. C. A. is concerned, we don't ask that the standards be frozen or that the Commission approve the standards in a way which will make it more difficult for anyone else who has other standards at any time," and added:

"We have no desire to recommend to the Commission that everybody have to conform to the R. M. A. standards, or have to show that everybody who is operating under R. M. A. standards should have to change to another set of standards because a new applicant wants to use a new set of standards. * * * I don't see why an applicant should have to bear the burden and we do not suggest anything which makes it hard for anybody who thinks he can promote television and render service in that field and serve public interest * * *."

From the foregoing the Commission felt assured that no attempt would be made to freeze the standards by any means. The statements to the Commission, the record shows, were with the knowledge and approval of the R. C. A. president, David Sarnoff.

Yet, on February 29, a letter carefully drafted and reviewed by the Radio Corporation's officials, including its president, was signed by Engstrom and delivered to a meeting of the R. M. A. Subcommittee on Television Standards, at the Hotel New Yorker, New York City. That letter stated:

"Since television transmission service and the sale of television receivers to the public have already begun on the basis of R. M. A. approved standards, proposals involving changes in transmission standards must necessarily be considered from the point of view of their superiority, if any, over existing standards. The proponents of changes in these approved standards must, of necessity, bear the burden of proof that such changes would effect a substantial improvement in the service to the public and that a change under the circumstances above referred to is warranted."

In April, Engstrom testified as to R. C. A.'s meaning in the use of the phrase "burden of proof" as follows:

"Chairman FLY. Well, tell me just what you mean by 'burden of proof'?

"The WITNESS. I mean by that, the kind of activity in the R. M. A. group where one man or one organization brings to that group the experience that he has in a particular line, it is usually up to him—and it always was up to us when we brought such information—to demonstrate to the other members that there was merit in his suggestion. That is what I mean.

"Chairman FLY. Yes. But, now, wait a minute. Now, wait a minute. The notion that one member would come in with such a single proposition, and then would take the burden of demonstrating to your satisfaction——

"The WITNESS. Not to mine, sir.

"Chairman FLY. Well, to the satisfaction of the association.

"The WITNESS. Yes, sir.

"Chairman FLY. Carries the implication that there is a status quo there, does it not?

"The WITNESS. That is correct, but there is an established procedure for changing any standard at any time.

"Chairman FLY. And, of course, there would be no need for changing any standard that was not, in effect, fixed?

"The WITNESS. Yes; that is right."

Meanwhile, on February 8, 1940, at a highly controversial meeting of the R. M. A. board of directors, Sarnoff had opposed a proposal by Philco that before any commercialization were undertaken, the R. M. A. standards should be reopened for consideration in the light of pending research and development on other alternatives. Sarnoff stated:

"If that is the point of view, I am sure the Radio Corporation does not belong around this table, and the quicker it resigns from membership and the quicker it gets out of the R. M. A. and runs its own business in the best way that it thinks it can run it, the greater freedom we shall all have to follow whatever course we wish to follow without any arguments or contentions or oppositions."

Following Sarnoff's announcement at this meeting of R. C. A.'s proposed commercial activities the following colloquy occurred between W. H. Grimditch of Philco and Sarnoff on the subject of the possible effect of such activities:

"Mr. GRIMDITCH. I am afraid if you would sell 25,000 sets in a year within a short time that would mean there would be $10,000,000 worth of obsolete apparatus in the hands of the public.

"Director SARNOFF. We live on obsolescence, don't we, in this industry? I think it is rather silly to argue about obsolete apparatus under those circumstances. * * * So far as we are concerned, there is no use discussing with us, inside or outside of the R. M. A., any program the purpose of which is to delay the commercialization of television."

R. C. A. did not carry out the threat to resign from the association, but at the meeting on February 29, when the Engstrom "burden of proof" letter was presented, Philco itself withdrew from the Television Standards Committee, announcing that the committee could serve no further purpose, since the widespread sale of equipment by R. C. A. would make consideration of any standards other than those of R. M. A. futile. At the same meeting all the members except R. C. A. and Farnsworth voted in favor of considering new proposals as against the suggestion that the R. M. A. standards be reaffirmed, but there is no record of any further action being taken on any new proposals.

The persistent determination of R. C. A. to move forward commercially is thus seen as independent of industry opinion and of the Commission's attitude on standards and commercialization. Announcement of R. C. A.'s plans had been made to the industry on February 8 and reiterated on February 29, both prior to the Commission's decision of the latter date. The determination was persisted in despite both industry opposition then and the Commission's decision later. The Commission's report was clear and no misunderstanding of it can be assumed. The record shows, moreover, that on the day following the announcement of the Commission's report, Bond Geddes, executive vice president of the R. M. A., addressed to Sarnoff and the other members of the R. M. A. a telegram reading in part as follows:

"Federal Communications Commission announced decision to permit limited commercial television operations September 1, authorizing advertising charges covering cost-sponsored programs. Commission did not fix standards but stated that television 'should not be frozen in the present state of the art.' "

FURTHER HEARING OF THE COMMISSION

Yet, on March 20, 1940, pursuant to R. C. A.'s earlier announced intentions to the industry, an intensive promotional campaign was launched by the company, the effect of which, if continued and successful, would, in the opinion of the Commission, tend toward the freezing of television broadcasting standards to the single system. Although regular program service by R. C. A.'s broadcasting subsidiary, N. B. C., was promoted and emphasized in extensive and varied public announcements, no mention was made of the experimental character of television broadcasting operations or of the

fact that only the N. B. C. station was on the air in New York City, that such station operated a program service irregularly for 2 or 3 hours per day but not on all days of the week, or that future stations employing alternative systems of transmission might not be received by the sets offered for sale.

Thomas F. Joyce, head of the R. C. A. sales department had testified as follows at the January hearing:

"Question. * * * You can't contemplate the type and character of a change that would make the set obsolete, and whether the cost incident to adjusting it would be greater or smaller is a question of degree, but it might be rendered obsolete, I assume.

"Answer. That is correct.

"Question. You further feel that the public should be told about this contingency?

"Answer. Yes; I do."

All of the foregoing factors are of concern to this Commission, not because of any question of fair-trade practices but because of the possible impact of R. C. A.'s whole course of conduct upon television broadcasting standards. It was apparent to the Commission that it was necessary to reinquire into the situation in order to ascertain whether the rules which it had adopted on February 29, 1940, were contributing toward a result contrary to their fundamental purpose of maintaining fluidity in the art in order to promote its advance and to avoid the premature crystallization of transmission standards, the result against which both the Commission and the industry had warned.

Indeed, action in the light of these facts was compelled by the congressional mandate under which the Commission serves. It would be a violation of its statutory obligations for the Commission to disregard any facts which might foreclose a proper exercise of its duty to fix transmission standards for a single uniform system of television broadcasting. Moreover, the Commission cannot ignore its duty to "encourage the larger and more effective use of radio" and close its eyes to activities impeding technical progress in the television art.

Accordingly, on March 22, 1940, the Commission scheduled a further hearing to begin April 8, to determine whether any revisions of the rules adopted on February 29 should be made or other action taken by the Commission, and whether the effective date for the beginning of limited commercial operations should be postponed.

The hearing was begun before the full Commission on April 8, 1940, and extended over a period of 5 days. The parties who appeared and submitted evidence at these hearings were, with few exceptions, the same as those who participated in the Commission's January hearing. Upon request of the parties, opportunity was given for the filing of briefs. Briefs were filed between May 1 and May 7, 1940, by Radio Pictures, Inc., a licensee of a television experimental station, R. C. A., Don Lee Broadcasting System, DuMont, Philco, Farnsworth, and Columbia Broadcasting System.

INDUSTRY VIEWS ON DANGERS INHERENT IN WIDESPREAD DISTRIBUTION OF EQUIPMENT

The position taken by R. C. A. in the R. M. A. meetings in February was not disclosed to the Commission until its April hearing. Up to that point it has been assumed by the Commission from the testimony given at the January hearing that the position of the entire industry, including R. C. A., was to avoid a freezing of standards at this time, whether this be accomplished by the Commission action or by the commercial activities of the industry itself. Nevertheless, it is difficult to avoid the conclusion that the "burden of proof" agreement which R. C. A. urged upon the association, combined with the reiteration of forcefully worded assertions of plans for sales promotion, the influence of those plans on the other manufacturers, and the promotional activities themselves, would have had the practical effect of crystallizing television transmission standards to the R. M. A. proposals and of causing a curtailment of research on other proposals. Indeed, recognizing that "certain companies presumably will proceed with receiver sales," W. R. G. Baker, director of the R. M. A. engineering department, remarked in a letter dated February 27, 1940, to Mr. A. S. Wells, president of the R. M. A., that "if enough sets are sold the standards may be formulated by reduction to practice."

This conclusion is regarded as inevitable by various other parties to the Commission's hearings. Philco has stated in its brief submitted after the second hearing:

"The Commission's power to fix transmission standards for television broadcasting is clear under section 303 (e) of the Communications Act. It is equally clear that if the Commission refrains from exercising this power and if commercialization (particularly the sale of receivers to the public) proceeds, transmission standards will be fixed by a portion of the industry. * * * The public outcry that would result from any later change in standards rendering receivers obsolete will effectively deprive the Commission of its statutory power."

According to the testimony of a Philco witness at the April hearing, the Commission's decision to permit limited commercialization and the announced plans of R. C. A. to engage in active sales of receivers caused it, after March 1, 1940, to abandon all of the research work upon which it was then engaged outside of the R. M. A. standards and to confine such research within those standards. As a result of these circumstances, its research staff was reduced to two-thirds of its former size, and its efforts were directed to the production of receivers.

The testimony of David B. Smith, of Philco, was as follows:

"Question. Beginning your account at that point, will you state the reasons for abandoning research in these fields other than vertical polarization?

"Answer. Well, when we received the Commission's order we, naturally, studied it. There were numerous conferences between our employees and our executives. We were pleased that the Commission seemed to agree with us that further improvement in the standards were necessary, but we were very much disappointed that they had, apparently, not understood or had not seen fit to take notice of our warning about commercialization. We felt that, while the Commission undoubtedly desired these improvements to be continued, there was a grave danger that the industry would go ahead with the commercialization that we anticipated that they would, and for that reason we felt that the standards we were considering, at least, could not be brought into the art, and, therefore, there was no point in trying to continue that line of research."

"The WITNESS. Our position, sir, was that in order to do research that would be definitely outside of the present standards, the only condition under which that could be done would be with, let's say, a reasonable hope that these improvements could be brought into the standards. As we stated in January, and we would like to repeat right now, that if the standards are actually frozen by the commercial activity of the industry, you cannot reasonably expect one to go ahead and do research outside of those standards."

Witnesses of other companies engaged in research outside of the R. M. A. standards testified that the same considerations would require a discontinuance or curtailment of such research if commercial activities continued on a wide scale.

DuMont Laboratories, Inc., for example, stated in its second brief that if commercial activities in the sale of receivers capable of receiving only 441 line-30 frame pictures continued, "it, too, would have been obliged to diminish or abandon its research program," and that "there would have been a burden upon any other manufacturer, including DuMont, to prove the superiority of existing and available tested transmission methods under most adverse circumstances."

U. A. Sanabria, an associate of Lee de Forest in American Television Laboratories, which is engaged in general television research and in particular upon a system of interlaced scanning designed to reduce flicker in pictures, testified that there would be no incentive for him to continue his researches in television if a large number of sets operating on present systems were distributed.

Dr. de Forest, long a leader in the radio field, who was unable to appear before the Commission at the second hearing, submitted a statement in writing on April 26, 1940, expressing the view that if commercial activities on the part of the industry continued, he had "no doubt that the present, indisputably half-baked 'standards' in television would soon be so effectively deep-rooted in the American television market that further evolution of this infant art would have been rendered economically and actually almost impossible."

It is obvious that the industry as a whole does not share the R. C. A. view of forging ahead regardless of the untested possibilities of improvement on the horizon. It further appears that the industry was not prepared to accept Sarnoff's premise of "We live on obsolescence" as a basis for justifying a heavy public investment at current levels of efficiency.

Indeed, these conclusions reached by a preponderant portion of the industry interested in television's further improvement are inevitable in view of the very nature of television and its operation.

In general, it may be said that television transmission will reach satisfactorily only sets designed to receive the number of lines and frames and the type of synchronizing pulse transmitted. Due to this lock and key relation of television transmitter and receiver, substantial changes in transmitters in respect to lines and frames, the retentive quality of screens, and synchronizing pulses, cannot be brought about after widespread distribution of receivers operating on a different combination of these factors. Thus widespread public distribution of sets of a system operating on present levels will undermine incentive for further advance in television broadcasting and the Commission will be confronted with the accomplished fact of frozen transmission standards.

It is this consideration that distinguishes the development of television from that of sound radio. At the time of the initial widespread distribution of sound radio receiving sets to the public, these sets were capable of receiving all types of radio transmission then being considered. General public use and improvement in radio transmission and reception could, therefore, go forward together without any substantial risk that the distribution of receiving sets would result in freezing transmission standards to the then levels. However, since television-receiving equipment adequate to receive transmission on one system would often be incapable or inadequate to receive transmission by another system, the widespread distribution of such receiving equipment would tend to cause the particular system of transmission to which it is geared to become a firmly rooted and immobile standard.

CONCLUSIONS

The rules adopted by the Commission on February 29, 1940, were intended to provide for a more rapid development of television by permitting programming experiments concurrently with necessary technical research leading to establishment of transmission standards by the Commission. Subsequent events, however, have demonstrated that commercial television broadcasting without the complete cooperation of the manufacturing industry is irreconcilable with the necessary objectives of further technical research and experimentation.

The positions of the different companies on this whole problem cannot be viewed with total disregard of the patent interests of

competing manufacturers which find expression in a desire to lock the scientific levels of the art down to a single uniform system based in whole or in part upon such patents. The functions of this Commission are not to be usurped and utilized as a means of monopolizing this important industry either through this or other devices.

It is essential to the program of television that there be not a mere semblance of competition, but that there be a genuine and healthy competition within an unfettered industry. The American system of broadcasting has been established by the Congress on a competitive basis. Television will be an important part of that system. Now, if ever, television is at the crossroad of monopoly or a healthy progressive competition. There can be no doubt as to the direction in which the Commission should, within its powers, attempt to guide it.

The fluid state of the television art and the desirability and need for further technical research before transmission standards are prescribed by the Commission were once again clearly manifested at the Commission's most recent hearing. Engineering opinion on many of the basic problems is still divided at this time. The industry now is no less anxious to continue further engineering improvements on basic aspects of the science than it was at the time of the Commission's earlier hearing. R. C. A.'s own engineering expert, for example, testified that his preference was for a system using 507 lines and 30 frames rather than the existing R. M A. standard of 441 lines and 30 frames. And, in fact, the very basic problem of what channel width or band of frequencies television shall employ must be regarded as a question not yet closed.

Contrary to the experience of other industries which have found that technical improvements were stimulated by large public use, in the television field a major portion of the industry takes the view that successful promotional activities at this time can act only as an anchor on experimental efforts to go forward. Premature crystallization of standards will, as has thus been pointedly illustrated to the Commission, remove the incentive for technical research toward higher levels of efficiency. If technical research having this goal is retarded or halted, the Commission's duty to fix transmission standards with due regard for considerations of public interest will have been, for all practical purposes, nullified.

It is, therefore, the conclusion of the Commission that in order to assure to the public a television system which is the product of comparative research on known possibilities standards of transmission should not now be set. It has further been decided that there should be no commercial broadcasting with its deterring effects upon experimentation until such time as the probabilities of basic research have been fairly explored. The Commission agrees with the industry that the earlier plan for arriving at commercial operations by an intermediate half step of partial commercialization to be taken next September cannot be relied upon to serve a useful purpose. The provisions in the rules for class II stations will be eliminated. As soon as the engineering opinion of the industry is prepared to approve any one of the competing systems of broadcasting as the standard system the Commission will consider the authorization of full commercialization. That a single uniform system of television broadcasting is essential—so far as basic standards are concerned—must also be amply clear. The public should not be inflicted with a hodgepodge of different television broadcasting and receiving systems.

It may be expected that industry opinion will insist upon such standards as will give definite assurance of satisfactory performance and of continuity of service for the public comparable to the continuity of service displayed in the past history of the radio industry. At the same time these basic standards—the standard gage they may be termed—should afford within their limits reasonable flexibility for future advances in the science of television broadcasting. With the view to encouraging research and experimentation on a wholly flexible basis, the Commission is prepared to authorize broader experimental operations by existing stations and by a number of additional stations.

Action will be taken promptly upon a number of pending applications for television experimental stations. These will be apportioned among various parts of the country with the view of forestalling any concentration of facilities in particular centers of population to the exclusion of the rest of the country. At the same time this will serve to provide further experimentation on the different systems on a comparative basis. Among the additional cities under consideration for such facilities are San Francisco, Los Angeles, Chicago, Washington, Albany, Cincinnati, Boston, and others. Each station will be utilized for the predominant purpose of advancing the science of television broadcasting in its engineering aspects. The Commission invites other responsible individuals or companies who are prepared to carry on this work to apply for a license.

Certain basic policies in the licensing of these experimental operations will be followed. A substantial job of research must be done by each station. The channels available are strictly limited, and they must be utilized in the public interest. The radio spectrum is public domain—development in television must be undertaken and advanced in order that this domain be devoted to the best public use. There is no room for squatters and there can be no preemption in this field. Monopoly must be avoided. Free competition is to be promoted and preserved. Accordingly the Commission deems it to be in the best interests of the public that there be a strict limitation on the number of authorizations to any one licensee for television broadcast stations which as a part of the experimentation may take programs to the public. In addition, rules for the regulation of television stations engaged in chain broadcasting will be promulgated at an appropriate time.

No time limit can now be set for the adoption of standards. The progress of the industry itself will largely determine this matter. The Commission will continue its study and observation of television developments and plans to make a further inspection and survey in the early fall. Meanwhile the Commission stands ready to confer with the industry and to assist in working out any problems concerned with television broadcasting.

Revised rules designed to carry into effect the conclusions reached herein will be issued in the near future.

Farm Research in the South

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ARTICLE BY HON. THEODORE G. BILBO, OF MISSISSIPPI

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by me entitled "Farm Research in the South," published in the Industrial Expansion of the South, the special edition of the Journal of Commerce and Commercial, of May 20, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Journal of Commerce and Commercial of May 20, 1940]

FARM RESEARCH IN THE SOUTH—SENATOR BILBO DISCUSSES AGRICULTURE'S AID TO INDUSTRY IN THE REGION—KRAFT PAPER AND NEWSPRINT, STARCH, CELLULOSE, OILS, HEAD CONTRIBUTIONS OF RESEARCH

(By THEODORE G. BILBO, United States Senator from Mississippi and author of bill creating regional research laboratories)

Farm research, in the sense of chemical science applied to agricultural products, looms as a powerful influence in reshaping the destiny of the South. Call it what you will, organic chemistry or by its popular new name, farm chemurgy, it amounts to the same thing—chemistry at work in industry for the farmer. And it is my firm conviction that no other factor since Eli Whitney's invention of the cotton gin has contributed so much toward the dawn of a new day in our agricultural Southland.

There are manifold reasons why the South is destined to be a stronghold in agro-industrial development through medium of scientific ingenuity. We have the soil and the climate for an abundance of crops suitable for industrial uses. Moreover, a large portion of the millions of tons of farm wastage produced in the United States and adaptable for industrial uses occurs in the South.

As Nature's favored storehouse for inorganic materials, the South has an almost unlimited supply of the heavy chemicals essential to this development. It is estimated that for $5 invested in new chemurgic enterprises, one additional dollar is spent in the heavy chemicals industry for petroleum, gas, coal, iron, sulphur, phosphates, etc. The South is by far the Nation's major source of these materials.

We can offer plentiful labor; for the most part native-born Americans, efficient and relatively free from disrupting elements and costly labor troubles.

The South's unsurpassed water and rail transportation facilities and its adjacence to the markets of South and Central America are other fortunate factors in the industrial picture.

Of no small significance, too, is the fact of lower living costs and more healthful living conditions made possible by an equable southern climate.

NEW USES FOR COTTON

For too many years the South has leaned too heavily on King Cotton. Predominant dependence on a single cash crop, cotton, with its extreme fluctuations in price, has been the greatest handicap to southern progress. To eliminate that handicap by finding new uses for cotton and cottonseed as well as for other crops now grown or adaptable for growth in the South is therefore the objective of the farm research program.

Time was, not so many years ago, when we grew cotton merely for the fiber. The seed, except that portion kept for planting purposes, was the "step child" of the cotton plantation, regarded as a nuisance, and its disposition was the bane of the planter's existence. By gradual steps, through applied science, the once lowly cottonseed has undergone a Cinderella-like transition to become the richest seed in the world. The cottonseed industry now ranks second to cotton lint as the major cash crop in the cotton South.

Cottonseed oil mills now represent a leading industry, more than 500 in number, spread throughout the southern part of the United States from the Atlantic to the Pacific. The four principal by-products of cottonseed, which are oil, cake, or meal, hulls and linters, now furnish the basic materials for hundreds of the products of American industry. Chemistry has devised an astounding range of uses for by-products of the cottonseed. The oil is an important ingredient in American-made oleomargarine, a wholesome substitute for butter. Cellulose from hulls and linters is the base of multiple products of industry, including synthetic silk and smokeless gunpowder. The field of plastics is a large consumer of cottonseed derivatives. The broad use of cottonseed meal and hulls as feed for livestock and fertilizer for the soil is common knowledge.

SOME CHEMICAL CONTRIBUTIONS

The layman is amazed when he contemplates the vast array of things created by modern chemistry. Silk hosiery (Nylon) and synthetic rubber from coal. Synthetic-silk fabric (rayon) from waste wood and other refuse of forest and field as well as from cotton linters. Lingo-cellulose plastics in many forms from pulpwood and plant fibers. Perfume, licorice, medicinals, and insecticides from pine stumps. Motor fuel from low-grade corn, sugarcane bagasse, cull potatoes, and miscellaneous waste crops. Acetic acid, methanol denaturant, and antifreeze from inferior hardwoods, cornstalks, and other trash. Masonite products from wood chips and pulpwood. Newsprint from southern slash pine, and kraft paper from pulpwood. Starch, flour, and glue from sweetpotatoes. These are but a few of a long list of the miracle products organic chemistry has given us. The list is long and growing ever longer, for almost daily we hear of another "white rabbit" pulled out of the farmer's hat by the chemist.

Institutional, private, and industrial laboratories over the country are spending multiplied millions of dollars annually in forwarding their research work. It was in recognition of the advance of the chemical age that the Congress of the United States passed a law in 1938 establishing four regional research laboratories devoted to the discovery of new and wider industrial uses and outlets for farm products. These laboratories, located in four strategic sections of the United States, will devote their full time to experiments with crops peculiar to the respective regions. The southern laboratory, at New Orleans, La., will treat largely on cotton, sweetpotatoes, and peanuts in the beginning. Two hundred scientists will be assigned to each laboratory.

As author of the bill creating these laboratories and a long-time advocate of more farm research, I am naturally expecting that great things will be accomplished for the benefit of American agricultural industry. The value of scientific achievement, as in any other realm, depends upon its practical application to sound business practices. For the purpose of practical illustration, I cannot think of better examples of what has been accomplished through farm chemurgy than are found in my home State.

THE CHEMURGIC CITY

Laurel, Miss., is known far and wide as "the 100 percent chemurgic city, where chemistry applied to waste products of the farm is working miracles." Interested visitors from all parts of the country journey there to see at first hand the accomplishments of agriculture linked with industry through chemical science. And yet, but for farm chemurgy, Laurel might well have joined the ranks of the "ghost towns" that followed in the wake of a decadent sawmill industry. This little city, whose present population is 23,000, was once a typical sawmill town. Men who lost their employment as the mills cut out have found new jobs in plants which utilize the former waste or semiwaste of forest and field. The famous Masonite plant is located there. Masonite fiberboard products are known and used in building trades throughout nearly the entire world. To help supply foreign demand, Masonite plants have lately been established in Rundviksverken, Sweden; Bolzano, Italy; and at Raymond Terrace, New South Wales, Australia. One is in process of installation at Gatineau, Quebec, Canada.

W. H. Mason, a man formerly associated with Thomas Edison, came to Laurel to conduct his experiments to cheat the trash-burners of nearby mills which were devouring hundreds of tons of wooden chips. His ingenius and patient experiments resulted in the discovery of a way to reduce that waste to fiber without destroying the lignins which nature employs to hold wood fibers together. He found he could make them into a strong, tough paper or into an efficient insulating board. One step led to another until the present Masonite processes were perfected.

Since wood refuse from sawmills is no longer available in sufficient quantity, the plant now uses pulpwood from south Mississippi forests (which formerly had little or no commercial value) for a hundred miles around, brought in by truck and rail to the extent of about 14,000 cords per month. For this raw material, the farmers receive an income totaling about $700,000. The plant employs over 1,700 people, and its present monthly pay roll is $152,000. Expenditures for gas and electricity, transportation, and miscellaneous expenses amount to approximately $725,000 annually. The grand total of money spent in Mississippi by the Masonite Corporation, inclusive of taxes, is $3,765,000 per annum, based on last year's operations. What this industry alone means to the community and the State is readily seen.

A somewhat similar plant is now in operation in the Mississippi Delta where the United States Gypsum Co. is converting the once worthless willow and cottonwood into wallboard and insulating material.

A NEW STARCH INDUSTRY

Unique, and hailed as an agricultural wonder, is the Laurel sweetpotato starch plant which converts the lowly sweetpotato into superior white starch—Aristocrat Sweetpotato Starch is the trade name. A pioneer in a fertile field, the starch plant stands out as a forerunner of a potential southern industry of gigantic proportions. This infant enterprise, just emerged from the experimental stage, purchased last year from nearby farmers an aggregate of 270,000 bushels of sweetpotatoes from which it extracted 2,800,000 pounds of starch. Potato flour, glue, and potato pulp stockfeed are among the valuable byproducts of starch processed at this plant—all having a bright industrial future.

Scientific experiments have been conducted under the purview of the United States Bureau of Agricultural Chemistry and Engineering, so that the factory serves as a research center as well as a commercial industry. Authorities on the subject say that it would require from 150 to perhaps 250 plants to supply the potential demand for sweetpotato starch. For the United States imports from foreign countries an annual total of more than 483,000,000 pounds of starch, according to 1937 figures from the Bureau of Foreign and Domestic Commerce.

Heretofore the sweetpotato had commercial value only as a food product. At least 20 percent of the potatoes produced do not meet the rigid standards of the markets, and this percentage of the sweetpotato crop therefore becomes "culls." The starch industry takes the potatoes "field run" and thereby has opened up an avenue for profitable usage of another farm waste or semiwaste.

In this great chemurgic drama even the pine stump, once regarded as an economic headache to the landowner and a blot upon the pastoral scene, has come into the industrial spotlight. Distillation plants at Laurel and at three or four other points in Mississippi are extracting commercial quantities of pine oil, turpentine, rosin, and miscellaneous disinfectants and medicinals from the old pine stump. Newest among the derivatives of pine stumpage are perfume and licorice. Distillation companies not only remove the stumps for the farmer but they pay the farmer for the stumps.

PULP AND PAPER

Until recent years paper manufacturers shook their collective heads at the suggestion of making paper from southern pine. It contained too much pitch, they said, and only northern white spruce would do for paper making. The idea of converting southern pine into white pulp for newsprint was held as just another daydream.

It remained for E. H. Mayo, superintendent of what is now the Kraft Paper Co., of Moss Point, Miss., to prove that kraft paper could be successfully and economically manufactured from southern slash pine. Since perfection of the kraft process more than 15 plants like the Moss Point mill have sprung up over various parts of the South. It is said that since 1935 the sum of $100,000,000 has been invested in southern pulp and paper mills.

And now, after long years of patient research, the crowning triumph has been realized. We have newsprint from Southern pine. This great epochal achievement is due to the genius and patience of the late Dr. Charles H. Herty, renowned chemist of Savannah, Ga., who conducted a 6-year research program in the utilization of fast-growing Southern pines. Just a few weeks ago the first Southern pine newsprint ever to be produced on commercial scale rolled from the $6,000,000 plant in Lufkin, Tex. With the opening of this plant a new frontier is crossed and a trail blazed for a new and highly promising southern industry. No group is more enthusiastic about this chemical conquest of nature than is the publishing trade. Statistics indicate that more than 4,000,000 tons of newsprint are consumed by the presses of the United States each year, and most of it is imported from other countries at exorbitant prices.

The South has a forest area well exceeding 200,000,000 acres. Junior forests are on the increase, and well-planned State and Federal programs are being executed for conservation and reforestation. Some of the wood utilization plants themselves sponsor conservation programs, as in the instance of the Masonite Corporation. With this safeguard, exploitation such as was experienced during the hey-day of the sawmills can be obviated. And this is yet another form of farm research contributing its share to southern progress.

TUNG OIL AND SOYBEANS

The oriental tung nut is among the newest of our industrial crops, having been introduced into this country from China. A subtropical plant, the tung tree is adaptable only to those areas having semi-tropical climate. The tung belt as now defined extends from Texas along the Gulf coast, through the extreme southern parts of Louisiana, Mississippi, Alabama, Georgia, and Florida. For many years the United States has imported from 100,000,000 to 175,000,000 pounds of tung oil from China for use in the manufacture of high-grade paints, varnishes, and lacquers; for calking boats; for undercoating automobiles; and for other like purposes.

We now have something like 160,000 acres planted to tung, and acreage is increasing with each passing year. Two-thirds of the acreage is in Mississippi, where is found the largest single tung grove in the entire world—in Pearl River County. Although even the oldest groves are still young, commercial production of tung nuts thus far has justified the erection of five tung-oil crushing plants, one each in Florida, Georgia, and Louisiana, and two in Mississippi. As production increases, it is expected that paint factories will locate in the tung-producing areas to form

another link in the agro-industrial development of the South. Cut-over land not suitable for general farming has been used for most of the tung plantings, so that this new industry has gone far to utilize land that would otherwise be idle.

CANE SUGAR, PEANUTS

Another comparatively new oleaginous crop in southern territory is the soybean. Few other crops offer a wider field of industrial usages for the soybean oil is edible as well as valuable in manufacturing processes such as in the paint industry. An unestimated number of food products are made from this bean, and it is a valuable source of raw material for adhesives and plastics. Soybean production is rapidly making headway in most of the Southern States, and gives promise of becoming an important commercial industry. Aside from its other uses the soybean plant is valuable as hay for livestock as well as beneficial in soil conservation and soil-building practices.

Sugarcane is an old and familiar crop in Louisiana, Georgia, Mississippi, Alabama, Florida, Texas, Arkansas, and South Carolina—listed according to rank in production.

Louisiana is famous for its sugar industry. According to a recent public statement, as many as 200,000 persons in Louisiana earn their living from cane culture and in sugar-processing plants. We have always thought of cane in terms of food products mainly. But modern science reveals latent wealth in other byproducts derivable from cane. Sugarcane not suitable for edible purposes is found usable for making motor fuel. Cane bagasse is a recognized source of cellulose, and so on. Here is a crop which warrants and undoubtedly will receive greater industrial attention as the chemical age advances.

The peanut is another old southern crop with a bright industrial future. The South produces an annual average of more than 1,000,000,000 pounds of peanuts every year. Yet, aside from its popularity as an edible nut and in manufactured food products, very little has been done with it in an industrial way here where it grows most abundantly. Dr. George Carver, renowned colored scientist of Tuskegee, Ala., states that he has found more than 100 varied uses for the peanut. Other scientists also place high value on the meat, the oil, and even the shells of the peanut in industrial usages. Georgia is the big peanut State and itself produces an average annual crop of nearly 309,000,000 pounds, valued at $50,000,000. The Government's southern research laboratory will in the beginning give special attention to research with peanuts, as well as with cotton and sweetpotatoes.

So it is not at all visionary to anticipate that the humble peanut will make a proud name for itself in southern industry as time goes on.

LIVESTOCK PRODUCTION

It would be most unfair not to mention the South's rapid strides in livestock production. In most of the Southern States both dairy cows and beef cattle have practically doubled in number during the past several years. It is certainly true of my State. The dairy industry in Mississippi has grown almost from "scratch" since 1925 to its present important status, with at least 18 creameries, 16 cheese plants, and 5 condensaries. Cash income from livestock and livestock products more than doubled between 1932 and 1939. Other Southern States have progressed in relatively high degree.

What scientific research has done to improve old methods and devise additional processes in the manufacture of dairy products forms an epic chapter, as witness our great American cheese industry.

As yet the South is concentrating on continued progress with livestock from the standpoint of more dairy-product plants, more packing houses, etc. But a frontier for tanneries, button factories, and other industries utilizing animal hides, hoofs, and horns cannot be overlooked as a fertile field for future industrial development.

One of the newest chemical phenomena has to do with milk. The skeptic might refuse to believe it, but it is true that two American chemists have recently patented a process for making artificial wool (casein fiber) from skim milk.

A southern commissioner of agriculture recently told me of an inquiry received from an eastern medicine manufacturer who wanted a list of slaughter houses in the State. His expressed purpose was to contact abattoirs with the view of purchasing large monthly supplies of certain vital organs of slaughtered farm animals.

This same agricultural official told also of a carbon manufacturer circularizing pecan-shelling plants in his quest for thousands of tons of pecan shells to be used in making carbon.

These are but additional revelations of how modern science seems to find a use for everything that formerly was utter waste.

To tell half the story of the South's forward march under the new regime of farm research would require volumes. I have merely touched upon a few of the high lights. Suffice it to say we have what it takes in natural resources and advantages, and we have the spirit of the new South. Our zeal for further development is not merely sectional. We are gratified to realize that more prosperity in the South means increased national prosperity.

Though we southerners deplore, perhaps resent, the prevailing implication that the South is the Nation's No. 1 economic problem, we welcome that other title frequently applied to us, America's last frontier. We find cause for optimism in the fact that we have frontiers to offer; that we are the Nation's prospect No. 1. It is pleasing to southern chivalry and southern pride to visualize the South at its witching hour, with new horizons to beckon new enterprise and new life.

If the learned Horace Greeley of "Go West, young man" fame were living now, he would surely counsel opportunity seekers to go South, where science, agriculture, and industry have joined hands to build a new industrial empire.

This is what farm research is contributing to southern industry.

Reorganization Plan No. V—Fifth Column and National Defense

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

Mr. DONDERO. Mr. Speaker, in the time allotted for the consideration of House Joint Resolution 551, known as Reorganization Plan No. V, it is not possible to obtain sufficient time to discuss this matter in the Committee of the Whole. Therefore, under the privilege extended to me by the House, I desire to insert my remarks on the pending resolution and make certain observations which I think pertinent to the plan.

The President proposed by this resolution that the Bureau of Immigration be taken from the Department of Labor, under the jurisdiction of Miss Perkins, Secretary of Labor, and transfer it to the Department of Justice, and authorizes the Attorney General of the United States to exercise the powers therein set forth. This proposal has my wholehearted approval and support. I shall vote for it.

It is to be regretted that this suggestion was not made 7 years ago. The statement made by the gentlewoman from New Jersey [Mrs. NORTON], chairman of the Committee on Labor of the House of Representatives, that the suggestion of transferring this Bureau from the Department of Labor to the Department of Justice comes from the Secretary of Labor, Miss Perkins, herself, comes as a complete surprise not only to me, but I am sure to a great many Members of the House of Representatives, because the record of the Department of Labor as conducted under the present Secretary, Miss Perkins, disproves any such suggestion.

There has been no agency of the Government during more than 7 years last past more responsible for subversive activities and "fifth column" organization in the United States than the Department of Labor and the attitude of the Secretary of Labor. If we have dangerous organizations in this country—and no one denies that we do have them—which have grown with alarming speed, it is due mainly to the unwillingness on the part of the Department of Labor to prosecute and deport known, convicted criminals, Communists, and other alien persons in this country. Government itself is to blame, if not for its acquiescence in, then for its indifference to, the activities, propaganda, and the subtle methods employed by Communists, Fascists, and Nazis groups known to be in this land. Let no American be deceived. When un-American groups are pampered and coddled by those high in the official life of our Government, the result of which is encouragement to such subversive groups, then may we be aware of the danger of the "fifth column" within our own gates.

Reorganization Plan No. V proposal comes at a very opportune time. It ought to be considered as a part of our national defense, and if it is so considered, it ought to be interpreted as a very frank confession that the Department of Labor has failed woefully in its duty to the American people in its failure of the proper enforcement of the law against the enemies of our Government within our own borders. I repeat, it is to be regretted that Government action was not taken 7 years ago. If it had been, I am of the opinion that the alarming conditions existing within our land as it relates to these un-American activities could not have been shown to exist by the Dies committee, which has been the only effort on the part of this Government to defend itself against its own enemies.

With nearly every other Member of Congress, I listened with intense interest to the fireside address of the President last night. He painted a rather reassuring picture of our national defense. But I believe he failed to take the American people into his confidence when he concealed from them the actual condition of our Army and Navy and air force by including in their numerical strength the units of equipment "on hand and on order." There is a vast difference between being "on hand" and "on order." It will be noticed that the President did not reveal how many were on hand and how many were on order. One of the widest breaches and the weakest link in our national defense is the stupendous and ever-increasing national debt of more than $45,000,000,000.

Let this administration propose that a tax be imposed at once to raise the necessary funds to pay for the increased cost for our national welfare. The American people will respond willingly and courageously to meet such a tax and pay for the equipment needed to defend our country and our people against any invasion. Our people are courageous and patriotic enough to willingly bear the burden themselves rather than to pass it on to our children and to generations yet unborn.

The President in his address expressed the hope that the present national demand for increased national defense would not affect some of the social legislation which has been enacted. I am sure that no Member of Congress would deliberately destroy that hope; but if such legislation is to be adhered to under national emergencies, then let the American people be prepared for an additional, and which may prove to be an insurmountable burden, in the increased cost which they must bear for national defense. It will mean less defense for the dollar.

If the American Nation desires to know how to build up its national defense, it might be well for us to inquire as a people how Hitler in the short space of 7 years built up one of the greatest war machines the world has ever seen. No one here will argue that he did it by employing people for 30 hours a week or 40 hours a week, but undoubtedly we will find that at every munitions factory in Germany they were perhaps employed double that time and were paid a wage based upon the defense of the country and the building of the war machine rather than the yardstick or measure of wages paid in peacetime.

One of the reasons for the apparent inadequate defense of both England and France was the attempt to provide that national defense on a short-hour week and giving aid to radical leaders who were more interested in their selfish ends than they were in the defense of their homeland.

The patriotism of our people should rise above any arbitrary wage scale now employed when the defense of the Nation is at stake. The destruction of our economic system and the increase of the national debt, which leads to bankruptcy and ruin, is as important a part of our national defense in preventing such a condition as the building of airplanes and the manufacture of rifles. Let America look well to its domestic problems if we would have adequate national defense.

It is a shocking record to know that in this country there are more than 36 national Communist youth movements, more than 122 national labor and racial Communist unions and clubs and over a hundred so-called Communist cultural chapters. The salute of them all is the raised fist and the emblem the red flag and the hammer and the sickle.

This sort of thing must be stopped—the membership of these "movements" is not American. It is alien. The objectives are not in the pursuit of freedom of speech and liberty of thought. They are deliberately malevolent and consciously directed to the end of the destruction of this Government.

There are over 300 Communist newspapers and magazines circulated in this country today, and millions of books and pamphlets of subversive nature are passing from hand to hand. Such is the disclosures of the Dies committee.

Rural Electrification Progress

EXTENSION OF REMARKS

OF

HON. CLYDE L. GARRETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

Mr. GARRETT. Mr. Speaker, I wish to say but a few words in praise of the Rural Electrification Administration, for this function of the Government has been of untold benefit to my State.

Back in 1935, before I came to Congress, I was a resident of a county that relied to a great extent on its rural income. I was well aware of the needs of the farmers, for I could know the conditions under which he was laboring. At that time the farm income was low and the farmers had little of the conveniences their urban neighbors received.

At that time—in 1935—only 2.3 percent of all Texas farms were receiving electrical power from central plants. This was much lower even than the national average, which was only 10 percent. We had little to brag about in those days, for most of the countries of Europe had as much or more than 50 percent of their farms equipped for electrical power. Germany had well over 90 percent of her farms electrified, and Sweden had an average of 50 percent. France had about 95 percent of all her farms connected to electrical power.

Japan, usually regarded as having a very low standard of living, had 91 percent of all her farms provided with electricity.

The United States, boasting the highest standard of living on earth, had only 10 percent of her farms connected with electricity, and Texas, the greatest State in the Union, had only 2.3 percent of her farms serviced with electricity.

American agriculture was awake to this need and had been asking Congress to remedy this need. I found that there was a determined group of men in Congress when I came to Washington who were working to provide the farmers with some means of obtaining this necessary power. To the best of my ability I supported and advocated every measure which sought to relieve this hindrance to American agriculture. One of the most highly prized letters I have is one from my good friend and colleague from Mississippi, the Honorable JOHN E. RANKIN, thanking me for my aid and support, mentioning specifically my aid in the passage of his amendment to the R. E. A. allotment of 1938, which, incidentally, increased the Texas portion for 1938 to $12,128,332.

Too, I was glad that this program could be worked out whereby the farmers could receive this aid without the moneys expended being lost to the Government. For you will know that the R. E. A. is operated on a no-subsidy, no-grant basis. The money is issued as a loan, paying slightly less than 3 percent, it being estimated that about 5 years of revenue regains the cost of construction.

Too, the farmers do not lose control of their cooperatives. The R. E. A. merely acts as banker and consultant for the farmers desiring electrical current. The control of the projects are in the hands of the farmers themselves acting through their democratic cooperatives with headquarters in their own communities.

Today Texas farms receiving electricity number 34,796, an increase of 172 percent since 1935. Farm lands in Texas that were not salable sold for $30 to $50 an acre after an R. E. A. project had been started. Farms that merely managed to pay taxes are now expanding their scope, and the farmer and his family are living more fully and more enjoyably.

In Texas the farm income has increased to $511,000,000. A great factor in this gain has been the aid the farmer has received from the use of electricity.

Too, this increase in the output of electrical current has also aided the power utilities in that they have sold more

power than ever before. Labor was employed in the construction of the lines and electrical appliance stores increased their sales when their market territory grew to encompass the rural districts. Statistics show that the income for Texas has gained from 1935 and is still rising.

Today I am happy that my district, the Seventeenth of Texas, can show a vast improvement over its status in 1935. At that time there was not one electrical cooperative in the entire district. Today, one-tenth of all the cooperatives in Texas are located in or serve the 12 counties that comprise the district. Almost 5,000 farms are either receiving or contemplate receiving electrical current through the R. E. A. cooperatives now in existence. The R. E. A. has become a vital part of the agricultural life of the farmers of my district.

Measured in dollars and cents, the R. E. A. is one of the greatest aids the Government has ever given the farmers—but measured in happiness and health for the farmer and his family, its greatness increases a hundredfold.

Economically, the farmer, using electricity, can increase his income by stepping up his activities. Working under more favorable conditions he can more than double his output. It is possible for him to conserve his labor and increase his productivity. The use of an electric dynamo makes many jobs possible.

Due to the supply of electricity, the farmer and his family can now enjoy the same modern conveniences to be had in the cities. Living conditions on the farm have progressed to a standard that the rural citizen never thought possible prior to 1935.

Health in the rural districts has received the benefits to be had from electrical facilities and our United States Health Department is enthusiastic over the gains made.

The farmers of my district, as evidenced from the many letters I have received, know the value of the R. E. A. and wish that it be continued until ultimately every farmer shall be able to subscribe to the service if he so desires.

And, so long as I shall remain in Congress, I shall support and vote for all legislation that will aid these farmers to achieve their desires.

Measured in the joy and aid to our farmers, the R. E. A. is indispensable.

Welfare and Safety of America

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

ADDRESS BY GOV. ARTHUR H. JAMES, OF PENNSYLVANIA

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Gov. Arthur H. James, of Pennsylvania, before the Republican State Central Committee, of Minnesota, on May 22, 1940:

It is with a sense of deep appreciation that I come here tonight as Governor of the largest Republican State to address a gathering of Republican men and women representing all parts of Minnesota.

Let me say at the outset that I am not going to talk politics beyond saying this: So far as I am concerned there will be neither a black-out nor a fadeout of the Republican Party so long as there is a threat that the blood of a single American boy will be shed in useless war.

Instead, I have a very simple message on issues that transcend the ambitions of men and of political parties—the welfare and safety of our Nation.

I have two suggestions for which I ask the most serious consideration of the men and women of America, in the full knowledge of all the dangers visible and hidden which beset this Nation.

These suggestions will in no way interfere with our progress in rearming America. That is a program which has been far too long delayed and into which we must plunge with the utmost speed and energy.

But Pennsylvania does not, and neither do the patriotic men of Minnesota—nor, for that matter, America—believe in building a war machine without brakes. We do not wish to lose the war against dictatorship getting ready for it.

We have available two brakes for the defense machine which we all concede is so badly needed. One is the American Constitution, and the other is the national Congress, composed of the elected representatives of all the men and women of all the States.

My suggestions tonight are, first, that the preparedness program of the National Government be immediately revised to include the American Constitution instead of discarding it, and, second, that the American people, directly and through their State governments, demand of Congress that it do not adjourn until America is rearmed and until the international crisis has abated.

For 7 years the New Deal has been attempting to bypass the Constitution. We all remember the various methods which have been tried: The Supreme Court packing bill, the reorganization bill, the senatorial purges, the use of relief funds to try to thwart the will of the people in elections, the setting up of bureaucracies at Washington subject to no restraint save that of the Executive who appointed them, the attacks on State's rights, and propaganda that the American Constitution was a relic of the "horse and buggy" days.

The New Deal has objected to the American Constitution for the very reason which should most compel the men and women of this Nation to preserve it. The new dealers have fought it because our founding fathers used that Constitution to put a fence around the powers of the President. If we are to have a Republic, if this is to continue to be a Government of, by, and for the people, those fences must stand—must stand, yes; and be strengthened.

Let it never be said that the American Constitution is a splendid peacetime document but unfitted for war. The Constitution was conceived during world conflict as grave as exists today. It was baptized in blood while Napoleon was ravaging Europe on a scale even greater than Hitler has yet achieved. The Constitution has demonstrated its worth in helping America win three major wars.

A free people, with their liberties guaranteed by such a Constitution and defended by their leaders, can always outfight an equal number of enslaved victims of dictatorship.

We do not need to speculate about what the new dealers would do to the American Constitution the moment either actual danger or war hysteria permits. They already have told us.

The New Deal mobilization bill provides for the immediate suspension of every constitutional provision guaranteeing the rights and liberties of the American people.

The day that mobilization bill becomes effective in its present form constitutional democracy stops in this Nation, and we will have a dictatorship. It will be a dictatorship with its emblem the Stars and Stripes, and not the swastika; but it will be a dictatorship as complete and as far out of the control of the American people as Nazi warlords have been beyond the control of the men and women of Germany.

We already have seen a 7-year skirmish in the battle for the preservation of the American Constitution. America's shock troops in that battle to defend the American way of living have been the National Congress. Backed by the unmistakable will of our Nation, Congress has well demonstrated the wisdom of our founding fathers in making the legislative branch of government coequal in authority with the executive.

In his message asking Congress for new funds for the purchase of fire apparatus to help protect us from the four-alarm fire raging in Europe, President Roosevelt paid tribute to the importance of Congress. He said: "The Congress and the Chief Executive constitute a team where the defense of the land is concerned."

But in the same breath he delivered the broadest sort of hint for the adjournment of Congress as soon as it has passed the appropriations he asked.

Don't forget one thing. No matter what promises are made, the cold fact still remains that once Congress adjourns no power on earth can call it back into session except the President himself. Think that over.

Ask your self this question: If Congress and the President constitute a team where the defense of the land is concerned, is it wise or safe to send half the team back to sit on the bench while the greatest war game of our generation is being played?

I call upon Congress to remain in session. I call upon the people of the United States to demand that it resist both hints and pressure for adjournment and continue to occupy its front-line trench until all America is satisfied that we are protected alike from aggressors from without and borers from within.

I shall urge Pennsylvania's delegation to vote against adjournment. I suggest that Minnesota follow that example. Let all the governors in all the States, in the name of peace and security, do likewise. Let the friends and advisers of the President himself counsel him against pushing his suggestion for adjournment.

There is more involved here than merely keeping a bulldog in Uncle Sam's political front yard while we make a musket for his shoulder.

Congress has services it can render this Nation, during the next few months, which no other body can give, and which are of supreme importance to our national-defense program.

For one thing, Congress can protect the new dealers and the President himself from the further activities of the "fifth column" that has succeeded in so long delaying adequate defenses.

Thinking Americans can form only one conclusion as to why the New Deal, with limitless money and almost limitless power, has failed to keep Uncle Sam prepared to defend himself.

We have seen a national administration which for 7 years has been flirting with the Communists. Communism in all its forms has been a guest at the New Deal table, and it has needed no Dies committee to tell us that the reddest reds and the pinkest pinks have been and still are high in the New Deal counsels.

Can any of us doubt that it has been due to infiltration from a communistic "fifth column" that America's preparations to defend herself have been so long delayed?

Congress is in far better position than the President to weed out anti-American elements in our national administration and in our Diplomatic Service. Congress is the Nation's best defense against the "fifth column," which inescapably is at work in America. But Congress, once it adjourns, is powerless in this direction.

Remaining at Washington, Congress can control all the termites, including the third-termites, that army of New Deal fat cats who pray for Roosevelt's reelection on the sole grounds that it would keep them living 4 years longer in political clover at the public's expense.

The third-termites would hesitate not a moment to foment a war scare to try to protect their jobs and their political gravy. They would not hesitate to shame the American flag by using patriotism to mask their greed and ambition. They would not hesitate even to demand postponement of the conventions and of the Presidential election itself to postpone their day of reckoning.

Congress, by remaining in session, can protect the Nation and the President alike from such selfish and short-sighted advice. Believe me, brethren, he needs that protection.

There is a further consideration of which this Nation is scarcely yet aware.

The men and women of the United States are just beginning to awaken to the fact that the New Deal, as a body of political and economic theories, died last Thursday.

The new dealers have spent 7 years and $60,000,000,000 trying to make planned scarcity work. Nearly $60,000,000,000 have gone with the wind of boondoggling and leaf raking. They have been spent to buy votes instead of battleships. Planned scarcity as a policy is totally and obviously incompatible with a program of adequate military preparedness. The President himself, in the clearest terms, pronounced the death knell of planned scarcity in his appeal for rearmament.

The New Deal program of the last 7 years has given America thousands of rusted-out mills and factories which now must be replaced, thousands of plowed-under farms which now must be recultivated, millions of unskilled workmen who must now be trained, and a Mammoth Cave full of gold now becoming worthless. All that was done in the name of planned scarcity, and it must all be undone before America can be on a basis of self-protection.

The New Deal, as a going economic and political concern, went busted last Thursday. It needs a board of receivers to conserve its assets and reorganize it into something which will prevent its being a further liability in our national economy.

I know of no better receivership for the New Deal than the elected representatives of the American people, the legislative body designated by the Constitution for this very purpose—and I refer to the National Congress. Repealing and amending the Federal statutes to thaw out the frozen resources of this Nation and to make them available for national defense is a job which will keep Congress busy for months, and it is work which must be done promptly and well.

Only Congress is in position to see that the political misuse of relief appropriations, which has been a national scandal for years, is not duplicated in the administration of moneys made available for defense purposes.

America would forever hang her head in shame if history wrote on her pages that one cent of funds appropriated to a defense war chest followed relief moneys into a political war chest. That is a disgrace from which the United States must be protected, and Congress, by remaining in session, is in position to prevent it.

Another disgrace which America might suffer and which Congress can prevent is that the defense appropriations be used to line private pockets. War profiteers, whatever their connections, must not be allowed to bleed these funds. America's slogan can well be, "Millions for defense, but not one cent for profiteers."

Fifty thousand airplanes a year will require a system of airports on a scale far greater than the Nation has in sight. Mechanized armies, to be effective, will need military highways spreading from shore to shore in a network far beyond the capacity of anything now in existence. These again are fields in which the congressional half of the national-defense team can be of great service to the Chief Executive.

It is unfortunate that this emergency arises on the eve of the national conventions and the presidential election. There are undoubtedly many in the United States who believe it would have been proper for the President, in view of the crisis he outlined, to have taken the whole question completely out of politics by seizing the opportunity to renounce any third-term ambitions. One brief statement would clear the atmosphere. Unmistakably it is his move.

His failure to do so already is being construed in his own party as meaning that political considerations are not to be forgotten. Already certain third-termites are seeking to stampede the country into what they are pleased to call a "draft Roosevelt" movement.

Their conduct cannot fail to raise the question of whether this is defense mobilization or political mobilization.

Continued efforts by the third-termites to give this country the radio jitters, and thus obscure the vital issues, cannot fail in the long run to raise the disturbing question of the good faith of the national defense program as outlined to Congress.

If we use the safeguards available to us, we will not risk losing the fight against dictatorship getting ready for it. By that, of course, we will run no risks of being embroiled in war preparing to maintain peace. By that means, we can isolate the germ of desire for war, and give the first inoculation of that serum on the banks of the Potomac.

The New Deal slogan of 7 years, "Talk big and carry a pop gun," is now dead, and we are ready to return to the good old American doctrine of "Speak softly and carry a big stick." That is a slogan worth resuming not only for our national policy but also for our personal guidance as individuals in whom lodges the final authority of this Nation.

We, as a people, have a big stick we can use against enemies at home as well as abroad. That big stick consists of the individual and collective rights guaranteed us by our Constitution. Beware of any voice which urges you to lay down your big stick, whether he asks it in the name of preparedness or anything else.

We all concede that America needs rearming. Most of us demanded long ago that this country prepare to hold her own in the arena of nations.

A generation ago America organized an Army division for the first World War in which were men from Maine and men from California, men from Oregon and men from Florida, men from Pennsylvania and men from Minnesota, men from the North and South and East and West. Those men stood shoulder to shoulder in the ranks, and they battled side by side in what we then hoped was a war to end wars.

Recent events have demonstrated to us how completely that war failed to make the world safe for democracy. But disappointment over failure to achieve the end of permanent peace will never tarnish the gallantry of the soldiers who merged their racial and geographic differences in the famous Rainbow Division.

Tonight America is calling for another Rainbow Division. She needs 48 States that will stand shoulder to shoulder to make America safe for democracy. Far later than we should, we have awakened to our dangers from abroad. The next few months will tell whether we have awakened to our dangers from within.

Our first duty is to our own country. We must rearm America so that the Stars and Stripes and all they stand for will be forever safe.

Pennsylvania is proud to volunteer her services in this new Rainbow Division. As Governor of the Keystone State, I wholeheartedly pledge the full cooperation of our industrial Commonwealth of 10,000,000 people in a drive for proper and adequate defenses.

As I look into the faces before me tonight I know that Minnesota also stands ready to put her shoulder to the wheel. I know that Minnesota as always is ready to do her full share in protecting our flag.

But one final warning. Let us resolve not to permit that new Rainbow Division to be mustered under sealed orders. Let's find out where we are going.

I for one take no stock in the belief that we need to have war. I believe that rearmament, coupled with a policy of no more meddling, no more burning of Uncle Sam's fingers at the fires of Europe, will be the best possible guaranty of continued peace

Almost all the world is engaged in a gigantic dance of death, and I still think it will be possible for Uncle Sam to be a wallflower at that vast military ball.

I know America wants peace, and I for one am tired of hearing the new dealers brand every man who urges peace an isolationist.

But if war must come, I know of only one war worth fighting, and that is a war to preserve American liberty.

Let us reject any temptation to sacrifice that liberty in getting ready to defend it.

American patriots of whatever party can make no more important decision this summer and fall than to resolve to fight dictatorship and jingoism with ballots, lest one day in the future they have to fight that evil pair with bullets.

May God preserve our Nation. Give us courage in this hour of peril to see our duty and then to do it.

Grand River Dam District, Oklahoma

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

STATEMENT PREPARED BY THE NORTHEAST OKLAHOMA ARSENAL ASSOCIATION, UNDER THE DIRECTION OF HON. MIKE SILVA, VINITA, OKLA.

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

POSSIBILITIES OF THE GRAND RIVER DAM DISTRICT AS A LOCATION FOR A FEDERAL ARSENAL OR OTHER FORMS OF INDUSTRIAL DEVELOPMENT ALLIED WITH NATIONAL DEFENSE

FOREWORD

It is the purpose of this brief survey to point out some of the facts and figures which indicate that northeast Oklahoma, the Grand River dam district, is a logical location for industries important in the national-defense program. This material is not submitted for use in support of a campaign for any specific project, but it is intended as basic material upon which presentations for definite proposals may be developed. It has been prepared by the Northeast Oklahoma Arsenal Association in furthering the program set forth.

This report points out the geographical advantages of the Grand River Dam district, its widely diversified natural resources, its rich and varied fuel and power resources, its transportation facilities, its abundant supply of intelligent and readily adaptable labor, and its other attributes which merit the consideration of those whose responsibility it may be to determine the location of the Nation's defense facilities and industries.

The Northeast Oklahoma Arsenal Association was organized by local interests within the Grand River Dam district, and has gained widespread support for its purpose and program. Leaders in public life and private business over a much wider area than even the limits of the Grand River Dam area have pledged their support to this program in recognition of the potentialities of this region for national-defense developments.

The officers and directors of the Northeast Oklahoma Arsenal Association represent many communities and many business classifications. Individually and collectively they stand ready to work with those charged with the responsibility of selecting a location for a Federal arsenal or for other forms of industrial development allied with the national-defense facilities of this country.

NORTHEAST OKLAHOMA ARSENAL ASSOCIATION

It is the purpose of the Northeast Oklahoma Arsenal Association to exploit the advantages of the Grand River Dam area as the logical location for a Federal arsenal and other forms of industrial development as they are related to the program of national defense.

To build an organization of sufficient strength and interest that it will command respect both in this area and in its approaches to the State and Federal Governments.

Through the medium of a carefully prepared survey, followed up with a program of personal efforts and contacts, encourage the War Department, or some other agency of the Federal Government, to make an exhaustive survey of the Grand River Dam area to determine its advantages of location, resources, etc., with reference to national-defense developments.

Following these preliminary steps, to adopt as the first major objective of the organization the securing of the location of a new Federal arsenal for the Grand River Dam area.

To take as the second definite objective of the association the securing of the location of a Federal nitrate plant to be operated in connection with the Grand River Dam.

To exploit the possibilities of this area insofar as chemical industries are concerned, both as they are related to the national defense, but also as they relate to industrial chemicals, both present and anticipated.

To work in cooperation with other groups and agencies for the development of this entire area through the encouragement of industries which are related to the national-defense program and which may be developed as private enterprises.

NORTHEAST OKLAHOMA ARSENAL SURVEY

With the completion of the Grand River Dam early in 1940, northeast Oklahoma offers an ideal location for a Federal arsenal or industrial plants allied with the program of national defense. Located equal distance from Chicago and El Paso, Tex., and approximately half way from the east coast to the west coast, the Grand River Dam area is inaccessible from any exposed boundaries. It is midway between the Federal arsenals at Rock Island, Ill., and San Antonio, Tex. The location is ideal from the standpoint of raw materials, fuel resources, power, and labor supply. Climatic conditions, water resources, transportation, and industrial services are favorable. This brief survey will give brief factual information about this area and summarize some of its advantages.

Grand River Dam (Pensacola project): Grand River is a tributary of the Arkansas, its headwaters being in southern Kansas, and its never-ceasing flow being fed by the streams of the Ozarks. Above the site of the Grand River Dam, Grand River drains the run-off waters of 10,415 square miles, with a maximum annual run-off of 10,600,000 acre-feet, and with a maximum flood flow of 220,000 second-feet. The dam will impound 1,680,000 acre-feet and its spillway will have a maximum capacity of 525,000 second-feet. At elevation 745, the lake area will be 46,500 acres, the largest body of water within a radius of 200 miles.

In 1935 the Oklahoma State Legislature created the Grand River Dam Authority, comprising 14 counties of northeastern Oklahoma, a public corporation, and a State instrumentality created as a conservation and reclamation district. Bonds were issued to be repaid by the sale of electric power. This authority received an allocation of $20,000,000 loan and grant from the Public Works Administration.

The dam, scheduled for completion early in 1940, is 6,565 feet long, making it the longest multiple arch dam in the world. The length of continuous concrete is 5,680 feet, and of the multiple arch section 4,284 feet. The height of the buttresses in the river bed will be 150 feet, and the dam is 200 feet wide at the base. The powerhouse is immediately below the west end of the dam and is 285 feet long and 75 feet wide, providing space for four 20,000-horsepower units to be installed, and for two future ones of the same capacity. The power produced by four 16,000-kilovolt-ampere generators will be at a potential of 13,800 volts, and the annual power output will be 200,000,000 kilowatt-hours with the present installed capacity.

Two additional dams are anticipated in the complete Grand River project, and the ultimate estimated power output is 440,000,000 kilowatt-hours per year.

Grand River Dam area: The Grand River Dam district, located in the northeast corner of Oklahoma, surrounds the Pensacola Dam, now under construction on Grand River, and includes 14 counties as follows: Adair, Cherokee, Craig, Creek, Delaware, Mayes, Muskogee, Nowata, McIntosh, Okmulgee, Ottawa, Sequoyah, Tulsa, and Wagoner. This region is located in the foothills of the Ozark Plateau region. Because of the topography of the area, the Grand River is a stream of unusual flow in a valley of great beauty and with great potentialities for the service of man. The Grand River Dam area includes 9,669 square miles in northeast Oklahoma and has a population of 577,212.

History: The story of Oklahoma is different from that of any other State in the Union, and, of the entire State, the history of northeast Oklahoma is the most colorful. This was made the melting pot for Indian tribes not only of this region but also from east of the Mississippi River. The eastern Indians, known as the Five Civilized Tribes, established their own governments, and each tribe called itself a nation and had its own boundaries, laws, and officers. Military posts were conveniently located for the purpose of maintaining order, as well as being centers of contact between the Indians and the Federal Government; missions were established to provide a means of furthering Christianity, education, and culture among the Indians. This area became Indian Territory, and the western portion of the present State was Oklahoma Territory. The twin Territories were merged and Oklahoma became the 46th State of the Union November 16, 1907.

Natural resources: No region of the United States has a greater wealth of natural resources or a wider range of important mineral deposits than the Grand River Dam area. Although a young State, Oklahoma has ranked consistently in fourth place among the States from the standpoint of mineral production, and the reserves of this State are largely assembled in northeast Oklahoma. Coal is locked up in the hills around Grand River Dam, according to Government estimates, to the extent of more than 75,000,000,000 tons—enough to last, at the average rate of mining, for 25,000 years. This area has vast amounts of oil and natural gas, and it is at the center of the midcontinent region which has more than 70 percent of the Nation's reserves of these essential resources.

The most abundant metal is zinc. During several years one county in this region, Ottawa, produced more zinc than all the other States combined. Associated with zinc is lead. There are still vast amounts of zinc and lead unmined in Ottawa County. Among the other mineral deposits adjacent to the Grand River Dam are copper, iron, manganese, granite, limestone, marble, shale, cement, bentonite, glass sand, volcanic ash, tripoli, and novaculite.

It should be noted that the general area surrounding the Grand River Dam is extremely wealthy in natural resources. The annual production of minerals from Arkansas, Colorado, Kansas, Louisiana, Missouri, New Mexico, Oklahoma, and Texas is in excess of $1,750,000,000, or more than 40 percent of the Nation's total production. These States lead in the production of coal, bauxite, molybdenum, gold, silver, lead, cement, stone, copper, and potassium salts. They also furnish vast amounts of asphalt, barite, chats, clay, feldspar, fluorspar, fuller's earth, graphite, gypsum, helium, mercury, oilstones, ores, pumice, salt, tantalum ore, titanium ore, uranium and vanadium ores.

Practically all of the minerals considered important in national-defense plans and produced in this country come from this eight-State region, and most of the other strategic materials not now produced in quantity in the United States are known to exist in this area.

Labor supply: With its population being over 98 percent native-born, a decided advantage exists in the Grand River Dam district over other areas where the standards of labor personnel are not so high. Skilled artisans are to be found in almost every line, and the possibility of labor shortage is almost out of the question because an almost unlimited supply of high-grade, intelligent, and readily adaptable labor may be drawn from the area. Most of the labor in this area is on an open-shop basis, with miscellaneous union labor working harmoniously, with resulting peace and friendship. The labor of this area is loyal to American ideals. The labor supply may be drawn from all of northeast Oklahoma, which had a population in 1930 of 1,087,174.

Industrial development of area: Although but 2 generations removed from the Indian settlement period northeast Oklahoma has made remarkable industrial progress, indicating the acceptance by private industry of the advantages of this area. According to the 1937 census of manufactures, northeast Oklahoma had 613 manufacturing establishments, giving employment to 16,088 wage earners. These concerns paid $16,684,273 annually in wages, $135,323,899 for materials, and had products valued at $195,225,155. In addition to the manufacturing activity, the area had, in 1935, 291 mining industries, which paid $5,440,930 in wages, and the value of their production being $18,183,504. Leading in manufacturing activity are petroleum refining, heavy-equipment manufacturing, lead and zinc smelting and refining, glass manufacturing, etc. Throughout the Grand River Dam area there is a wealth of available sites, with unlimited space for expansion.

Power resources: Northeast Oklahoma, with the completion of the Grand River Dam, will be favorably supplied with power at favorable rates. In addition to Grand River Dam power, the area has a number of municipal power plants and is served by the interconnected systems of the Public Service Co. of Oklahoma, Oklahoma Gas & Electric Co., Oklahoma Power & Water Co., Oklahoma Utilities Co., and the Empire District Electric Co. Not including the Grand River Dam project, Oklahoma has electric power facilities with a total generating capacity of 331,334 kilowatts. There are 27 steam power plants with a capacity of 289,487 kilowatts, 67 internal-combustion plants, 4 combination plants, and 2 hydroelectric plants in addition to Grand River Dam. The network of connected interstate transmission lines assures an adequate supply of power to meet unforeseen demands.

Energy resources: It is doubtful if any area of the United States can equal northeastern Oklahoma in the amount and range of energy resources, including oil, natural gas, coal, and water power. The Grand River Dam is at the center of a reserve of 79,000,000,000 tons of coal. This region has long been a leader in petroleum production. Not only does this district produce approximately 100,000,000 barrels of oil per year, but it is at the heart of the Mid-Continent area, which accounts for more than 40 percent of the world's oil production. This area is also served by interconnected natural-gas systems, with many years' supply in sight. It is also at the center of the area which annually produces 70 percent of the Nation's natural gas. The water-power possibilities are indicated by the Pensacola project and other proposed developments on Grand River.

Water resources: All of northeast Oklahoma is networked with streams fed largely by springs in the foothills of the Ozark Mountains. The annual rainfall in this area is approximately 40 inches, and it is well distributed throughout the year. The ground-water situation is most favorable, and in many areas an abundance of water is available merely from the use of sand pumps. The Grand River Dam itself will impound 550,000,000,000 gallons of water.

Transportation facilities: Oklahoma, the youngest of the Southern States and the second largest, has extensive and well-distributed transportation systems, and this is especially true in northeast Oklahoma. The railroads of the State, operating a total mileage close to 7,000 miles, provide adequate passenger and freight service to all sections. Of the total mileage, all but a few miles are operated by 12 class I roads, which provide trunk lines from East to West and North to South. The total mileage of Oklahoma's State highway system is in excess of 8,000 miles, made up of approximately 3,300 miles of hard-surface roads, 3,700 miles of treated and untreated gravel roads, and only about 1,100 miles of dirt roads. A project is under way to make the Arkansas and Verdigris Rivers navigable into the Grand River Dam area. When this is completed access can then be made for direct shipments to Gulf coast ports. The area is also well provided with main-line air-transport service, and airports throughout the area are generally in excellent condition.

Cities and towns: The population of the Grand River Dam area is well distributed. Cities and towns with a population of 2,500 or more in 1930 are: Bartlesville, 14,763; Bristow, 6,619; Claremore, 3,720; Commerce, 2,608; Drumright, 4,972; Henryetta, 7,694; Miami, 8,064; Muskogee, 32,026; Nowata, 3,531; Okmulgee, 17,097; Picher, 7,773; Sand Springs, 6,674; Sapulpa, 10,533; Tulsa, 141,258; Vinita, 4,263; Wagoner, 2,994.

Climate: The eastern part of Oklahoma is essentially agreeable for living and exceptional so far as agriculture is concerned. The annual average rainfall is about 40 inches, with 75 to 80 percent falling during the 210-day growing season between March 1 and October 31. Snow which averages only a few inches annually seldom lasts more than a few days. It is unnecessary for any lost time to be charged up in any industrial activity to extreme weather conditions. With short, mild winters the summers are correspondingly long with warm temperature, but the climate is dry and the nights are nearly always cool. The annual average temperature is 60.7° F., with the average maximum temperature being 72.2, and the average minimum 49.1.

Business in area: Northeast Oklahoma, comprising 33.6 percent of the State's land area, has 45.4 percent of its population and an annual buying income of $436,314,000, or 46.9 percent of the State total. This area has 165,242 registered automobiles, 133,338 electric light and power customers, and 83,369 farms. Because income is almost equally divided between agriculture, production of minerals, and manufacturing, business conditions in the area are unusually stable. Sharp fluctuations in business trends are seldom noticed. Employment figures, according to most recent information, are as follows: Manufacturing, 16,088; mining, 6,216; retail, 23,561; and wholesale, 4,700.

Agriculture: A diversified system of agriculture is practiced in this area, providing almost year-around farm production to be made available to business and industrial employees. Because of its central location and varied topography, this region produces most of the major crops of the United States with the single exception of citrus fruits. The total cash farm income in the State in 1937, amounting to $186,155,000, placed Oklahoma fourth among the Southern States and was an increase of $37,317,000 over the comparable figure of 1936. Of this total cash farm income, $89,168 was derived from crops and $82,322,000 from livestock and livestock products. This area and that adjacent to it produces large quantities of wheat, cotton, oats, corn, and fruits. Although Oklahoma often is considered as a prairie State, a considerable area of native forest land extends from the southern pine region of the southeast to the western boundaries of the State, where oak and some other types prevail. The number of trees indigenous to Oklahoma is 134.

Advantages for arsenal: The foregoing merely indicates the numerous advantages available in the Grand River Dam area for an arsenal and for industries related to the national-defense facilities. Each new development in the international situation reemphasizes the importance of locating this Nation's defense facilities away from the exposed coasts. In this regard northeast Oklahoma is superbly located, combining the advantages of a most central interior location with the fact that it is readily accessible from North, East, South, or West. Although this area is not far from the geographical center of the Nation and close by the population center, it is still far away from the major concentrations of population as well as the major industrial areas where an enemy might be expected to concentrate its first attacks. Furthermore, this district is centrally located in an area without any national-defense plants at this time, being almost exactly equal distance between the plants at Rock Island, Ill., and San Antonio, Tex.

This area is believed to have more of the natural resources needed for such a program than any other district so centrally located in the United States. Water is available of good quality and in abundance for any industrial undertaking. Climate is favorable and the labor supply is abundant. Electric energy is available at low rates, and with the completion of Grand River Dam there will be a surplus of electric energy in northeast Oklahoma. Zinc, a munitions necessity, is available in Ottawa County in one of the most important producing areas in the world. A portion of the products of this area is reduced within the area. This area also ranks high in lead production, and much of it is reduced nearby. Cotton for use in explosives and for other uses is available from the cotton fields of Oklahoma. Coal is available in abundance for the innumerable products made from it, including some of the more important explosives.

When the magic wand of chemistry is waved over bituminous coal the results are beyond comprehension. From this product, by low-pressure distillation, is developed gas, coke, and coal tar. From coal tar and gas therefrom many well-known products are derived. In addition to a large number of materials used in everyday life, two important explosives are derived from coal tar. One is picric acid, which has been used as an explosive since the Russo-Japanese War, and the other is nitric acid, a very important factor in the manufacturing of explosives.

Coal in northeast Oklahoma is a high-class bituminous coal, and is mined under ideal conditions, with very little impurities in the coal seam, very little methane gas present, and dust explosions unheard of in this region. Thoroughgoing analyses show that gas can be manufactured from this coal. It is also known that by coking this coal it will make a much more desirable domestic fuel.

In view of the outstanding advantages offered by this district, the Northeast Oklahoma Arsenal Association asks that an exhaustive Federal survey be ordered immediately to determine the importance of the Grand River Dam area to the national-defense program and pledges full cooperation of the entire area in such a study.

House Resolution 36

House resolution memorializing the Congress of the United States and the Secretary of the Department of War to investigate the feasibility and practicability of establishing an arsenal and munition works, the same being convertible to the manufacture of commercial fertilizer, airplane factory, and training school for pilots and mechanics, all of which to serve the needs of the United States in peacetime and wartime

Whereas we are cognizant of the fact that there are several wars, declared and undeclared, now going on throughout the world; and

Whereas agricultural activities and the animal-husbandry industry are the two chief pursuits of livelihood in which the people of Oklahoma are now engaged; and

Whereas eastern Oklahoma is a part of the United States which is far removed from any coast and would prove less vulnerable to an attack than possibly any other area in the United States because of its natural terrain; and

Whereas eastern Oklahoma has all of the necessary materials for the manufacture and production of the many supplies that can be used in peacetime, and which production can be rapidly converted in wartime to the defense of our Nation, such as lead, zinc, iron ore, potash, manganese, cotton, petroleum, and hydroelectric power; and

Whereas all of the present arsenals and munition works now located in the United States, save and except one, are located in the close proximity of the oceans and of the Gulf of Mexico, and are vulnerable to foreign attack: Now, therefore, be it

Resolved by the House of Representatives of the Seventeenth Legislature of the State of Oklahoma, That the Congress of the United States and the Secretary of the Department of War be memorialized to take cognizance of the possibilities of eastern Oklahoma in the proposed program of national defense, and to take the necessary steps to make the greatest possible use of such area in that program by investigating the feasibility and practicability of establishing commercial fertilizer plants, convertible munition works, arsenals, airplane factories, and training schools for pilots and mechanics; be it further

Resolved, That a copy of this resolution be forwarded by the Speaker of the House of Representatives to each Member of the House of Congress from the State of Oklahoma, and a copy to each Senator in the United States Senate from the State of Oklahoma, and a copy to the Honorable Harry H. Woodring, Secretary of War of the United States.

Adopted by the house of representatives the 10th day of April 1939.

DON WELCH,
Speaker of the House of Representatives.

How the Term "Fifth Column" Originated

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1940

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following explanation of the origin of the term "fifth column":

A great deal of curiosity has been aroused recently by the repeated use of the expression "fifth column" in the press and over the radio. The way in which it has been used has served to give a good idea of its meaning, but very few have known how the term originated.

In checking back it is found that the expression "fifth column" started with General Emilio Mola during the recent civil war in Spain.

During that war General Mola was in command of the Nationalist troops which were marching against Madrid. When questioned about the disposition of his troops he is said to have replied:

> We have four columns on the march outside the city. In the city we have a fifth column.

By the words "in the city we have a fifth column" he meant that within the city he had people working and doing practically the same thing that the bunds and other similar organizations have done in Czechoslovakia, Austria, Poland, Denmark, Holland, Belgium, and Luxemburg, and as they are doing throughout the United States today.

Thus a new expression was born and added to modern languages. It has come to be associated with any subversive or treacherous undercover movements made within a country threatened with attack by an enemy.

The New Deal and the Third Term Issue

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1940

ADDRESS BY HON. HOWARD H. BAKER

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable Howard H. Baker, attorney general of the thirteenth judicial circuit of Tennessee, at the Republican district convention of the Second Congressional District of Tennessee, at Knoxville, on May 17, 1940:

It is a great pleasure to be chairman of this convention, a meeting of the best Republicans in America, the best citizens of the United States, the best people in the world. It is recognized by all authorities that the purest Anglo-Saxon blood in the present-day world flows through the veins of East Tennesseans. We are not patting ourselves on the back. I am merely stating facts.

You came here to select two delegates and two alternates to the national convention of our party on June 24 at Philadelphia, at which meeting we shall name and select the next President of the United States.

Our party had its inception at a time of grave national peril, and throughout its history, which is almost a history of our great Nation, it has directed the course of life of our forefathers and of ourselves with three exceptions, the administrations of Grover Cleveland, Woodrow Wilson, and of Franklin Delano Roosevelt. This is no time to point with pride nor view with alarm. It is no time to base our claims upon the past, glorious though it may be. We are happy in the thought that our party was born in travail; to have been born otherwise would have been an unnatural birth. We are proud of the history of our party, of its survival in 1864, and of its leadership throughout modern years.

The people of this Nation are familiar with this history, but they now are face to face with cold realities. They respect our history and tradition but they are far more concerned with the realities of today. And rightly so. What are the realities? Not a campaign between the Democratic Party and the Republican Party. If so, there would be no real cause for alarm unless it be from the standpoint of the unappeasable appetite of the office seeker, and we have them in both parties. We have them even in our party, the party of Lincoln and his illustrious successors. Republicans for revenue only. We were taught by our Master, the Nazarene, that if we would see clearly, we should first cleanse our own eyes.

We do not face the Democratic Party, the party of Jefferson, of Andrew Jackson, or even of the idealist, Woodrow Wilson. We do not face the party of Senator Carter Glass or of Senator George, or of Vice President Garner, or of Cordell Hull, our own Tennessean, who would be a most formidable opponent but who doesn't have a Chinaman's chance (the Gallup poll to the contrary notwithstanding), and the reason he doesn't have a chance is that he is not acceptable to F. D. R. Mr. Hull has not yet called Mr. Roosevelt "Our Lincoln" and never will. So that eliminates him.

We face the New Deal, and by early fall the best of the Democratic Party as it exists today, that is, those Democrats who believe in their party's principles and who place America above piecounterism, will fold their tents and walk silently away. I predict that if the third termites nominate Mr. Roosevelt or an outright New Dealer, the Democratic Party will assemble shortly and nominate a Democratic candidate for President and will thus eliminate any possibility of a doubt of the election of the Republican nominee for Chief Executive of this great Nation.

It is my mature, sincere, and heartfelt belief that if our American system of government is to remain and endure, the New Deal must be eliminated in 1940. Unbridled debt will eat away the foundation of any nation, family, or individual, and we know that our national debt is now unbridled. Droves of mules are loose in the clover patch, and there is no mule herder, or if there is one his thoughts are upon other subjects.

The New Deal has attempted to stir up class hatred in a nation where there are no classes, no aristocracy except one based upon hard work and accomplishment, and it has partially succeeded, but the sound common sense of the American people has reas-

serted itself, and we again realize that such conflict is futile, that "a house divided against itself must fall," that "life, liberty, and the pursuit of happiness" are still the cardinal aims of free men, that industry and frugality are still words to be prized, and that hard work is the secret of success.

We are faced with the towering menace of European war, now almost a world war, one which may cause the last one to dwarf into insignificance. It is a situation which may well cause the hearts of everyone—father, mother, son, and daughter—to be tremendously disturbed. Twice in our national history the thought of "don't swap horses in the middle of the stream" was used in political campaigns such as the one we may be approaching. The first time this expression was used it was true. The war had been waged for nearly 4 years; its outcome was doubtful; the issue was whether the War between the States should continue or cease.

It was a real issue. If Mr. Lincoln had been defeated, the Union would have been severed immediately. The other time was in 1916. Mr. Wilson was elected upon the issue that "He kept us out of war." The weeks were very short after Mr. Wilson's reelection and inauguration until we were very active participants in the war. The gathering war clouds will probably provide the chariot wheels for the third-term draft in 1940, but I believe that the American people have too much common sense and have their feet too solidly upon the ground to be deceived by such a feigned issue. I am not one of those who believe in "peace at any price" or complete isolation for the United States of America. The latter would be fine, but it is impossible. However, I do not believe in unnecessary bluffing on our part or going to war over a few barrels of oil or some tin; the New Deal has enough tin, anyway. There is no truer statement or thought than that they who play with fire will get burned. We should spend billions for defense and keep our hands out of European shenanigans and "protection" measures; and, to use the words of one of our present-day Republican statesmen, "Let's swap horses and stay on this side of the stream."

Some good has been accomplished by the New Deal and we must retain the things which are worth while. This is neither the time nor the place to recount them.

We must remove fear and hatred and give business a chance to reassert itself, but, above all, we must remove the New Deal. When that is done our problems will approach solution. We shall solve them by the concerted thought and action of all right-thinking Americans.

Save the American Home

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

PROGRAM OF INDIANA HOME OWNERS' ASSOCIATION, INC.

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I present herewith the 8-point program of the Indiana Home Owners' Association, Inc., of Fort Wayne, Ind., a growing and militant organization of more than 3,000 Hoosier home owners.

The commendable purpose of this fine association, which was organized a year ago, is to preserve our Christian democracy by saving the American home. It is a nonpartisan, nonprofit organization, and it has the support of many leading citizens of the community.

As part of its legislative program the Home Owners' Association is promoting the Mead-Barbour bill, S. 3447, which is now before the Senate Committee on Banking and Currency. This measure would amend the Home Owners' Loan Act by reducing the interest rate on H. O. L. C. loans, by abolishing certain deficiency judgments, and by providing a moratorium on foreclosures.

The officers and leaders of the association are: Henry J. Peters, president; Frank Bender, vice president; Chester W. Keen, secretary; Mrs. C. A. Menefee, assistant secretary; Dr. R. L. West, treasurer; Frank V. Kelly, chairman of the board of directors; and Herman C. Brandt, member of the board of directors.

After considerable study and investigation, based on practical experience with this pressing problem, the association has prepared the following eight-point program for the preservation of the American home. I recommend that it be given the serious and sympathetic consideration of this Congress:

It is our firm conviction that the Home Owners' Loan offices established throughout the various metropolitan centers in the United States are being maintained at excessive and unnecessary cost to the Home Owners' Loan Corporation, and that a reputable realtor who knows real estate and whose integrity is beyond question in each community would be better fitted not only to receive the collections but to handle the real estate which the Home Owners' Loan Corporation has taken back than the Home Owners' Loan Organization now in existence.

It would have the added advantage of enabling those mortgagors who are in some difficulties with their mortgage to go to a local individual who has had years of experience in the real-estate business, and to present to him their problems, and with his help and suggestion, many of these homes which have been foreclosed could have been saved to home owners, and hundreds of thousands of dollars could have been saved to the United States Government and the Home Owners' Loan Corporation by efficient handling by someone with a background of experience and adequate knowledge of real-estate conditions in the various communities.

With this preface, we suggest the following changes be made:

1. That the Home Owners' Loan Corporation law or the regulations of the Home Owners' Loan Corporation, whichever may be required, be amended to enable those who are delinquent in their payments, and who have made good-faith effort to pay, possess good moral character and honesty, and are good moral risks, accompanied by a reasonable probability of acquiring a sufficient earning capacity to pay out their mortgages, may reamortize their loans at the reduced interest rate the same as those whose mortgages are current.

(a) By this this association does not mean that the man who has never paid, and who has never endeavored to pay, and who is a chiseler should be able to qualify under this reamortization plan.

2. Amend the law or regulations to provide that the Home Owners' Loan Corporation, if it still possesses property which has been foreclosed, shall reconvey and accept a mortgage for the amount from those persons who are good moral risks and possess a reasonable probability of paying out their mortgages on the reamortization basis, to be determined by a home owners' debt committee as provided for hereinafter.

3. Place the handling of Home Owners' Loan Corporation mortgages and collections in the hands of a reputable local real-estate agency in each metropolitan center with authority to trade or exchange properties now owned by the Home Owners' Loan Corporation to those Home Owners' Loan mortgagors who are overhoused, and accept the higher priced property, in order that the Home Owners' Loan mortgagor may not lose his entire equity, on a basis which will assure to the Home Owners' Loan Corporation no greater loss than would be sustained in the handling of the cheaper property.

4. On foreclosures, eliminate appraisal fees, photographers' fees, and limit attorneys' fees to a fixed amount as a part of the cost of foreclosure, so that if the mortgagor is enabled to redeem his property he can redeem it without paying more than a reasonable fee for costs and expenses.

5. Require the Home Owners' Loan Corporation to take immediate steps with efficiency to implement the amendment for rewriting current mortgages at a lower rate of interest on the longer basis.

6. Provide that in event of foreclosure the Home Owners' Loan mortgagor may take advantage of the provisions of the Frazier-Lemke bill for farm mortgages by the same proceedings and under the same terms.

7. Provide for the creation of a home owners' debt committee in each county for the purpose of reviewing loans before foreclosure proceedings are instituted, and for the purpose of working with the mortgagor to enable him to manage his funds and budget his income so that reasonable payments may be made on his mortgage, and for the purpose of passing upon credit ratings, moral risks, and ability to pay, and the probability of income of those who seek to repurchase their properties which have been foreclosed, two members of the committee to be appointed in each community by the Home Owners' Loan Corporation, two members by the Home Owners' Loan mortgagors, and a fifth member by the judge of the circuit court in the county where the committee is appointed.

8. If the Home Owners' Loan Corporation is placed on a basis of efficiency, properties and the mortgages managed by local real-estate agencies of reputable character, and excess baggage weeded out, enough savings can be effected to accomplish a further reduction in the interest rate on Home Owners' Loan mortgages.

Business Engaged in the Marketing and Distribution of Petroleum and Petroleum Products Should Not Be Classified as Chain Stores

EXTENSION OF REMARKS

OF

HON. THOMAS D. WINTER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

STATEMENT OF HON. THOMAS D. WINTER, OF KANSAS

Mr. WINTER. Mr. Speaker, a special Ways and Means Subcommittee has been considering H. R. 1, commonly known as the antichain-store bill, which is designated to protect local merchants against unfair trade tactics of the fast-growing chain-store monopoly. On May 10, 1940, I appeared before this subcommitte in opposition to an amendment to H. R. 1, which the subcommittee then had under consideration, which contemplated including places of business engaged in the distribution and marketing of petroleum and petroleum products in the category of chain stores and making such places of business subject to the tax provided in H. R. 1 against chain stores. My statement before the subcommittee was as follows:

Mr. WINTER. Mr. Chairman, I am not going to take up very much of your time. I can agree with practically everything Mr. DISNEY has said, but not all of it.

The principal reason which has prompted my appearance here this morning is the apparent intention of the sponsor of H. R. 1, my learned colleague from the State of Texas, to include places of business engaged in the distribution and marketing of petroleum and petroleum products along with the other businesses to which he intends to apply the provisions of this bill.

At the outset of my discussion I would like to make it plain as to just what my interest is in this particular legislation. As you gentlemen know, I represent the Third Congressional District of Kansas. While Kansas is known throughout the country as one of the leading farm States, it also possesses great mineral resources and is one of the top-ranking crude-oil-producing States of the Nation. It might surprise you gentlemen to learn that the annual value of the petroleum produced in my State almost equals the total annual value of all its farm products.

In the production of this essential resource Kansas ranks sixth among the 23 States which produce oil. It is this fact, specifically, which is responsible for the interest of my constituents and myself in the attempt of the sponsor of H. R. 1 to include the production and distribution of petroleum products in the bill which is now under consideration by this committee.

The Third Congressional District of Kansas, which I represent, contains nine counties in the southeastern part of our State adjoining Oklahoma. This particular section of the State embraces a large portion of the State's oil-producing area and the returns from this activity, naturally, are of immeasurable economic benefit to the residents of that area.

But our interest does not cease with the production of the oil itself. In addition to operating their own oil wells the residents of my district also refine the crude oil which they produce into gasoline, lubricants, fuel oils, and other finished petroleum products for consumption. My district contains about one-third of the total capacity of all the refineries now in operation in the State and thousands of our citizens are gainfully engaged in the marketing of these products.

On the basis of the current yield of gasoline from crude oil it is estimated that the gasoline produced in the State of Kansas each year is sufficient to maintain 1,800,000 vehicles in operation for a whole year. Obviously, all of that volume of gasoline cannot be consumed within our State, for we only have 577,000 motor vehicles in the whole State. So it is clear that my constituents must depend upon distribution in other States if they are to make an adequate livelihood for themselves and their families.

They are not, moreover, in a position to undertake such distribution under their own financial resources. All of their available capital already is being utilized in the operation of their oil wells and their refineries. So, if they are to benefit from the sale of the finished products which they manufacture from the crude oil they produce, they must rely upon distribution facilities provided and maintained by others.

Wholly satisfactory results are now being experienced with the present system employed in the distribution and the marketing of these finished petroleum products. It seems only natural to me, therefore, that my constituents should be vitally interested in the uninterrupted continuance of the present efficient and economical distribution of their products to the country's consuming markets. It seems equally natural that they should be most loath to have legislation enacted which would cause a serious disruption in the present marketing structure.

In fact, many of them feel, and I believe with good reason, that if the provisions of H. R. 1 are made to apply to the oil industry that the marketing of petroleum products would be immediately plunged into chaos, and I think you gentlemen will agree with me that the marketing of petroleum products, and particularly gasoline, is in a peculiar situation. It is different than the marketing of food products or clothing that is being distributed by chain stores. There isn't any other way that petroleum can be marketed to the public successfully at the low economic price we are getting it for today.

In my district I don't know of any filling station that is not locally operated, and a great majority of them are locally owned, and I have gone into the thing very seriously with the representatives of the various companies, and the men operating these filling stations can buy or they can lease them.

I was very much interested in what Mr. DINGELL said about the 24-hour notice on contracts. That does not prevail in my State. Those contracts are signed for a definite period of time, and they use the gasoline of their particular company. But if a man owns his own station or a string of them, he buys whatever make of gasoline and lubricants he desires.

Mr. DINGELL. And I will say to you, so far as I am concerned, there is nothing to sustain that assertion except the word of the man who called me over the long-distance telephone.

Mr. WINTER. Well, I took that as your statement.

Mr. DINGELL. I have no reason to question the soundness or the veracity of what he told me, but it is not substantiated so far as the record is concerned.

Mr. WINTER. I just wanted to call attention to the fact that you made that statement, and since you made it, to say that that condition does not exist in Kansas.

Mr. DINGELL. You understand my position, I am not attempting to, or by the widest stretch of the imagination, planning on including any line of business under the provisions of the bill which rightfully would not belong there. On the other hand, my contention is if this is to be a chain-store bill, aimed and directed at chain stores, I want it to affect chain-filling stations or chain purveyors of liquor or chain-drug stores or chain-food stores or clothing stores or automobile supplies. Anything that is a chain must of necessity be included here, and any exclusions I naturally have my suspicions of. We had a witness here the other day who made a statement in favor of the bill. Then he evidently heard from his constituents and he came right back here and amended his attitude.

Mr. MCCORMACK. I think in that case that witness overlooked an important part of his testimony. Those things happen to all of us

Mr. DINGELL. That may be true, but the fact of the matter is that he favored the bill, provided it excluded filling stations.

Mr. WINTER. I can agree with what the gentleman says to this point, with one exception, however, that is, to me, you have got to take into consideration the distribution of the particular article. If that distribution goes on under the class of what you are terming "chain stores" and the chain distribution of it, and it is detrimental to the people and the communities and the country as a whole which is producing that particular article, then I can agree with the gentleman, but I cannot for the life of me see how you can place the chain-store stamp upon the distribution of petroleum products in the manner and under the system we have developed here in America, and I will say this to the gentleman, that in my particular community—and that part of my State is producing a great deal of our oil and refining and making the gasoline—if this bill is enacted into law and it carries such a provision as this bringing filling stations under it, you would find everybody down there would be faced with the loss of their life savings and investment, and you would throw the whole distribution system into chaos.

Mr. DINGELL. I don't think we can go into the question there as to whether or not the bill is detrimental. That is beside the question before us.

Mr. WINTER. I will agree with you on that.

Mr. DINGELL. We have had more than 150 witnesses here who have said that the provisions of the bill are detrimental to the interests for which the witnesses spoke, but so far as the inclusion or the exclusion of any line of business is concerned, that question does not enter. It is a question of whether or not they qualify under the term "chain stores."

Mr. WINTER. I think it is a very important question for this committee to consider whether or not the enactment of any amendment to this bill or any other bill would be detrimental to an industry as a whole.

Mr. DINGELL. I agree with you, and I am sure the committee will take such a thing into account. But I mean, so far as the inclusion or exclusion of any particular line of business——

Mr. WINTER. I am not talking about a particular business. If the gentleman will get my point—I mean an entire distribution system now in use in America insofar as the sale of petroleum products is concerned. That is the only point that I urge.

Mr. DINGELL. You understand my attitude?

Mr. WINTER. Certainly.

Mr. DINGELL. I am not unfriendly to the filling stations or to the producers of petroleum. We are an oil-producing State in Michigan.

Mr. WINTER. I am not unfriendly to H. R. 1 by any means. I don't mean that.

Mr. DINGELL. And my State produces the burners——

Mr. WINTER. I know it does.

Mr. DINGELL. Of the production that comes from your State.

Mr. WINTER. And we have lots of them in use in our State.

Mr. DINGELL. We have lots in common. I have no opposition to anything you might say, but I am interested in the question of fairness.

Mr. WINTER. I think this whole committee, so far as that is concerned, will be fair in whatever decision they arrive at in this matter, and I will say this to the gentleman, I do not contend that this present marketing system is perfect by any means. It has a lot of faults. But there is one thing I do know, and that is this: that it is functioning now with the very minimum of wasted effort and economic loss, and that seems to indicate it is just about as satisfactory a way of distributing the products of the petroleum industry as you can find.

Mr. DINGELL. I don't think there is any question about the efficiency and the cheapness at which the product is sold.

Mr. WINTER. And I don't think there is any question about the proposition of the number of people employed in it, and it seems most unwise to me and my constituents and the people who have a vast amount of investment in this to attempt any cure-all system so far as the system of distribution is concerned whereby we serve the public with the products we make from our crude oil and petroleum as we produce it and refine it.

As I say, I do not contend that the present marketing system is perfect. It may have some faults, but the fact that it now functions with the very minimum of wasted effort and economic loss seems to indicate that it is just about as satisfactory as it is possible to be. And it seems most unwise to attempt to install a new cure-all system which admittedly will effect radical changes in the whole set-up of marketing without any definite assurance or effective guarantee that there will be any resulting benefit to the consumer or to the producer and the refiner.

At this point it seems most desirable to place special emphasis upon one particular point. To us, in Kansas, the prosperity and welfare of the individuals who consume petroleum products, the individuals who refine these products, and the individuals who produce the crude oil from which they are manufactured, and the individuals satisfactorily and gainfully engaged in the marketing of these products under the present system, seem equally as important as the welfare of any small number of individuals in the marketing branch of the industry who are dissatisfied for one reason or another. As we understand our democratic Government, it is designed to foster and promote the greatest good for the greatest possible number and we, in Kansas, feel that the marketing system now in use in the petroleum industry is producing the greatest good for the greatest possible number at a minimum cost to the consumer.

And on behalf of my constituents, who are engaged as petroleum producers, refiners, and distributors of petroleum products, I most earnestly and sincerely protest the application of H. R. 1 to the production, distribution, and marketing of petroleum and its products.

So far as the bill generally is concerned, I am making a study of it, and I say to you frankly I am not prepared to make any statement on it at this time.

Mr. MCCORMACK. You are appearing here in one capacity.

Mr. WINTER. In one capacity; yes.

Mr. MCCORMACK. There is just one question I want to ask you.

Mr. WINTER. Yes, sir.

Mr. MCCORMACK. Assuming the provision you addressed the committee on should be included and the bill reported, what effect would it have on the State of Kansas from an economic and financial angle, and, in your opinion, upon every other State that produces petroleum?

Mr. WINTER. If this provision were in the bill?

Mr. MCCORMACK. If it was.

Mr. WINTER. I think it would wreck it. This is a business that is now employing hundreds of thousands of people, and we would have a great many more people on the unemployed roll.

Mr. MCCORMACK. I just wanted to get your opinion as to the result.

Mr. CROWTHER. I just want to say to the Congressman that in my opinion he has given us a very informing and enlightening statement, and I congratulate him.

Mr. WINTER. Thank you, gentlemen, for your time.

Amendment of National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

ARTICLE BY DAVID LAWRENCE

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, published recently in the Washington Star:

WAGNER ACT VOTE TO MAKE HISTORY—STAND ON CHANGES SEEN TIED UP WITH MORALS OF DEMOCRACY

(By David Lawrence)

Within a few days the House will be asked to record itself on what may prove a historic vote because it is directly related to national unity and efficiency and production.

For several months, the House has had before it certain proposals to amend the National Labor Relations Act. These amendments do not in any way weaken collective bargaining or the rights of labor to organize, but they decidedly weaken the power of an arbitrary-minded tribunal to write into the law things that were never put there in the first instance by Congress. Likewise, the amendments seek to give employers—who, too, have civil rights and are supposed to be treated fairly, even though they are in the minority—a chance to conduct their labor relations without being harassed by misuse or abuse of the words of the statute.

The labor-union politicians, working in close cooperation with the National Labor Relations Board, have been conducting a lobby to persuade Members of the House to leave the law unchanged. Threats of reprisals at the polls are in the background of the controversy. Republicans and Democrats alike have been asked to vote against the amendments on the ground that the labor unions did not want changes

The position of the C. I. O. has been to oppose all amendments. The A. F. of L. started out with amendments of its own and thought it had administration support, but it turns out that the A. F. of L. has been left isolated. Lately there have been signs that the A. F. of L. leaders will return to the position they originally took, namely that a new labor board must be created.

BETTER RELATIONS NEEDED

The need for a more satisfactory relationship between management and labor than exists in America today is conceded on all sides. In England, it is admitted that because labor refused to cooperate voluntarily, measures of emergency had to be adopted by Parliament conscripting labor and capital. But in the end it is labor that has to surrender most. So in America, if voluntary cooperation breaks down and America is forced into the war some day, labor will bear the brunt of the struggle. Can America forestall such a development by setting up now a better relationship between management and labor? The House will have to answer that question and take full responsibility for the decision next week.

It is not a difficult controversy to appraise. When, after a searching investigation by a special House committee, abuses are revealed, it is certainly not constructive for the big powerful labor politicians to ignore the abuses and endeavor to whitewash completely those who have been guilty of wrongdoing and of openly violating the Federal statutes. Members of the Board have boldly confessed to violation of antilobbying laws, and yet have never been prosecuted.

PUBLIC MORALITY UNDER CLOUD

The spectacle of an administration which vigorously enforces the laws against employers and deliberately refrains from enforcing the statutes against its own employees when they violate Federal law is an example of the decay of democratic government and public morality. When political expediency supersedes honest enforcement of the law, the foundation of democracy itself is made insecure.

The campaign against amending the national labor relations law has in itself revealed that arbitrarily interpreted statutes can be kept in force if the political lobbies are strong enough. The administration by its position thus far has committed itself to the side of unqualified endorsement of the mismanagement by the Board. All the revelations of the Smith committee have been brushed to one side and administration leaders are fighting against amendments.

How can industry ever have confidence in any administration which so far forgets the rules of fair play in a democracy that when unfairness is clearly proved, no redress is obtainable? How much enthusiasm can industry put into the production machine when it feels that at Washington is a group of overzealous politicians interested primarily in their own ambitions and their own maintenance of political power?

VOTERS FINAL ARBITERS

The average citizen often asks himself what he can do about it. The coming vote in the House will give him much food for thought and a stimulus to action. Every vote for unqualified retention of the National Labor Relations Act, every vote made at the behest of pressure groups, can be repudiated at the polls by larger groups of the electorate who want to see a fair deal for employers as well as employees.

The question of what the Senate does about it is secondary. For the House must go on record first. If the House does not see the implications to national defense and efficient production in failure to correct the mistakes in the Wagner law, then America must look to the voters at the polls to express in unmistakable terms this autumn the national desire for fairness and voluntary cooperation in government. It's another episode in the era of selfishness that has made democracy so weak to cope with totalitarian states.

The Mexican Mystery

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1940

EDITORIAL FROM THE NEW YORK DAILY NEWS

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Daily News for May 25, 1940:

[From the New York Daily News of May 25, 1940]

THE MEXICAN MYSTERY

In this crisis, we feel that it is no time to pinprick our Government. And that is not our intention.

Nevertheless, we have long been puzzled by the present Government's policy toward Mexico—or lack of policy, maybe. Our bewilderment is renewed and refreshed by Hal Burton's series of articles on Mexico, now running in the News, and full of interesting and alarming material.

Soon after he was inaugurated in 1933, President Roosevelt announced the good-neighbor policy. It was to apply to all Latin America, which, of course, includes Mexico. About the same time, our Government began buying silver from all comers at inflated prices, the object being to give the western silver producers an economic boost and to help certain silver-standard countries, notably China.

In March 1938 the Mexican Government seized about $450,000,000 worth of oil properties in Mexico belonging to various American, British, and Dutch companies, and undertook to run those properties on its own.

Our State Department filed various protests, which were received with extreme politeness by the Mexican Government. But the story President Cardenas' press agents and newspapers told the Mexican people was that the United States Government approved the oil grabs. And the Mexican Supreme Court O. K.'d the oil grabs.

We went on buying Mexican silver at inflated prices, and are still doing so. That had and has the effect of staving off a complete financial break-down in Mexico—though Cardenas' government is having pretty tough going nevertheless.

Cardenas is selling the expropriated oil wherever he can find buyers or swappers; and those buyers and swappers were chiefly German and Italian before the war and are chiefly Japanese now.

In short, we are subsidizing with silver purchases a government which takes the property of Americans and sells or swaps it to governments which are less our friends than any other first-rank governments in the world.

"FIFTH COLUMN"

We've heard it asserted that this United States super-good neighborliness toward Mexico was at bottom a New Deal effort to pay off its political debt of the 1936 campaign to John L. Lewis, who contributed about $500,000 of his United Mine Workers' funds to the Democrats that year, and who is very friendly with Vincente Lombardo Toledano, Mexican labor leader. We have no reason to believe that there is anything in this charge, no way of verifying it. But it has been whispered about, nevertheless, and has apparently convinced some people.

Our soft-heartedness toward Mexico now begins to threaten to kick us in the face.

As Mr. Burton reports, the coming Mexican Presidential election has already fanned up a revolutionary situation in Mexico. Cardenas's candidate, Manuel Avila Camacho, and the conservative candidate, Juan Andreu Almazan, are making ready to contest the election with guns, whichever way it goes. The result may be a dangerous explosion to the south of us, at a time when Europe is exploding to the east of us and Asia to the west of us.

Even worse than that, to quote Mr. Burton:

"The 'fifth column' is closing ranks in Mexico, facing north toward the American border. Germany has 200 busy agents at work—more than in World War days, when Carranza maintained a dubious 'neutrality.'

"Russia, too, is busy behind the scenes. Native Communists and fellow travelers run many of her errands. Some of the anti-Franco refugees from Spain do the rest. Japan hovers on the side lines, distributing discreet largesse in the form of 'investments' that never will pan out."

That is the kind of country to which we go on being a good neighbor by buying its silver at uneconomic prices, then burying the silver at West Point, where it does us no good.

Mexico is already on the ragged edge of complete communism, its government having taken many a lesson from Leon Trotsky, its long-time honored guest. Nations unfriendly to us are already using Mexico for purposes best known to themselves. It is conceivable that Mexico may sometime be used as the jumping-off point for an invasion of the United States—or at least for some kind of violation of the Monroe Doctrine.

To repeat, we cannot understand why this Government goes on being such an extra-good neighbor to Mexico.

"Fifth Columnists"

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1940

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include therein an editorial which appeared in the Evening Star on Saturday, May 25, 1940, which editorial follows:

[From the Washington Evening Star of May 25, 1940]

"FIFTH COLUMNISTS"

The grim determination with which Great Britain is running down her "fifth columnists" is convincing evidence that the dictatorship realizes the seriousness of the peril across the channel.

Although democratic rights are in eclipse as police and Scotland Yard crack down on Fascists and Communists, these elements have no cause for complaint. They are merely victims of the very methods they would use if they should come to power—methods which they have been actively trying to establish in England.

It is one of the paradoxes of democracy that the guaranties of freedom of speech, assembly, and press are the shields behind which the foes of democracy conduct their vicious campaigns to destroy the system which permits them to exist.

If Britain has now, through the exigencies of the war, become a dictatorship, it is the most nearly perfect example of democracy in action, not only waging war efficiently against a highly mobilized opponent but jealously guarding its own future.

Not only Britain and France, but other nations not yet involved in this war are paying increased attention to those within their borders who would pave the way for an invader. Particularly is this true in Latin America, where the small republics have for years been the objects of Nazi lures and blandishments. Many of them have German and Italian minorities articulate in support of the lands from which they came.

Mexico especially has reason for apprehension at this moment as a hot election campaign approaches its climax in July. Mexico reports a suspiciously large influx of German tourists, augmenting the already substantial body of Nazis which have long used Mexico as a sphere in which to spread their ideology.

It is possible that subversive elements taking advantage of political upheaval, should that follow the election, might rise to power.

In such an event the United States could not remain a disinterested observer. We have too many potential "fifth columnists" ourselves to permit the rise on our border of a regime which would be more sympathetic with the cause of Nazi-fascism in Europe than is good for the Americas.

Coalition Government

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1940

ARTICLE BY CHARLES G. ROSS

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles G. Ross:

WASHINGTON LETTER
(By Charles G. Ross)

CONCERNING THE NONSENSICAL TALK ABOUT THE NEED FOR A COALITION GOVERNMENT IN AMERICA—GOVERNOR LANDON MAKES A GOOD POINT IN OPPOSING THE IDEA

WASHINGTON, May 24.—The silliest talk to which our preparedness program has given birth is that we should have a coalition Government. If we had our backs to the wall, like England, the desperate necessities of the case would, of course, put us under that kind of government. There would be no alternative. And the Government in that event would be far more than a coalition government of

the sort that is being talked about; it would be a totalitarian government, like England's now.

But we haven't got our backs to the wall. We are not even in a war. What we are now undertaking to do is simply to spend money in sufficient sums and with sufficient expertness to insure our national safety if we do get into a war. This is a tremendously important effort; it is something that needs to be carried through with all dispatch; but it constitutes no crisis remotely warranting the hysterical cry that we abandon our traditional two-party system of government.

The preparedness program, overshadowing though it is at the moment and may be for a long time to come, is still but one of the concerns of the National Government. There are plenty of other grave concerns, and out of them grow issues that provide proper fighting material for the parties. To say that all these other issues should be put aside—which is to say, concretely, that the opposition party should be denied its right to do all it can at the polls to enforce its own view of these issues—is to say that democracy is unable to function even under a faint threat of bad weather; it is to urge a step toward the very form of government that is causing us, by its hateful aggressions, to pour out our billions for the defense of our democracy.

There could be no greater irony than for the United States at this time to adopt the methods of the dictators.

Conceivably, the time may come, as it has tragically come to England, when we shall have to do this. It is not here now, and to suggest that it is here is to do neither the cause of preparedness nor the cause of representative government any service. We fought the last war without going under a coalition; we can surely now, when at peace, do whatever is necessary to be done without going under a coalition.

This is not to say that the administration would not be well advised to set up a coordinating board of industrial leaders and experts to supervise the defense program. The members of such a board should be—to insure public confidence and the maximum of efficiency they necessarily would be—chosen with utter disregard to politics. What we face is not only a military problem; it is to a very large extent a purely industrial problem. There can be no question of the willingness of Republican industrialists as well as Democrats to cooperate with the President and the experts of the Army and Navy in the great nonpartisan effort represented by the program which is now going through Congress with the votes of Democrats and Republicans alike. As to national defense, politics is adjourned.

To this extent there is coalition—coalition that we like to think is inevitable whenever the country is faced with the threat of danger from the outside. The President could dramatize this unity we have achieved in a special field, he could make this unity count for efficiency and speed in the execution of the defense program by summoning to his aid the best qualified men in the country regardless of their attitude toward his domestic policies.

But a nonpartisan board, operating outside the Cabinet, with respect to an issue on which there is national unity, is a different thing altogether from a coalition government. A coalition government under present conditions would give us a Cabinet with a confusion of voices on all save the one issue of preparedness. Within the inner council of the Government would be men hostile to many of its purposes. The whole conception of the Cabinet as the official family of the President, selected by him because of their essential agreement with his views, would be violated. As for the outsiders drawn into the coalition, their influence with the country in opposition to the President would be weakened or destroyed. The point need not be labored: We need unified responsibility at the head of the Government; we need an alert oposition unhampered by ties with the Government.

Governor Landon made a good point in his statement of Wednesday when he said that "it is to be noted that even in the midst of actual war the Labor and Liberal Parties in England refused to enter the Cabinet until there had been substantial agreement on policies."

Coalition government in our system is justifiable only under the pressure of some transcendent issue on which there is substantial agreement between the parties and beside which the normal issues of the day shrivel into insignificance. To say that the present necessity of building up our armament has put us in this stage is to utter the rankest nonsense.

Grand Coulee Dam a Link in National Defense

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

ARTICLE FROM THE SEATTLE STAR

Mr. LEAVY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am glad to have reprinted an article from the Seattle Star under date of May 20, 1940, written by Jay Franklin, one of the Nation's best-known columnists. This article deals with the unusual potentialities of Grand Coulee Dam in connection with national defense.

I have personally and as a member of the Interior Subcommittee on Appropriations given much thought and consideration to the almost undreamed-of possibilities that exist in connection with the unlimited deposits of magnesite ore within a short distance of Grand Coulee. This article by Jay Franklin, in a direct, concise, and interesting manner, points out the possibilities which, in my opinion, will of itself justify the great work that the Government has been carrying on in the construction of Grand Coulee Dam.

The article follows:

GRAND COULEE DAM A LINK IN NATIONAL DEFENSE

Behind the recent curious personnel upset in the Bureau of Mines lies an equally curious chapter in the dollar-scarred story of our national defense. It involves the projected use of cheap electric power from the great Coulee Dam in Washington to produce magnesium metal on a big scale for industrial and defense purposes.

Magnesium is one-third lighter than aluminum and stronger than steel. In addition it alloys easily with other metals, including manganese, and does not corrode. The Nazis are using magnesium extensively in their manufacture of military aircraft and air-bomb casings, thus stepping up fuel and load capacity and cruising radius enormously. It may well be considered the strategic metal of this and future wars.

The principal source of commercial magnesium today in this country is the Dow Chemical Co., which recovers the metal from brine deposits at Midland, Mich., and sells the product at about 28 cents a pound. Production has steadily increased from 500,000 pounds in 1928 to 5,000,000 pounds in 1938, while in 1939 the total of 11,000,000 pounds was produced.

At Chewelah, not many miles east of Grand Coulee, there are huge deposits of magnesium ore—estimated at 8,000,000,000 tons with a metallic content of around 20 percent magnesium. (The brine deposits contain about 1 percent magnesium but the process of recovery is different.)

For a number of years the School of Mines of the Washington State College at Pullman has been conducting research into electrolytic methods of refining magnesite ore. This research was undertaken by Dean A. E. Drucker, of the School of Mines. An effort was made to ascertain the German process which supports Goering's air-armada but there was nothing doing with the Nazis. Finally Dean Drucker succeeded in perfecting the laboratory process by which it is possible to refine Chewelah ore using Grand Coulee energy.

The basic calculations are convincing. Using Grand Coulee power at $17.50 per kilowatt year—or 2 mills per kilowatt-hour—it will be possible to produce an almost unlimited supply of magnesium airplane metal, etc., at 10 cents a pound, or about one-third of the present price for the limited supply of the metal. The economics of the operation are still more convincing. It will require 20,000 kilowatt-hours to produce a ton of metallic magnesium at a power-cost of 2 cents a pound. With a total projected power capacity of 2,700,000 horsepower or a capacity of 2,000,000,000 kilowatt-hours, Coulee dam will be in a position to create a gigantic low-cost armaments industry safe from all conceivable air-raids or military capture behind the strong palisades of the Rockies and Cascade range.

The present plans for Grand Coulee call for the installation of two station service power units this fall and the completion of the first three major generators of 150,000 horsepower capacity apiece by the spring of 1942. Undoubtedly their installation could be speeded up materially on national emergency orders from Washington.

In the meantime, the current appropriation calls for the erection of a small pilot plant to produce magnesium metal at Grand Coulee. This plant would reduce the laboratory work at Pullman to industrial practice, under the joint auspices of the United States Bureau of Mines and the Washington State College School of Mines. Protracted delays on the part of the Bureau at Washington, D. C., are understood to have been the reason for the recent drastic shake-up in the Bureau of Mines.

Here, it is suggested, is a real test of the patriotism of private enterprise. The production of a vital war material can scarcely be deferred to the commercial convenience of a business corporation. If Dean Drucker's calculations are correct, the United States Government can produce unlimited quantities of magnesium at a cost which will put the Dow Chemical Co. at a tremendous disadvantage. During the next 2 or 3 years, the Dow people can make a killing in airplane manufacture—if they can overcome the vested interest of other metals, especially steel and aluminum, in the airplane and munitions industry. But if the United States is to prepare itself for the modern forms of warfare, the Government must clear away all congressional and bureaucratic opposition to the rapid development of Grand Coulee as an integral and essential part of our national defense. JAY FRANKLIN.

The National Defense

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

LETTER FROM A CONSTITUENT

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from one of my constituents:

THE SOUTHERN G-F CO., INC.,
Atlanta, Ga., May 23, 1940.

Hon. ROBERT RAMSPECK,
Congressional Office Building, Washington, D. C.

DEAR MR. RAMSPECK: I can appreciate the fact that you have so much on your mind that you hardly have time to read a letter from one of your constituents.

Being the son of a father who always voted a Republican ticket, and although I have always been a Republican, at the age of 50 I have about made up my mind to change. If Mr. Lindbergh and Mr. Landon are the mouthpieces of the Republicans, Heaven help the Republican Party.

As Senator BYRNES said last night, our good friend One Way Corrigan is just as well equipped to express himself on international affairs as Mr. Lindbergh. What background and what experience does Lindbergh have to jeopardize the future of this country by some misstatements he has made. What right has any man who runs around with a Hitler and Goering medal on his chest to tell us in this country what we should and should not do? Unfortunately this young man, in the eyes of many, is still an idol, but I believe the pedestal on which he has been placed has been shattered.

When it comes to ex-Governor Landon, to mix in politics or the future of the President, especially during this very serious period, is pathetic; and many people, like myself, old Republicans, are disgusted with the picture.

I am the father of a boy 21 years of age, and, of course, he will do his duty when called upon, but to avoid the necessity of being drawn in the maelstrom of bloody war, the only way to prevent it is to arm yourself to the hilt and keep the burglar out of your home I am not of the panicky type, neither are my friends, but I think everything within the power of this Government should be done to help England and France, as they are fighting our battles against the future expansion of avaricious Germany. Yet, if the Allies are defeated, we will have a real problem on our hands, not with Germany but with some of her very close bedfellows, such as Japan and Italy. Therefore, I urge you to do everything in your power to expedite the rearming of this country, which is in a deplorable condition, and, if necessary, tax the profits of every corporation, either large or small, to put this across.

I am sending you copies of this letter, and I wish you would please turn them over to some of the Republican leaders in Washington, who, I am sure, are just as loyal Americans as you and I but are being misled by the infantile mentality of some of our citizens with limited foresight and with the type of Republicans which brought about the downfall of the Republican Party.

Believe me, I am,
Very truly yours,

L. ARONSTAM, *President.*

Lindbergh Speaks Again

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of Tuesday, May 21, 1940:

[From the Washington Times-Herald of May 21, 1940]

LINDBERGH SPEAKS AGAIN

Col. Charles A. Lindbergh Sunday evening made the third radio speech on the war that he has made since the war began. We thought the speech contained a high percentage of common sense, at least in the passages devoted to the correct aviation defense policy for the United States.

All of Lindbergh's adventures in connection with this war have been interesting.

In 1936, while still a self-made exile in England, Lindbergh visited Berlin, and said at an Aero Club meeting that modern warfare might easily "destroy the very things we wish to protect"—a remark which didn't please Germany's airmen a little bit.

In 1938, after a tour of Russia, Czechoslovakia, Rumania, and France, Lindbergh was accused by the Russian Government press of having advised Neville Chamberlain's appeasement crowd in London that he thought the German air force could lick the British, French, Russian, and Czech air forces put together.

That Lindbergh had some such hunch was indicated when on May 17, 1939, he told the House Military Appropriations Subcommittee that in all types of planes except heavy bombers the German planes had the edge over the American.

When the war finally broke out last September, Lindbergh went on the air (September 15) with a bluntly worded plea for absolute United States isolation. A month later (October 13) he repeated that plea, and went further by remarking:

"Sooner or later we must demand the freedom of this continent and its surrounding islands from the dictates of European power"—which started Canadians calling Lindbergh names as Russians, Germans, British, and French had done before.

THIS TALK OF INVASION

Well, the German air force, in Poland and Norway, and in the last 11 days on the western front, has borne out Lindbergh's long hunch that it was a most efficient air force. So we surmise that people will listen somewhat more attentively to Lindbergh's ideas from now on than they have done for some time past.

In Sunday night's speech, he put forth several ideas:

"The power of aviation has been greatly underrated in the past. Now, we must be careful not to overrate this power in the excitement of reaction * * *.

"Aviation is for us an asset. It adds to our national safety. With a firm and clear-cut policy, we can build an air defense for America that will stand above these shifting sands of war * * *.

"But * * * without a strong policy of defense, we will not even know what types of planes to build. The speed and range of our fighting planes must depend on the bases available for their use. If we are to defend the United States alone, then we must construct numerous air bases along the Mexican and Canadian borders. Such a plan would require large numbers of small bombers and pursuit planes, and eventually it would leave us as vulnerable to air attack as the nations of Europe are today.

"On the other hand, if we are to defend the entire Western Hemisphere, we need long-range bombers capable of attacking a hostile fleet a thousand miles or more at sea. * * *

"Let us not be confused by this talk of invasion by European aircraft. The air defense of America is as simple as the attack is difficult when the true facts are faced."

From this point Colonel Lindbergh went into a repetition of his previous pleas for absolute United States isolation from the eternal wars of Europe. This part of the speech was obviously pointed at the Roosevelt administration, which Lindbergh seems to suspect of interventionism.

That is a matter of opinion, and of evidence piled up from day to day—and it is a matter which may come to a show-down at the polls next November.

The practical part of Lindbergh's speech struck us as practical, indeed, and very reassuring in these days when some people's imaginations are already seeing the "blitzkrieg" bombers dealing death and destruction here.

We think Lindbergh would be a valuable man on any Government board of air-defense planning and strategy.

Refunding Taxes on Forced Patent Lands (H. R. 952)

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1940

Mr. CASE of South Dakota. Mr. Speaker, under permission to extend my remarks, I wish to set forth the purpose and the history of H. R. 952, which the House passed yesterday by unanimous consent.

This bill, if now passed by the Senate and then signed by the President, will open the way to correct what the Secretary of the Interior has said was—

An unfortunate situation growing out of an erroneous interpretation by this Department of the provisions of the act of May 8, 1906 (34 Stat. 182)—Report on H. R. 6393, May 17, 1938.

That error, Mr. Speaker, was the issuing of patents between 1917 and 1920 to Indians in the violation of a trust period, the issuing of fee patents to trust Indians without their application or consent. When issued, the patents naturally were placed on record in the several counties and the lands were thereupon assessed and taxes collected or the lands were taken for nonpayment.

Within recent years, the Federal courts have consistently held that the issuing of these patents without the consent or application of the allottee was illegal and the courts have awarded judgments against the counties for the taxes collected.

The levy and collection of taxes was a duty imposed upon the local units of Government by statutory law and the bonds of their officers. The error was not their error. The error was the mistake of the United States Department of the Interior, as the Secretary agreed in the letter mentioned, in which he also said:

Clearly the local authorities were not at fault for taxing such land while patents in fee were outstanding.

The first legislative approach to a solution of this problem was the introduction in the Seventy-fourth Congress of bills to authorize the appropriation of $100,000 for an examination of the records in counties west of the Mississippi River to determine the status of each forced patent, to see whether the allottees had confirmed the patent by direct approval or by selling the land.

When I came to the Seventy-fifth Congress, I reintroduced the bill at the request of many unpaid Indians and many counties hard pressed to refund the taxes collected. I urged the matter before the Indian Affairs Committee and they reported the bill favorably. On the floor, however, it met the objection that the amount for the investigation was more than the refunding of the taxes should cost.

So I tried a different approach. I obtained a list of all the judgments issued against counties in my State of South Dakota and introduced a private relief bill (H. R. 6393, 75th Cong.) to reimburse them so that they could pay the judgments. That bill went to the general Claims Committee. In his report to that bill, the Secretary of the Interior, admitted the justice of the claims, but suggested that a bill should be drawn so as to permit refunding the taxes to Indians or counties in all States affected. I introduced such a bill (H. R. 10644) but it was then too late to get action in that session.

Consequently, I reintroduced the third bill as H. R. 952 at the opening of the Seventy-sixth Congress. The Committee on Indian Affairs gave a careful hearing and reported it favorably, following reports from the Department of the Interior, the General Accounting Office, and the Attorney General, from all of whom we asked for reports in order to meet possible objections on the floor of the House.

The Secretary of the Interior had said that—

The $75,000 authorized to be appropriated by the bill as amended would be sufficient to take care of all those cases in which judgments have been rendered and those now pending in the courts. It would also leave a balance to reimburse those Indians whose patents in fee may be canceled in future years.

As is well known, the gentleman from Missouri [Mr. COCHRAN] who is chairman of the committee on expenditures for executive departments, makes it a rule to object and strike from the consent calendar those bills dealing with Indian matters unless the bills are approved by the Attorney General. We discussed this matter with the Attorney General's office.

In a report dated May 9, 1939, the Attorney General suggested that no action be taken on the bill until the Supreme Court had heard and decided the case of the Board of County Commissioners of Jackson County, Kans. against United States. He stated, however:

The reimbursement proposed by H. R. 952 merely covers the amounts actually paid by the Indians as taxes and does not include interest thereon. If the Supreme Court should hold in the Jackson County case that the court below erred in awarding interest, the bill in its present form would appear to be unobjectionable.

Although the Department of the Interior suggested that this decision need not delay passage of the bill, objections were made to passing the bill in the 1939 sessions, pending the decision by the Supreme Court. On December 18, 1939, the Court, through Justice Frankfurter, handed down its decision holding that the Kansas court had erred in awarding interest, and saying in part:

Jackson County in all innocence acted in reliance on a fee patent given under the hand of the President of the United States. Even after Congress in 1927 authorized the Secretary of the Interior to cancel such a patent, it was not until 1935 that a cancelation was made. Here is a long unexcused delay in the assertion of a right for which Jackson County should not be penalized. By virtue of the most authoritative semblance of legitimacy under national law, the land of M-Ko-Quah-Wah a and the lands of other Indians had become a part of the economy of Jackson County. For 8 years after Congress had directed attention to the problem, those specifically entrusted with the intricacies of Indian law did not call Jackson County's action into question. Whatever may be her unfortunate duty to restore the taxes which she had every practical justification for collecting at the time, no claim of fairness calls upon her also to pay interest for the use of money which she could not have known was not properly hers. * * * We think as to interest here, the loss should remain where it has fallen.

On the basis of that decision, it was clear that H. R. 952 was properly drawn. By personal conference and letter, in January I placed the matter before the unofficial objectors on both sides of the aisle and before the gentleman from Missouri and others who had blocked passage of the bill, calling to their attention the fact that under this decision the bill was not objectionable to the Attorney General.

Before all of the objectors could be identified, however, and the facts explained, the bill had been put over from one consent calendar to another four times. On one occasion three objections to consideration were made and the bill was temporarily stricken from the calendar. I am glad to say, however, that those objectors subsequently withdrew their objections and the bill was restored to the calendar, and that March 18, with every objector satisfied, the bill was passed by unanimous consent.

I have made these remarks, Mr. Speaker, in order that the RECORD may show the history of the legislation, its intent and purpose, its essential equity, and to make clear why it was drawn in this form. With this background, I sincerely trust that it may now be approved in the Senate soon and then be approved by the President, in order that the next session of the Congress may consider appropriations under its authorization to do long delayed justice to Indians and counties concerned. (H. R. 952 was passed by the Senate May 28, 1940.)

Sixth Annual Joint Convention of the National Association of Postmasters, New York State Chapter, and the National Association of Postal Supervisors, New York State Branch

EXTENSION OF REMARKS

OF

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. SCHWERT. Mr. Speaker, on Thursday, Friday, and Saturday, May 23, 24, and 25, the Sixth Annual Joint Convention of the National Association of Postmasters, New

York State Chapter, and the National Association of Postal Supervisors, New York State Branch, was held in Buffalo, N. Y. Conventions of this type which bring together the men and women of the United States Postal Service in an exchange of ideas and a thorough discussion of their procedure and problems means much to the United States Postal Service. On Friday, May 24, a luncheon was held at which local businessmen were given the opportunity to question postal officials. This bringing together of business and governmental departments also is worth while. This convention was brought to a final conclusion by a banquet and dance at the Buffalo Consistory. It was my privilege and pleasure to be present at this climaxing event of the above-mentioned fine convention, and under leave to extend my remarks I include the address given that evening by United States Senator JAMES M. MEAD:

Coming here directly from Washington, I cannot avoid bringing with me some of the tense spirit that prevails in the Nation's Capital. These have been almost unprecedentedly busy legislative days since the outbreak of "total war" in Europe. Unhappily large-scale measures of national defense and necessary adjustments in existing statutes have been requested and are required in this present accelerated program of preparedness. And I am happy to report that the Senate passed the military and naval expansion program of the President by the votes of 74 to 0 and 76 to 0.

There is no hysteria in the legislative Chambers at the Capitol, but there is a grim realization that, like the advocates of representative government generally throughout the world, we are on the defensive today. There is a unanimous recognition that lip-service to the national defense is not enough—concrete, constructive, and, above all, speedy contributions to the armed protection of the Republic are required. All parties, all advocates, whether listed as pacifist, isolationist, preparedist, united to set an example worthy of emulation.

We have already, during the past few years, added materially to our defenses. Now we must continue that program at an accelerated rate.

Again, I say there is tension but not hysteria at Washington. If I brought you no other report, it would be this: The Nation is in good hands. The leadership of the United States in this day of emergency commands the universal confidence of all groups in our land. Our President enjoys the confidence of the great mass of our people—of the people not only within the confines of territorial United States but of all the Americas. From the southernmost tip of South America to the Arctic expanses in the northernmost area of this hemisphere there is confidence in the strength and the wisdom and the program of protection and self-defense of our national leadership. Yes; America is in capable hands, and no other single factor contributes more to our strength and unity and stability in this crisis.

As the President of the United States, leader of all our people, has emphasized repeatedly, and most particularly in his recent national-defense declaration, "Peace, not war" is the aim of this great brotherhood of the Americas. We are building for peace, we are building for unity, we are building for self-defense. We are in nowise interested in conquests, in aggression, or in any of the pursuits of force. We are, on the other hand, militantly dedicated to a policy of neighborliness.

Most of us listened to the President's national-defense message to the Congress. It was a serious message, dealing with the crisis of today. It was a vitally important and urgent message—one that could no longer be postponed in view of the holocaust abroad. The President emphasized that this is a day in which the weak, the unprepared, and the unwarlike nations of the world are having their illusions of peace, their dreams of neutrality shattered. He voiced a truth which is now evident to all of our peace-loving citizens. He said that aggression, invasion, and annihilation are the harvests reaped by unprepared, undefended, and disunited nations. It must not happen here.

The fate which overtook China, Austria, Albania, Czechoslovakia, Poland, Finland, Denmark, Norway, Holland, Belgium, and Luxemburg bears out the accuracy of that assertion.

This does not mean that your legislators at Washington are convinced that the fate of the hapless republics which I have enumerated is the inevitable for the United States. But, it does mean that we must prepare for the unpredictable, the unannounced, and the unexpected. We are the last bulwark of freedom left in the world that is not engaged in a titanic struggle to preserve its way of life. There is not a capital in the whole of continental Europe that enjoys the peace that prevails at Washington. It is our responsibility to hold fast and firm to the blessings which we enjoy. As we insure our property, our homes, our communities by adequate police and fire protection, so, too, will we protect our shores from the invasion that precedes destruction with the best navy on earth.

There is no longer room for doubt that our progress along the pathway of peace requires vast additions to our military defenses. We are going immediately to work in providing those necessary weapons of defense. We have the wealth, the resources, and the industrial ability to produce the material requirements that are necessary for our adequate national protection.

But, I say to you that our most serious enemy will not be the tanks, deadly gases, the flame throwers, nor the airplane-bomber, nor any of the other terrifying implements of modern war. If we are made vulnerable to assault, it will be because we have failed to strengthen, to solidify, and to adequately provide the defenses of loyalty, of tolerance, of neighborliness, and of good will among our own people.

Here in America we must continue to educate ourselves in the strength and unity which comes from living side by side in peace and understanding. We must not blind ourselves to the fact that there are forces operating today, in this country, to arouse animosities among our people.

There are sworn enemies of our free system of Government at work in our midst. Let us abolish those subversive forces. Let us erase them from our land. Let us clean our body politic of corrosive elements which impede and thwart the processes of representative government. Let us be good neighbors in every sense of the word. In a nation of good neighbors we require unity, loyalty, and patriotic devotion.

The children of England, Germany, Ireland, Italy, Poland, and other lands who settled this Nation, and who served in its wars, are devoted to its democratic ideals.

Regardless of racial ancestry, we must all stand shoulder to shoulder in a united aim to defend the principles of equal justice for both the big and the small, for the weak and the strong. We must not be pro-ally, pro-British, pro-German, or pro-anything but pro-American in this crisis.

If such is our faith, it follows that we must not assume the role of a complacent, self-satisfied citizen, lulled into the inertia of slumbering half interest.

We dare not leave the arena of human rights to the demagogue, to the subversive critic, or to the advocate of bigotry or intolerance, thinking him to be a harmless nuisance. Not if our eyes, ears, and minds are alert to the grim realities of today; not if we remember that democracy is not saved by law and by implements of war alone. But by those who will speak for it, live for it, and, if need be, defend it against attacks from within and from without.

Our security and our stability, as a representative government, requires effectiveness in national leadership and unity among all of our people. We must not turn our backs to the domestic problems which confront the Nation, nor must be blind ourselves to what could happen in the future at the hands of those who are unfriendly to our American way of life.

As I stated before, I am not warning against the inevitable but, rather, I am advocating that we be prepared in every manner against the unpredictable. We know not what lies ahead. There is uncertainty in the minds and hearts of all free people. That apprehension grows day by day as the ruthless march of totalitarian leadership continues. Our continent must be made safe from attack. Our people must be made secure in their homes.

As we build strong and invulnerable our military lines of defense, let us also be sure that we are not permitting any "Trojan horse" or "fifth columns" to develop under the advantages and liberties of our happy system.

We must say to our subversive critics that "if my Government means anything to me, it means that its philosophy is broad enough to protect every man in his right of political opinion, every man in his liberty of speech, and every man in his freedom of religious worship."

But we must insist that if our democracy is to work, then the springs of liberty must not be polluted with the poison of hate, covered with the slime of proscription, or drugged with the spirit of intolerance.

We may proudly declare that here in America we oppose regimentation; we respect our democratic heritage; and we reject prejudice and persecution as panaceas to be fed to hungry and desperate men.

I exhort you therefore to persevere with all your might and main in the defense of American institutions and in the defense of democracy as we know and enjoy it. Culture, religion, and civilization depend upon your perseverance.

You must join with all the fervor and enthusiasm of genuine patriots to forge new instruments and new methods to combat the blindness of the partisan, the passion of the jingoist, the vengeance of the bigot.

Through religion, education, logic, understanding, and fraternalism increased unity, loyalty, and neighborliness will be achieved.

Here we live in peace and brotherhood with all our neighbors. All races, creeds, and colors can find advantage and opportunity, equality and independence, dignity and happiness, within our shores. A preservation of those rights and privileges has been made possible under our free system of government. Political, social, and religious difficulties abroad should make us ever more deeply appreciative of the liberties that are ours to enjoy.

Let us say again and again that we believe in democracy. Let us repeat for all the world to hear that we believe in defending the right of man to follow the dictates of his own conscience. Let us, by action and accomplishment, demonstrate, with unmistakable emphasis, that we subscribe to a philosophy which permits and encourages freedom of rational personal and public independence in thought and action.

I ask you to live and breathe the genuine spirit of democracy. I ask you to typify, by work and deed, the embodiment of true American principles. I ask you never to forget that American democracy stands for the enthronement of law and equity, the preservation of free government, the right to individual liberty, the education of

the poor and unfortunate, the establishment of free institutions, the protection of life and property. I ask you to constantly sow the healthful seed of good loyal and patriotic citizenship. With diligence, with ample safeguards, and with a fundamental faith in our doctrine of representative government, we will be able to "nip in the bud" any sporadic fly-by-night movement which may arise to plague, to threaten, or to undermine our America.

The plea I make tonight is a plea for loyalty to the democratic system on the part of all of our people. I cannot too fervently appeal for solidification of internal loyalty which will strike to the very heart and banish from this fortunate land those who are unfriendly to the American way—those who came here with malice in their hearts or sabotage in their minds.

After all, this is our America. This is our way of life. This is all we have striven for, and fought for, and defended through a century and a half of a democratic development. We must say to the enemy of our system that we will never permit dissipation from within of the strength which upholds and supports the structure of our Republic.

Loyalty, devotion to principle, and a firmness of opposition to the enemies in our midst is the way to perpetuate, against all odds, the American way of life. To uphold and to support the leadership of the Nation, regardless of partisan considerations, is the order of the day. Loyalty to American principles, faith in the democratic system, supported by an invulnerable defense will keep America safe and will guarantee to our people the peaceful pursuit of happiness and opportunity which we, above all else, desire.

Eighteen Months' Operation of Wage and Hour Act

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

ARTICLE BY IRVING DILLIARD, OF THE ST. LOUIS POST-DISPATCH

Mr. COCHRAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article relative to the Wage and Hour Act written by Mr. Irving Dilliard, of the editorial staff of the St. Louis Post-Dispatch, appearing in that paper under date of Sunday, May 12. The article follows:

UNITED STATES WAGE AND HOUR LAW: SURVEY OF 18 MONTHS OF OPERATION—WORKING WITH GOOD RESULTS, BUT NOT SO WELL AS IT MIGHT BE—DIFFERENCES OF OPINION ON BENEFITS AND DISADVANTAGES RANGE FROM "SWELL FOR ME AND MY FAMILY" TO "WORST OF DAMN-FOOL EXPERIMENTS"—BUT INVESTIGATION IN WASHINGTON AND IN SOUTH INDICATES NEW STATUTE IS ENTITLED TO SUPPORT, APPRECIATION, AND UNDERSTANDING

(By Irving Dilliard)

The Wage and Hour Act is working. It is not working as well as it might or as well as it should. But it is working.

The Wage and Hour Act has brought benefits to the country. It has not brought as many benefits as it is capable of and it has not yet helped nearly all those for whom it was intended. But it has significant social and economic gains to its credit.

On the basis of performance during the 18 months of its life, the law and its administrators are entitled to the support of employers, the appreciation of employees, and the sympathetic understanding of the public.

These are fair conclusions, in the writer's opinion, on the experience thus far with the National Fair Labor Standards Act of 1938—frequently referred to as the Magna Carta of marginal workers in America, certainly a legislative embodiment of the New Deal's humanitarian philosophy.

They are conclusions arrived at after a trip to Washington to talk with the law's administrators and Members of Congress who have been debating changes in it—and back through the South to inquire into the actual operation of the law in the section of the country which, so it was said by many of the law's opponents 2 years ago, would be seriously disadvantaged by application of minimum-wage and maximum-hours standards.

NOT EVERY ONE WILL AGREE; SHARP DISSENTERS IN SOUTH

They are not conclusions with which everyone will agree. The field trip through the South—the course traversed Virginia, North Carolina, South Carolina, Georgia, Alabama, Tennessee, and Kentucky—produced radically differing opinions:

"The best thing that ever happened to the South."

"It's swell for me and my family."

"A fine ideal being defeated by lax administration."

"I'm not as well off as before."

"The wrong way to do the right thing."

"It gives the decent employer protection against the chiseler."

"The worst of the damn-fool experiments of the Roosevelt crowd."

So the reactions run from one extreme to the other. But, taking them all together, shaking them up and settling them down, the three conclusions stand, this investigator is convinced. The Wage and Hour Act is working, it is doing good, and it is entitled to support.

This, of course, is not to say that the law is perfect, that changes are not needed, that the administration should not be improved. Changes are needed—and it is most unfortunate that the recent debate should have produced a parliamentary situation which virtually precludes perfecting amendments at the present session.

But thanks to the dog-in-the-manger strategy of the Representative from North Carolina's vegetable raising and canning coastal plain, the central issue became whether emasculatory amendments exempting some 2,000,000 agricultural canners and other processors of food products should be adopted. With this to the fore, the needed relaxation of the hours' provisions for workers paid well above or several times the minimum, and other desirable changes, went by the board, as the opposing sides loaded down each other's bills with amendments which neither side could accept.

And so the law stands. Its main provisions are simply enough stated. From October 24, 1938, to October 24, 1939, the least that an employer could legally pay a worker in an industry in interstate commerce or in the production of goods for interstate commerce was 25 cents an hour. And 44 hours was the maximum which the employer could legally work that employee without paying for overtime at the rate of time and a half.

SCHEDULE OF PERIODIC CHANGES, WAGE RISES WITH FEWER HOURS

Under the schedule of periodic changes which the law set up, the minimum-wage rate increased to 30 cents last October 24 and the workweek dropped to 42 hours. The minimum wage will rise to 40 cents an hour in 1945, but it may be increased above 30 cents before 1945 by industry committees working with the Labor Department's Wage and Hour Division, as has already been done in several industries. Next October 24 the maximum workweek—again the workweek to be paid for at the employee's regular rate of pay—will be reduced to 40 hours.

As did the old N. R. A., some of whose other gains the Wage-Hour Act seeks to retain, the law prohibits outright child-labor products in interstate commerce.

The intention is that by the application of these standards workers will be protected from actual want through an irreducible though low minimum below which wages may not fall. It is intended at the same time to create additional opportunities for employment and to bring about a wider diffusion of mass buying power upon which industry itself is dependent.

The law casts its lot with no industry or section, other than by saying in effect that in the competition among communities for industries, substandard wages and excessively long hours of labor shall no longer be determining factors.

MORE THAN 100 INTERVIEWED IN WIDE RANGE OF INTERESTS

Such are the intentions. To find out how nearly they are being realized the writer talked to more than 100 persons about the operation of the law and its effects on industry, wage earners, and society in general. The variety of occupations and points of view represented is in itself interesting. Among the persons interviewed were:

Col. Philip B. Fleming, Wage-Hour Administrator; Maj. A. L. Fletcher, Assistant Administrator in charge of cooperation and inspection; Msgr. John A. Ryan, director of the social-action department of the National Catholic Welfare Council; Dr. Frank Porter Graham, president of the University of North Carolina; Jonathan Daniels, editor of the Raleigh News and Observer; William Mitch, president, Alabama district, the United Mine Workers of America; Charles F. DeBardeleben, president of the Alabama Fuel & Iron Co.; Dr. Howard W. Odum, organizer of conferences and studies of southern social and economic problems; Miss Lucy Randolph Mason, C. I. O. public relations representative for the South; Dr. W. E. B. DuBois, Atlanta University sociologist and defender of Negro rights; Bernard Borah, southern director for the Amalgamated Clothing Workers of America.

Those interviewed also included manufacturers and mill operators and representatives of banking, law, and newspaper publishing, who requested that their names not be identified with their views.

Among still others asked for their opinion were a high official in another administrative agency, a former important officer in the early days of the New Deal now in private law practice, chamber of commerce officers, wage earners, Pullman porters, and red caps. Red caps have lately been changed in several important terminals, including St. Louis, Cincinnati, and Washington, from a tip basis of pay to a regular weekly minimum wage of $12.60.

WHAT ARE THE COMPLAINTS? THEY ARE MANY AND VARIOUS

What are the complaints? They are numerous and they vary in nature with the outlook and interests of the complainer.

In western North Carolina a leading textile operator said that he and the manufacturers he knew had no objection to the establishment of minimum standards below which no one should have to live. His factory and the other factories with which he competed paid well above the minimum rates and did not work long hours. What he objected to was "the administration." He said that the Government worked "hand in glove" with labor

unions and looked on employers as "deadbeats and chiselers." His factory, he said, was not a "sweatshop" and he did not think Government representatives should treat it as if it were.

Another textile executive in the same North Carolina city said that the greatest difficulty was that an employer never could be sure that he was doing the right thing. He might ask an inspector. He might get an opinion from Washington. He might follow instructions to the letter and still be forced to defend himself against prosecution if some employee decided to bring suit against him for "failure to comply."

One industrialist said the inspectors are not content with confining themselves to pay roll and time books, but insist on seeing profit and loss statements and other confidential records. He said that they apparently have been instructed to keep their eyes open for other Federal and State law violation, so that they are not merely wage-hour law inspectors but snoopers into every corner of a business. This, he said, antagonized businessmen who should be treated so as to induce their cooperation.

"WE'RE HEADED STRAIGHT FOR HELL"

"Uncle Charlie" DeBardeleben, as Birmingham knows the president of the Alabama Fuel and Iron Co., placed no restrictions on quoting his views. "If this wage-hour nonsense and all the other monkey business of the New Deal keeps up, we're headed for hell straight as a martin to his gourd," he said, with obvious feeling

Complaining that the wage differentials between the North and the South were being wiped out, he said that the South had been "a bunch of ninnies" to be "taken in by the plotters and planners of the New Deal," whose purposes he said were "to break up industry, fritter away the taxpayers' money, and buy votes."

The suggestion that the wage-hour law might have increased the income of marginal workers and so enlarged the purchasing power brought an explosive denial that the law had had any good effects. The hour limitation had put the worker in chains, he said.

The issue, however, is larger than the wage-hour law in the eyes of the man who placed machine guns in concrete blockhouses to keep C. I. O. organizers from his coal mines. "It is time to look things squarely in the face," he said. "What took place in Norway can take place here. The C. I. O. has more Communist organizers in Alabama than there are in the Russian Government. This New Deal has been one damnable monumental mess."

OBJECTION TO DISCRETIONARY POWER

Another Birmingham industrialist objected to the discretionary powers of the Wage and Hour Administrator. He said it was wrong in principle that any bureau should make rules which could not be taken to the courts for review. He also declared his opposition to applying the maximum-hours provisions to salaried employees, many of whom, he said, were embarrassed and annoyed by the requirement of time-and-a-half to work beyond the legal maximum.

An outstanding newspaper executive said that application of hours provisions to professional workers, such as editorial writers, was creating a problem for employers who by no stretch of the imagination were proper subjects for minimum-wage legislation. Only the beginning office boys were paid less than the weekly minimum in his plant, he said, and yet the maximum-hours provisions appeared to apply to everyone in the building. He said he was heartily in favor of an irreducible minimum wage for workers in the poorly paid industries, and accordingly thought it unwise that energies which should be expended to extend the benefits of the law to them were being diverted into keeping track of the hours worked by salaried persons well above the minimum levels.

HOSIERY, TEXTILE, OTHER INDUSTRIES

In the hosiery, textile, millinery, shoe, knitted underwear, and knitted outerwear industries, for example, industry committees have already raised minimum wages above the 30-cent minimum now in force. Some critics of the law say that the administration has allowed itself to be used by organized labor for raising wages in certain industries, while thousands and thousands of workers, in serious need of the law's helping hand have not yet been reached by enforcement.

Organized labor finds fault with the law and its administration but the fault is of another kind. Here the complaints are that the law doesn't go far enough and that what there is of it isn't being rigidly enough enforced. Labor leaders say there is widespread evasion and describe in detail ruses and devices which they say employers practice for getting around the act.

One simple and common way of evading the law, they say, is to have the workers punch out at the time required for apparent compliance and then to allow them to go on working 2 to 5 more hours to increase their output and bring down their pay. Girls on piece work in some dress factories, for example, are told, according to this explanation, that they will be fired if their work does not come up to 30 cents an hour. They are not told to stay on and work, but the hints which the forelady passes along leads them to come back to their sewing tables after they have punched out for the day.

Many factories have short rest periods in the morning and afternoon, experience having shown that increased efficiency more than makes up for the time which goes into the rest interval. Piece workers who need extra time to produce enough work to equal the minimum wage frequently work through the rest period, the C. I. O. man said. It is also common, he said, for slower workers to cut their lunch time short in order to meet the requirements which the factory manager has let be known must be met as a condition to employment.

C. I. O. MAN CITES EVIDENCE

As evidence of a tendency of minimum-wage legislation, at least in its early stages, to level wages, a C. I. O. leader cited the case of a Virginia dress-shirt factory which posted a notice to the effect that those workers who had not been receiving the legal minimum would be raised and that those who had been getting more than the minimum would be reduced accordingly. This was a clear instance of violation. Experience, so the labor leader said, has taught chiseling employers not to be so bold as to post such notices on their bulletin boards which inspectors and labor representatives may see.

Another labor leader said that although enforcement of the law had meant restitution to many employees of wages illegally withheld from them, restitution in itself did not guarantee the worker's right to and use of the money. He told of a South Carolina print-cloth cotton-mill operator—South Carolina produces 95 percent of the country's print cloth—who, so he said, persuaded two young employees to take their $100 restitution checks to a nearby store, cash them, and turn the money back in at the mill office.

The Atlantic Coast Line Railroad probably provides the classic story of evasion. In order to avoid paying five track maintenance men the legal minimum wage, the railroad deducted from their wages for water pumps that did not pump, for sanitary facilities that did not exist, for ice in the drinking water used by the men while at work, for transportation on railroad motor cars from section headquarters to the place on the tracks where they were to work, for discarded ties used as fuel, and for quarters in abandoned cars. One man was assigned to quarters in and charged rent for a forsaken depot which was used by the railroad as a fertilizer storage warehouse.

UNITED STATES JUDGE MEEKINS' VIEW

Federal Judge Isaac M. Meekins, of North Carolina, who as a Raleigh newspaper reporter put it, "is not known as any great liberal," called these deductions exactly what they were—"devices" to avoid having to increase the wages of the section hands to the amount required by the law. In addition to awarding the employees a total of $1,079 in withheld wages, an equal amount of liquidated damages and attorneys' fees, Judge Meekins upheld the constitutionality of the law under the interstate-commerce clause.

Several labor leaders objected to what they called a tendency to compromise cases of violation. Their more or less uniform complaint was that after violation is found the Wage and Hour Division is "content" to obtain wage restitution when it should go on to prosecute.

One of those who protested against this kind of enforcement said that a shirt company in South Carolina had set aside a $1,000 fund as part of its operating plan. If it was caught it would make restitution to its workers out of the fund. If it escaped it would be so much ahead. Unless prosecutions become the order of the day for willful violators, an increasing number of chiselers, so this labor leader phrased it, would run the risk of being caught, confident that the penalty would be no more than restitution of withheld wages—no penalty at all.

WORKERS IN GREATEST NEED

Pointing out that the workers who stood in greatest need of minimum-wage protection were the unorganized workers in the lumber, furniture, textile, clothing, shirt, shoe, cottonseed oil, and fertilizer industries, one C. I. O. representative said that the law would probably prove of some assistance in the unionization of workers. Experience under the law would teach them, he said, that they were entitled to more than they were receiving and thus open their eyes to the fact that only through collective bargaining could they expect to improve their working condition to standards above mere subsistence.

In labor circles it was said repeatedly that the administration of the law, although well-intentioned, was not vigorous enough; that it needed field men under the administrators more zealous for enforcement than the administrators themselves. In more than one place there were reports of dissension in the local wage-hour office, with frequent changes in the staff and other signs that the organization was far from perfected.

LARGELY AN EDUCATIONAL JOB

Wage and Hour Division heads in the Department of Labor—where a Jo Davidson sculpture of "Mother" Jones, fiery leader of striking miners, greets the caller—know about all these complaints, all these shortcomings, about the inadequacy of the inspection, about evasion.

Col. Philip B. Fleming, the administrator, told the writer in a soft, mild voice with overtones of firmness, that the job of the Wage and Hour Division was still largely educational. An Army engineer in charge of river work at St. Paul at the time of his detail as administrator, he explained the slow work of extending the protections of a great social reform such as national minimum-wage legislation much as he might have described the construction of a great waterways project.

Obviously pleased with various court rulings sustaining the constitutionality of the law and especially with that of three judges of the New Orleans Court of Appeals, Colonel Fleming promised that greatly improved enforcement would come as more and more inspectors were trained and placed in the field. He said that there would be 800 inspectors by the end of June, and that this number would be increased as rapidly as possible toward a staff of 2,000, the number estimated as required to provide periodic check-up on the 250,000 employers of the 12,000,000 workers now under the law.

A "fairly large" number of complaints of violation had come from Missouri and Illinois, Colonel Fleming said, explaining, however,

that heaviest trouble was on the Atlantic seaboard. One of the best evidences of widespread support for the law in industry, he said, was the fact that a surprisingly large number of complaints against evasion came from complying businessmen who desired to have their competitors brought into line.

GREATLY SATISFYING WORK

It was a greatly satisfying work he was in, Colonel Fleming said—satisfying because of the obvious benefits the law was bringing to marginal workers for whom little or nothing has ever been done before. Employers of such labor are now making restitution of an accumulation of $6,000,000 in wages which were withheld until the Wage and Hour Division investigated complaints and obtained agreements for payment.

Only persons who read the letters which day laborers and mill hands and clerks and many other kinds of workers sit down and write to their Government could know how much a few cents more an hour and a reasonable working day means to them, Colonel Fleming said. Many persons appear to be living for the first time, he said.

Colonel Fleming had no apologies to make for the increase of minimum wages in certain industries through the industry committees. These committees are provided for by the law and while it is true, he said, that some of them have already raised industry wages to the 1945 minimum level, it has been done with approval of the industries concerned.

It is further true, the Administrator said, that some industries have reached the 1940 minimum before inspectors have reached many small factories in remoter places. But there was no reason, he said, why industries which were ready to make use of the industry committee system should wait on the enlargement of the inspection force and compliance by marginal producers. In any case, wage scales which anticipate the 1945 minimum in many factories will show backward employers why compliance with the present minimum is reasonable and proper.

ASSISTANT ADMINISTRATOR

Assistant Administrator A. L. Fletcher, in charge of inspection and compliance, is no novice at labor-law enforcement. He was for many years an elected commissioner of labor in North Carolina, where he persuaded the legislature to pass some of the best labor legislation in the country. Even labor leaders who now say that he is not as vigorous an enforcer as he should be pay tribute to Major Fletcher's achievements in North Carolina.

His plan of enforcement for the country as a whole will be the same as in North Carolina, Major Fletcher said. "In North Carolina we kept everlasting at it. Every violator knew that we would get to him. Maybe not today, maybe not this week, or this month, but eventually. We intend to pursue exactly the same policy in the enforcement of the Wage and Hour Act. Whoever the violator may be, he can write it down in his little book that the Wage and Hour Division is going to get him eventually, and when that fact soaks in there just aren't going to be many violators."

Major Fletcher is the first to say that inspection is as yet inadequate. But there are reasons for that. One is the fact that the inspectors are being recruited under civil service—a much slower process than the overnight creation of a force through political selection. But if it is slower, it is also much better in that the inspectors are of higher quality and not beholden to political influence for their posts.

COMPLAINTS FROM THE FIELD

Although he makes allowance for the fact that employers are apt to become resentful when inspectors discover violations, Major Fletcher does not overlook complaints from the field about the inspection force. He tells the inspectors that, so far as the country at large is concerned, they are the Wage and Hour Division; that each inspector should be "exceedingly careful, exceedingly considerate, and exceedingly patient—all without being soft, vacillating, or uncertain."

Major Fletcher is not one of the southerners who think there should be two sets of living standards—one standard for the workers of the North and a lower standard for the workers of the South. He told the writer that if the South would study its pay rolls it would see that it had been strangling a big part of its potential market for its cotton textiles, cigarettes, and lumber. The South has been producing so cheaply that its producers have not been able to buy the products of their own hands, he said.

DR. GRAHAM AND PANEL

The writer found a vigorous exponent of this view in Dr. Frank Porter Graham, president of the University of North Carolina, who assembled a panel of his social scientists, including a labor-problems expert, so they might be questioned on the law's working and influence.

That meeting, in the handsome old president's house at historic Chapel Hill, produced these faculty observations: That the wage-hour law is an excellent thing for the South in the long run; that it has already improved purchasing power enough that many merchants who were opposed now favor the law; that the South must, in order to obtain its proper place in the Nation, set living standards equal to those in the North; that the North owes it to the South to make further adjustments in the matter of freight rates, provide Federal aid for education, and otherwise assist the South in return for its acceptance of the Wage and Hour Act.

At Atlanta University, Dr. W. E. B. DuBois, former editor of The Crisis, and a young economist on his staff, agreed that effects of the law on the Negro could not be told with any certainty as yet. Some Negroes have had their wages increased, they said, but others doubtless have, after the customary lot of Negroes, lost their places to white workers as a result of the higher scales.

When told that several redcaps had complained to the writer that they were not as well off on the minimum wage, Dr. DuBois said that it would take experience to show whether they made more on tips than on a regular weekly wage, constant the year around. But in any case the change to regular payment was a decided benefit, he said, these familiar figures at the Nation's depots now being "recognized as laborers and not as the objects of casual philanthropy."

SIGNIFICANT SPECTACLE

Something which the writer saw as he traveled by plane from Atlanta to Birmingham impressed him more than anything else on the trip. This was the contour plowing on the clayey hills of Georgia. Looking down he saw literally hundreds of fields plowed in circular furrows, in ovals, in letter S's, around and around, like giant fingerprints on red and yellow impression paper.

A few springs ago not one of these fields would have been plowed in contours. Every farmer plowed in straight lines, up over the hill and down, up, over, and down. And when the rains came the valuable topsoil washed away to the rivers and the sea. But they are learning better. Scientific farming is coming. The ideas which have been developed and proved at the agricultural colleges and the experiment stations are catching on at the farms.

As the contour fields gave way to the green of pine forests—forests now being systematically replanted—these words seemed to sound themselves above the loud hum of the airplane motor:

"The South has broken with age-old practice to check the erosion of its soil. It is now turning to higher wages and better living conditions to halt the erosion of its people."

Puerto Rico, the United States, and Pan America

EXTENSION OF REMARKS

OF

HON. BOLÍVAR PAGÁN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

SPEECH DELIVERED BY HON. BOLÍVAR PAGÁN AT THE PAN AMERICAN CLUB

Mr. PAGÁN. Mr. Speaker, on leave to extend my remarks in the RECORD, I hereby insert the speech delivered by myself on last Friday, May 24, 1940, before the Y's Pan American Club, at Washington, D. C.

Ladies and gentlemen, I am very glad that we have had tonight among us the former Governor of Puerto Rico, Maj. Gen. Blanton Winship. I thank him for the kind remarks he has just made about me in his opening speech. Also, on behalf of my people, I extend my gratitude to Governor Winship for the generous remarks he made about Puerto Rico and his good wishes for my people. I may add that Governor Winship was one of the most popular governors we have had in Puerto Rico, since the times of Ponce de León. He understood our people and did the utmost for our welfare and happiness, and we always will remember Governor Winship as one of the best and most beloved governors we have ever had.

I certainly appreciate deeply the kind invitation tendered me by Miss Isabelle Lynne to address tonight this distinguished gathering of the Pan American Club, and I feel myself very gratified among my fellow Puerto Ricans and among good friends of my beloved land on the Caribbean Sea.

First, I must say that I heartily feel myself at home in continental United States; we can say as do all Puerto Ricans coming here, who see in this great country of the United States our own country, and look to its glorious flag as our own flag, as we hope that Puerto Rico will be forever an inseparable part of the United States, having been taught for over 40 years to love and cherish American institutions of government, of democracy, and freedom, and hoping that in the near future a new star will shine in the blue field of the Old Glory, vouching to the Nation, to the world, and to history, that a new sister State, Puerto Rico, has been admitted in the sisterhood of free commonwealths of the United States of America.

Before going ahead, let me pay a word of tribute to my illustrious predecessor in the office of Resident Commissioner of Puerto Rico, the late honorable Santiago Iglesias, who fought a life struggle in Puerto Rico for the enlightening, the freedom, and welfare of my island, and who, a Spaniard by birth, was elected and reelected as Congressman from Puerto Rico, and who passed to his grave with the full love, respect, and veneration of my people. I should today dedicate a thought to Santiago Iglesias. He, a Spaniard, elected by the free will of the people of Puerto Rico to Congress,

is of special significance in this pan-American night. His election to represent Puerto Rico in the United States may have been, in the mysterious commands of destiny, a foreword that Puerto Rico, being Spanish in its historical stock, language, religion, culture and traditions, was very properly represented in the United States by a Spaniard to voice our people and help blend our Spanish civilization with the civilization of the mainland United States, bringing with us our racial stock, peculiar traits, and folklore into the whole of the diversified peoples that form this great Republic, and at the same time recalling our sister countries of the West Indies, of Mexico, of Central and South America, that, in the great pan-American ideal, Puerto Rico, as a part of the United States, is a token of lasting understanding, friendship, good will, peace, and unity among all the countries of the three Americas.

I am tempted to speak to you tonight only about the wonderful beauty of my island, which for me is the loveliest spot in the whole world. But I am afraid I would be considered simply as a business agent of tourism. Because my island, where a perpetual spring enlivens nature, with a constant blue sky smiling to our smooth rolling plains and low, beautiful hills always clad in bright evergreen, with numerous meandering rivers and rivulets of crystal water singing through the forests, with pretty birds and many, many flowers, with so many lovely retreats in the hills, and with a coast line of golden sand opening to many natural and splendid bathing-water pools, and everywhere the most picturesque landscape, and all inhabited with a people of ancestral politeness and the most kind sense of hospitality, a land gifted with beatiful women and gentlemanly manhood, and where in all places can be felt the breath of culture and modern progress, is certainly a place to go and live and stay.

But, Isabelle Lynn suggested to me to speak to you something about what the United States is trying to accomplish in Puerto Rico, what Puerto Rico wants from the United States, and why it is important for the two of them to work closely together.

In looking to the present picture of Puerto Rico, we have to recall that civilization got a foothold in Puerto Rico before any place in the mainland of the United States. Before the Pilgrim Fathers settled in New England; before the Dutch founded New York; before Roger Williams established a living place in Rhode Island; before William Penn stepped into the woods of Pennsylvania; before Capt. John Smith established an English settlement in Virginia; before the Spanish set foot and built a town in Florida; before LaSalle and Marquette set fcot on the banks of the Mississippi River; before any white settlement was established in what came to be the United States of America, for years before, already a civilized settlement was firmly established in Puerto Rico, the first Christian church in America was built, and the forefathers of the present Puerto Rican people, with the blessings of God, had laid the lasting foundations of our insular society.

When the United States flag was first hoisted over our public buildings, Puerto Rico had lived four long centuries of civilized and Christian life, we were a cultured people, aware of all the movements of history and all endeavors of enlightenment and progress, we had had men and women distinguished in literature, in arts and sciences, in statesmanship, and in our roll of fame we had soldiers, heroes, saints, and leaders of wisdom and character.

Now, a visitor going to our island, studying our local history, mixing with our people, seeing our landscape and our old churches, our old highways and bridges, forts, castles, and palaces, and wandering through sundry places full of history and legend, can witness that a people is established there, of the best civilized stock, aware of progress, and a people that deserves a place under the sun with all the opportunities, rights, and privileges of a free commonwealth.

Notwithstanding everything which I have so far said to you this night, looking now to the other side of the picture, Puerto Rico is far from being a paradise, it has not been a heaven of happiness to our people. Physical conditions of our country, nature, and history, have made us a poor and weak people. We certainly have over there much unemployment and real misery, with its social and economic problems, which I will discuss on some other occasion. Politically, Puerto Rico, as a whole, always has been a colony or possession depending on some power in the family of nations.

Puerto Rico is a small island, covering less than 3,600 square miles, overcrowded with a population of nearly 2,000,000 inhabitants, with 2,000,000 acres of land but out of which only about 800,000 acres is cultivable cropland, and so with less than one-half acre in the per capita distribution of land. We have practically no minerals, no petroleum, no supply of raw materials for manufacturing and trade. Our country is mainly agricultural, and has practically only one important stable industry, not mentioning several minor agricultural crops and minor industries which do not amount to much. We can say that only growing of sugarcane and the industry of sugar is the principal basis of our economic structure. With such a picture of our economy, and with the rate of overpopulation, we face a chronic problem of unemployment and distress. All the endeavors to provide food, shelter, health, education, high standards of living, and the advantages of welfare and happiness to all our people, meet the difficulties of our peculiar conditions.

As a fact and as a matter of justice, we should admit that the United States has accomplished a great task in Puerto Rico. The United States Government and American people have accomplished very much in its endeavors to help my people and to foster well-being and progress in Puerto Rico.

Since the United States troops occupied Puerto Rico during the Spanish-American War and the new American regime was established, Puerto Rico has taken great strides in progress of all sorts. The Puerto Rican people were encouraged by the incoming Americans, our people felt that they were living a new dawn of freedom and prosperity, and the Puerto Ricans welcomed the American flag and adapted themselves rapidly to the new way of life.

During the last 42 years Puerto Rico has certainly taken long strides to progress under the American flag. It would take a long time to go on making its encouraging story and accomplishments. But let me give a general picture with some facts and figures.

During these years under the United States, a great battle has been successfully waged against endemic tropical diseases that formerly decimated our population, and under excellent plans of public health these diseases have been practically subdued, and the present deaths have been reduced to a very low rate. The appropriations in our insular budget for public health 42 years ago were really insignificant, about $50,000. Now more than 10 percent of all our public revenue is spent in public health, amounting yearly to about $2,000,000.

In 1898 we had only 152 miles of public roads. Now we have about 2,000 miles of highways and public roads.

In 1898 we had only about 400 public schools scattered in few places, with a total school attendance of scarcely 27,000 pupils, and the appropriations for public education amounted to about $180,000. Now we have many thousands of public schools, more than 2,000 school buildings, beacons of light, in all the cities, towns, villages, wards, mountains, countrysides, with about 7,000 teachers, a school attendance of about 300,000, and the yearly appropriations for public education is about $7,000,000, with more than a third of all Government taxes and revenue devoted yearly to public education and learning.

Our trade 42 years ago ranged to a total of about $35,000,000. Now we had had, during the last years, an annual average of nearly $200,000,000.

Our present main crop, sugar, yielded a production of about 60,000 tons in 1898. In 1939 we yielded a production of 851,000 tons, but in 1934 we yielded a production of 1,100,000 tons, and without the restrictions of the Federal control program imposed on us we could yield a production of 1,300,000 tons or more. The value of sugar exportation in 1898 was less than $2,000,000. In 1939 it was over $53,000,000.

These facts and figures will give a bird's-eye view of the prosperity and progress of Puerto Rico during the last 42 years, while my people have been living and led by the hand and endeavors of the United States.

On the political side, we have another picture, which I will lay before you as briefly as possible.

As refers to personal guaranties and protection under the law, we can proudly say that in no other country of the world are there more guaranties and assurances to the citizens for the enjoyment of the rights of man than in Puerto Rico, under the American flag. The Bill of Rights of the Constitution of the United States, which is embodied in our Organic Act, is certainly a true Magna Carta of individual rights and a charter of human rights, enjoyed in Puerto Rico by all for the protection of all citizens.

About the status and political pledges and hopes of our people as a whole, the story is interesting.

At the opening of the Spanish-American War in 1898, which brought the island of Puerto Rico under the regime and flag of the United States, Puerto Rico enjoyed a charter of government recently granted by the Kingdom of Spain. Under that charter it was really provided for a home-rule shape of government for Puerto Ricans. It provided for a legislative assembly or chamber of representatives elected by the people of Puerto Rico. From among the members of the popular chamber a cabinet was appointed which swayed all administrative functions in the executive branch of our government, responsible to the people, by its elected chamber of representatives. Under said charter of home rule, Puerto Rico was free to enter into trade agreements with foreign countries, could protect our agriculture and industries levying protective tariffs, and had full powers to approve all legislation concerning local insular matters. And, furthermore, the charter provided that no law could be passed by the Spanish Congress or Cortes concerning Puerto Rico without the approval of our insular chamber of representatives. Said charter provided for 16 representatives and 3 senators elected by Puerto Ricans to the Spanish Congress at Madrid.

Nevertheless, as I have stated, Puerto Ricans welcomed the new regime and hailed its flag. Great encouragement and hopes were given us by the United States. The history and accomplishments of the United States, its shape of government, its institutions of freedom and democracy, the American way of life, the breath of prosperity, power, and liberty of the United States really filled our hearts with cherished hopes, and the Puerto Ricans, all the Puerto Ricans felt happy about the new day that was dawning.

The general that commanded the American Army that occupied Puerto Rico during the Spanish-American War in 1898 addressed the people of Puerto Rico as follows:

"In the prosecution of the war against the Kingdom of Spain by the people of the United States in the cause of liberty, justice, and humanity, its military forces have come to occupy the island of Puerto Rico. They come bearing the banner of freedom. * * * They bring you the fostering arm of a nation of free people, whose greatest power is in justice and humanity to all those living within its fold. * * * We have not come to make war upon the people of a country that for centuries has been

oppressed, but, on the contrary, to bring you protection, not only to yourselves but to your property, to promote your prosperity, and to bestow upon you the immunities and blessings of the liberal institutions of our Government."

During the negotiations of the treaty of peace between Spain and the United States, when the Spanish peace representatives questioned the American peace commissioners about the future political status of the Puerto Ricans, the Americans said the following:

"As regards the status and civil rights of the native inhabitants, these were reserved to Congress, which would enact laws for the Government of Territories ceded to the United States, this being but a confirmation of the right of the sovereign power to leave to the new government the establishment of these important relations. The Congress of a nation which never enacted a law oppressive or detrimental to the rights of residents within its dominions and whose laws guarantee the greatest liberty compatible with the conservation of property, surely can be trusted not to depart from its well-established practice in dealing with the inhabitants of these islands."

The Secretary of War in the Cabinet of President McKinley, in his first report concerning Puerto Rico in 1899, made the following statement:

"The people of the ceded islands have acquired a moral right to be treated by the United States in accordance with the underlying principles of justice and freedom which we have declared in our Constitution and which are the essential safeguards of every individual against the powers of government; not because these provisions were enacted for them but because they are essential limitations inherent to the existence of the American Government."

Mention of Puerto Rico in messages to Congress from Presidents McKinley, Theodore Roosevelt, and other Presidents were gratifying to Puerto Rico as far as these messages praised the Puerto Ricans as a people endowed with intelligence and ability, with a grasp of principles of sound government and progress, and expressing that Puerto Rico was going ahead very well under the new flag.

All the messages and public papers of the Presidents of the United States concerning the Philippine Islands, from the recommendations of President McKinley to the Philippine Commission in 1898 through messages of the following Presidents to Woodrow Wilson, expressed or implied the policy of the United States leading for independence to the Philippines. But, on the contrary, as regards Puerto Rico, no declaration or remark have ever been made by any President of the United States or American Governor of Puerto Rico, not even by any official spokesman of the United States, that merely implied the remote idea that in the policy toward Puerto Rico the status of independence was contemplated. On the contrary, all public papers of Presidents of the United States and messages and remarks of American Governors of Puerto Rico have said openly or impliedly that the policy of United States is to keep Puerto Rico under the flag of the United States.

President Woodrow Wilson, in his first annual message to Congress, on December 2, 1913, in the part concerning Puerto Rico, stated as follows:

"These are all matters of vital domestic concern, and besides them, outside the charmed circle of our own national life in which our affections command us, as well as our consciences, there stand out our obligations toward our Territories oversea. Here we are trustees. Puerto Rico, Hawaii, the Philippines, are ours, indeed, but not ours to do what we please with. Such Territories, once regarded as mere possessions, are no longer to be selfishly exploited; they are part of the domain of public conscience and of serviceable enlightened statesmanship. We must administer them for the people who live in them and with the same sense of responsibility to them as toward our own people in our domestic affairs. No doubt we shall successfully enough bind Puerto Rico and the Hawaiian Islands to ourselves by ties of justice and interest and affection * * *."

Moreover, President Woodrow Wilson in his third annual message to Congress, delivered on December 7, 1915, stated as follows:

"There is another matter which seems to me to be very intimately associated with the question of national safety and preparation for defense. That is our policy toward the Philippines and the people of Puerto Rico. Our treatment of them and their attitude toward us are manifestly of the first consequence in the development of our duties in the world and in getting a free hand to perform those duties. We must be free from every unnecessary burden or embarrassment; and there is no better way to be clear of embarrassment than to fulfill our promises and promote the interests of those dependent on us to the utmost. Bills for the alteration and reform of the government of the Philippines and for rendering fuller political justice to the people of Puerto Rico were submitted to the Sixty-third Congress. They will be submitted also to you. I need not particularize their details. You are, most of you, already familiar with them. But I do recommend them to your early adoption with the sincere conviction that there are few measures you could adopt which would more serviceably clear the way for the great policies by which we wish to make good, now and always, our right to lead in enterprise of peace and good will and economic and political freedom."

Upon said recommendations of President Wilson, Congress granted us our present Organic Act in 1917.

Our present Organic Act, no doubt, is much better than the former, approved in 1900. It is more just. But it really does not satisfy the people of Puerto Rico today. The legislative assembly provided in our present Organic Act is elected wholly by our people, but its measures are subject to the practically absolute veto of the Governor. The provision granting to the people of Puerto Rico a degree of self-government, through its elective insular senate, to which body powers are given to advise and consent upon the appointments of the Governor, has not been in practice always a guaranty of the degree of self-government for Puerto Ricans, as certainly was the thought of President Wilson when he recommended Congress and requested more justice to Puerto Rico. This greater degree of self-government, which clearly was the intent of Congress when our present Organic Act was granted, has not all the assurances that we deserve. Any time any Governor, who is appointed at the pleasure of the President of the United States, may arbitrarily, or ill-advisedly, or due to any momentary misunderstanding, disregard the Organic Act, which is our insular constitution, and make of it a simple scrap of paper, and we in such case are practically helpless under the law, having to depend only upon the spirit of justice of the President of the United States, who may or may not give relief to any disregard of our organic law.

We want under the American flag another shape of government, which may train us in a form of real self-government that we deserve.

That is what we now aim politically, and that is what we are requesting from the United States, hoping that all Americans, with sense of fairness and justice, will help us to achieve, hoping to keep forever our ties with the United States, until the happy and glorious day comes when we may feel ourselves, with due pride, enjoying full citizenship of the United States, with equal duties and rights and privileges as all Americans in continental United States, when Puerto Rico may attain its entrance as an equal State in the sisterhood of this great federation of free commonwealths of the great Republic of the United States. Now, meanwhile, we hope that it may be granted to us at once a true democratic shape of government in Puerto Rico, where we could enjoy self-government, and by which form of government we could train ourselves for ultimate statehood.

Meanwhile, also, we are conscious, and deeply concerned, about the United States, its role in the Western Hemisphere as the elder brother of American Republics. Moreover, during the troubled times the world is now living, in the threshold of perhaps the greatest war struggle of mankind, when democracy is in jeopardy by the inrush of dicatorship, accompanied with tremendous ruthless war power which is a menace to democracy and civilization, we feel that Puerto Rico, aware of its duty, with the ties of racial origin, language, religion, and culture with the Latin-American countries, should stand most loyally by the United States. And I can assure that Puerto Rico, token of friendship and unity of Pan America, a watchdog near the entrance of the Panama Canal, now on the forward line of defense as a possible Gibraltar of America, can be relied upon as a spot where the flag of the United States is floating upon a loyal people, conscious of the destiny of United States as the safeguard and champion of democracy and freedom for all the three Americas and for all the world.

The National Defense and the War in Europe

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

LETTER FROM RT. REV. CAMERON J. DAVIS, BISHOP OF WESTERN NEW YORK

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Rt. Rev. Cameron J. Davis, bishop of western New York:

THE DIOCESE OF WESTERN NEW YORK,
Buffalo, N. Y., May 25, 1940.

The Honorable WALTER G. ANDREWS,
Congress of the United States, House of Representatives, Washington, D. C.

MY DEAR SIR: The annual convention of the Diocese of Western New York adopted the following statement and resolution and directed me to send you a copy of them:

"While in principle we deplore and condemn war, it is apparent that in the present crisis human freedom itself is at stake. The forces now making war on the European democracies have shown unmistakable and unremitting hostility to the moral values which are fundamental in Christianity and all other traditional forms of religion.

"We hold that it is our duty to let the whole world know where we stand. We call upon all fellow Christians to join us in giving assistance to those who are struggling at untold cost to uphold

those principles upon which Christian civilization and all that we hold most sacred depend: Be it therefore

"*Resolved*, That—

"1. We commend the action of our Government in protesting against the ruthless invasion of neutral nations and the barbarous acts of oppression committed against multitudes of innocent people.

"2. We join in requesting the Congress to make immediate and adequate provision for national defense.

"3. We request that Congress take immediately such action as will enable the democracies of Europe to obtain in this country such supplies of materials, including credits and advances of money as may be necessary for the successful defense of those values and ideals sacred to Christian nations."

With assurances of my sincere respect, I am,

Faithfully yours,

CAMERON J. DAVIS,
Bishop of Western New York.

Guarding the Destinies of America

EXTENSION OF REMARKS
OF
HON. DAVID I. WALSH
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1940

RADIO ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, AT JEWISH VETERANS' MEMORIAL EXERCISES

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me over the radio on Thursday evening, May 23, 1940, on the occasion of the Jewish veterans' memorial exercises held in Washington on that date.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, my fellow Americans, these are dark days in the course of world affairs—black chapters in the pages of history. Momentous, but we hope and pray not perilous, days for our own land and our own peoples. It is an hour when courage, faithful citizenship, strong patriotism, and trust in the Almighty need to be joined in the bosom of every man, every mother, and every child living in America.

These are qualities which have been splendidly exemplified by those to whom my remarks are especially directed—the Jewish war veterans of the United States, who are tonight gathered in their lodges and other meeting places throughout the Nation, in annual memorial services to those of their religious faith who laid down their lives for their country.

I esteem the opportunity of addressing simultaneously these many gatherings, these thousands of listeners, through the instrumentality of this modern magic which we know as radio broadcasting. It is a distinct privilege.

Some may inquire, why a Jewish or any racial organization of American war veterans? Nearly all the racial and religious groups have organized similar veterans' organizations. This does not mean that you or they are not satisfied and proud to be American veterans and belong to the Nation-wide veteran organizations—but it does indicate a desire to take justifiable pride in the contribution which the several racial groups have made to our military service in the American wars. It also serves the purpose of letting the general public know the loyalty and willingness of the children of those who were born in other lands and who are now American citizens, to make the supreme sacrifice of death for the preservation of our American institutions. Let it also be said, it should banish forever the whispering propaganda of those who would question the loyalty of our foreign-born citizens and their descendants or seek to deny them the full enjoyment of the civil and religious liberties guaranteed to all citizens by the Constitution.

Let us consider in some detail the glorious record of our Jewish veterans for it attests the loyalty, the patriotism, and the bravery of those of Jewish ancestry first in the war for our independence and thereafter in every war in which the United States has ever engaged.

In these days when a billion dollars is voted by Congress for national defense in a few hours, the reference in the history of our Revolutionary War to an advance by a Jewish patriot of $300,000 to help finance the Continental Army under George Washington may appear as a small matter. But it was a huge sum of money in those days and of inestimable aid to the Revolutionary cause.

The rolls of our fighting forces in the War of 1812 and the Mexican War both contain the names of men and officers of Jewish blood.

At the outbreak of the Civil War in 1861 the Jewish population of this country was estimated at about 200,000. Some 8,000 Jews are believed to have served in the Union and Confederate Armies. The veterans' rolls of the Spanish War in 1898 tell a similar story.

The total number of Jews in the service during the World War is conservatively estimated at from 200,000 to 225,000, which constituted more than 4 percent of the armed forces of the United States, whereas proportionately the Jews in this country formed about 3 percent of the total population.

No less than 1,100 citations for valor awarded to men of Jewish faith are on record. The Congressional Medal of Honor, of which only 78 have been awarded to date, was conferred on 3 Jewish soldiers. The Distinguished Service Cross is worn by at least 150 American Jews, the French Medaille Militaire by 4 American Jews, and the Croix de Guerre by 174 Jews of the A. E. F.

There is scarcely a racial or religious group in all America that cannot point with justifiable pride to an equally glorious record of service and sacrifice.

On August 20 of last year I was honored by being invited to deliver the dedicatory address on the occasion of the unveiling of a monument presented by the Jewish people of Newport, R. I., to the city of Newport and dedicated to the American heritage of religious liberty. Two hundred and eighty-one years previous to the date of this dedication a small band of Jewish families, after a long and hazardous sail from Brazil and the West Indies, entered the harbor of Newport and became part of the community which the followers of Roger Williams had founded.

They were poor, weary, discouraged, and disheartened. They brought with them, however, the spiritual values of the religion of their fathers. It was the only influence that sustained them and gave them hope and courage. Realizing the priceless value of the ancient religion of their forebears, they immediately turned their thoughts to God. And recognizing the great fundamental duty that man owes to the Almighty, namely, worship, gratitude, praise, and prayer, they built on this spot the first synagogue erected in America. From that day to this, persecuted and exiled Jews have continued to find an asylum in every seaport that encircles the territory of the United States of America.

Tonight I am honored by being invited to join with you in honoring the memory of the thousands of Jewish youths who have given their lives for our country.

Such an occasion as this is in vain unless we draw new inspiration and new courage. The memory of our war dead heroes should fill our hearts with patriotism, our minds with high resolve—the resolve that the land of the free for which they fought and died shall remain free; that the democracy established in this land under the Constitution of the United States shall be preserved; and that, in the immortal words of Lincoln, "government of the people, by the people, and for the people shall not perish from the earth." And on this solemn occasion, contemplating the service and sacrifice of your dead comrades, the high resolve also that, God willing, all Americans of whatever race and creed shall dwell in peace with one another. I know of no more appropriate sentiment for us to take away from these memorial exercises than the sentiment inscribed in one of the public buildings here in the city of Washington. It is a sentiment that applies both to nations and to men: "God made us neighbors, let justice make us friends."

If every American Protestant, American Catholic, and American Jew could live this sentiment, they would not only give manifestation of sincerity of their religious faith, but we would indeed all really live in the true spirit of Americanism.

Between Americans there are naturally differences of doctrine, but there is one point on which all may well agree: That the religious-minded people of this country should be as one in opposing the efforts of those who would make this Nation a Godless Nation; promote intolerance, array class or religious or racial groups against each other. Let not petty jealousies, distractions, Old World enmities, long-continued feuds, most of them of Old World origin, longer permit men to look upon religion as impractical and out of date, or infringe upon the birthright of every American to enjoy equality of opportunity, civil and religious liberty, and social and political justice.

My fellow citizens, reflection upon the results of the World War, the war to end wars, reveals the fallacy of the faith that the laurel wreath of peace is a permanent part of the victor's crown.

Every American, regardless of race, creed, or partisan affiliation, is wholeheartedly in favor of peace and in favor of everything that will promote peace—peace for our own country and, if possible, peace for the world.

Every American desires and seeks national security and national safety and is in favor of a course of action designed to achieve security and safety and to keep our country immune from attack by war-maddened foreign aggressors.

It is a tragic circumstance, but undoubtedly true, that treaties and compacts and international pledges and agreements as an insurance against war have been shown to be of no avail. They are being honored only in their breach.

Furthermore, thanks to the inventions of modern science, warfare today is infinitely more destructive and more cruel and more terrifying than ever before.

With respect to our national defenses we are proceeding with all possible speed to strengthen them at every point, in order so far as is within our power to safeguard our land and to preserve our freedom and our heritage.

We must be on our guard also to preserve our priceless heritage from the insidious forces of destruction within our own land—the question of the defense and security of the democratic institutions of our own beloved country. Let us be alert to detect false propaganda and false dogma from subversive elements and groups that are attempting to undermine and destroy our democratic institutions; indeed, to annihilate the freedom for which our forefathers fought and died.

It is difficult to recognize them, therefore they are harder to defeat. It will demand constant surveillance and careful reconnoitering to recognize the foe when you meet him, but if guided by basic American ideals and principles for which your comrades died, you cannot fail.

You living veterans who 20 years ago left the military service must not think that your battles are over. You must make yourselves the inspired leaders in all the great movements for advancement and progress of our beloved country.

We seek not to suppress the right of any man or woman to think and speak freely. That is their God-given right as American citizens. But we must exert our utmost influence in thought, speech, and action against the apostles of foreign philosophies, alien to American ideals, who would, if they had their way, topple our most precious institutions about us and erect on the ruins the superstructure of destructive communistic or totalitarian government.

Guarding the destinies of America against the perils that threaten it from abroad and the sinister enemies that would undermine it at home is more than ever a cause to which you and I may well dedicate ourselves.

Appropriations for the Military Establishment

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1940

TABLE PREPARED BY THE FINANCE BRANCH OF THE ARMY

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a table showing the appropriations for the Military Establishment, showing the approximate break-down into major functions, for the fiscal years 1925 to 1940, inclusive.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Appropriations for the Military Establishment, showing approximate break-down into major functions, fiscal years 1925–40, inclusive

Fiscal year	Recurring charges and improvement of plant: Pay, rations, clothing, repairs, research and development, planning, construction, training, operations, maneuvers, schools, etc.		Augmentation, modernization, and replacement of arms and equipment: This includes new aircraft, spare engines, spare parts, bombs, new tanks, antiaircraft and antitank guns, semiautomatic rifles, trucks, tractors, field guns, machine guns, ammunition, etc.		Total appropriation, Military Establishment
	Entire Army (less Air Corps)	Air Corps	Entire Army (less Air Corps)	Air Corps	
(1)	(2)	(3)	(4)	(5)	(6)
1925	$208,280,000	$35,398,000	$7,623,000	$4,699,000	$256,000,000
1926	202,795,000	38,950,000	12,244,000	7,011,000	261,000,000
1927	202,102,000	37,167,000	21,673,000	8,058,000	269,000,000
1928	224,268,000	42,917,000	4,219,000	10,596,000	282,000,000
1929	234,121,000	45,473,000	17,594,000	13,812,000	311,000,000
1930	249,829,000	53,975,000	11,502,000	16,694,000	332,000,000
1931	254,397,000	60,525,000	14,089,000	17,989,000	347,000,000
1932	244,031,000	60,603,000	14,163,000	16,203,000	335,000,000
1933	238,003,000	47,217,000	6,617,000	12,163,000	304,000,000
1934 [1]	222,625,000	45,472,000	590,000	8,313,000	277,000,000
	[2] 53,150,000	[2] 18,050,000	[2] 18,000,000	[2] 7,500,000	[2] 96,700,000
1935	205,219,000	54,375,000	8,373,000	13,033,000	281,000,000
	[2] 6,300,000	[2] 2,100,000	[2] 500,000		[2] 8,900,000
1936	243,538,000	57,284,000	24,121,000	30,057,000	355,000,000
1937	[2] $13,950,000	[2] $4,650,000			[2] $18,600,000
	258,834,000	65,951,000	$19,538,000	$43,677,000	388,000,000
	[2] 23,700,000	[2] 7,900,000			[2] 31,600,000
1938	282,780,000	75,303,000	15,626,000	43,291,000	417,000,000
	[2] 37,950,000	[2] 12,650,000			[2] 50,600,000
1939	294,010,000	81,431,000	30,151,000	54,408,000	460,000,000
	[2] 94,425,000	[2] 31,475,000			[2] 125,900,000
1940	380,038,000	222,533,000	118,033,000	202,396,000	923,000,000
	[2] 29,250,000	[2] 9,750,000			[2] 39,000,000
Total	3,944,870,000	1,024,574,000	326,156,000	502,400,000	5,798,000,000
	[2] 258,725,000	[2] 86,575,000	[2] 18,500,000	[2] 7,500,000	[2] 371,300,000
Grand total	4,203,595,000	1,111,149,000	344,656,000	509,900,000	6,169,300,000

The grand total in—

Column 2 is 68.1 percent of the grand total in column 6.
Column 3 is 18.0 percent of the grand total in column 6.
Column 4 is 5.6 percent of the grand total in column 6.
Column 5 is 8.36 percent of the grand total in column 6.

100.0 percent.

[1] A total of approximately $36,500,000 was impounded and refunded in 1934. This was taken more or less proportionately from all activities.
[2] Allotments from Federal emergency funds.

Arms Program

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1940

ADDRESS BY FORMER PRESIDENT HOOVER

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Times-Herald of this date under the heading "Hoover Urges Industrialist Leader as Czar to Direct Arms Program in United States Preparedness."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Times-Herald of May 28, 1940]

HOOVER URGES INDUSTRIALIST LEADER AS CZAR TO DIRECT ARMS PROGRAM IN UNITED STATES PREPAREDNESS—SPEED AND ECONOMY ADVISED BY EX-PRESIDENT IN ADDRESS TO NATION

NEW YORK, May 28.—Appointment of a preparedness czar to direct the vast expansion of the United States' war establishment was urged last night by former President Herbert Hoover. He spoke over the N. B. C. blue network.

Hoover specified a seven-point program for real preparedness:

1. Creation of a munitions administration in Washington.

URGES INDUSTRIALIST

2. That it should have a single-head administration with assistant heads for labor, agriculture, and industry.

3. The administrator should be an industrialist, and not a politician.

4. He should be authorized to appoint a nonpartisan advisory board representing the Army, Navy, labor, transportation, manufacturing.

5. The whole of the purchasing and manufacturing for the Army and Navy from private industry should be done by the administrator.

6. A research organization should be created to constantly improve these products.

7. All appropriations for such work should be made to the administrator's organization.

CITES SPEED, ECONOMY

"This is a form of organization that will get speed and economy," Hoover declared. "Urgency, speed, and economy are not bureaucratic virtues."

He cited three lessons which had been learned from the World War, the first being that procuring in sufficient volume of munitions must be separated from Army and Navy establishments, adding that this was a job for "management and labor," a job that "requires that thousands of factories be coordinated to do their part."

The second lesson, he said, was that such operations could not be "controlled by boards, councils, or conferences.

"The whole genius of the American people was demonstrated over 150 years that when we come to executive action, including the office of the President of the United States, we must have single-headed responsibility.

"It is just as foolish to set up a board to conduct munitions business as it would be to set up a board to conduct the Presidency of the United States.

"The third lesson taught by experience is that we must get these vast expenditures of money out of politics—get them out of sectional pressures and out of group pressures. * * * That is the only way we can prevent profiteering and eliminate waste and assure efficiency."

NO CAUSE FOR PANIC

Hoover advised the American people that "there is no occasion for panic," but "there is need for speed" in preparedness.

Describing the kind of preparedness he would like to see, the former President said:

"My own view is that we need, first, a strong navy. We need a skeletonized but more flexible army. We need large additions of skilled personnel in our reserves, air pilots, tank drivers, and gunners. And we need equally the organization of our industrial capacity to produce our weapons and supplies. It is in that organization where we are weakest.

"We do not want 50,000 planes put away in hangars. These planes would be obsolete in a year. I do not suppose that this is the President's proposal. In the face of constantly advancing science and invention it would be folly to have 50,000 airplanes in peacetime. It would require half a million men to look after them and to fly them. It would require more billions of dollars a year to support them.

"What we need is organization in Washington capable of bringing about a coordination in American industry that can produce 50,000 airplanes in a year if they were called to do it.

"If we could demonstrate that we could supply the Army and Navy with 4,000 planes during a single month, that would be ample notice to the world to keep off our grass. Likewise, we need an organized capacity to produce tanks and other arms."

Concerning the Roosevelt administration, Mr. Hoover said:

"Did we wish to engage in criticism we could point out that for years as officers responsible for national defense we had a Secretary of the Navy too ill to attend to his duties. Then he was replaced by a temporary appointment.

"NEED FOR CHANGE

"For 3 years the differences between the Assistant Secretary of War and his superior have been public knowledge. The recommendations of wise men for organization and coordination of industry have been rejected. It all proves the stark need of revolutionary change in method of organization for the future.

"What we are interested in now is not recrimination. What we want is to be prepared.

"The first step in preparedness must be made right in Washington. Our governmental machinery must be made capable of producing preparedness.

"In the 10 years prior to 1934, when the face of the world was turned toward peace, our expenditures for munitions and constructions was under $150,000,000 a year. Such organization as was necessary to make these purchases and bring about their manufacture could be carried out under the War and Navy Departments.

"We are confronted with a much larger and more complicated problem. The Congress is just passing an appropriation of three and a third billion, a large part of it to be used to manufacture planes, tanks, guns, and ships. That is a problem of gigantic industrial production. That requires another form of organization if we are not to fail again.

"President Roosevelt in his address last evening implied that previous administrations had been derelict in providing national defense. These statements have a partisan flavor. I could challenge the implications of Mr. Roosevelt's figures.

"For instance, despite the number of ships commissioned or not commissioned, the statistical abstract, published by Mr. Roosevelt's administration, shows we had available fighting ships to a total of about 1,100,000 tons when he took office, against about 1,350,000 tons today.

"Of far more importance, however, national defense is a relative thing. It is relative to the military menace in the rest of the world. No government has the right to impose unnecessary burdens on all those who toil.

"AMPLE WARNING

"The peaceful democratic government of Germany collapsed into dictatorship under Hitler 2 months after Mr. Roosevelt was elected. It was in Mr. Roosevelt's administration that Europe began to rumble with aggression and armament. The German Army grew to 2,500,000 men. Their Navy expanded.

"Great Britain, France, Russia, and Japan and all others at once expanded their expenditures 400 percent. The total of 60 nations increased expenditures from $4,000,000,000 in 1932 to $17,000,000,000 in 1938. The suggestion that we should have armed against menaces that had not been born seems overdone.

"During this last 5 years we have had warning time and again, publicly and privately. The Congress has increased appropriations year by year since 1934. It even permitted relief funds to be used for defense. We obviously have not gotten preparedness.

"Creation of such organization would be only the first step in meeting the task before us.

"Preparedness in a nation is not alone the ability to manufacture arms, or even the number of soldiers or warships or airplanes. It lies in the moral strength and the resolute will of the people. It also lies in economic strength and prosperity of a people.

"WEAKENED BY DEBT

"I do not wish to dwell upon the fact that today we have 10,000,000 unemployed, that we have 18,000,000 destitute people on relief; that one-third of our population is living at subnormal standards; that agriculture is kept afloat only by Government subsidy; that our national strength for defense has been weakened by the huge increase of our national debt and taxes in time of peace.

"Business and industry have been palsied with fear, hesitation, and lack of confidence. In consequence our industrial efficiency has even decreased in the last 8 years. That can be proven. A recent census of the machine tools in the United States showed that while only 52 percent were over 10 years old in 1932, there are 70 percent of them over 10 years old today. That means our industrial plant has slipped backward in its vital equipment.

"Today our call is for industrial production to defend the Nation. To get that we must have more than efficient Government organization. We must change the attitude of Government toward industry. If we are to be prepared for the supreme test of national defense, there must be regeneration of the springs of economic life in our people. We must restore confidence and thus employment. We truly need national unity for the most fundamental part of life and national defense.

"France is today paying in blood the penalty for a government of similar economic attitudes under the government of Premier Blum.

"We have no good reason to be discouraged or fearful. We have the largest resources in the world. We have the greatest mechanical genius. Our men are courageous and our women inspired in fortitude. The whole world knows the capacity of the United States in initiative, in execution, in creation, and performance.

"MUST BE PREPARED

"Once we convince the world that our capacities are organized, no nation will have any desire to establish bases on the Western Hemisphere or make any attack upon us now or any other time.

"Human liberty may need take refuge upon this continent. We must efficiently be prepared to defend it as the last hope of the world."

United States Air Power

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1940

ARTICLES FROM THE WASHINGTON TIMES-HERALD AND THE WASHINGTON DAILY NEWS

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington (D. C.) Times-Herald of May 28, 1940, together with an article by John T. Flynn, published in the Washington (D. C.) Daily News of May 28, 1940, on the subject of the air power of the United States.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Washington Times-Herald of May 28, 1940]

George Washington said: "Excessive partiality for one foreign nation and excessive dislike for another cause those whom they

actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other."—From the Farewell Address.

UNITED STATES AIR POWER ONE-FOURTH THAT OF GERMANY—ARMY AND NAVY HAVE 4,489 PLANES, 70,000 MEN TO FLY THEM

(This is the last of a series of articles on the actual and potential strengths of the United States Military Establishments.)

The combined air fleets of the United States number 4,489 planes. Of these approximately 1,800 are in the Navy, and slightly more than 2,600 are in the Army Air Corps.

To man and maintain this air fleet the Army, Navy, and Marine Corps have approximately 70,000 officers and enlisted men detailed to the air force.

FAR SURPASSED BY GERMANY

How this air force compares with that of the other great world powers is shown in the following table, based on the best estimates available to military observers. The table gives the number of planes and the number of men in world air forces.

Nation	Planes	Men
United States	4,489	70,000
Germany	15,000	300,000
Britain	7,000	245,000
Italy	5,000	120,000
France	4,000	85,000
Japan	3,500	40,000

The Army has 500 bombers, 430 combat planes, 170 observation planes, and 130 reconnaissance planes. The rest of its air fleet is in reserve and training planes. The Navy numbers 400 bombers, 350 combat planes, 140 observation planes, 100 reconnaissance planes, and the balance of its force is also in reserve and training planes.

The German air force is estimated to have 4,000 bombers. Russia is believed to have 1,500.

SALES TO ALLIES CUT STRENGTH

The Army Air Corps today would have near a strength of 5,500 fighting planes had its expansion program not been sidetracked to rush planes to France and Britain.

The current air-expansion program, authorized under the expanded defense program, would give the Nation an air force of 10,000 planes by July 1, 1941.

Although almost none of the Army's planes are last-minute models, they can be modernized with the addition of armor, bullet-sealed gasoline tanks, and like improvements.

[From the Washington Daily News of May 28, 1940]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, May 28.—The plight of the aviation industry now gives us a clue to one of the first difficulties into which war forces business.

There are orders—orders by the billions of dollars—waiting for the airplane factories. But they have not enough plants to handle them all. Therefore, before they can take these orders and cash in on them they will have to build more plant space.

But to do this they have to have money—sales of stock, or bonds, or vast loans from banks or somebody. But right there the fellow who buys the stock or bonds or lends the money asks himself a very pertinent question. Suppose I put all this money into this company and then, all of a sudden, the war stops. Then what?

All the orders of the Allies will be canceled, if they lose, and there will be no one to pay for them. As for America, the scare may be over, and the orders will stop or pause. Then there will be no need for this immense plant the company built.

That's what happened in the last war. Up in New England, Remington Arms and Winchester in Connecticut—and scores of other companies—went almost mad with the prosperity. New plants were built—building after building went up—millions went into them.

And then the war ended, the orders stopped, but there were the plants. And all the money that had gone into those plants was still buried in them. The profits had been great but not enough to pay for the cost of production plus the original investment.

We might as well face it as a war fact that private investment in war industries is going to be very difficult, and that if these industries are to be financed the Government will have to do it and make up its mind to face the losses if the loan is never made good.

I do not mean that the Government should own the factories. I mean it should make the necessary loans—only on essential war industries—and do so with the understanding that the loans shall be written off when the war or the war hysteria is over.

That will be doubly beneficial to the country. First of all, it will make it possible to limit the profits without endangering production. Second, and more important, it will help avoid what, unfortunately, seems inevitable when this war is over.

Private concerns with huge war machinery plants on their hands and with their own money in the plants, will be driven to find work, and the only work will be more war orders after the war is over. This will lead to propaganda for keeping up preparation, preparation against new and ever-present enemies.

If, when the war is over or the war effort at an end here, the Government should be in position to say, "No more orders; the need has passed. Now put away your excessive gun and plane plants, and do not worry because you haven't amortized your investment. The money is due to me and I am prepared to call it off."

This may sound foolish—but, as surely as we live, it is the course of wisdom.

Trojan Horsepower

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1940

ARTICLE BY FRANK C. WALDROP

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article by Mr. Frank C. Waldrop, of the Times-Herald of Washington, D. C., entitled "Trojan Horsepower."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald]

TROJAN HORSEPOWER

(By Frank C. Waldrop)

It is getting to be worth your life, not to mention your liberty, to be seen in the company of a dachshund these days.

All of official Washington is on a hell-for-leather rodeo to round up the terrible Trojan horses, each of which, presumably, will be wearing a swastika brand on his right flank and carrying secret codes.

Isn't it about time to rein up for a bit and survey the terrain before we miss something?

Let's go back to last August. The war was not yet, and the negotiations were fast and devious. Who was it that pushed over the bar-room table and started all the shooting? The record shows that none other than long-whiskered Joe, from Moscow, did that job.

Stalin's compact with Hitler released the Nazi legions, and no amount of squirming or dodging by the Communists can lead close thinkers away from that original fact.

And the evidence has piled up steadily ever since that one of the elements of that deal was a sell-out of the Communist Party, United States of America, to Hitler as his half-witted tool here. The Nazis have never been able to build an organization in this country anything like so big or so wealthy or so well accepted among the googly-eyed respectables as have the "reds."

If we are going to round up the Trojan horses (and we had better), we had better begin at the beginning. And here's one for you to think over while you are thinking about where to begin.

This is a passage from page 281 of an authoritative new book entitled "Your Federal Civil Service," by James C. O'Brien, promotion officer, and Philip P. Marenberg, on the Board of Appeals and Review of the Civil Service Commission:

"Section 9 of the Hatch Act, which became law on August 2, 1939, provides that it shall be unlawful for the Government to employ any person who is a member of any political party or organization which teaches or advocates the overthrow of the constitutional form of government in the United States, and that any such person, if holding office, shall be immediately removed from his position through the medium of nonpayment of salary.

"Some persons believe that this provision in the Hatch Act, when read in conjunction with the Supreme Court's decision in the Strecker case, would seem to imply that a person who is presently a member of the Communist Party may not be eligible to hold a Government job, whether it be civil service or noncivil service.

"However, no authoritative decision has been made to date as to whether the Communist Party teaches or advocates the overthrow of our constitutional form of government."

They also state that the Civil Service Commission has no authority in any case to determine whether an applicant for a Government job is a Communist.

Think that over. Nowhere is there legal premise, according to these lawyers of the Government whose business it is to know, for

assuming that a Communist is dedicated to overthrow our constitutional form of government, or to find out whether he is a Communist in the first place.

As a matter of fact, the Communist Party of the United States of America has been sending through the mails in large quantities recently copies of its constitution and bylaws.

In the preamble of this document it is explicitly stated that the party "defends the United States Constitution against its reactionary enemies who would destroy democracy and all popular liberties."

You have to read carefully to find the gimmick, which is that the preamble also dedicates the Communists to "the establishment of socialism, according to the scientific principles enunciated by the greatest teachers of mankind, Marx, Engels, Lenin, and Stalin." Also, in article XI, the Communist Party of the United States of America announces its "affiliation" with the fraternal Communist parties of other lands through the Communist International.

Well, do you look at all this through the wrong end of a legalistic microscope, or do you look at the record?

What have the fraternal Communist parties done in Germany? In Italy? In Spain? In France? Did they, in those countries, advocate or attempt overthrow of the established governments? The record speaks.

Did the people of those countries act too late, too soon, or just right? In Italy, the Communists brought on Mussolini.

In Germany, they brought on Hitler. In Spain, they brought on Franco. In France, they shackled the people until now Death itself thunders at the gates of Paris.

And the "scientific principles" of socialism enunciated by those great humanitarian thinkers, Marx, Engels, Lenin, and Stalin, have certainly done a pretty job in Russia.

There is evidence that the Communist Party, United States of America, has captured control of certain important labor unions in strategic war industries and is ready to call strikes whenever an order is placed in certain factories to make goods going to enemies of Hitler.

Do you approve of that? Is it in our national interest?

And yet, counsel to the Civil Service Commission find there is no bar in law as yet to Communists taking and holding employ in the Government of the United States.

Radio Forum Discussion on Munitions, Men, and Morale

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1940

RADIO ADDRESS BY HON. WARREN R. AUSTIN, OF VERMONT

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the proceedings of the national radio forum arranged by the Washington Star and broadcast over the National Broadcasting Co. network on last evening, including an introduction by G. Gould Lincoln, political editor of the Washington Star, and an address by me on the subject of munitions, men, and morale.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

INTRODUCTION BY G. GOULD LINCOLN, POLITICAL EDITOR OF THE WASHINGTON STAR, WASHINGTON, D. C.

Ladies and gentlemen, it is our privilege to have as our guest in the National Radio Forum a distinguished Republican Member of the United States Senate, who will speak to us on the subject Munitions, Men, and Morale.

Senator WARREN R. AUSTIN, of Vermont, has achieved a reputation in the Senate for his clear-headed independence of thought and speech; he typifies the American tradition that party differences are buried in the face of National emergencies. Senator AUSTIN'S thought and speech on foreign affairs have never been guided by partisan considerations, and his views on the subject have won the respect of his colleagues.

As a member of the Committee on Military Affairs, Senator AUSTIN has been in a position closely to observe the measures taken for our national defense, and I feel that all of us will profit by his appraisal of the situation as it is today.

It is my great pleasure now to present to you Senator WARREN R. AUSTIN, of Vermont.

ADDRESS BY SENATOR AUSTIN

In the beginning of the Seventy-sixth Congress industry was wholly unprepared to respond to the demands for national defense.

America was weak in the most vital organ of the Military Establishment, namely, production of munitions.

Assuming a large quantity of material on hand for the initial protective force, but an industrial establishment practically paralyzed, prudence and foresight required the rapid building up of the capacity to produce for future demands.

However, the assumption is incorrect, for we were woefully short of military material, defense fortifications, aircraft, antiaircraft guns, and ammunition.

Regardless of international tensions, there has been technical developments in the methods and means of warfare in recent years which dictated a change in American plans and preparations for defense.

As Secretary of War Woodring put it:

"Today the individual soldier is at the complete mercy of a modern military foe unless he is equipped and supported by a variety of highly developed weapons, for which, in turn, there has been provided an adequate supply of ammunition and reserves."

The Military Affairs Committees of both the Senate and House held hearings in January and February 1939 on a plan for adequate national defense, as outlined in a message of the President dated January 12, 1939.

Notwithstanding the vicissitudes of the contest between isolationists and realists, involving the question of providing airplanes for England, France, and the Netherlands, the act which carried into effect the recommendations of the President was approved April 3, 1939.

Within the brief period of 82 days a democracy had effectively reformed its policy regarding the means of protection of itself—continental and insular.

Development of production of airplanes, which is such an important item of modern defense, was immediately stimulated by contracts for delivery to the United States. But the chief cause of expansion of plant capacity was the export trade encouraged by our foreign policy.

This policy of exporting planes to belligerents accomplished several objectives:

Increase in the size and essential capacity of factories at the cost of the foreign governments, their capital, not ours, undertaking the risk of war-plant investment.

Reduction of a corresponding development in possible enemy nations.

Acquisition of new ideas discovered in the laboratory test of war itself.

Education in technique, through the requirements of customers engaged in warfare.

The ability to confound a possible enemy by shutting off the source of supply.

In all this program the theory of priority has been carefully studied and the right of the United States to place the American orders over foreign orders has been contractually preserved. All foreign orders are subject to the condition that they shall not interfere with our own procurement. Thus we have had nothing to lose and everything to gain by this wise policy of selling and exporting airplanes.

During the recess following the first session of this Congress and in September the present World War broke out. The President called Congress into extraordinary session and the Neutrality Act of 1939 was passed. It became a law on November 4, 1939.

This was the second chapter in the international record of this Congress.

"The Neutrality Act of 1939" is a misnomer, but it is the legal name of the act. It is not neutral. It might be characterized as quasi-neutral, but throughout the dramatic events which produced it I have always claimed that one of its chief objectives is national defense through aid of the democraries. I claimed, in the process of enacting this law, that we should do what we could short of becoming a belligerent to promote victory by the Allies.

In the course of debate in the extraordinary session I was asked by Senator Borah, whose distinguished memory we cherish:

"Mr. BORAH. Mr. President, the Senator from Vermont stated that he was actuated by the belief that it was to the interest and security of the people of the United States that the Allies win. What does the Senator mean by 'win'?

* * * * * * *

"Mr. AUSTIN. Mr. President, it means the stopping of the aggression of the totalitarian philosophy. It means the stopping, for the time being at least, of the military penetration of the Western Hemisphere. Does that answer the Senator's question?

* * * * * * *

"It makes little difference whether one uses the word 'win' or some other significant verb that indicates that our purpose is either to have an early—and the earlier the better—peace negotiated without further combat, which peace will be just, as nearly as human frailty will permit, or to stop for a time being, at least, the philosophical penetration of our country with ideas that tend to undermine our free institutions and are aimed insidiously at the Republic; or even to prevent the occurrence of incidents which might result in the occupation of Canada or the islands of the

Atlantic Ocean near our coast, as well as the occupation of Latin America by totalitarian states having visions of world empire and world grandeur."

Under that so-called Neutrality Act of 1939, the exportation of munitions has been further stimulated and the capacity of the American plant has been growing as a direct result of procurements by belligerents and at their expense.

I have no doubt that the products of our factories have gone to both sides, but the preponderant effect has been to furnish aid to the democracies. This belongs in my address to you tonight solely because it bears upon the subject of national defense.

Our present understanding of world events moves us to sacrifice and to action to protect our free institutions and opens a new chapter of endless possibilities in world politics.

We have seen in the case of the Netherlands that the steadfast desire for peace, an attitude of neutrality, and even its kindly provision of asylum for the former war lord of the German people did not save it from devastating aggression.

The list of countries overrun within the last 9 months also includes Austria, Czechoslovakia, Poland, Norway, Denmark, Belgium, and France.

As has been pointed out in the President's address, our great territory of American States may be susceptible of attack from several angles through swift approach by air, which brings the problem of defense to the individual citizen in every community.

After hearing the testimony in the Military Affairs Committee in January and February of 1939, showing the penetration of Latin America by the dynamic foreign policy of national socialism, and upon consideration of other evidence, of the establishment of professorships in Latin American colleges, the placing of teachers of military science in their armies, of totalitarian officers specially trained in the language of the country they were sent to, of pilots and mechanics for their air lines—indeed, one whole air-line company of South America has a personnel 95 percent German—I became convinced that the final demands of the totalitarian powers could not be visualized; that there were no limits to them short of that expressed by Rauschning in The Revolution of Nihilism, thus:

"In particular, therefore, it is not correct to regard the new German foreign policy as simply the final form of the policy of the Pan-Germans. The foreign policy of the Third Reich goes beyond the most extreme limits any nation has consciously set itself in the past. It is supposed to be a 'peace policy of justice,' but: A new peace shall make Germany 'mistress of the globe,' a peace not hanging on the palm fronds of lachrymose pacifist womenfolk, but established by the victorious sword of a master race that takes over the world in the service of a higher civilization.' Such is the main political principle of national socialism as expressed by Rosenberg. Hitler's language is rather more general, but it conveys no less ambitious perspectives."

Rosenberg was once the National Socialist Party's supreme expert.

One does not have to exaggerate or yield to hysteria in making the decision of a prudent person that immediate superiority of power, spiritual and material, is indispensable to save the principles which constitute the American cosmos and to prevent further enslavement of the world to the doctrines of national socialism.

The evil spirit of world revolution put us on notice that civilization had slipped back to legendary pagan days of the Trojan horse.

Therefore we arm.

We arm mentally.

The general desire for peace following the first World War had such vogue that it deluded the democracies. Such effort as they made to perpetuate liberty was concentrated on other sanctions for peace than force. They relaxed. They took their ease. Their former victories gave a sense of security which now is seen to have been false. This includes the American Republic.

Like the Greeks of whom Virgil charged, "The unused weapon dies with rust," we Americans foolishly allowed the spiritual and physical means of national defense to die with rust.

The present deficiencies in the American establishments for protection are partly due to the assumption by the public that the record of recurrent wars—approximately every 30 years—could be ignored with safety; that the United States is isolated in effect by wide spaces of air and water, and that whatever happens over there cannot disturb our serenity or destroy our free institutions.

In such a condition of public opinion the Department charged with the duty of planning have been unable to accomplish, in the past 20 years, even the minimum objectives which they have continually urged.

During the 8 years that I have served in the Senate I have observed vigorous opposition to every appropriation for national defense by conscientious Americans within and without Congress.

Now, however, alarmed by the velocity of the spread of dynamic enemies of liberty over the countries of Asia and Europe, informed public opinion is aroused and energized to achieve, in the shortest practicable time, that preparedness which ought to prevent encroachment upon the Western Hemisphere, both continental and insular.

On national defense we are united. The strong harmony of our action taken last week is actuated more by the conviction that this is necessary for our own tranquillity than by the emotion excited by the abhorrence of the wrong involved in the inhuman and horrible slaughter of peaceful noncombatants and the ruthless and barbaric invasion of neutral countries.

We perceive the significance of the penetration of Latin America by totalitarian foreign policy and the phenomenon of the "fifth column."

Notwithstanding the imminence of a Presidential election, in which there is keen competition, Republicans and Democrats volunteer in a great unit to save our country. National defense and foreign relations are not a party issue. Their administration usually is an issue.

The former disagreements which cut across both party lines resolved the protagonists into groups called isolationists and realists, neutrals, and those called pro-Ally.

We now clearly see that our peace and safety, and the permanence of our Republic, depend upon stopping totalitarian conquests.

We are encouraged to adhere to the forms of government which have given us a higher degree of relative liberty, and a higher standard of civilization than elsewhere, by the vigor of our present unity of action and the competency with which this Republic proceeds to arm itself adequately. Without frenzy, without excitement, and with calculated planning, which had its genesis in many former blueprints made by the War and Navy Departments, we did, within the brief period of 7 days, vitalize the President's plan for adequate defense.

We are determined to preserve democracy.

We have its ability to act wisely and effectively without injurious loss of time, and without abandoning its structural safeguards. We will continue to do this.

The President's plan for defense is briefly described as follows:

1. It recognizes the effectiveness of providing the democracies which are in desperate combat all the aircraft for which they have applied or will probably require. Therefore the development of our capacity to produce will be increased above that attained with Allied capital.

2. It will rapidly increase the rate of production until our capacity equals 50,000 planes a year.

The Panama Canal will have an additional and separate set of locks for naval use.

Air bases will be located at strategic places accommodating mobile and quick defense of continental United States.

Coast defenses on both oceans and the Caribbean Sea will be improved.

Antiaircraft guns will be provided in character and number designed to be sufficient for the increased Army.

The Army will be increased to full capacity of its peacetime proportions.

When all elements of the National Guard and O. R. C. are included, it will aggregate over a million men.

In addition to this, I believe we should have an air-raid Reserve protecting the homes in every community throughout the country.

All arms, ammunition, equipment, transportation, housing, clothing, and other material required to round out a well-balanced and effective peacetime Army will be produced.

This basis, or skeleton, for a larger Army will be easily augmented, if necessary, in the future. Provision has been made for training of air pilots and ground personnel on a scale sufficiently progressive to correspond to the production of planes.

The President's plan for national defense comprehends the Western Hemisphere.

It is not given to us all to know the plans of the Executive Department in detail. We do know that the attitude indicated by the friendly neighbor policy harmonizes with our attitude toward Europe and Asia, even if it differs.

My considered opinion is that we should not make permanent alliances with Latin American countries, or with Canada, but I do think that we ought to make temporary alliances for the common defense and for intelligent coordinated planning. In deed, I believe this is an important element which ought to be in the President's plan.

The President's plan for national defense which Congress is unanimously providing involves the following results:

In all ways, short of our joining as a combatant, it will aid the democracies to stop Hitler, and bring the war to an end without subjugation of the democracies.

It will make us so competent to maintain our security that no belligerent would attack us, or commit other acts which are calculated to injure us severely or to threaten us with great harm.

It will create the moral and material superiority necessary to overcome an enemy.

It will increase our prestige and will fortify our position in any future negotiation between nations affecting any of our international relations.

We face bravely the internal hazards of a free government.

Without injustice or oppression we are building up resistance against them. The chief reliance of the Government, however, is on the devoted patriotism of its citizens, whose constant regard for law and order, maintains an atmosphere in which sabotage, sedition, and subversive acts, are difficult to conceal, and hard to carry out.

Remembering our many racial stocks, and cherishing the virtues of each of them separately and in assimilation here, we all hold Americanism the precious heritage to be transmitted to our children. For it we willingly and zealously sacrifice and strive.

Collectivism, the economy of the enemies of democracy, is at war with capitalism, the economy of America. Therefore an important measure of our defense is the maintenance of the soundness and solvency of our national economy.

The cost of our present obligations is great; but not so heavy as the cost of failure to spend now would later be. We ought to tighten our belts now and forthwith plan to meet the requirements.

Industry, mining, agriculture, commerce, the professions, labor, capital, and all other factors in the united effort should cheerfully cooperate to attain the maximum efficiency of our superb voluntary mobilization.

Out of the sorrow and anxiety of these dark days may rise a better America.

The demand for rapid production and for smoothly running service ought to produce the right solution of many of the complex issues that vex employer and employee, Government, and citizen.

The will to win should generate the will to do justice and to be unselfish on all sides.

My own efforts toward speeding up the national industrial plant and energizing and coordinating the superb resources of America, human and material, included the offer of legislation to enable the President to create a five-man board specially qualified to harmonize the relations between Government, employer, and employee, and stimulate quality and velocity of production.

While we temporarily lift the checks on power in this emergency we record our determination to preserve democratic liberty. Democratic liberty does not function with the speed of despotism under the impetuous will of fear-inspiring dictatorship, but is the will of the people revealed in measured and progressive steps toward their greater welfare and happiness as a whole.

Therefore our paramount object is to preserve the Republic.

While we subject our freedom to severe restriction for the common defense, we consecrate ourselves to the duty of keeping the lamp burning over our altars throughout these dark days.

The munitions, the men, and the morale which we enlist today shall be effective—

To keep the ambitious dictator from coming to plunder and seize the wealth of the Americas, for he shall know that he cannot get it, and

To maintain the permanence of republican forms of government against expansion of executive power and against invasion by the "fifth column."

Force may prevail against law temporarily, but we are determined that law, not force, shall ultimately be the arbiter of disagreements. For us the will of the people shall continue to be supreme.

United and prepared and animated by the virtuous purpose to save our country and its liberty, we shall become invincible.

Friends of the Land

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1940

LIST OF OFFICERS AND MEMBERS AND ARTICLE BY MORRIS LLEWELLYN COOKE

Mr. LEE. Mr. President, this year there was an organization formed under the name of Friends of the Land, a nonpartisan, nonprofit society for conservation of soil, rain, and man. I ask unanimous consent to have printed in the Appendix of the RECORD a list of the officers of that organization, together with the trustees and sponsors, and also an article on the subject New Steps to Save the Land, by Morris Llewellyn Cooke, published in the Survey Graphic for April 1940.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

FRIENDS OF THE LAND—A NONPARTISAN, NONPROFIT SOCIETY FOR CONSERVATION OF SOIL, RAIN, AND MAN

Morris Llewellyn Cooke, president.
Joshua Evans, Jr., treasurer.
Charles W. Collier, executive director.
Russell Lord, editor.

Vice presidents: Charles E. Holzer, first vice president; J. S. Apperson, New York; George A. Condra, Nebraska; J. N. Darling, Iowa; D. P. Fabrick, Montana; O. U. Habberstad, Minnesota; F. S. Hurd, Oklahoma; Aldo Leopold, Wisconsin; J. E. Noll, Missouri.

Trustees: J. J. Boatman, Iowa; Isaiah Bowman, Maryland; Bryce C. Browning, Ohio; James H. Causey, Colorado; Stuart Chase, Connecticut; George P. Clements, California; George M. Corlett, Colorado; Alma M. Davis, Arizona; Glenn E. Dill, Oklahoma; Vaughn Flannery, Maryland; J. Ross Hanahan, South Carolina; George H. Hecke, California; Miss Harlean James, District of Columbia; J. F. Jackson, Georgia; B. H. Kizer, Washington; Robert D. Lusk, South Dakota; E. B. MacNaughton, Oregon; V. C. Marshall, Texas; Wheeler McMillen, Pennsylvania; Will G. Metz, Wyoming; M. O. Ryan, North Dakota; J. Russell Smith, Pennsylvania; Robert J. Smith, Texas; Clifford H. Stone, Colorado; Huston Thompson, District of Columbia; Rexford G. Tugwell, New York; O. S. Warden, Montana; Victor Weybright, New York; T. Guy Woolford, Georgia; Robert Sterling Yard, District of Columbia.

Sponsors: Robert A. Allen, Nevada; C. L. Alsberg, California; C. W. Bailey, Tennessee; John H. Baker, New York; Charles A. Beard, Connecticut; Barry Bingham, Kentucky; Remsen D. Bird, California; U. B. Blalock, North Carolina; A. A. Brock, California; David K. E. Bruce, Virginia; Thomas D. Campbell, Montana; W. W. Campbell, Arkansas; Frederick P. Champ, Utah; George T. Cochran, Oregon; Mrs. Mabel C. Costigan, Colorado; Walter S. Cothran, Georgia; David Cushman Coyle, District of Columbia; Jonathan Daniels, North Carolina; J. C. Derieux, South Carolina; Robert L. Duffus, Connecticut; Paul M. Dunn, Utah; C. A. Dykstra, Wisconsin; J. J. Edwards, Washington; Albert Einstein, New Jersey; Edwin R. Embree, Illinois; Samuel S. Fels, Pennsylvania; John M. Fouts, Texas; P. H. Glatfelter, Pennsylvania; P. Hetherton, Washington; John E. Hill, Texas; T. C. Holy, Ohio; Gene A. Howe, Texas; Frank W. Hussey, Maine; Thomas Jesse Jones, New York; Paul Kellogg, New York; I. N. Knutson, Wisconsin, Grover Cleveland Ladner, Pennsylvania; Oliver La Farge, New York; Fiorello H. LaGuardia, New York; A. Frank Lever, South Carolina; David D. Long, Georgia; Edward Avery McIlhenny, Louisiana; Archibald MacLeish, District of Columbia; Otto T. Mallery, Pennsylvania; K. W. Marett, South Carolina; John C. Merriam, District of Columbia; A. B. Miller, California; Theodore Monke, North Dakota; Frank E. Mullen, New York; Miss Anne Mumford, California; Robert Cushman Murphy, New York; Richard Neuberger, Oregon; J. K. Newman, Pennsylvania; James G. Patton, Colorado; Donald Culross Peattie, California; Clarence Poe, North Carolina; Charles Redd, Utah; Robert Redfield, Illinois; Erle H. Reid, Wyoming; John H. Reisner, New York; Mrs. John Rogers, Jr., New York; H. M. Roseberry, Kentucky; W. Carson Ryan, New York; Carl O. Sauer, California; E. F. Scattergood, California; Paul B. Sears, Ohio; Markley Stevenson, Pennsylvania; Alfred Stieglitz, New York; Russell M. Story, California; Raymond Gram Swing, New York; G. C. Taylor, Louisiana; Wilbur K. Thomas, Pennsylvania; J. W. Turrentine, District of Columbia; Rupert B. Vance, North Carolina; Peter Vischer, New York; P. A. Waring, Pennsylvania; W. W. Waymack, Iowa; Kendall Weisiger, Georgia; William P. Wharton, Massachusetts; J. R. Wiggins, Minnesota; Robert E. Wood, Illinois; Carl M Yerrington, Montana; J. F. Zimmerman, New Mexico.

[From the Survey Graphic for April 1940]

NEW STEPS TO SAVE THE LAND

(By Morris Llewellyn Cooke)

"A good land; a land of brooks of water, of fountains and depths that spring out of the valleys and hills; a land of wheat and barley, of vines and fig trees and pomegranates; a land of olive oil and honey: * * * Here thou shalt eat bread without scarceness; thou shalt not lack anything." Deuteronomy viii: 7-9.)

"The waters wear the stones; thou washest away the things that grow out of the dust of the earth; and thou destroyest the hope of man. * * * If my land cry against me, or that the furrows thereof likewise complain * * * let thistles grow instead of wheat, and cockle instead of barley. The words of Job are ended." (The Book of Job.)

It is an old story, often repeated in the time of man. We have talked a lot about it in this country lately, and have come to realize that over vast areas we stand confronted with defaced landscapes, depleted water supplies, grave dislocations in the hydrologic cycle, and an all but catastrophic degradation of soil and man.

We have hurt our land. We have made much of it ugly in the plain implication that land laid to waste will not support that measure of individual freedom and those constantly higher standards of living which we as Americans have been led to expect.

Down our streams every year go enormous quantities of plant-food elements—nitrogen, phosphorus, and potash—that might have produced bread, meat, milk, and garments. This huge loss represents only part of the annual erosion bill. Erosion not only removes plant nutrients; it carries away at one disastrous stroke the available plant food, the material from which plant food is made, the micro-organisms that aid in the manufacture of available plant nutrients, the mineral matter that holds these organic and inorganic materials—the whole body of the soil.

Soil misuse makes people poor. Soil displacement is followed by human displacement. The first shock of displacement is felt in the open country. But soon, as yields and trade fall off, it is also felt in the towns.

Any land is all of one body. If one part is skinned, bared to the beat of the weather, wounded, not only the winds spread the trouble, dramatically, but the surface veins and arteries of the Nation, its streams and rivers, bear ill. Soiled water depletes soil,

exhausts underground and surface water supplies, raises flood levels, dispossesses shore and upland birds and animals from their accustomed haunts, chokes game fish, diminishes shore line sea food, clogs harbors, and stops with grit and boulders the purr of dynamos.

Eroded soil is soil in some part dead, devitalized. Soil debility soon repeated in nutritive deficiencies, spreads undernourishment. Evidence on this point is far from complete; but the trend of accumulating findings is unmistakable. If the soil does not have it in it, plants that grow there do not; nor do the animals that eat those plants; nor the people throughout a country who eat those plants and animals. Soil debility soon removes stiffening lime from the national backbone, lowers the beat and vigor of the national bloodstream, and leads to a devitalized society.

We, too, are all of one body. We all live on, or from, the soil.

No matter which political party gains ascendancy as the years go by, whether the swing be from middle left to far right, or to the farther left, whether we remain at peace or go to war again, this fact will remain: So long as we keep on scrubbing off, blowing off, killing off, our topsoil business and social conditions in this country will remain fundamentally unsound.

WHAT WE HAVE DONE ABOUT IT

Over the past 50 years we have slowly begun to do something toward reconciling the ways of man and nature. The national forests were first reserved to the Nation in 1890. In 1903 the Reclamation Service was created, and in 1904 the Forest Service started its work. The first great conservation drive in this country dates from 1905 in the administration of the first President Roosevelt. During the next 25 years the National Park Service and the Biological Survey came into action, and in the general field of agricultural education the land-grant colleges and extension services made great strides. All such advances have been accelerated, and others have been launched during the past decade. We have, as a nation, created and brought into action the Soil Conservation Service and the Civilian Conservation Corps. We have placed the public grazing lands under protective management, extended additional authorities to the Biological Survey and the Forest Service, and provided for control of floods by treatment of watershed lands. We have passed State laws providing for soil-conservation districts, have joined in new efforts of county land-use planning, from the ground up, and have instituted many other important developments.

While public programs have enabled us to begin to do something to conserve our land resources in a large, sensible, and connected way, they have fallen far short of all that needs to be done. We continue to lose ground at an ominous rate to the onrushing forces of soil and water wastage.

A NEW STEP

If our vital resources are to be saved, the conservation programs must be implemented by additional Federal and State legislation, by more adequate and sensible appropriations, and by measures which look on our land organically, as a living unit, and not as an aggregation of unrelated segments and problems. Even more essential will be the democratically achieved and greatly increased interest and support of all the people. All of us may need to make sacrifices, if we are to have national security. The efforts of Government officials alone will not suffice.

A new vehicle is needed through which friends of conservation can move and speak out together as never before and which will enlist all our citizens in a crusade to protect the land. To meet this need there has just been established a nonprofit society tentatively called Friends of the Land to support, increase, and to a greater degree unify, all efforts for the conservation of the soil, rain, and all the living products, especially man. This society is being organized by a representative group of citizens from all parts of the United States, meeting in Washington for the purpose, March 22–23, 1940.

Friends of the Land will at first work with friends of conservation, both lay and professional, here in this country, and later with like-minded people in other lands.

With the conservation idea advancing to a wider outlook and more practical techniques of research and husbandry, with conservation becoming, in effect, a working philosophy to reconcile the ways of man and nature—the time is right for such a society to grow and act.

The need is imminent. Much of the civilized world is at war again, sick at heart and weary. Even this far removed from the main centers of pressure on soil and humans, we feel, and shall continue to feel, the strain and tension. A wartime psychology fixes attention on devices of slaughter and destruction. It diverts human effort and ingenuity from studies and devices to perpetuate the source values of humankind.

Whether our principal personal interests be in soil, grass, trees, songbirds, game, flowers, livestock, landscape, or outdoor recreation; and whatever our occupation—farmer, banker, forester, agrostologist, journalist, anthropologist, ecologist, teacher, student, or what not—we can all work together for the good of the land.

To promote the conservation of land and water resources in America, Friends of the Land will place before the people of our country various issues and problems in this field. A monthly magazine, dealing humanly with problems and victories in all fields of conservation, here and abroad, will start publication, it is hoped, this summer.

The society will encourage new research and husbandry in land and water conservation by individuals, cooperative groups, and public agencies. It will recognize outstanding achievements by suitable citations or awards. Our educational institutions will be encouraged to include in their curricula, courses on the significance and technique of land and water conservation; and a search will be made for wider ways in which youth, especially unemployed youth, may participate in a moral equivalent of war to save our soils and waters.

All over the earth, land and water wastage threaten the stability of civilization. In China famine stalks on worn and deadened soil. The Sahara Desert rolls south more than one-half mile each year. Much of Africa is wasting away. Australia is threatened. Palestine is covered with geological skeletons of formerly productive lands. The soils of India bleed to death. And here, even here in this new country, as Secretary Wallace has said, "The war that needs most concern us is the war at our feet."

The energies of nations are now absorbed in world conflict. But it should still be possible to lay the groundwork for international cooperation in solving the great common problem of land and water wastage, a problem which, in the long view, transcends in importance most of those over which the world is now convulsed. Perhaps, in time, the destructive impulses of nations can be sublimated into a drive to conserve the resources on which the ultimate welfare of mankind depends.

To these ends friends of the land will explore possibilities of foreign collaboration and will encourage the establishment in foreign lands of private organizations for the furtherance of conservation. An international clearing house of conservation information will be maintained, and in general such things will be promoted as will lead to a world-wide acceptance of the concept that the earth is the mother of man, and when the people of any country forget that fact, they perish.

Rural Electrification Marches On

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

SPEECH OF HON. JOHN E. RANKIN BEFORE THE RURAL ELECTRIFICATION ADMINISTRATION'S FIFTH ANNUAL STAFF CONFERENCE, IN THE AUDITORIUM OF THE DEPARTMENT OF AGRICULTURE, ON WEDNESDAY, MAY 8, 1940

Mr. LYNDON B. JOHNSON. Mr. Speaker, I want every Member of this Congress and the people of this country to read the able speech, Rural Electrification Marches On, delivered by my colleague the gentleman from Mississippi, Hon. JOHN RANKIN, who has done more toward making electricity available to the farmers of the Nation than any other man. The administration, the Congress, and the farmers of the country are deeply in his debt for the great fights he has made in their behalf. Under leave granted me, I include Mr. RANKIN's address to the Staff Conference of the R. E. A.:

Mr. RANKIN. Mr. Chairman, Secretary Wallace, ladies, and gentlemen, I first want to thank my distinguished friend, and your able administrator, Harry Slattery, for his complimentary introduction, and for his kind references to my services in the interest of rural electrification, as well as of cheap electricity for the American people generally.

I was delighted to hear the splendid address of our distinguished Secretary of Agriculture. I wish every farmer in America could have heard it. [Applause.]

We are on our way to a better day for the American farmer. I am going to speak plainly to you today. Since I owe my position to the 250,000 people back in the First District of Mississippi, and since they are the only ones who can call me to account, I have assumed the position of speaking what I feel on this subject of rural electrification in which they are so vitally interested. I am limited only by the rules of propriety, or the rules of the House of Representatives, and sometimes I am accused of violating both of them—in order to make myself heard, or understood. [Laughter.]

This R. E. A. program has gone so far now that it sells itself. It is self-spreading, just like measles, grasshoppers, or Johnson grass, or like Bermuda grass. Probably I ought to say like a religious wave. It just extends itself. Nothing can stop it or take it away from the farmers after they get it. It is real, permanent improvement.

I have some good news for you and for the farmers of the country this morning. We are going to get $100,000,000 for rural electrification for the coming year. [Applause.] We already have $40,000,000 provided for, and I have been working

for 2 months to try to get another $100,000,000. I have succeeded in getting a Budget recommendation for $60,000,000. I was called from the White House just a moment ago and given the glad tidings that this recommendation had been approved and is on its way to the House of Representatives. It now becomes my duty, and my pleasure, to get busy and get it approved by Congress.

This is the greatest program for the benefit of the American farmers and the American people generally this Nation has ever seen. I have been amazed to hear men call it "socialism." As a matter of fact, it is the greatest stimulus to individualism that has ever been instituted among the farmers of any nation. You take a man out on his farm, where he can have every convenience that modern science provides, where he can keep his children at home, close to the soil, under his own roof, and can entertain them in his own house, where they can romp and play in God's sunlight, and he will make individualists of them, real Americans who will take care of our country in the years to come. [Applause.]

If you will pardon me, I will give you a brief history of my activities in behalf of rural electrification. As you know, I was coauthor with Senator NORRIS of the bill creating the T. V. A., the greatest development of modern times. Nothing on earth compares with it, and it has done more for the American people than any other enterprise we have ever undertaken. Already the very example of the T. V. A. yardstick has forced reductions in light and power rates to the American people amounting to more than $600,000,000 a year.

A Congressman arose in the House the other day and said he lived in Cincinnati, where they had extremely cheap rates. Of course they have now. We have been threatening for 5 years to put a T. V. A. power line across the State of Ohio to supply T. V. A. power to the farmers of Ohio at T. V. A. rates; and for fear that might be done and that the people of Cincinnati might hook on, the power company serving Cincinnati reduced rates almost to T. V. A. levels. If we could get T. V. A. rates all over Ohio, it would save the light and power consumers of that State more than $47,000,000 a year. Someone said Birmingham, Ala., now has T. V. A. rates. Certainly, because we forced T. V. A. power into Tarrant City and Bessemer, adjacent to Birmingham, with the result that they had to bring their rates down to meet the competition.

They have called me the father of rural electrification in the House because I started the drive for the electrification of the farm homes of this country. I organized the first one of these cooperative power associations in my home county and then organized one in every other county in the district 2 years before the Rural Electrification Administration was created. Therefore I am a pioneer. I don't mean that I split all the rails in the South. My ancestors and their neighbors did that. I followed along and saw those old people plow up and down and across those prairies or up and down those hillsides in the hot sun, making a bare living and denied many of the conveniences and practically all of the luxuries of life. I saw the burdens of drudgery borne by the farm women of that section, and I determined I would see if I couldn't find something better for them, something to lighten their burdens. I found it—electricity—rural electrification—the greatest economic blessing our farmers have ever known. [Applause.]

When the T. V. A. was first created I went home and started a movement to get T. V. A. power for my district. The doubting Thomases said it was useless. I represent 10 counties in northeast Mississippi, and I served notice then that one of two things had to be done: The power companies either had to reduce their rates to the T. V. A. yardstick levels, or one of us had to get out of the district. They took me at my word, and have seen to it that I had opposition ever since. But I am still there, and today they do not own an insulator in the district. We have spread T. V. A. power throughout every one of those 10 counties. [Applause.]

If the people in the district I represent paid the same rates for their electricity they paid 7 years ago, their electric light and power bill for 1940 would cost them $2,000,000 more than they are going to pay for it. That is the value of 40,000 bales of cotton, an average of 4,000 bales to the county. I have the best electrified farming district in America. We have built approximately 2,000 miles of rural power lines in those 10 counties, and we are still on our way.

We are trying to reach every farmhouse with a rural power line that was reached with a draft in time of war, or that the tax collector can find in times of peace. And we are not going to "bust" the Government doing it. Every dollar we are putting out on these rural lines, Mr. Secretary, will come back with interest and will bring with it compound interest in happiness, contentment, and relief from drudgery.

President Roosevelt and his administration have done more for the power consumers of America than all other Presidents and all other administrations combined. [Applause.]

I want to pay tribute to my distinguished friend and coworker, Senator NORRIS. He has done more for the power consumers of America than any other man who has ever sat in the Senate of the United States. [Applause.]

When I started out on this program in my own district we secured our funds through the T. V. A. That was before the R. E. A. was created. When the original R. E. A. Act was passed unfortunately there was not a majority on the House committee that handled it who were as liberal on this subject as Senator NORRIS and I are. They put a ceiling over us, or limited the amount that could be expended for rural electrification each year to $40,000,000. They thought they would hold us down to $40,000,000 a year, and that we couldn't find a way around it. But I was like the girl whose father willed her everything he had provided she would "never marry any man on earth." She went down into the Mammoth Cave and got married. She said she couldn't get around that promise but she could get under it. [Laughter.]

Well, we found a way around, or under, that limitation. With the approval of the President and the R. E. A. Administrator, I inserted an amendment into the relief bill, or spending bill, 2 years ago for an extra $100,000,000; and, as I said, we are going to get $60,000,000 additional this year.

I also wrote an amendment into the relief bill making R. E. A. projects eligible for W. P. A. assistance. It helps to reduce the cost of these rural lines to the cooperatives and enables them to reach more farmers—sometimes twice as many—without additional expense to the cooperative.

These cooperatives are paying out gradually. I have one in my district that paid out in 5 years. I know it is charged that these "co-ops" in the T. V. A. area are buying power below the cost of production. But that is not true They are paying the T. V. A. from 5 to 7 mills a kilowatt-hour for electric power wholesale that was being sold to a private power concern at Muscle Shoals during the Hoover administration at 1.56 mills a kilowatt-hour.

This outfit over on the Susquehanna River is selling power wholesale to the Philadelphia Electric Co. at 3.35 mills a kilowatt-hour, which is much cheaper than T. V. A. sells it to anyone. This concern here in Washington, the Potomac Electric Co., buys a good deal of its power wholesale for a little over 2 mills a kilowatt-hour. If private power companies can sell power for 2 or 3 or 4 mills a kilowatt-hour, how can they accuse the T. V. A. of selling it below cost when they charge from 5 to 7 mills a kilowatt-hour wholesale? [At this point the lights went out in the auditorium.] I knew they would hear me. Mr. Secretary, we should put this building on an R. E. A. line. [Laughter.] [At this point the lights came back on in the auditorium.] Evidently they heard that too. [Renewed laughter.]

We have found that electricity can be generated with coal, gas, oil, or water power anywhere in the United States and laid down wholesale at rates at least as low as the preesnt T. V. A. wholesale rates—or even lower It could be supplied to every consumer in America at the T. V. A. yardstick rates without loss on legitimate investments.

Seven years ago 25 kilowatt-hours of electricity cost a consumer in a town or city in my district $2.50; 100 kilowatt-hours cost $8.60; and 1,000 kilowatt-hours cost $66.10. Today 25 kilowatt-hours cost 75 cents, while 100 kilowatt-hours cost $2.50, and 1,000 kilowatt-hours cost $8.90. It costs a farmer $9.90 for 1,000 kilowatt-hours a month, but $1 of that goes to help pay for his line. We can do the same thing in every community in America. [Applause.]

Secretary Wallace has the right idea; the farmer's prosperity has to be built from the ground. I have no patience with the opinions some people have that the farmer is just out there to produce something for the rest of us to live on. Agriculture is a way of life. The farmer is the backbone of this Nation and he is entitled to every convenience that can be provided. [Applause.]

On the subject of investments, let me remind you that the greatest public power system in America is in Ontario, Canada. They have $400,000,000 invested in generation, transmission, and distribution systems, including the municipalities. They generate, transmit, and distribute one-twelfth as much power as private power companies generate and distribute in the United States. Therefore these power companies in this country ought to have twelve times that investment. What is 12 times $400,000,000? It is $4,800,000,000. Throw in enough to make even $5,000,000,000, and take that amount from the $13,000,000,000 the private power companies claim to have invested in this country and you will see that they have anywhere from $6,000,000,000 to $8,000,000,000 of water or inflated valuations in their capital structures. That is the reason they didn't want to deal with the R. E. A. They want to charge rates high enough to pay dividends on all that water. [Applause.]

Speaking of watered stock [the speaker took a drink of water] [laughter]—I understand the Republicans have a power magnate running for President. I hope they nominate him. I'll bet he can teach the farmers how to water the stock and shear the sheep. [Laughter.]

Before the T. V. A. and R. E. A. were created, a private power company had one rural power line in my county. On that line a farmer paid $4.50 for 25 kilowatt-hours of electricity that he now gets for 75 cents. That was going on all over the country where the farmers got any electricity at all. They called the overcharge a line charge. We have eliminated it at home and it should be eliminated all over the country.

The consumers in my town had only 19-percent saturation of electric refrigerators when the T. V. A. rates went into effect; 19 out of every 100 who had lights in their homes had electric refrigerators. Now 90 percent of them have electric refrigerators. It is about twice what it is in New York City or what it is in Philadelphia, Pittsburgh, or the other great cities throughout the country. The

farmers on our lines have a higher percentage of saturation of electric refrigerators than they have in many of the principal cities throughout the country. Not only that, but they all have radios.

I remember when I first took up this fight on the floor of the House one distinguished Republican, who has since been retired, said to me, "Don't you know that if you built these lines out to these farmers' houses the first thing the farmer would do would be to buy a radio?" I said, "Certainly he would; if he didn't have sense enough to get a radio his wife would make him get one." He thought that was extravagance. He thought it was all right for the city man to have an automobile, a radio, and a refrigerator, but not a farmer. That is a fair sample of Republican sympathy for agriculture.

Sometime ago an old farmer down at home was walking down the street one morning when a young sprout walked up and slapped him on the back and said, "You came to town to get the news, did you?" He said, "Heck, no; I came to bring it. I got it before you woke up." [Laughter.] Farmers don't have to go to town now to get the news; they don't even have to read the local papers to be informed—or misinformed. They can get it over the radio. [Applause.]

I checked up to see what percentage of the people in my town had electric irons. Out of 1,720 domestic consumers they had 1,920 electric irons—many families had 2 or 3. I found that practically every farmer on the rural lines, or about 90 percent of them, had electric irons.

I found that the Electric Home and Farm Authority—another agency of this administration that is contributing so much to this program—had helped farmers to equip their homes with electric refrigerators, electric water pumps, electric churns, cream separators, feed grinders, and other necessary appliances. Some of them had milking machines, and many of them now have electric fences—just one small wire with a few volts of electricity. But does it work!

One of my farmer neighbors has a herd of Jersey cows. He sent off and got a young male. When this young bovine got about grown the farmer took him out and put him in a pasture with an electric fence around it. He acted just like a Republican Congressman or a Republican candidate for President, by totally ignoring rural electrification. [Laughter.] He came out with his head in the air, and walked into that fence, with such disastrous consequences as will come to those Congressmen and those candidates for President next November. [Applause.] He looked over at the green pastures beyond, and strolled into that fence. As soon as he touched it, he thought an earthquake had struck him. He stuck to it for about half a minute, trembled from head to foot, lashed his tail, licked out his tongue, and bawled, while the sparks flashed from his hoofs. When he finally got loose, he retreated hastily to the center of the field, and he has never been within 10 feet of that fence since. [Applause.]

I have been accused of official necromancy. In the words of Senator Carmack, they have accused me of welding the wooden handle to the pewter spoon [laughter], grafting the dead bough to the living trunk, mixing oil and water together placidly in the same bottle, and making boon companions of the spider and the fly, because I have succeeded in coordinating the R. E. A. and the W. P. A., and causing them to work in perfect harmony in the building of rural power lines. [Applause.]

There is one thing about it, they can't accuse me of using "fifth column" tactics. My efforts have been open and aboveboard, and I have even had the temerity to invite the opposition to join me. So many Congressmen are coming to me now and asking how it is done, that I am thinking of issuing a bulletin on the subject. If I do, it won't be written in braille, because it will be for Democrats, and those who have democratic leanings or democratic convictions, and who believe in rural electrification. They won't have to read it in the dark. [Applause.]

As I said, I wrote into the relief bill a provision that we could get W. P. A. help on these rural lines, and put the unemployed to work on them. It has worked like a charm. I want you to pass this information out to the farmers. If anyone undertakes to give you trouble under the Hatch Act for doing so, I will defend you and say that I sent them word by you, that you are representing me in taking this word to them. [Laughter.]

It was some time before I could get one of these projects worked up. I worried everybody to death, almost. I finally went to Hyde Park and got it ironed out. The power association put up the sponsor's fund, surveyed the proposed lines, and put them into a W. P. A. project. We thought it better for our people to be cutting poles, digging holes, and building these rural power lines than to be doing some other things to which some of them were assigned. As I said, it worked like a charm. The W. P. A. gave us the money for the labor. Therefore we cut those poles, peeled them, hauled them to the creosoting plant, and hauled them back, cut out the right-of-way, dug the holes, erected the poles, put on the cross arms, and stretched the wire. They gave us exemptions for the skilled labor necessary and allowed us $6 to $7 per month per man on materials, which enabled us to reduce the cost of these lines about 50 percent. That enabled us to reach more farmers. It enabled us to reach the isolated farmer—the one across the creek, the one beyond the pasture, over on the distant hillside, or around on the side road. We are trying to reach them all through this great program. And, believe me, the American people are behind us. [Applause.]

When these Old Guard Republicans or reactionary Democrats who are opposing us go home, take their flashlights, and start out to try to teach their farmers how to milk ducks [laughter], instead of helping them to get electricity to their homes, they are going to be by them like a good old time darky down at home was who got lost in a thunderstorm one night. He was trying to follow a path by the flash of the lightning. He was making poor headway and the storm was growing worse. He decided he had better pray. About the time the notion struck him the lightning hit a tree close by and shivered it to splinters. He dropped down on his knees and said, "O Lawd, I reckon you knows what you is doin'. I spec you knows mo' 'bout what's bes' in a storm like dis dan I does. But ef it means all de same to you, I'd be powerful glad ef you'd gimme less racket and mo' light." [Laughter and applause.]

We are today building cooperative cold-storage plants throughout the country, and we are going to continue to build them until we get one in every locality, so the farmer can live and eat the products from his own farm throughout the entire year. Millions of pounds of food are now being lost every year that could and should be saved. These cooperative cold-storage plants will do the work. I was out in Nebraska, speaking for my friend and coworker for the R. E. A. and the T. V. A., Senator GEORGE NORRIS, one of the best friends the farmers of this Nation ever had. [Applause.] I ate some fine Nebraska beef, but I found out that it came around through a packing house in Kansas City. They passed me some corn flakes. They were made from Nebraska corn but came from Battle Creek, Mich. With these cooperative cold-storage plants and these community processing plants we can eat our own meat, eggs, poultry, fruit, corn, fish, and vegetables the year round. If they keep raising the price of manufactured goods, farm women, with their electric sewing machines, can make their own clothes as well as clothes for the rest of the family.

I know there has been criticism of Secretary Wallace in some quarters because of his soil-conservation program, which I think is one of the greatest movements that has ever been instituted for the farmers of this Nation. We are saving our soil for future generations, we are building for a thousand years. Our people have nowhere else to go. Our backs are to the wall. We must build up or own country, our own section, our own communities, and our own homes and make them better and brighter places in which to live. [Applause.]

Whenever we electrify a community in my district I insist that they electrify the schoolhouse in that community, then set aside a room in that schoolhouse and equip it with electrical appliances. The dealers are usually willing to supply the appliances free of charge. It is good advertising for them. Then we teach the children how to operate those appliances. Above all things, we are teaching them to read the meter. The other fellow has been reading our meters too long. [Applause.] Now we have a meter that even a Republican Congressman or a Republican candidate for President can read. It just has one dial, where the old meter had four, and it costs about half what the old one did.

I am trying to leave as my monument cheap electricity in every farm home in the district I represent, and I hope to live to see it in every farm home in America. We are behind almost every country in the world in rural electrification. In France, England, Sweden, Norway, and Germany they have 90 percent of their farms electrified. Holland and Switzerland have 100 percent of their farms electrified. Even Japan has 90 percent of her farms electrified.

But we are on our way; no force on earth can stop us. Those candidates for Congress and for President who have not seen the light yet had better wake up and join the procession instead of listening to the siren songs of the opposition, and then have a rude awakening next November. [Applause.] Otherwise they will be like the old churchman who was led astray by some shrewd and unscrupulous fellows who wanted to use him to serve their own selfish ends back in the Volstead days. He was running for office, and they wanted to use him. They took him for a ride one night and coaxed him off the water wagon, first with a little spiked punch, then a little light wine, then a highball or two, and finally wound up with a heavy mixture of Alabama white mule and Pennsylvania applejack, followed by a chaser of Milwaukee home brew, which started him off "on flowery beds of ease" into what Grover Cleveland once called "innocuous desuetude."

He dreamt that he dwelt on an isle of cracked ice,
In the midst of a lake of champagne,
Where bloomed the mint juleps in meadows of green
And showers of lithia rain.

[Laughter and applause.]

He reclined on a sofa of lager beer foam,
With a pillow of froth for his head,
And the spray from a fountain of sparkling gin fizz
Descended like dew on his bed.

[Laughter.]

From far-away mountains of crystalline ice,
Came zephyrs refreshing and cool,
Wafting the incense of sweet muscatel
That sparkled in many a pool.

His senses were soothed by the amorous sound
Of a brooklet of pousse-cafe,
That rippled along over pebbles of snow
To a river of absinthe frappe.

[Renewed laughter.]

Ah, soothing the sound of that tinkling glass,
For the lake in his stomach was deep.
He dreamt that he lapped up a highball or two
And languidly floated to sleep.

And then he awoke, on a bed full of rocks,
With a bolster as hard as a brick,
With a wrench in his back, a rack in his head,
And a stomach detestably sick.

He had sand in his eyes, and grit in his mouth,
Where the taste of the night before clung,
And he felt a bath towel shoved down his throat,
Which he later found out was his tongue.

[Laughter.]

He searched for the thread of the evening before,
In the maze of his mystified brain,
From the depths of his soul there came the old vow,
"I'm on the wagon again!"

[Prolonged laughter and applause.]

Arthur Krock's Comments on Roosevelt's Fireside Speech

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ARTICLE BY ARTHUR KROCK

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock from this morning's New York Times:

[From the New York Times of May 28, 1940]

UNPREPAREDNESS IS THE RESPONSIBILITY OF MANY

(By Arthur Krock)

WASHINGTON, May 27.—"I do not propose to, I could not, go into every detail," said the President on the radio last night, discussing the military uses to which have been put the $7,000,000,000 plus spent for national defense since he took office. Yet some of the details are very interesting and do not take much space.

Mr. Roosevelt said that in 1933 "the relative fighting power of the Navy had been greatly diminished by failure to replace ships and equipment which had become out of date." Yet in that year Hitler had just come to power in Germany; all the democracies were sleeping at the switch along with the United States; and our condition was not in the least unusual. It was the inevitable consequence of the Arms Limitation Conference in Washington in 1921, and the New York Times Index has no reference to any protest Mr. Roosevelt may have made at that time against the junking of the Navy. If he did not oppose the Hughes plan, as the files indicate he did not, he was a member of the vast majority.

The issue of this newspaper for December 27, 1921, contained many columns on the progress of Secretary Hughes' proposal. It contained also, on page 12, a letter from Mr. Roosevelt. But this was written as president of the National Navy Club, and its text was an appeal for support of this worthy organization; nothing about disarmament one way or another.

The details which the President did not give, and the reasons he failed to mention for neglect in preparedness from 1922 to 1933, make a proper supplement for his radio speech. That neglect, for which the responsibility was general, was once explained by former Representative Swagar Sherley of Kentucky in one of his wise and pithy epigrams. "Unpreparedness," he said, "is the price which a nation pays for democracy." This explanation thoroughly covers the subject up to the phase, after the President had been some time in office, when Hitler began his coups de main. Since then, critics assert, we should have spent more money on the Military Establishment, or gotten more for what we spent.

This is where the details, omitted by the President, become of value. The present equipment of the Army, in the categories mentioned by the President, is to be learned from official records if not from Mr. Roosevelt's speech.

He lumped together things ordered, in the process of construction, and completed. Thus, "Since 1933 we have actually purchased 5,640 airplanes for the Army," adding that those delivered 4, 5, 6, or 7 years ago have been worn out and scrapped. But a breakdown discloses that the Army now has only 2,422 planes, of which but 863 are combat types, and only several hundred of these modern.

"We now," said the President, "have more than 1,700 modern anti-aircraft guns of all types on hand or on order." We actually have in hand 163 of the 3-inch somewhat outmoded guns and precisely 1 modern defense weapon of this type.

"We have now on hand and on order," said the President, "more than 1,600 modern infantry mortars." Official sources report that the Army has "only a handful" of the 75-millimeter howitzers in its physical possession. The President added that we have "on hand and on order" 1,700 modern tanks and armored cars. There are on hand less than 100 light tanks. Mr. Roosevelt gave no figures as to scout cars and antitank guns. We have 500 of the former and 300 to 400 of the latter.

The figures as to Navy aircraft look rather better. "Today," said the President, "we have 2,892 on hand and on order." Of these, as he did not go on to report, 1,765 are in service now and 1,912 are expected to be in service in the next fiscal year. They will be divided in types as follows: Scouting, 851; transport, 120; fighting, 193; torpedo or bombing, 120; training, 270; and patrol bombing, 310. The remainder are miscellaneous.

These are some of the uses to which the $7,000,000,000 have been put since 1933, the total being exclusive of what is being currently provided to increase the national-defense establishment. They are the details available to any authorized and responsible interrogator, including Members of Congress. But there is a feeling in Congress that it should have a fuller and more complete break-down, which can be procured only by an inquiry. And there is a further feeling that some legislative observation should be maintained over the amounts to be spent in the future.

Few of those who express these sentiments, however, have overstepped the bounds of mild criticism. Considering the sums that have been spent, and that this is general election year, remarkable restraint has been observed. And there seems to be little doubt that, if the administration would support an inquiry and concurrent checking of future expenditures, a confidential status in any period of emergency would be accepted where confidence was obviously linked with national security. But a radio speech, particularly in such general terms, with such lack of detail and full of repetition of the blind phrase "on order," does not seem to the critics adequate in the circumstances.

The low mechanized state of the Army is especially disturbing to them in view of the sums expended and Gen. Hugh Johnson's repeated charge that the President years ago had $3,300,000,000 for this purpose and used none of it to that end.

Bermuda and Caribbean Isles Needed for Defense

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

STATEMENT BY MAKE EUROPE PAY WAR DEBTS COMMITTEE

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Make Europe Pay War Debts Committee on the subject Bermuda and Caribbean Isles Needed for Defense:

"The position of the Make Europe Pay War Debts Committee in contending for the acquisition of Bermuda and the British and French West Indies by the United States is being more and more vindicated by events as well as by statements of outstanding public men," said a statement issued by the committee from its headquarters today at 425-426 Bond Building, Washington, D. C. The committee is headed by Senator ERNEST LUNDEEN, of Minnesota, as national chairman, with two Congressmen, SWEENEY, of Ohio, and RANDOLPH, of West Virginia, among the vice chairmen. Other vice chairmen include ex-Senator Smith W. Brookhart, of Iowa; Gov. E. P. Carville, of Nevada; and Gen. Smedley D. Butler.

"In his message to Congress on May 16," the statement continued, "President Roosevelt strongly emphasized America's increased proximity to Europe because of aviation and other changed technological and military conditions. This is in direct harmony with the position of the Make Europe Pay War Debts Committee which has from its inception pointed out the urgency of American ownership of Bermuda and the Caribbean islands as a matter of defense.

"In maintaining that these possessions should be acquired by the United States, we have been motivated by their defense usefulness as much as by the belief that their transfer would constitute a fair and a practical settlement of the old war debts which

have so long been a subject of controversy. Some, in their zeal for the Allied cause, have jumped to the erroneous conclusion that the demand for the islands was based upon a desire to help the Nazis, and that to press such a demand would be an act unfriendly to the Allied belligerents. This was, of course, absolutely incorrect, as the Make Europe Pay War Debts Committee is concerned solely with the interests of the American people—certainly not with interfering in a ruthless and revolting war, which an overwhelming majority of Americans, from the Chief Executive down, have expressed a heartfelt desire to keep out of.

At an earlier stage of our activity there was a disappointing lack of interest in the proposed acquisition of Bermuda and the West Indian islands among some of our statesmen, while others, like Senators LUNDEEN and REYNOLDS and Congressmen RANDOLPH and SWEENEY, fought persistently to awaken the Nation to the imperative necessity of having all adjacent isles under the American flag. A quotation once reported—perhaps inaccurately—from a White House conference, characterized Senator REYNOLDS' advocacy of acquisition as "silly."

Today, however, the tide is turning. More than one distinguished American who was a short time ago apathetic to the proposal now recognizes its value. More than one prominent columnist is now featuring the wisdom of the suggestion in his writings.

Excerpts from the President's message to Congress coincide with our consistent viewpoint:

"More than ever the protection of the whole American Hemisphere against invasion or control or domination by non-American nations has the united support of the 21 American republics, including the United States. * * *

"If Bermuda fell into hostile hands, it is a matter of less than 3 hours for modern bombers to reach our shores.

"From a base in the outer West Indies, the coast of Florida could be reached in 200 minutes."

Frank C. Waldrop, in an able, full-page feature article in the Washington Times-Herald, recently remarked, "Right on the bosom of our most personal sea, the Caribbean, claws the war in real if unseen fury." His article was headed, "Why Debt-Dodging Europe Should Cede Caribbean Holdings to the U. S. A."

Timely references to the Caribbean situation have been made by such correspondents as Ernest K. Lindley, Drew Pearson and Robert S. Allen in "Merry-Go-Round," Joseph Alsop and Robert Kintner, Ludwell Denny, and various others. The Nation itself is aroused to the vital necessity of facing what is assuredly "a condition, not a theory."

The Make Europe Pay War Debts Committee calls upon Congress to act promptly with regard to this critical and inescapable issue.

Make No Mistake

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ADDRESS BY HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my address to the Republican State Convention assembled at Montpelier, Vt., May 24, 1940, as follows:

Mr. Chairman, neighbors, and friends, the close attention you have paid to, and the enthusiastic applause you have accorded the address of my friend, Hon. JOSEPH W. MARTIN, Jr., the distinguished minority leader of the House of Representatives, evidences your intense interest in and accord with the address he has made in his powerful and inimitable way.

I also noted your manifest appreciation of the forthright and sensible statements made so eloquently and forcefully by the Honorable Leonard Wing, the gentleman who is presiding in his usual effective manner, as chairman of this convention.

I might well commence and conclude my remarks by saying that I agree with the statements made by these two gentlemen who have heretofore addressed you; but you expect me to do more than this.

So let me say to you, neighbors and friends, that we should make no mistake. The job that confronts the Republican Party (and all Americans) is first to take care of America and American citizens, solve our domestic problems, keep out of the war in Europe, and keep the war in Europe out of America.

We should not be misled or misinformed nor should we be lulled into any false sense of security. Our goal, that of each and every individual, and particularly that of the Republican Party, is the preservation of the American way of life, of civil and religious liberty, and of economic freedom, than which nothing could be more worth while.

Our form of government and our scheme of society—and God knows they need improving—are yet so immeasurably superior as systems to anything in the world that no comparison need be made. Europe is not effete. It is medieval—held back by inertia when not held back by worse things.

During the thousand years that will be required for Europe to attain a real civilization wars will come, as wars have always come in the past.

The masses in Europe are driven as cattle. So long as this is true they will be driven periodically into wars and wars will be abroad there periodically for another thousand years or more.

We should have learned by bitter experience that we cannot go to Europe and control her destiny, even if we would, any more than we could have controlled the history which has produced this crisis.

True it is as Senator VANDENBERG says, "We cannot isolate ourselves in this foreshortened world." It must be our task to insulate ourselves to the last possible degree against this scourge.

The greater our resentment the greater must be our coolheaded restraint in official policy and action, because the greater must be our determination to stay out unless this war comes to the New World.

We must never surrender to the state of mind which resigns itself to the ultimate inevitability of our involvement. We must never forget that we have our hands full in saving democracy at home. We owe that, not only to America, but to the world.

I admit that I am committed by blood and sentiment to the proposition that we should render every aid short of going to war, to the democracies of Europe. Yet I am not in favor of rushing in where angels fear to tread, just to appear to be a good fellow, or of involving ourselves in the war by ill-considered sentimental acts, unjustified by either the propagandized situation of ourselves or of our friends.

There is nothing in the situation itself, or sufficiently new in the President's speech regarding our lack of preparedness to stampede the American people into ventures that may cost them and their posterity all the constitutional liberties and opportunities purchased by the blood of past generations of their fighting and far-seeing ancestors.

We agree with the President's speech in principle. We are not mollycoddles, nor do we lack intestinal fortitude. We have no conquered territory to surrender, we need no foreign territory; we will not squander either our human or material resources, except to defend ourselves against the world. This we will do always, and if and when it be necessary, as now, to make America safe for Americans, in America. That is our primary national obligation.

Our domestic and internal problems are our greatest concern. As we solve or fail to solve them, so shall we stand or fall. Our all-compelling obligation and first duty is to make America invulnerable against foes from without and enemies within our gates. Our duties abroad will to a considerable extent solve themselves as, if, and when this program is speeded to completion.

Secondary things will take second place if we make first things first.

The very perpetuity and security of our democratic institutions depend upon a logical, sensible, definite solution of America's difficult domestic problem, unemployment. It is paradoxical, as Representative WOODRUM of Virginia so eloquently stated the other day, that "In a great land of peace and plenty there is great want and suffering. In a land where there is a surplus of wheat there is no bread. In a land where there is a surplus of cotton, little children are naked. In a land of marvelous opportunities and much work to be done, men pound the highways seeking employment. I say to you, my fellow countrymen, that it is a sad commentary on our ability to make democracy work if we cannot coordinate these great influences." That is America's problem No. 1.

Unless and until we can solve it, you know as well as I do that there is no future for democracy, domestic or international, as we know it.

We have plenty of troubles at home. The "red herring" of internationalism dragged across the trail, should not distract our attention from nor let us lose the scent of tremendous difficulties to be overcome along the road we will have to follow at home in order to stay there.

There can be no difference of opinion among thinking people. Since the New Deal came into power it has spent more than $60,000,000,000. That is approximately enough to buy every manufacturing plant and every mine and every industry in the United States. In the hands of industry that amount of money would have provided and will provide enough jobs for more than the 9,500,000 unemployed. In the hands of Government it has created a centralized bureaucracy, a colossal debt and deficit that has absolutely prevented and stopped productive enterprise.

Think it over! There is no difference of opinion among people who think. We are of one mind and one heart in our anxiety that our country should climb out of the pit of depression into which it has been plunged.

We are of one mind and one heart in our desire to restore the activity of our industires so as to provide work for those who have been seeking it in vain. Seven years of useless experimentation

and wasteful spending of our money have convinced us that this recovery now can be achieved only by the election of a Republican administration in this coming campaign.

So much for business. Now let us look at another angle of the situation.

The destitute condition of the farmers of this country is due, in large measure, to the unfair procedure of the agricultural policy of the New Deal.

First, the New Deal went out and loaded farmers up with all the loans the farmers would carry and assured the farmer that better prices would prevail.

The ink had hardly had time to dry on his mortgage before the new dealers lowered the tariff through the reciprocal-trade treaties.

The new dealers then instituted the program of starting up new farmers subsidized by the administration to compete with farmers already on the farms. Many of them were taken from the relief rolls and set up in business against the regular farmer.

Then the new dealers started a program of controlling surpluses by buying surplus food to hold up agricultural prices. They spent $66,000,000 in 1 year to hold up agricultural prices, so they claim—turned around and imported as high as $868,000,000 worth of competitive agricultural products that could and should have been raised on the farms of our country.

The New Deal program has put an invisible mortgage on every acre of cropland in America. The farmer may think his farm is paid for, and the records in the register of deed's office may show that there isn't any mortgage on record, but the invisible mortgage must be paid by the production of crops off this farm just as much as if it were in the county recorder's office.

A $1,000,000,000 increase in the public debt represents $2.90 in mortgage on every acre of cropland, if agriculture were to carry the whole load.

That's the story, in part. I agree wholeheartedly with the remark made by George Peek when he said in this connection, "We must replace theorists with realists, inconsistency with consistency, incompetency with ability, fiction with truth; and the time is now."

As my friend Wendell Willkie said some days ago in Pittsburgh: "On behalf of our own peace and security and our own spiritual values," of course "we should give to the democracies such assistance as we can, short of war. The British, French, Scandinavians, Dutch, and Belgians believe in the free enterprise system under democracy. That is what we believe. Whatever we can do to aid that faith without jeopardizing peace for our own land, that we should be willing to do." That's common sense.

Let me say to you, however, that our influence, our interests, and our future international relations rest on the foundation of a preparedness sufficient to protect and defend ourselves, internally and externally, against every foe, singly or in combination. That is the truth. That is what the American people should know. Knowing it, no sacrifice will be too great for them to make in order to insure its consummation.

Our internal domestic situation should give us great concern. I am no strategist. I am, however, convinced that by reason of our situation between the seas our continental security will not and cannot be seriously threatened by Europe or Asia, their air forces, their navies, or their armies, if—and only if—we command the seas.

"Sooner or later," as Colonel Lindbergh says, "we must demand the freedom of this continent and its surrounding islands from the dictates of European power. Let us not be confused by this talk of invasion by European aircraft. The air defense of America is as simple as the attack is difficult when the true facts are faced."

Whether we like it or not, the day has come for us, the United States, to forego our dependence for our safety upon what the English Navy might and could do for us in an emergency, and for us to command the seas, for tomorrow there may be no British Navy. Our command and control of the seas is the rock on which rests the security of our national defense and, in fact, of civilization itself.

We must have a navy strong enough to protect our shores before an enemy can reach our shores from the sea. We must have an army and an air force adequately and numerically large enough and well enough equipped on shore to support and to maintain such policy as the Navy may adopt at any zero hour on any M day.

We should have learned that if we ever have to fight we should only fight to resist aggression or in defense. I am convinced that participation or intervention by us in the present holocaust by sending our manpower to Europe would accomplish nothing comparable to the consequent sacrifice in human lives, of our resources, and the possible loss of other things more precious that would be involved in such a participation.

Our defense needs may be briefly summarized, as they repeatedly have been, as follows:

"Our Army adequately equipped with modern weapons for air and land—that means just that and is all-inclusive—must be adequate to defend the bases from which our fleet and our aircraft operate. We must, in addition, have an air force capable of being concentrated on either coast, superior in number to the greatest number of carrier-borne and catapulted aircraft possessed by any naval power or conceivable combination of powers, and powerful enough to prevent an enemy from establishing in either ocean a base in this hemisphere while our fleet is engaging the enemy's fleet."

So I say no price is too high to pay, and no sacrifice too great to make, to insure that such a situation shall obtain at the earliest possible day, and from thence onward be maintained. Therein lies our salvation, the preservation of our ideals, and our hope for the future.

It is the business of the Republican Party to see to it that a government be installed in Washington which will make us so strong that no foreign foe will dare to molest us, which will see to it that ways are found to solve our domestic crises, and with a loyalty unmoved, unshaken, unseduced, unconquerable, and unafraid, we shall stand, a Nation united.

We Americans have made a new declaration of our independence. We have renewed our oath and our obligation to maintain and to defend it, against any and every attack always, from wherever or by whomsoever, it be assailed.

Let me also say to you that as I see it and believe, never again should a son of any American mother be called upon to make the supreme sacrifice in any land across the sea, or to fight for ideas and ideologies from which our forefathers had the brains, the courage, and the independence to separate themselves, so long ago,

Never again should an American soldier be called upon to lay down his life, to be planted beneath 2 feet of Flanders sod, or to be in those foreign fields marked by crosses, row on row, as a blood tribute to that greed for glory, gold, and glebe that is at the bottom of all the troubles of this war-worn world. Billions for defense. Not one red cent for tribute should be our slogan.

National Defense

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. BUCKLEY of New York. Mr. Speaker, we are today discussing problems of national defense. On Sunday evening I had the pleasure of hearing President Roosevelt review the present strength of our military forces and equipment; also, the plan to develop a program of defense to secure the safety of our Nation.

Many of us buy every edition of the newspapers these days, and spend much time listening to the radio commentators to get the news from Europe. And, what a low feeling one is left in when he hears of the attacks by the German war machine on courageous and helpless people. There come to view scenes of death, suffering, and destruction to countries who but a few years ago believed that they lived in comparative peace and safety. When we see photos and moving pictures of some of the newly created refugees plodding along roads, knowing not where the end is, we are too shocked to even gain the full significance of their plight.

We Americans believe in peace, and we are violently opposed to war; we are also opposed to sending our troops abroad to engage in foreign conflicts. As our President stated last Sunday, we are continuously offering prayers for peace for all mankind. Many of the other nations believed in peace and were opposed to war; but, alas, the monster that knows no ethics, religion, or anything of decency, rolls on to destroy their homes, their lives, and, most important of all, their spirit of freedom and religion. As in the past, I have called the roll of the victims, but there are some to be added today, since my statement to this House a month ago—Austria, Czechoslovakia, Poland, Estonia, Latvia, Lithuania, Finland, Denmark, Norway, Luxembourg, Holland, and Belgium. What has happened to these can and may happen to others. We will see to it that it will never happen to us. To the credit of America, our democracy, it must be said that in times of emergency we forget partisanship, sectionalism, and everything else in order to unite for the best interests of our country. There is little opposition to our President's plan to speed up the national defense. Those who are opposed are generally persons believing in the usual rank "isms" or those who term themselves isolationists, and point out that no one would dare attack us or that the oceans will protect us against such attacks.

Conditions change, and what would have seemed sufficient protection yesterday is not adequate today. Likewise, what we believe secure today would render us insecure tomorrow. Examples of this can readily be found in our municipalities. Some years ago many of our towns operated a fire department with a volunteer fire force. They did not have motorized equipment but used manpower to convey and operate the apparatus to the scene of the fire. The alarm system consisted sometimes of an iron hoop and hammer. That was adequate for that time. With the growth of the community, the taller structures, and the greater possibility of fire, these methods were abandoned in favor of the so-called modern and up-to-date fire departments, with a paid civil service trained force, motorized high-water pressure equipment, and electric fire-alarm systems. We also know that methods used in our police departments years ago have been discarded in favor of new and better safeguards for the life and property of our citizens.

With regard to our own defenses, although they may be better than at any time during peace in the past, we are going to improve them to meet present peace threats to the safety of our Nation. We will not disregard the fire alarm that has sounded across the seas, and we will not be caught napping. I note from a recent Nation-wide survey conducted by the American Institute of Public Opinion (the so-called Gallup poll) that the public overwhelmingly approves of the defense program.

The American people regard with deep concern the attacks made upon small nations by the Nazi and Bolshevik Governments, and they know that the dictators of the world cannot be trusted, that they will continue to crush other nations, accompanied with the usual slaughter of helpless and innocent people. We are determined that it shall not happen here.

It is our duty to make America so strong on land, on sea, and in the air that no one on the face of the earth will entertain any idea of attacking us or challenging our beliefs in a democratic form of government. We believe in peace, and we will adopt this policy as an insurance to keep that peace. That our country should be adequately safeguarded by land, sea, and air defenses is a subject which should admit of no debate. Today our Navy is stronger than at any peacetime in history, our Army has a greater peacetime strength, our Air Corps is stronger than at any time in history. However, that is not sufficient. We should have the largest, best-trained, and best-equipped air force in the world. We should have on each coast a battle fleet second to none. Our land-defense equipment should be such that a successful attack would be beyond the realm of possibility.

Time after time I have vigorously condemned the alien philosophies of nazi-ism, fascism, and communism. I knew that they were opposed to our democratic way of life. I knew that the Communists pitted class against class, seeking revolution and destruction of religion. I knew that nazi-ism pitted "superiority" of race against race and sought revolution and the destruction of religion. Fascism is just as bad. Today, after the revelations that were uncovered by the Dies committee and by other agencies of our Government, and the reports on the operations of the "fifth column" abroad, we now realize the danger of tolerating their further activities. In the preparation and carrying out of this defense program we cannot and we will not overlook this cancerous growth upon our body politic. We will allow them no latitude. They must be weeded out and done away with.

The United States will demonstrate to the world that a democracy can survive. To those of us living in this period of history, our mission is to preserve our heritage and all the fine qualities that make our civilization worth while. In this, industry, labor, government, and the public will work hand in hand with unison and harmony.

Many years ago a great American issued the following words:

> To be prepared for war is one of the most effectual means of preserving peace.

Its author—George Washington.

National Defense and the World Crisis

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

Mr. VOORHIS of California. Mr. Speaker, the national-defense program has now and will continue to have my full support. I think it is necessary at this time. It is too important, however, to be dealt with without the most careful consideration of its every angle.

Through all recorded human history there have occurred about once every 500 years great and profoundly important changes in the life of mankind upon this earth. If we begin with the year 1000 B. C. we find it marks the approximate date of the occupation of the Greek peninsula by the race that was to give us—about 500 years later—the greatest civilization the world had up to that time known. It was about 500 B. C. that the little city of Rome embarked upon her career of conquest that was to make her not only the mistress of the world from a military standpoint but the Eternal City in a much broader sense. Five hundred years later there took place the greatest of all events in the history of mankind—the birth of the Christ whose gospel was to prove the hope of all subsequent ages and whose brief life on earth was to become a spiritual power capable of destroying many evil institutions and of shaking empires to their foundation. In 500 A. D., approximately, the hammering of the northern barbarians finally broke the gates of Rome and the Dark Ages came over the whole of the western world. Almost exactly 500 years later we find the beginning of the Renaissance, the revival, and the call of Pope Urban for the First Crusade, which was, among other things, to set in motion a new set of forces of curiosity, change, and discovery that would one day give to all men in all parts of the world contacts of one kind or another with all other people on the planet. In 1492, only 8 years prior to 1500, Columbus made his historic voyage and discovered a new western world upon which the brightest hopes of mankind have ever since been fixed.

We now find ourselves approaching the dawn of the next 500-year period and if history teaches us anything it is this: That we should expect to find ourselves in the very midst of one of those periods when the ways of mankind are put to severe tests and when there is tension and trouble among the 2,000,000,000 human beings who have been cast by the Almighty upon this strange little speck in an oftentimes baffling universe.

It is hardly surprising then that we find ourselves in a distressed and tragic time when the peoples of the world are torn by conflict, afflicted by unspeakable acts of war and aggression, and when they seek one thing more than anything else, hope for a brighter tomorrow when there can be peace again.

What then are the things we as Americans can contribute to giving that hope to the peoples of the world?

The first, I believe, is a rediscovery of certain age-old truths which have in one form or another survived all the changes which I have just now so briefly sketched. I believe the greatest need of the world today is to deepen its religious life and to realize afresh that man does not live by bread alone. For if man needs hope more than anything else—and I believe he does—then he needs a hope that nothing can destroy—not war, nor dictatorship, nor death itself. The only such hope that there is is a religious hope. But we shall not be able to help restore and revive that hope merely by protecting the churches of our country against forces that oppose them. That we should certainly do, but far more than that is required. It is required that there be a new national spirit of consecration to what is right, a new willingness on the part of men to be misunderstood and

scorned—yes, and laughed at, if necessary—because they attempt to base their action on what they sincerely believe to be the will of God. It is required that there are some things worth working, living, and dying for yourself—as contrasted with sending other people out to die. And it is required that people who are not compelled to do so should in larger and larger numbers voluntarily identify themselves with the poor and the distressed of their nation first and of the world as well.

A CRISIS FOR FREEDOM

There is no use minimizing the stark realities of the present hour. The readiness with which the American people have responded to the proposal of the President for a vastly strengthened national defense is proof that the people understand that they must face those realities. There are two principles of life and government which face each other around the world today. The one is the principle of dictatorial might; the other is the principle of government of the people, by the people, and for the people. Under the dictator principle human beings count for little—even whole small nations are apparently of small concern. Under that principle it is held that the common people are incapable of self-government or of responding to idealism; the only "progress" is achieved by ruthlessly compelling people to travel a road marked out for them by the "all-wise" and all-powerful ruling clique. Under the democratic principle people count, people are depended upon, and their right to life, liberty, and the pursuit of happiness is the aim of their society and government. (The strange story of how and why it has come about that democratic peoples have been saddled with financial systems that throttle their enterprise and saddle them with unnecessary debt is too long to be injected here. Suffice it to say that there is no more affinity between democracy and the present financial system than there is between day and night, and that the heaviest burden democracy carries as it faces the opposing forces is that debt-money system.)

We are beginning to realize that freedom is a real thing, a precious thing, a thing dearly bought through centuries of effort, thought, and sacrifice. And a determination is growing in the American heart that, as long as they can by any means prevent it, the dictator principle shall not come upon the shores of this western world. We have been deeply moved and profoundly shaken. We are capable today of sacrifices which even a few short weeks ago we simply were not willing to make. Much good—and much that is not good—can come out of the state of mind in which the American people find themselves today. It is an hour for action. It is also an hour for careful consideration of what is right and best to do. It is an hour for consecration. And it is an hour when we may do great good or great harm to the future of our country and the world. Which of these it is to be will, in my judgment, depend not so much upon what we do as upon the spirit in which we do it.

And the first and most important thing is that we keep our heads, that we do not become panicky or excited, and that while we work for unity of purpose and objective we do not become intolerant of discussion as to the best means of achieving that objective.

THE MEANS OF DEFENSE

There is no longer any shadow of doubt that the national-defense program will be passed almost unanimously by an aroused Congress. Certainly, I shall support that program. But it will make all the difference in the world just how this program is carried forward.

First of all, it should be carried forward according to a plan—the best plan of national defense that the best brains in the country can devise. We have, I think, had not enough of this. I do not subscribe for a moment to the charge that "all the money spent in recent years on defense has been poured down a rat hole." I believe that money has, on the whole, been well spent. But I do know that this to too vital a time for us to fail—as Members of Congress—to insist on the very greatest efficiency and care being used in the expenditure of the defense funds we are providing. There should be no jealousy or friction within or between departments having to do with national defense. Such things can have no place from now on.

Second. This program of national defense must be carried forward on the basis of the principle of equality of sacrifice, which means sacrifice in proportion to the ability to make sacrifice. It is significant, I believe, that at least one eloquent House orator has suggested that we begin the sacrifice by making savings at the expense of the unemployed. He seems to have the idea that if people already undernourished are made still more undernourished it will strengthen their spirits and increase their stamina. Quite the contrary is, in my opinion, the truth. I believe this is no time to relax our efforts to solve the unemployment problem. Rather should we redouble our efforts. Neither is this a time to forget the problem of migratory labor, or of agriculture generally, or of the ill-housed, or of any other group. But there are those who will try to use this time to get us to forget these things. There are those who will try to urge in the name of national defense that at one and the same time we remove the measures protective of labor from the statute books and also relax all vigilance with regard to profiteering at the expense of the Nation. Patriotic businessmen will resent the implication that their loyalty has to be purchased. They will, I am convinced, be as ready as anyone to do their part if Congress does not play politics with this issue.

The truth is that any loyal American stands ready to "tighten his belt" if only he knows that all others are doing likewise.

TAXES

Third. Then, this program of national defense should be accompanied by a tax program that will really distribute the burden. I am not for letting favored groups go scot-free. But I am for distributing the burden in a fair and equitable manner. Income and inheritance taxes will have to be increased. The base will probably have to be broadened. Taxes on admitted luxuries can and should be increased. Loopholes, particularly the tax-exempt loopholes, should be plugged.

WAR EXCESS-PROFITS TAX MEASURE—H. R. 9513

And once again I am saying now, as I have been saying since the first day of the session, that a war excess-profits tax measure should be passed. A carefully prepared bill has been in—introduced by myself—since that first day. Its number is H. R. 9513. Tax experts tell me it would raise $500,000,000 at present levels of production—much more as the impact of the defense program is felt.

And action on these taxes should be taken now—before Congress adjourns, as soon as the appropriation bills have been disposed of. The country will respect us far more if we do not delay on this vital matter. Everyone knows we have got to pass tax legislation. Everyone knows we will do it next winter if we do not do it now. We are not going to fool a single person by waiting until after election.

NATIONAL CREDIT FOR DEFENSE

It is the practice of nations when facing national emergencies to call upon their people for sacrifice. But it has also been their practice to leave untouched by any sacrifice and, indeed, to handsomely reward the private creators of credit with higher and higher interest rates. Every national resource except the national credit is drawn upon by the Nation to meet its needs. The credit of any nation is based upon its production. It rests upon the capacity of the people to produce wealth and to make sacrifices. Yet we insist upon pawning our national credit to induce the banks to monetize it in the form of interest-bearing debt. The people as a whole make the sacrifices; the private banking system lends back to the people the use of their own credit. This is unreasonable and unjust.

We should proceed at once to buy the capital stock of the 12 central Federal Reserve banks, which now operate as banks of issue though they are privately owned by the mem-

ber banks. And we should then provide either for the issue of United Staets currency or for the direct use of United States credit to pay the necessary expenses of national defense. With this must, of course, go a tax program of sufficient scope to prevent inflation and to provide for paying as we go for national defense.

In other words, new money or new national credit would be issued or created at a sufficient rate to pay for national defense. By means of the taxes levied the people will pay back to the Government this extension of their own credit. No debt need be contracted under these circumstances and no interest need be paid.

On January 22 I introduced a bill called the National Credit for Defense Act, which provides that this method of financing be used if by any tragic circumstance war should come upon us. That bill is now being redrafted so it will meet the present situation and the national-defense needs.

DO NOT SACRIFICE JUSTICE

I have spoken many times of sacrifice in this speech. But there is one thing that must not be sacrificed and that is elemental human decency and justice. There will be plenty of temptation to do so, plenty of opportunity to try to prove one's patriotism by making unfounded accusations against others with whom one does not agree. Aliens good and bad, aliens who are 100 percent loyal to this Nation as well as aliens whose real loyalty is still elsewhere, will, unless we are careful, all be dumped into one category and used as national whipping boys. Let us be careful lest honest criticism be condemned along with real obstructionist tactics. Let us be careful to distinguish between the person who with all his heart and conscience believes war is wrong and who, therefore, strives to the end for peace and the other individual who, for the benefit of foreign powers, tries to confuse the American defense effort in the name of "peace," but who really believes that force and force alone should be the principle of government. And above all, let him who has never done a small selfish thing that hurt or robbed his Nation for his own gain be the first to cast the stone.

I say these things not to minimize the importance of our detecting and dealing with any elements in this country whose allegiance is given to another nation or to a foreign dictator. I say them so we will, with great earnestness, avoid an unreasoning suspicion of every person who dissents from the dominant majority opinion. America's effort is to protect freedom and democracy. We must not destroy them in the process.

The job before the Dies committee, of which I am a member, is now of much greater importance than has heretofore been the case. That job now is one of doing everything possible to bring to light real "fifth column" agents in this country. The time has passed for the committee to spend its time on any but the most important people who are actually and actively working in the United States in the interest of foreign governments. The test from now on has got to be the test of where a man's loyalty lies. And it ought to be a matter of proof and not of inference, unless that inference can be checked and rechecked from a number of independent sources in every case. For whereas it may once have been true that a person accused before the committe was put in a difficult position, it is now true that such a person may well become an object of bitter hatred and deep suspicion. Already we have read of violence flaring up in various parts of the country—in one case against people distributing handbills. Whatever may be our opinion of the handbills, and however wrong may have been the things they said, there is one thing certain, and that is that the important "fifth column" agents are not out distributing handbills of any sort. Far more likely, they are occupying comfortable positions in the upper layers of our society.

There can be no question that the Communists have been working hand in glove with Nazi agents in Norway, France, many other nations, and in the United States. The Communists are probably a larger mass movement in the United States at present and it is easier to find out about them, but it should be remembered that their intrigue has been less successful than has the Nazi intrigue in every single country where the two have existed side by side. The Dies committee has done a pretty thorough job of exposing the extent and scope of communism in the United States, and I would not have the committee neglect this work. But it is clearly of the very utmost importance that an equally good job be done at the admittedly more difficult task of exposing the Fascist and the Nazi movements.

The gentleman from Texas [Mr. PATMAN], in his speech before the House yesterday, presented material on Nazi activities in this country that I hope and believe our committee will follow up with care. If even half of what he said is true, then he has pointed to persons of such power and influence that their exposure will be worth as much as the bringing to light of the activities of 1,000 unemployed radicals.

RETROSPECT AND PROSPECT

No one, I think, can view the present tragedy of Europe without seeking to find out just where the awful mistake was made after the last World War which caused another one to come so soon. I have never been a particularly enthusiastic advocate of the League of Nations. But I cannot help wondering whether it might not have been possible, by some such means, to have worked out a really just and equitable arrangement among the nations and to have avoided this holocaust. And I am certain that some way, somehow, we have got to find a vastly better answer than we have yet found to the problem of the relations between nations. At present, as I have said, I think we are doing right in building up the military defenses of our Nation. I am afraid there are forces at work in the world that understand nothing else. But if we stop and think we must realize how all the skill of science, all the ingenuity of man, is being turned to the refinement of means of destroying human life. The energies of men are turned more and more to the production of armaments. And while I would not fail to provide the defenses I think this country needs under present circumstances, I know my duty cannot and must not stop there.

The day will come because it must come (unless one believes that man's destiny on this earth is nothing more than self destruction) when the people of the world will realize that they have got to devise a way of peacefully living together on this earth. Some sort of world order—yes; some sort of world union—has got some day to come. It will present terrific problems, but not one of them will be half so great or half so terrible as the thing the people of Europe are facing today—the thing I hope and pray we can keep away from our western world.

We have got to think through this crisis and beyond it. Merely to meet it is not enough. We have got to keep alive that hope of a better world which for some strange but, I think, very significant reason mankind has never given up even in the darkest hours of history.

Yes; the principles of freedom and of concern for human life are worth preserving, worth sacrificing for. If America must stand as the refuge of democracy, we must make her strong to do that. But, even as we undertake this task, let us not forget that there are other kinds of strength than military strength that we shall need in the days that lie ahead.

For the strongest force in the world is not armed might. The strongest force in the world is the power and influence of a human spirit which is ready to make complete self-sacrifice. Enough people of that kind can stop a Hitler or any other force on earth. But it requires utter consecration.

Some day the world is going to learn this. Some day once again the power of the one Man who ever completely gave himself for humanity and to God will be given opportunity by men to work among them. It would be well for us to be ready for that day. For when it comes, all who have used implements of war for conquest will be afraid. They may rule for a few brief moments. But they can never really conquer, because they cannot conquer their own souls.

How Much Do We Want Liberty?

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

RADIO ADDRESS BY RABBI IRVING F. REICHERT, OF CONGREGATION EMANU-EL, SAN FRANCISCO, CALIF.

Mr. HAVENNER. Mr. Speaker, by unanimous consent I am printing in the Appendix of the RECORD a radio address by a distinguished constituent, Rabbi Irving F. Reichert, of Congregation Emanu-El, San Francisco, over the N. B. C. Blue Network, as follows:

It is not in the least surprising that the Fathers of the American Republic derived a great many of their ideas on government from the Hebrew Scriptures. They were, for the most part, deeply religious men. The Bible was the best-known book in their libraries. Their knowledge of the Old Testament was reflected, not only in the State papers and orations of the period, but in the principles of free government which they enunciated in the Bill of Rights and the Constitution. For example, on the same day when the Declaration of Independence was signed, a distinguished committee consisting of Franklin, Adams, and Jefferson, which had been appointed to submit a design for a Great Seal of the United States, brought in its report. The report was accepted, and so on the first Great Seal of our Nation there appeared the picture of King Pharaoh and his cohorts drowning in the Red Sea, while on the bank, framed in a halo of glory, stood Moses and the newly emancipated Israelites. Around the rim of the Seal ran the legend, "Rebellion to tyrants is obedience to God." And when those same founding fathers came to select the motto for the Liberty Bell, which has become one of the treasured symbols of our freedom, they chose as the most appropriate quotation a verse from the book of Leviticus: "Proclaim ye liberty throughout the land to all the inhabitants thereof."

These patriotic reminiscences are evoked by the circumstance that commencing on Monday night next and lasting for 7 days, the faithful of Israel will celebrate the Passover. Its theme is liberty. It commemorates with feast and story, with song and prayer, the release of the ancient Hebrews from Egyptian slavery. That first emancipation in recorded history proved to be one of the turning points in the destiny of mankind. When Moses, speaking in the name of the Eternal Spirit, demanded the release of the Hebrew slaves, saying, "Let my people go that they may serve me," he formulated for the first time the principle that human rights take precedence over property rights; that was a stupendous and a revolutionary declaration. Moreover, had the Israelites not been freed from Egyptian bondage, the Ten Commandments would never have been given; the Bible, including the New Testament as well as the Old, would never have been written; the Hebrews would have been absorbed into the population of Egypt, and Christianity and Mohammedanism would never have been born.

One need not be a believer in religion to appreciate the enormous significance of Moses in human history. Even a skeptic who dismisses the miraculous elements in the biblical account of the exodus as the romantic exaggeration of a pious scribe cannot thus legitimately deny the essential fact of the liberation from Egypt. For more than four centuries the Hebrews had been slaves. Anyone who has ever stood in the shadow of the pyramids or looked upon the massive ruins of the temple at Luxor can appreciate the fact that those ancient Hebrews were of considerable economic importance to their Egyptian masters. One can readily imagine the tremendous obstacles which Moses had to surmount before he could achieve the independence of his people—the resistance of their rulers, the servile timidity of his brethren, the jealousy of rival leaders, the bitter enmity of the privileged classes. Himself of royal status, he might have enjoyed the luxury of the idle rich and contemplated with serene detachment a system of human degradation of which he was the beneficiary. He chose instead to fill a more heroic role. He cared enough for liberty to make that choice.

We are living in one of those crucial periods in which the principle of human freedom must face anew the challenge of a cruel and truculent illiberalism. All the values of the human spirit which civilized men hold dear and honorable are threatened with extinction by a force more sinister and ruthless, more powerful and determined than any which our world has ever known. In one country after another the brutal fist of tyranny has brushed the heritage of humane and cultured living which is the finest flower of the free spirit of man. Every marvelous device which science has made available for the extension of human happiness and freedom is turned with savagery and staggering might into an instrument for the annihilation of those precious possessions. Mile by mile the frontiers of liberty are shrinking as the victorious hosts of destruction press their evil gains.

The number of free countries is growing smaller. Some have chosen dictatorship; others have had it forced upon them; still others, through the stern demands of military necessity, have been obliged to submit to it. Nor is there any neutral nation in the world today, howsoever far removed from the actual theater of war, whose liberties are not threatened. Tyranny is wearing many alluring disguises nowadays in her competition with the Goddess of Liberty. Her cheeks are rouged with false prosperity to trap the unwary with an appearance of health and her solicitation is often phrased in the plagiarized vocabulary of patriotism. Believe me, she is a dangerous courtesan and never more seductive than in a time when unemployment walks the streets in run-down shoes, and men are bewildered and desperate. Will we in America fall a prey to that snare? Despite the pressure of propaganda and the compulsion of a contracting economy, will we maintain and defend our democratic institutions? That is the crucial question which our generation must face and answer.

Now, a man does not have to be a prophet to realize that our answer to that question will depend on how much we want liberty. How highly do we value it? What price are we prepared to pay for it? The men and women who bequeathed it to us as the most precious quality of American life held it worthy of their lives, their fortunes, and their sacred honor. They renounced some very delightful creature comforts and abdicated not a few attractive selfish privileges that the blessings of freedom might be more generally extended. How much do we want liberty?

In the first place, do we want liberty intelligently enough to recognize the proposition that government and economics are inseparable? Liberty is not to be had merely for the asking. It cannot be produced out of an empty political slogan the way a magician pulls a rabbit out of an empty hat. How much liberty does a man have when he is continually harassed by uncertainty and want? What meaning has freedom of opportunity when every door to gainful employment is closed?

The other day one of my friends, who is a thoughtful observer of the contemporary scene, put it this way: "90 percent of the American people," said he, "would readily exchange the Bill of Rights for economic security." Well, if my friend is right, we had best see to it that 90 percent, or even a substantial fraction of that number, are not driven by necessity to that desperate choice. Nevertheless, freedom to starve or freedom to register for relief is not the American conception of liberty—not by a long sea mile. To be sure, we have traveled a considerable distance during the last few difficult years along the road of enlightened social legislation, and the provisions we have made for unemployment relief, old-age pensions, minimum wages, and the like testify to a growing acceptance of the principle that government must be deeply concerned with the economic welfare of the people. And that, let me remind you, is no new theory in our national life. Jefferson championed it; Madison fought for it; Patrick Henry gave it all his celebrated eloquence. Our freedom is not menaced half so much by overpublicized Communists as it is by undernourished Americans. We need not fear hardworking Fascists nearly as much as Americans who have no work at all.

Write this down and think about it: The greatest menace to democracy is insecurity and want. If the millions of our unemployed and their dependents care enough about liberty to stand by and tighten their belts until we can work this problem out, we can preserve liberty in America. If government can make our boundless resources serve the greatest good of the greatest number, we can, within the framework of the existing order, retain our freedom. How much do we want liberty?

In the second place, do we care enough about liberty to subordinate our lesser loyalties for its preservation? Josiah Royce, in his Philosophy of Loyalty, reminds us of one of the most stirring episodes in English history. In 1642 there was a conflict between Charles I and the House of Commons. The King requested the surrender of those men who were most actively opposing him, but the House refused to give them up and reminded the King of its traditional prerogatives by which the House alone had jurisdiction over its members. Thereupon the King resolved to have his way by force. The next day, accompanied by an armed guard, he proceeded to the House and handed the presiding officer a list of the men he wished to arrest, with the curt demand, "Mr. Speaker, do you espy these persons in the House?" What followed made history. The speaker kneeled before his sovereign and, in calm, firm tones, replied, "Your Majesty, I am the speaker of this House, and being such, I have neither eyes to see nor ears to hear nor tongue to speak, save as this House may direct, and I most humbly beg Your Majesty's pardon if that is the only answer I can give to Your Majesty." Well, there you have a dramatic instance of a conflict in loyalties in which the lesser gave way to the greater. The speaker and the men sought by the King belonged, for all we know, to opposing political factions. It is quite likely that they had their differences and disagreements on many policies and issues, but when

the fundamentals of democratic government were challenged, they closed the ranks. The higher loyalty had the right-of-way.

Let no one listening in this afternoon suppose that he is outside the circle of this matter. Each one of us, in the words of Emerson, is a bundle of relations. Just see how we fragmentize our lives and mortgage out our loyalties—into political parties, fraternal organizations, trade unions, industrial associations, religious denominations—what an endless and varied multitude of affiliations lay imperious claims upon us. "This is the ax you must grind," they say, "remember that you are a Democrat," or "put republicanism first," or "the workers must stand firm," or "industry must have a clear field." What sort of clamor is this at a time when the pillars of the temple are trembling? Some years ago in California a quarterback gave the wrong signals, and the ball was run clear down the field to the opponent's goal for an enemy touchdown. There are too many quarterbacks out there calling the wrong signals—running the ball in the wrong direction. The forces that threaten republican government today are powerful and unscrupulous. It will take the best teamwork we can manage to beat them. Let us give America the right-of-way. This is a time to think and act not merely as Republicans and Democrats, labor leaders or captains of industry, workers or employers, Jews or Christians—but as Americans. How much do we want liberty?

To be sure, this does not mean that we must surrender our honest convictions or refuse to tolerate the opinions of those who differ with us. To do that would create the very tyranny we would destroy. That is exactly what has happened in Russia and Germany and Italy and that is why we say, "Thank God for America." Only as we keep America safe for differences can we keep it safe for freedom. Remember the words of Wendell Phillips: "If there is anything in the universe that can't stand discussion, let it crack." You may not like what that revolutionary radical is saying any more than I do, but so long as he has not put himself outside the protection of our laws, he has a right to speak. You have the right to differ. That is the American way. You may not approve of your neighbor's conduct any more than he approves of yours—that does not entitle you to tar and feather him and run him out of town. The Ku Kluxers and Vigilantes who make so brave a show behind their masks at night against the helpless victims of their cruelty have learned, it seems, much more from Hitler and Stalin than from Washington and Lincoln. They constitute by far a greater menace to America than all the Christian Fronts and bunds from coast to coast. Remember those immortal words of Lincoln: "Those who deny liberty to others do not deserve it for themselves, and under a just God, will not long enjoy it." How much tolerance do we want? Do we want it only for our own opinions, and not for the opinions of others? How much law and order do we want? Do we want it only for our own protection, and not for the protection of our neighbors? How much freedom do we want? Do we want it only for white men, and not for black and yellow? How much do we want liberty?

Finally this question leads directly to the heart of a world situation that touches intimately the life of each of us. Do we cherish liberty enough to refuse to risk its destruction in a war overseas? Make no mistake about this, my friends, the moment our Nation enters a foreign war, you can bid adieu to the Goddess of Liberty. Her statue in New York Harbor may not even be there to greet our soldiers coming home—if there are any left to come home. War demands dictatorship for its efficient waging. It demands the total resources—spiritual as well as material—of a nation. And in return it gives back corpses, blind and crippled sons and husbands, starvation, bankruptcy, unemployment, and dictatorship.

You blind men, fumbling with your broom-straws in the Veterans' Hospital that overlooks the Golden Gate, whose shimmering glory you can never know—you won the last war. You sharecroppers, scratching the dry crust of earth for crumbs to feed your wives and children—you won the last war. You bankers and brokers whose war profits built such costly tombs for your gassed and shattered sons—do you hear me? You won the last war. Thousands slain and hopelessly mangled; 200 billions of property destroyed; a National debt of 40 billions, 10 millions of unemployed—and who can count the cost in human suffering and the destruction of spiritual values? And we won the war.

A man does not have to be an isolationist, or even neutral in his heart to stand against American participation in this war. God grant that it may speedily end, and be succeeded by a just and lasting peace. To that end we can best contribute if we keep our sanity in a world gone mad. And we can keep our freedom too. If ever our own shores should be threatened by an invading foe, we shall know how to meet that challenge. But as we value liberty, we shall resist the siren voices that would lure us to its destruction. Have we so soon forgotten the surging tide of starved and angry voices in our city streets after the last war? Seeking democracy for the world, we barely saved it for ourselves. Next time we may not fare so well. The dice are loaded in that game. How much do we want liberty?

The Benefit of a Raised Price Level to the Farmer and Laborer

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1940

RADIO ADDRESS BY CHARLES G. BINDERUP

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I am pleased to include the following radio address by our former colleague, Charles G. Binderup:

Good morning, my radio audience, and thank you for responding so splendidly to these broadcasts with your fine letters of encouragement. Before beginning my address today I would like to express profound appreciation to the owners and managers of this radio station. It is a privilege and pleasure to speak to you people, scattered out over the great Middle West of this Nation, in behalf of our Uncle Sam and to remind you of an honor debt you owe him. Have you forgotten when you or your folks came West, or across the water, as I did, in search of justice and freedom and a home? Your Uncle Sam gave you everything. Surely you have not forgotten. Then why don't you pay for these great blessings, now that he needs you? Can't you hear him pleading with you that "this Nation under God shall have a new birth of freedom and that government of the people, by the people, and for the people shall not perish from the earth"?

In these radio talks we are endeavoring to touch that magnetic spark of patriotism hidden away within the heart and soul of every American citizen. Without this awakening democracy cannot live, and with this awakening democracy cannot die. When we say "patriotism" we do not mean war, except, of course, in the case of an invasion of our own Nation. It is not our business to meddle with foreign affairs.

Just yesterday a letter came to the desk containing another one of the old, familiar Wall Street ghosts. To accommodate the writer, let us jerk off the white sheet and see the nothingness under the robe of this frightening apparition. He writes as follows:

"In your Constitutional Money magazine of April you speak about raising the price level of the farmers' products and at the same time raise the price level of the products of labor. What good will it do to raise the price level of farm products if you raise the price of labor and industrial products in the same proportion? Both the farmer and the laborer would have to pay more for what they have to buy. It wouldn't do one bit of good. Mr. Knox, former candidate for Vice President, spoke over the radio last night, giving the real plan as I see it, and that is to reduce the cost of what a farmer has to pay to a parity with the price of what he sells. I think Mr. Knox is 100 percent right." Our correspondent signed the letter "John Jacobs, Hastings, Nebr."

Friends, you heard about this ghost, this scarecrow, when you were children, didn't you? And since that time you have heard its weird cry echoed from Wall Street in an effort to weave a cobweb through the minds of the people so that reason couldn't enter in. The purpose of this ghost is to create an envy or hatred, a friction and strife between labor and the farmer, to keep our ranks divided so money monopoly could rule supreme and unquestioned. There is nothing new in this argument, Mr. Jacobs. It is a Wall Street ghost echoed by Knox. How destitute of a plan your Mr. Knox must be to suggest a thing so impossible to cure the economic ills of the farming class.

Your friend, Mr. Knox, says we must reduce the price of what the farmer has to pay. It is a well-established fact that on the average about 75 percent of what the farmer has to pay is made up of fixed charges, such as mortgages, taxes, rents, interest, freight rates, insurance, and hundreds of others. Now, Mr. Jacobs, how would your Mr. Knox reduce the principal of farm mortgages in the Nation, now totaling $7,000,000,000? The farmers have promised to pay this amount or surrender their farms and homes. And how is he going to reduce the interest rates written in black on white on these mortgages? How is Mr. Knox going to reduce freight rates when the Interstate Commerce Commission has within the last 4 years allowed the railroads to increase freight rates twice, and the law provides that they are entitled to a 6-percent profit regardless of how high the rates must be raised? How would he reduce taxes with millions of unemployed on W. P. A. or direct relief without a revolution? And how would he go about reducing the face value of the $225,000,000,000 in private debts the people are owing or the interest rates? How utterly impossible is his suggestion.

Mr. Jacobs, if you, or anyone else, refused to pay these debts or undertook to scale them down, the police would come in the power of the law and set your family and yourself out on the highway or street. If the police couldn't do it, they would call out the State militia. If they couldn't put you out and foreclose, taking your property to the last cent you owed, the Federal Army could be called to put you out. You wouldn't have the slightest recourse by law. You would find all the law on the other side. You wouldn't stand any more show than a snowball down in the hotter regions. How ridiculous of a supposedly intelligent man to make such a suggestion.

Instead, why not use the international bankers' method in reverse, just as was explained to you in our magazine, the Constitutional Money Advocate? Put back into circulation the money that the banking system took out in 1920, 1929, and 1937. Everyone knows if you put more money into circulation you can thereby raise the prices for labor and agriculture just as high as you want to. But remember a raised price level does not at all affect fixed charges. Fixed charges remain the same. If your annual fixed charges, such as interest, taxes, insurance, freight rates, rents, etc., equal $1,000, you are going to pay $1,000, no matter if the bankers do take enough money out of circulation to bring wheat and labor down to half, virtually doubling your fixed charges. This has become legally right by custom but is morally wrong. It is just as morally wrong as if those holding your note had raised the figures on your obligations to twice the amount for which it was contracted.

Suppose we reestablished the Coolidge price level of 1926. We all agreed at that time that this should be our standard and that prices must never go below that standard. This would make prices today approximately as follows: Wheat, $2; hogs, 14 cents; eggs, 35 cents; cream, 51 cents; corn, 81 cents; and common-labor wages, from $5 to $7 a day. We would just about double the laboring man's wages and the price the farmer gets for his products. You have virtually in this way accomplished just what you wanted to. They didn't have to cut your mortgages and interest, your taxes and freight rates, and all the other fixed charges in order to make it easier for you to pay.

Let us give you an example of just how you have benefited by a raised price level. Today you owe $8,000 mortgage on your farm and are paying 5-percent interest. You have just seen the party holding this mortgage, and you have tried to do as Mr. Knox suggested—reduce the price of what the farmer has to pay. Perhaps you suggested cutting the principal and interest in two, thereby reducing the mortgage from $8,000 to $4,000 and the interest from 5 to 2½ percent. Of course, he laughed at you, and likely said, "Pay what the mortgage stipulates or I will foreclose and put you off the farm." Or perhaps you have seen your landlord and wanted him to reduce the rent from the old-established rental of one-third to one-sixth and the pasture rent from $2 to $1 an acre. He very likely told you to pay as the lease set forth or get off the farm. You have seen tax collectors, and they said: "Why, a cut of your taxes is impossible. The records show your taxes are so much, and we can't cut it 1 cent." So on you go the rounds, encouraged by the impossible philosophy, as advanced by your Mr. Knox, to reduce what the farmer has to pay.

But suppose you use the plan as suggested in the April issue of our magazine, the Constitutional Money Advocate. This plan has been tried and found to work first class. It's the old international bankers' philosophy in reverse. It will work both ways—to the advantage of the international bankers one way, in that it will make money scarce, which makes the dollar dear and labor and the products of labor cheap, which is what the international banker wants, so his interest will buy more; and to the advantage of the people in the other way, in that it will make money plentiful, which makes the dollar cheap and labor and the products of labor high, which is what the people want, so they can pay their interest, taxes, and fixed charges. The international bankers, through the Federal Reserve Banking System, took out of circulation in 1920, $10,000,000,000; in 1929, $8,000,000,000; and in 1937, $3,000,000,000, bringing prices below the American standard of living by deflation. So let us do just as you would demand of an ordinary horse thief—bring it back, put the money back in circulation, and thereby advance prices to a decent standard of living, with a living wage to the farmer and the laborer. Put us back to the 1926 price level. It's just as easy to raise the price level as it is to lower it. Money monopoly lowered it, so let us raise it. Increase the money circulating in the veins and arteries of trade and commerce, as explained in the book, Uncle Sam's Hospital Chart, on page 101. Expand our money supply by paying old-age pensions of $50 a month and rehabilitating the farmer back on his farm until we have full production and full employment.

It is so important to remember, my friends, that fixed charges are not affected by the raising or lowering of the price level. They do not change, regardless of how much you increase or decrease wages and agricultural prices. If anything, fixed charges would be reduced slightly with prosperity. Everyone knows if the railroads run to full capacity, with the profits limited to 6 percent by law, transportation rates would come down. Everyone knows that with prosperity interest rates on new loans would come down, and it is equally certain that taxes would be cut in two by doubling rates and thus spreading or doubling the tax base on which to distribute the tax levy. Insurance should become cheaper for the reason that it reduces the moral risk, and a landlord is always striving to raise the rent when his investment does not pay out, so it should be easier to deal with your landlord.

Let us, with another example, illustrate the advantage of a raised price level to the farmer and laborer. Your wheat today is worth $1. Expand our money supply until it reaches the 1926 price level of $2. That means it would take only half as much wheat to pay the same mortgage. It means, in substance, that you did reduce your mortgage from $8,000 to $4,000 and your interest from 5 to 2½ percent by doubling the price of what you had to sell. And it's so easy for Uncle Sam to do this.

So you virtually did accomplish just what you asked the mortgage holder to do for you—cut the mortgage and the interest in two—but this time he cannot tell you to get off the farm. Think of the joke you pulled on the tax collector who told you there was no chance in the world to cut your taxes. You paid him every cent, but by doubling the price of what you had to sell it was the same as if you had cut your taxes in two. He didn't explain to you that it could be done in the old international bankers' way by adjusting the price level, by increasing the money supply. The railroad company laughed at you when you asked for a 50-percent reduction in freight rates, and said, "impossible," but you did get this reduction by raising the price level of labor and commodities, didn't you? And then there was the landlord who told you to pay as the lease stipulated or get off the farm. You just let him alone and by congressional control of the money supply of the Nation got your rent reduced from one-third to one-sixth of the crops, and pasture rent from $2 to $1, when measured by increased prices for your commodities. In your insurance and all the rest you did get a 50-percent reduction in what you had to pay, didn't you, because you received twice as much for what you had to sell?

Undoubtedly you belong to the National Grange or some farm organization—if you don't, you ought to—who have been working overtime for the cost of production plus a reasonable profit to the farmer and here you got it by merely raising the price level, the only way it can ever be done. Every other plan is merely a piece of patchwork.

I hope I have impressed it upon your minds that fixed charges are not affected by a raised price level. They do not change by raising the price of commodities and labor. Suppose today the farmer gets 14 cents for eggs. These eggs, with fixed charges added, would retail on the market for 35 cents. If a laboring man in the city now gets 35 cents an hour for 8 hours, or $2.80 a day, he could buy with a day's wages just 8 dozen eggs, at 35 cents a dozen. Now suppose we double the price the farmer gets for his eggs. That would give the farmer 28 cents a dozen in place of 14 cents. The city laborer would then pay 35 cents plus the raise of 14 cents, or 49 cents a dozen for his eggs. But at the same time we have doubled the laborer's wages also, so he now gets $5.60 a day instead of $2.80. Then, for a day's wages he could buy over 11 dozen eggs, at the raised price of 49 cents, or over 3 dozen eggs more a day than with lower prices and lower wages. It would give the laboring man an additional purchasing power of over 27 percent. He could buy over one-fourth more from the farmer, and the farmer, getting 28 cents a dozen for eggs in place of 14 cents, could buy twice as much from industry. This is exactly the way a raised price level would affect us. Don't tell me this would not bring out a great prosperity, and prosperity can come in no other way. What did we do? We raised the price level and thereby created a purchasing and consuming power among the lower-income group, definitely and positively the only way you can bring back prosperity. When Congress gets through chasing up all the blind alleys in search of a plan to bring back prosperity, it is hoped by a process of elimination they will find this the only road to bring back our great Nation. Even Congressman DIES and his committee will have to join in the only plan and give up trying to effect a cure by treating the pimples on the body politic of old Uncle Sam in place of devoting their time to the diagnosis and the real case. Let me repeat, the reason why you can raise farm prices and the laboring man's wages in the same proportion, and at the same time derive a big benefit to both, is because 75 percent of the cost of living is made up of fixed charges which are not affected by this raise.

The Sherman antitrust law to hold prices of monopoly down, together with the congressional control of our money supply to hold prices up for the lower income group, would be common-sense government. What a victory it would be, Mr. Jacobs, for the people. And you left everyone happy. You would do much more. You would cut in two the $225,000,000,000 the people now owe in private debts, and you would have reduced Uncle Sam's debt from $45,000,000,000 to $22,500,000,000 and the interest from $1,100,000,000 to $550,000,000, all because we went back to the 1926 price level and doubled the price of labor and commodities. There would be great rejoicing and happiness and prosperity over the entire Nation—no, over the entire world, because we would have solved the problem of want in the midst of plenty, the problem of distribution. Every great nation that ever was, and is no more, died because the people failed to solve this problem. You would have choked to death with justice and righteousness all the Communists and "reds" and radicals and made a great citizen out of those who hate our Government because it had, without their knowledge or understanding, tolerated the contraction of our money supply that had doubled their debt and robbed them of their homes and farms, their jobs, and their constitutional rights to life, liberty, and the pursuit of happiness.

But suppose, Mr. Jacobs, you had tried to follow the advice of Mr. Knox. Of course, you couldn't have done it without repudiating your obligations and disregarding your contracts. In fact, you couldn't have done it, if at all, without strikes and civil war or revolution. We tried it once when the people undertook to put into effect by force the moratorium on farm mortgages. Do you remember when they loaded the sheriff up, in many cases, and took him off the ground during a mortgage sale where the farmers' neighbors had agreed to bid in cows for a dollar and horses for $2, etc., to give back to the original owner? Do you remember when they put a rope around the neck of a Federal judge and dragged him off the bench, threatening to hang him for his decision that would not support the moratorium? My friend, that was revolution. If we followed the advice of your Mr. Knox, we would have a revolution before morning.

Answer to Editorial in Grand Rapids Press on Reciprocal-Trade Agreements

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

Mr. ENGEL. Mr. Speaker, on the 22d day of May 1940 my colleague, the gentleman from Michigan, Representative FRANK E. HOOK, placed into the RECORD an editorial which appeared in the Grand Rapids Press under date of May 10, 1940. The editorial placed in the RECORD disagreed with a statement I had made on the floor of the House regarding the reciprocal-trade agreement and its application to the cherry growers of Michigan.

I ask unanimous consent to extend my own remarks in the RECORD and include therein a letter dated May 23, 1940, addressed to Mr. B. G. Brown, editorial writer of the Grand Rapids Press, which is in answer to the editorial which appeared in the Press.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 23, 1940.

Mr. B. G. BROWN,
Editorial Writer, Grand Rapids Press, Grand Rapids, Mich.

DEAR MR. BROWN: This will acknowledge receipt of your letter of May 14, enclosing an editorial from the Grand Rapids Press with reference to my talk on the floor of the House on the wage-hour bill. I also received from another source your editorial of May 16, in which you state: "It may be wondered just where Congressman ENGEL obtained his information."

The Grand Rapids Press has been too kind to me, both in its news and editorial columns, for me to take any editorial as personal. I always welcome constructive criticism and know that no individual is always right. I never posed as an expert of any kind, and certainly not as a tariff expert.

Answering your question in your editorial of May 16 as to where I obtained my information, I wish to state that my sources of information were the Department of State and the Department of Commerce.

The statement in your editorial of May 16 from Mr. Harry C. Hawkins, Chief of the Division of Trade Agreements, Department of State, reads in part as follows: "Preliminary statistics show that only 11 pounds of maraschino cherries, valued at $4, were imported from Italy in 1939. The United States imports of cherries from Italy are almost entirely 'cherries sulphured or in brine,' the duty on which has not been altered in any trade agreement."

Your editorial further states that during the first 3 months of 1940 only 3,491 pounds of cherries came from France. It is my understanding that cherries "sulfured or in brine" are cherries that are shipped here for the maraschino trade. The Cherry Growers Packing Co., of Traverse City, Mich., in 1936 packed 28,000 barrels of cherries in brine, or approximately 7,000,000 pounds for the maraschino trade. New York, Pennsylvania, Ohio, and Michigan during that same year packed 52,000 barrels of cherries in brine, or approximately 14,000,000 pounds for the maraschino trade, so sulfured cherries or cherries in brine coming over from Europe are in direct competition with Michigan, for cherries packed in brine and bottled are used for the maraschino trade.

I do not know where Mr. Hawkins gets his information that there was no reduction in duty on cherries sulfured or in brine in any trade agreement. I have before me a letter dated November 30, 1936, signed by the Honorable Francis B. Sayre, Assistant Secretary of State, who had charge of making the trade agreement to which we have been referring. This letter states that there was a tariff reduction of 20 percent in the ad valorem duty on sulfured or cherries in brine, and that the ad valorem duty reduction amounted to 2.2 cents on the No. 1 quality imported product and 1.5 cents on the No. 2 quality imported product, so either Francis B. Sayre, who made the French treaty, is wrong in saying there was a reduction, or Mr. Hawkins is wrong in saying there is not. I got my information from Mr. Sayre's letter. Mr. Young, in the editorial as quoted by you, contended that the reduction in the tariff was much less than 20 percent.

I have before me the letter above referred to by Mr. Sayre, which reads, in part, as follows: "On August 24, 1936, the average price on the New York market for sulfured, hand-pitted, imported cherries of No. 1 quality was 11 cents per pound, duty unpaid, or 22½ cents per pound, duty paid. The average price of No. 2 quality imported cherries was 7½ cents per pound, duty unpaid, or 18½ cents per pound, duty paid. On that date, therefore, the 20-percent reduction in the ad valorem duty amounted to 2.2 cents per pound on the No. 1 quality imported product and 1.5 cents per pound on the No. 2 quality, or less than 10 percent of the market value of both qualities."

The ad valorem duty is figured on the value of the cherry at port, duty unpaid, and naturally is not figured on the tax levied. The selling price, according to Mr. Sayre's letter, of No. 1 quality sulfured, hand-pitted, imported cherries or cherries in brine at New York was 11 cents a pound, duty unpaid. If this is true, then a 2.2-cent-a-pound reduction in the tariff would be a 20-percent reduction. If the No. 2 quality imported cherry referred to sold for 7½ cents a pound, duty unpaid, then a 1.5-cent-per-pound reduction would be a 20-percent reduction.

On June 4, 1936, I wrote a letter to Mr. Hull, protesting against the reduction made by the reciprocal-trade agreement. This letter was signed by every Republican Member of Congress from Michigan. In that letter, I used the following language: "Your Department further informs us that this reduction upon a basis of the 1934 importations represents a reduction of the tariff from 96 to 76 percent." Incidentally, the State Department never questioned that statement.

On May 25, 1936, Mr. George W. Bolling, of Traverse City, Mich., chairman of the Ninth District Democratic Congressional Committee, wrote Congressman George A. Sadowski, protesting against a cut in the tariff, pointing out that the present tariff on maraschino cherries in brine was to be cut 21 percent.

On June 25, Mr. C. L. Brody, executive secretary of the Michigan State Farm Bureau, wrote to the Michigan delegation in Congress that he was informed that a reduction of the tariff on cherries would be made, amounting to 20 percent. I do not know where Mr. Brody and Mr. Bolling obtained their information, but they must have received it from some authentic source.

Importation of cherries: I have before me a letter signed by Mr. Alexander V. Dye, Director of the Bureau of Foreign and Domestic Commerce of the Department of Commerce, dated April 15, 1938. Mr. Dye in this letter informed me that during the 6 months from July to December of 1937, and immediately following the treaty, a total of 1,023,854 pounds of cherries, sulfured or in brine, were imported from France, Italy, and Spain under the French reciprocal-trade agreement. Of this amount, 998,336 pounds were imported from Italy, 22,034 from Spain and only 3,472 from France.

In addition to these 1,023,854 pounds of cherries, sulfured or in brine, which were imported in 1937, there were imported during the same year 582,837 pounds of natural cherries and 57,598 pounds of maraschino cherries, candied, crystallized, and so forth, making a total of 1,664,289 pounds of cherries that came here in 1937 in competition with Michigan maraschino cherries. Incidentally, I called the Food Stuffs Division of the Department of Commerce yesterday and they informed me that these natural cherries were bottled up for the maraschino trade or were being used as maraschino cherries inside of chocolates, and so forth.

These figures are taken from a letter which Mr. Dye of the Department of Commerce wrote me on April 5, 1938, so apparently Mr. Dye and Mr. Young, both of the Department of Commerce, are getting their wires crossed. Mr. Young, in the figures given you, states that in 1937 the total importations rose to 57,000 pounds, of which 56,000 came from France. Apparently either Mr. Dye, whose figures I took, was wrong; or Mr. Young, whose figures you took, was wrong.

I called the Department of Commerce and asked for the figures again on May 15, 1940, and I have before me a letter dated May 16, 1940, signed by Mr. Young, in which he writes as follows: "In response to your telephone message of May 15, there are transmitted herewith pages from issues of Foreign Commerce and Navigation of the United States."

I have before me those pages which Mr. Young sent me. These figures are taken from the regular Commerce Reports for 1937. They show that Italy imported into the United States 149,348 pounds of cherries with pits and 861,824 pounds of cherries with pits removed, all sulfured and in brine, while France imported only 3,472 pounds with pits removed. This does not agree with Mr. Young's statement in your editorial.

The statement sent by Mr. Young in his letter to me further shows that in 1939 there were imported into this country from Italy 92,565 pounds of cherries with pits removed. In addition to

this there were imported from Yugoslavia, Canada, Argentina, Chile, Greece, and Italy 1,481,671 pounds of cherries in the natural state. There were also shipped into this country 35,303 pounds of maraschino and candied cherries, or a total of 1,516,974 pounds, of cherries that went into the maraschino trade.

I do not know whether there was any reduction in the tariff on cherries in the natural state, but the Department of Commerce informs me that these are coming in to be used in the maraschino trade. It also will be noted that while the tariff on cherries with pits removed is 9½ cents a pound, the tariff on natural cherries, according to the statement sent me by the Department of Commerce for 1938, was 1 cent a pound, or the equivalent of 13.1 percent ad valorem, as against 99.7 percent ad valorem tariff on pitted cherries.

I do not know whether or not cherries now imported as natural cherries under the lower tariff rate are replacing cherries without pits under a higher tariff, but I do know that they all go into the maraschino trade in competition with Michigan cherries.

I also note what you said regarding the importation of cherries for the first 3 months of 1940. I have before me a statement from Mr. Young. This statement shows that for the first 3 months of 1940 there were imported from France 3,491 pounds of maraschino or candied cherries, and France was also shipping in some 2,420 pounds of cherries in brine with pits removed. However, there were shipped in from Chile, Greece, Italy, and Yugoslavia during the same 3 months 487,116 pounds of cherries in the natural state, which the Food Stuffs Division of the Department of Commerce tells me go into the maraschino trade.

Cherries are, of course, a seasonal product. They are imported during certain months of the year. Whether the reduction of cherries sulfured or in brine during the first 3 months is due to the seasonal production, or whether those cherries are now imported for the same purpose in a natural state under a lower tariff rate, I do not know, but the facts are certainly not in accord with Mr. Young's or Mr. Hawkins' statement to you.

Competition: In your editorial, Mr. Young refers to the entire 1938 cherry crop as consisting of 278,000,000 pounds, of which approximately 36,000,000 pounds were produced as maraschino cherries. Of this 278,000,000 pounds, somewhere around 125,000,000 pounds, I believe, are sour cherries. The bulk of the cherry crop, both sweet and sour, goes into the canned trade. I can buy canned sour cherries now on the retail market for about 12 cents per No. 2 can.

Somewhere around 20,000,000 pounds of the maraschino cherries manufactured in this country are manufactured from sour cherries. If this maraschino-cherry production is in any way destroyed it would mean that these 20,000,000 pounds would be added to an already glutted cherry market that goes into canning. The imported cherries compete with these 20,000,000 pounds. In view of the fact that the value of these hand-pitted maraschino cherries lies largely in the labor of hand-pitting and preparing, and in view of the further fact that it costs us, according to information given us by the cherry growers, 5 cents a pound to hand-pit them here, whereas European countries are hand-pitting them with woman and child labor at a very small cost, you can see just what this competition means. Even a million or 2,000,000 pounds of imported maraschino cherries added to these 20,000,000 pounds helps to create the surplus, and it is the surplus that breaks the market. The competition of foreign imports must be compared with the maraschino trade and not with the canned trade, whether sweet or sour.

In his letter of November 30, 1936, Mr. Sayre informed me that the average price on the New York market for sulphured, hand-pitted, imported cherries of No. 1 quality was 11 cents per pound, duty unpaid, and that the average price of No. 2 quality imported cherries was 7½ cents a pound, duty unpaid. The cherry industry pays approximately 1 cent a pound for picking these cherries, plus 5 cents a pound for hand-pitting in addition to all the other costs such as barreling, storing, sorting, brine, freight charges, general overhead, etc. So you can readily see what will happen if the cherry grower is not given adequate tariff protection.

You can't plow cherry trees under. You can't stop growing cherries like you can wheat. These cherries keep growing unless you cut the trees. The grower does not know what price he is going to receive until after he has completed his cultivating, spraying, and all other costs of growing. He then has the cherries with the cost incurred, and he must keep selling them in competition with foreign trade and at a price which will give him a market as against the foreign market. In other words he has one of two choices. He can either take 1½ cents, 2 cents, or 3 cents a pound for his cherries delivered at the factory and with it a loss, or he can send them down to the New York market at a price which will keep the foreign product out, hoping that the next year's price will be better. If he lets them rot on the trees he loses the money he has spent in cultivating, spraying, and has no return on his investment. In either case he takes a loss.

The importation of cherries affects the price and holds the price down even though the importations may not be coming in in large quantities, because the grower knows he must supply that market at the price which the market will pay, even though that price is below his cost of production. If the grower should sell these cherries at the cost of production of 3½ cents to 5 cents a pound, add 1 cent for picking, 5 cents for hand-pitting, plus all the other costs of handling, barreling, freight charges, etc., his selling price would be in excess of the price at which imported cherries can be sold on the present New York market.

Perhaps I am unduly apprehensive, but I know that when the State Department makes a concession to a European country in a reciprocal-trade agreement, that country expects to make use of that reduction. They are not giving us something for nothing.

The European war and the war with Ethiopia, and the condition of the standing armies for the past 6 years in Europe have undoubtedly affected these imports. What will happen if peacetime is declared and the entire European manpower goes back to peacetime pursuits is rather alarming to me, I am perfectly frank to say. I am afraid that they will import cherries at any price to get back their 1929 market. There is no question in my mind but what that was their objective when they obtained a reduction in the cherry tariff.

In conclusion may I say this. I do not believe that you and I disagree on the reciprocal-trade agreement policy. The reciprocal-trade agreement policy was a Republican policy. If I am correct, William McKinley advocated it back in his day. I know that William Howard Taft as President made an agreement with Canada, which Canada refused to ratify. You and I both believe in reciprocal-trade agreements. We differ, however, with the method of the application of that policy.

I believe the American market should belong to the American farmer and to the American workingman, and neither should be traded off for the other. The fact that you argue that the cherry industry was not hurt induces me to believe that you agree with me that the State Department should not make reciprocal-trade agreements which injure either the farmer or industry. Where you and I differ is in our policy and not on what should be done, but upon what the effect of the policy is as administered by this administration. Is the farmer and is any part of our industry being injured?

May I say that the fact that we may have exported 5,000,000 pounds of cherries does not alter the matter, nor does it help the cherry grower if we turn right around and import from some other country another four or five million pounds. We should try to export all of our surplus that we can of this product, and should not import any to add to our surplus. Incidentally, the Monthly Summary of Foreign Commerce states that there were only 303,309 pounds of cherries exported during the first 3 months of this year.

I have called Mr. Hawkins on the phone, giving him a copy of your last editorial and referring him to Mr. Sayre's and Mr. Young's letters, and have given him all the information I have. I have asked him to explain the situation. I am just as anxious to get at the facts as you are, and I shall await Mr. Hawkins' letter and answer with considerable interest.

Thanking you, I remain,

Sincerely yours,

ALBERT J. ENGEL.

I also ask unanimous consent to place in the RECORD a letter which I addressed to the Honorable Cordell Hull, Secretary of State, on June 15, 1936, which letter was signed by the 11 Republican Congressmen from Michigan who were in the House on that date.

JUNE 15, 1936.

Hon. CORDELL HULL,

Secretary of State, Washington, D. C.

MY DEAR MR. HULL: We have just been informed that under the trade agreement with France, the tariff on maraschino and candied cherries not in brine nor sulphur and not in their natural state was reduced from 9½ cents a pound plus 40 percent ad valorum to 9½ cents a pound plus 20 percent ad valorum. Your Department further informs us that this reduction upon a basis of the 1934 importations represents a reduction of the tariff from 96 percent to 76 percent. Under the most-favored-nation clause adopted by you in your reciprocal-trade agreements, this concession permits the importation of these cherries by any other nation including Italy, with the same reduction in tariff which is given France.

For your information, approximately 22,000,000 pounds of Italian cherries in addition to cherries from other countries were shipped into this country for the maraschino trade in 1929, and prior to the time this tariff was placed on the importation of this product. In 1934 after this tariff had been in operation approximately 4 years and industry had had an opportunity of operating, the importation of this product was reduced to approximately 700,000 pounds. The remainder of the maraschino-cherry trade was supplied by domestic cherry growers and manufacturers. In view of the fact that there has been a surplus of cherries in this country for several years past, this has been an important factor in keeping the cherry industry from being completely demoralized. The maraschino-cherry trade has absorbed from 10 to 15 percent of the total crop which has been a decisive factor in preventing a still greater surplus, and a complete break-down of prices.

The above tariff rate was based upon the difference in the cost of production in this country and in the European countries, represented mainly in the difference of the cost of labor. The French trade agreement permits the importation of the finished product which represents approximately 80 percent labor. The price the cherry grower receives for his cherries is ultimately determined by

the price the consumer pays for the finished product. All cherries in brine, either domestic or foreign, must ultimately meet this foreign competition as a finished product. A 20-percent reduction on cherries in brine which are worth about 10 cents a pound would have meant a reduction in the price of the finished product of approximately 2 cents a pound. We are informed that the candied or finished cherries sell for about 30 cents a pound, and therefore a 20-percent reduction would mean a reduction of 6 cents a pound. In view of the difference in the cost of labor in European countries and in this country, this reduction will throw open the door to the importation of manufactured cherries, will deprive the home grower of his market, and will add to the surplus crop of the United States in any year in which a normal crop is produced. All of these facts were presented to the fact-finding committee of the Tariff Commission a year ago.

We, the undersigned members of the Michigan delegation in Congress, protest against the reduction of the tariff on this product.

Yours truly,

Albert J. Engel, Geo. A. Dondero, Wm. W. Blackney, Carl E. Mapes, Roy O. Woodruff, Earl C. Michener, Clare E. Hoffman, Jesse P. Wolcott, Clarence J. McLeod, Verner Main, F. L. Crawford.

On June 22, 1936, I received an answer from Mr. Hull, acknowledging my letter of June 15, and stating that a full report would be made as soon as possible. On July 9, 1936, I received a reply from the Honorable Francis B. Sayre, Assistant Secretary of State. I ask unanimous consent to insert this letter into the RECORD.

JULY 9, 1936.

The Honorable ALBERT J. ENGEL,
House of Representatives.

MY DEAR MR. ENGEL: Secretary Hull has requested me to inform you that the Department has given careful and sympathetic consideration to the letter of June 15, 1936, signed by you and 10 other Congressmen, representing districts of the State of Michigan, with respect to the reduction from 9.5 cents and 40 percent ad valorem to 9.5 cents and 20 percent ad valorem in the import duty on maraschino, candied, and other prepared and preserved cherries under the trade agreement with France. I take pleasure in giving you the following information in regard to this matter.

With reference to your statement that the duty reduction affecting maraschino and candied cherries under the trade agreement with France constitutes an increase in foreign competition for all cherries in brine, it may be pointed out that maraschino and candied cherries are made of sweet cherries, almost exclusively of the Queen Anne variety, which is grown in commercial quantities on the west coast, but not in the East. East of the Rocky Mountains sour cherries are the dominant variety grown and are produced for kitchen and canning markets. The Michigan cherry industry is, as you doubtless know, mainly engaged in the growing of cherries of the latter variety, whose markets are not competitive with the special kinds of imported cherries on which the duty has been reduced.

According to the estimates of the Department of Agriculture, in the year 1935 only 9 percent of the Michigan cherry crop was of sweet cherries, the bulk of 91 percent being sour cherries. Moreover, it is my understanding that the bulk of the relatively small crop of sweet cherries is sold in the fresh-fruit markets. In 1934 only 6 percent of the crop of your State was reported to be composed of sweet cherries.

Unfortunately, buyers in this and other fields sometimes endeavor to secure more favorable prices by the use of arguments which do not always bear analysis. I sincerely hope that the cherry growers of your State will not allow themselves to be misled during the coming season as to the true significance of the duty reduction.

Sincerely yours,

FRANCIS B. SAYRE,
Assistant Secretary.

On August 7, 1936, after consulting with the cherry growers of Traverse City and verifying the facts, I addressed a letter to the Honorable Francis B. Sayre, a copy of which I ask unanimous consent to insert in the RECORD:

LAKE CITY, MICH., *August 7, 1936.*

Hon. FRANCIS B. SAYRE,
Assistant Secretary of State, Washington, D. C.

MY DEAR MR. SAYRE: Your letter of recent date with respect to the reduction from 9.5 cents and 40 percent ad valorem to 9.5 cents and 20 percent ad valorem in the import duty on maraschino, candied, and other prepared and preserved cherries under the trade agreement with France received. Your letter reads in part as follows:

"With reference to your statement that the duty reduction affecting maraschino and candied cherries under the trade agreement with France constitutes an increase in foreign competition for all cherries in brine, it may be pointed out that maraschino and candied cherries are made of sweet cherries, almost exclusively of the Queen Anne variety, which is grown in commercial quantities on the west coast, but not in the East. East of the Rocky Mountains sour cherries are the dominant variety grown and are produced for kitchen and canning markets. The Michigan cherry industry is, as you doubtless know, mainly engaged in the growing of cherries of the latter variety, whose markets are not competitive with the special kinds of imported cherries on which the duty has been reduced."

This statement is absolutely in error. The Cherry Growers Packing Co. of Traverse City, Mich., alone are packing this year in excess of 28,000 barrels of Montmorency cherries in brine to go to the manufacturing trade for maraschino cherries. There is one other company in Traverse City which is packing 8,000 barrels. Approximately 50,000 barrels of Montmorency cherries are being packed in brine this year for the maraschino trade. Each barrel contains 250 pounds. This means that 9,000,000 pounds of Grand Traverse region cherries are being packed this year for the maraschino-cherry trade and approximately 12,500,000 pounds of New York and Michigan cherries are being packed for that trade this year. Let me remind you that Montmorency cherries are not sweet cherries but are sour cherries; that these 12,500,000 pounds of cherries used for the maraschino trade would otherwise go into the sour canning cherry trade and would add to the surplus, helping to break the price in a year with an average production or a surplus of this product.

This industry grew from nothing in 1929 up to this magnitude in a few short years. The outlook for future development was good until this treaty was signed. I am informed that Italy is now offering in the United States hand-pitted and barreled-in-brine cherries at a price of 5 cents per pound, exclusive of duty, which leaves nothing in it for the grower or the labor used in hand-pitting. The cost for hand-pitting alone is in excess of 5 cents a pound for that type of fruit.

Mr. A. J. Rogers, of Benzonia, Mich., representing the Michigan cherry growers, accompanied me to the fact-finding board of the Tariff Commission a year ago last winter, protesting against taking the tariff off on cherries. All of these facts were presented to that board, including the fact that the sour cherry is being used extensively for the maraschino trade. Now you profess an ignorance of the very facts contained in the records placed there by the representative of the cherry growers, who traveled 750 miles to testify at that hearing. This ignorance on the part of the Department of State is inexcusable. A continuation of this policy will mean ruin for the cherry industry because it can mean just one thing—the throwing of this tremendous amount of Montmorency cherries on the sour-cherry market, creating and increasing a surplus and lowering the price.

The statement was recently made by an official of this State, that "while you can plow under wheat, cotton, or corn, you cannot plow under cherry trees." I wish to again enter my emphatic protest against this action on the part of the State Department, which if continued will ultimately spell ruin for the cherry industry of my State and my district.

Sincerely yours,

ALBERT J. ENGEL.

Despite the fact that Mr. Sayre wrote me within a few days that he would reply to my letter shortly, I did not receive an answer until November 30, 1936, or approximately 20 days after the November election was over. I ask unanimous consent to place that letter in the RECORD.

NOVEMBER 30, 1936.

The Honorable ALBERT J. ENGEL,
Lake City, Mich.

MY DEAR MR. ENGEL: Reference is made to your letter of August 7, 1936, and to the Department's acknowledgment thereof on August 14, relating to the reduction in the import duty on maraschino, candied, and other prepared and preserved cherries under the trade agreement with France.

A very careful study has been made of factors affecting the cherry industry, and the results thereof do not indicate that the domestic industry has been injured by the reduction in the duty on imported cherries from 9.5 cents and 40 percent ad valorem to 9.5 cents and 20 percent ad valorem.

On August 24, 1936, the average price on the New York market for sulphured, hand-pitted, imported cherries of No. 1 quality was 11 cents per pound, duty unpaid, or 22½ cents per pound, duty paid. The average price of No. 2 quality imported cherries was 7½ cents per pound, duty unpaid, or 18½ cents per pound, duty paid. On that date therefore the 20-percent reduction in the ad valorem duty amounted to 2 2 cents per pound on the No. 1 quality imported product and 1.5 cents per pound on the No. 2 quality, or less than 10 percent of the market value of both qualities. Even after the reduction in the duty, a total computed ad valorem duty of 105 percent on No. 1 quality and 147 percent on No. 2 quality was paid on imported cherries.

On the same date, August 24, the average price in the New York market for Michigan and New York sulphured, machine-pitted, sour cherries was about 9 cents per pound, while the sulphured, unpitted cherries sold for about 7 cents per pound. Including the newly reduced duty, therefore, the lowest quality of imported cherries sold for approximately double the price of the domestic sour cherries pitted by machine. Under such conditions, it does not seem possible that imported cherries can compete directly with the Michigan product.

I may also point out that the total imports of cherries from June 15, 1936 (the effective date of the agreement with France),

to the end of August (the latest date for which import data are available), amounted to only 5,329 pounds, valued at $1,045, including 3,720 pounds, valued at $668, which were imported from France. In view of the insignificant character of imports of preserved cherries since June 15, it would not appear that the reduction in the duty has had any effect upon the domestic industry.

I may assure you that your interest in this matter will be borne in mind. When additional and perhaps more significant data regarding imports of cherries become available, I shall write you again on the subject.

Sincerely yours,

FRANCIS B. SAYRE,
Assistant Secretary.

Mr. Speaker, somehow, the State Department has a total lack of understanding of the cherry question. I wish to emphasize again the fact that the cherry growers had sent witnesses down here 800 miles to Washington and 800 miles back, a total of 1,600 miles, to tell Mr. Hull, Mr. Sayre, and the Fact-Finding Board of the Tariff Commission just how maraschino cherries were being made out of sour cherries. The fact that Mr. Sayre, in his letter of July 9, 1936, stated that "maraschino and candied cherries are made of sweet cherries, almost exclusively of the Queen Anne variety" shows that neither nor Mr. Sayre nor Mr. Hull even read, much less took into consideration, the testimony that the cherry growers witnesses traveled 1,600 miles to give.

Regarding his last letter of November 30, 1936. I wish again to call attention to the fact that cherries grow on trees. They do not grow as an annual crop that can be plowed under. It takes time for trees to develop, and the full effect of a tariff reduction on cherries will not be felt until several years after the change has been made, because it takes that long for trees to grow. I wish to repeat what I said on the floor of the House on February 9, 1937:

Let me remind the Secretary of State that many times a comparatively small importation of a product added to a crop in this country is the straw that breaks the camel's back. It breaks the domestic price by adding to a surplus or creating a surplus when there is a normal crop.

I am not particularly opposed to reciprocal-trade agreements, but I am opposed to this method of making these agreements. I am opposed to sacrificing American industry in this way. I am opposed to trading Michigan cherries for southern cotton. It does not take a tariff expert to analyze these facts and come to the conclusion as to what will happen if this policy is persisted in by the Department of State. I maintain, above all, that the cherry growers of my district or any other industry have the right to know whether or not their product is threatened by an agreement before they are asked to come down here blindly to testify or defend themselves, not knowing whether they will be brought into court or not.

National Defense

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

RADIO ADDRESS BY HON. HERBERT HOOVER

Mr. MICHENER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following national-defense address by the Honorable Herbert Hoover over the network of the National Broadcasting Co. on May 27, 1940:

I wish to talk to my countrymen tonight upon national defense. The increasing dangers in the world make it imperative that we be better prepared. But equally the time has come when the American people must insist that adequate organization be set up within the Government which will produce this defense. It must be an organization directed by men of outstanding experience in production management and labor unhampered by partisan politics.

Today we are onlookers at the most tremendous human tragedy of centuries. We are horrified at each gigantic scene. Scene after scene is so great and so terrible that even across 3,000 miles of ocean our people are filled with sympathy, with indigation, with hopes, and with fear. Our people are justly alarmed for our own safety. And some of them are more panicky than the people in Paris and London.

Whatever our feelings of outrage are, now is the time to keep cool. We need cool judgment if we are to make secure our own defense. The President has stated that a flight of hostile planes over Omaha, Des Moines, or New York could take place from enemy air bases in the Western Hempisphere. But before operating from a base in the Western Hemisphere an enemy must first capture that territory. Such an enemy must fortify that base. He must transport thousands of airplanes, hundreds of thousands of troops, thousands of machinists, with shops and vast stores of weapons and materials. And he must get all of that past the American fleet which is twice as strong as the combined fleets of Europe, omitting the British. That is a job that will take time even if it were possible. There is no occasion for panic. There is need for speed.

It can be argued that war makers from overseas have no reason or intention to attack the Western Hemisphere. Reasons can be advanced that this war cannot reach American shores. Whatever the outcome in Europe may be, or whatever the intentions of European war makers may be, that is not the problem I wish to discuss. What America must have is such defenses that no European nation will even think about crossing this 3,000 miles of ocean at all. We must make sure that no such dangerous thoughts will be generated in their minds. We want a sign of "Keep off the grass," with a fierce dog plainly in sight.

I was born and raised in that religious atmosphere which for 300 years has never varied in its extreme devotion to peace. Yet I know that peace comes in the modern world only to those nations which adequately prepared to defend themselves. The European Allies are now paying in blood and disaster for their failure to heed plain warnings. With adequate preparedness they might have escaped attack.

THE CAUSE FOR AMERICAN CONCERN

The anxiety and alarm which in recent days have gripped our people have not been all due to the rise of a new system of government in Europe which does not hesitate to overrun innocent neutrals. It is not all due to the new character of mechanized armies. It is not all due to the barbaric use of these weapons against peaceful people and against women and children. It is also due to alarm and shock over the disclosure of the inadequacy of our preparedness plans and our defense.

The Congress had hugely increased appropriations for national defense steadily for the past 5 years. The expenditures upon the Army and Navy have more than doubled from about five hundred and fifty million in 1934 to over one billion three hundred thousand this year. Now the Chief of Staff tells the Congress that we are not organized to wage modern war; that our arsenals are not equipped to produce the guns we should have; that it will take until June 1942 to obtain the necessary new rifles for our present force; that we are woefully behind in antitank guns, in antiaircraft guns, in coast defense, and in tanks.

Congress was told that we could only put 75,000 men into the field as a mobile force at the present time, and that these would not be fully equipped. Further, that it would take 18 months at least to equip our present Army and Reserves of 450,000 men. We are told we do not ever have sufficient clothing for this Army.

And the Chief of the Air Corps comes before the Congress and says that none of the Army's airplanes can be regarded as modern. Asked how many of our 2,700 military airplanes "can be modernized," the Air Corps Chief replied, "Offhand, I should say a half dozen." And perhaps most disheartening of all was his statement that the whole production of military airplanes, ever under the impulse of Allied orders, is only about 340 per month. And this contrasts with a sudden statement that we need 4,000 per month.

President Roosevelt in his address last evening implied that previous administrations had been derelict in providing national defense. These statements have a partisan flavor. I could challenge the implications of Mr. Roosevelt's figures. For instance, despite the number of ships commissioned or not commissioned, the Statistical Abstract, published by Mr. Roosevelt's administration, shows we had available fighting ships to a total of about 1,100,000 tons when he took office, against about 1,350,000 tons today.

Of far more importance, however, national defense is a relative thing. It is relative to the military menace in the rest of the world. No government has the right to impose unnecessary burdens on all those who toil.

For 14 years after the Great War and up to the end of the last administration the face of the civilized world has kept turned toward peace. All major nations were in agreement limiting their navies, and these agreements were being observed. Germany was limited by the Treaty of Versailles to 100,000 men and not much navy. Agreement to limit land armament among other nations was making progress. Methods for settlement of disputes by peaceful means was becoming stronger. During this time we in the United States spent about $700,000,000 a year on our Army and Navy. President Roosevelt considered the outlook throughout the world for peace and disarmament was so promising that he in 1934 himself reduced this rate of expenditure by about $100,000,000.

The peaceful democratic government of Germany collapsed into dictatorship under Hitler 2 months after Mr. Roosevelt was elected. It was in Mr. Roosevelt's administration that Europe began to rumble with aggression and armament. The German Army grew

to 2,500,000 men. Their navy expanded. Great Britain, France, Russia, and Japan, and all others at once expanded their expenditures 400 percent. The total of 60 nations increased expenditures from four billion in 1932 to seventeen billion in 1938. The suggestion that we should have armed against menaces that had not been born seems overdone.

During this last 5 years we have had warning time and again, publicly and privately. The Congress has increased appropriations year by year since 1934. It even permitted relief funds to be used for defense. We obviously have not gotten preparedness.

Did we wish to engage in criticism we could point out that for years as officers responsible for national defense we had a Secretary of the Navy too ill to attend to his duties. Then he was replaced by a temporary appointment. For 3 years the differences between the Assistant Secretary of War and his superior have been public knowledge. The recommendations of wise men for organization and coordination of industry have been rejected. It all proves the stark need of revolutionary change in method of organization for the future.

What we are interested in now is not recrimination. What we want is to be prepared.

The first step in adequate preparedness must be made right in Washington. Our governmental machinery must be made capable of producing preparedness.

THE NATURE OF THE PROBLEM

In the 10 years prior to 1934, when the face of the world was turned toward peace, our expenditure for munitions and constructions was under one hundred and fifty million a year. Such organization as was necessary to make these purchases and bring about their manufacture could be carried out under the War and Navy Departments. We are confronted with a much larger and more complicated problem. The Congress is just passing an appropriation of three and a third billion, a large part of it to be used to manufacture planes, tanks, guns, and ships. That is a problem of gigantic industrial production. That requires another form of organization if we are not to fail again.

WHAT SORT OF PREPAREDNESS DO WE WANT?

Before that organization is created we must answer the question as to what kind of preparedness we want. My own view is that we need first a strong navy. We need a skeletonized but more flexible army. We need large additions of skilled personnel in our reserves, air pilots, tank drivers, and gunners. And we need equally the organization of our industrial capacity to produce our weapons and supplies. It is in that organization where we are weakest. We do not want 50,000 planes put away in hangars. These planes would be obsolete in a year. I do not suppose that this is the President's proposal. In the face of constantly advancing science and invention it would be folly to have 50,000 airplanes in peacetime. It would require half a million men to look after them and to fly them. It would require more billions of dollars a year to support them.

What we need is organization in Washington capable of bringing about a coordination in American industry that can produce 50,000 airplanes in a year if they were called to do it. If we could demonstrate that we could supply the Army and Navy with 4,000 planes during a single month, that would be ample notice to the world to keep off our grass. Likewise we need an organized capacity to produce tanks and other arms.

We need much larger research to constantly improve these machines.

The test of preparedness is not to be found in words or blueprints. The test is the capacity and the ability of our factories to turn out quickly and effectively—guns, airplanes, tanks, and whatever we require. And the proof to these things lies in an adequate organization in the Government that will permit these things to be produced by industry.

The magnitude of this problem of producing 4,000 airplanes a month contrasts vividly with the present capacity of 340 military planes a month.

WHAT SORT OF INDUSTRIAL ORGANIZATION MUST WE HAVE?

In the last 25 years the governments of the world have been confronted, as never before in history, with the problem of creating governmental organizations capable of making their national preparedness function. During that time it has been my duty to observe and to deal with these organizations on the economic side in a score of governments. I have seen their successes and their failures. During the last war I was constantly in contact with the governmental organizations behind the lines in France and Germany and Great Britain. I saw these organizations emerge from national muddling by politicians. I saw them develop into extremely efficient agencies under the leadership of competent men. At one time I examined these organizations at the request of President Wilson. Later on I sat in our American War Council and participated in organizing this country's industrial resources when we entered the Great War. While in the White House I had part in preparing plans for organization against a time of emergency for defense of our country.

This experience of the whole world leads to certain definite and specific conclusions as to organization of preparedness in industry when governments are under strain.

First and foremost: This is a business requiring expert knowledge of manufacturing, industry, labor, and transportation and agriculture. The lesson of the whole of the last World War and every step in the present war is that the procurement of munitions in any large volume must be separated from the Army and Navy Establishments. It must be done by an organization separate and independent of either Department. It is an industrial job—a manufacturing job, a mass-production job—for management and labor. It requires that thousands of factories be coordinated to do their part.

The profession of our soldiers and sailors is to make war. They are not trained as production and financial executives. And neither are the politicians nor bureaucrats. This is a job for businessmen and labor.

Nor is it a job that can be done any better by political coalitions. This is no question of political unity. It is a question of hard-headed practical business organization in which for the security of the Nation there is no politics at all.

The second lesson learned over and over again out of all these recent years is that such operations cannot be controlled by boards or councils or conferences.

They must be controlled by a singlehanded, trusted, and experienced man. Every nation in Europe in the last war started in to organize industrial production of war materials through boards. And after muddling for months and the sacrifice of the lives of hundreds of thousands of men and the loss of hundreds of millions of dollars every government fighting in that war finally created a munitions department, headed by a single man. When we entered the Great War we failed to profit by that experience. We set up the War Industries Board in an advisory capacity to the Army and Navy. It was supposed to coordinate the activities of those departments with industry. It occupied itself largely with futile debates. We lost precious months by the fuddling of this Board. After these months of muddling we came to a tardy realization that the experience of the nations might be worth while, and we made one man, Mr. Bernard Baruch, responsible. And then the industrial machine began to hum and munitions to arrive.

The efficient production of goods involves the same problems and techniques, whether they are produced for private or public consumption, whether they are for war or for peace.

The whole genius of the American people has demonstrated over 150 years that when we come to executive action, including the office of the President of the United States, we must have single-headed responsibility. It is just as foolish to set up a board to conduct munitions business as it would be to set up a board to conduct the Presidency of the United States.

Centralization of executive responsibility for the production of munitions does not require clothing any man with autocratic powers. This form of organization can and should be based upon organized cooperation. The American people have the highest sense of cooperation of any nation in the world. We proved that in the last war. We shall prove it again if the Government organizes in such a way as to instill confidence in the people.

The third lesson taught by experience is that we must get these vast expenditures of money out of politics—get them out of sectional pressures and out of group pressures. We must get them focused into one place where the whole Nation can look at it and watch the spending. That is the only way we can prevent profiteering. It is the only way we can eliminate waste and assure efficiency. We must not blind ourselves to the sectional pulling and logrolling that goes on in our country. We know too well the use that can be made politically of favors to localities and to individuals in the expenditure of such large sums of money.

It is a sorry thing that the American people have to learn these lessons over and over again every time necessity knocks at our doors.

Therefore what are the essentials of this organization if we want real preparedness? It requires:

1. That a munitions administration be created in Washington.
2. That it should have a single-headed administrator with assistant heads for labor, agriculture, and industry.
3. That administrator should be an industrialist and not a politician.
4. That he should have authority to appoint a nonpartisan advisory board representing the Army, Navy, labor, transportation, manufacturing, and agriculture.
5. That the whole of the purchasing and manufacturing for the Army and Navy from private industry should be done by this administrator. The business of the Army and Navy is to state what they want. It is for the munitions administrator to deliver it.
6. That a research organization should be created to constantly improve these products.
7. That all appropriations for such work should be made to this organization.

This is a form of organization that will get speed and economy. Urgency, speed, and economy are not bureaucratic virtues.

REGENERATION OF OUR NATIONAL STRENGTH

Creation of such organization would be only the first step in meeting the task before us.

Preparedness in a nation is not alone the ability to manufacture arms, or even the number of soldiers or warships or airplanes. It lies in the moral strength and the resolute will of the people. It also lies in economic strength and prosperity of a people. I do not wish to dwell upon the fact that today we have 10,000,000 unemployed; that we have 18,000,000 destitute people on relief; that

one-third of our population is living at subnormal standards; that agriculture is kept afloat only by Government subsidy; that our national strength for defense has been weakened by the huge increase of our national debt and taxes in time of peace.

Business and industry have been palsied with fear, hesitation, and lack of confidence. In consequence our industrial efficiency has even decreased in the last 8 years. That can be proven. A recent census of the machine tools in the United States showed that while only 52 percent were over 10 years old in 1932, there are 70 percent of them over 10 years old today. That means our industrial plant has slipped backward in its vital equipment.

Today our call is for industrial production to defend the Nation. To get that we must have more than efficient Government organization. We must change the attitude of government toward industry. If we are to be prepared for the supreme test of national defense there must be regeneration of the springs of economic life in our people. We must restore confidence and thus employment. We truly need national unity for this most fundamental part of life and national defense.

France is today paying in blood the penalty for a government of similar economic attitudes under the government of Premier Blum.

We have no good reason to be discouraged or fearful. We have the largest resources in the world. We have the greatest mechanical genius. Our men are courageous and our women inspired in fortitude. The whole world knows the capacity of the United States in initiative, in execution, in creation, and performance. Once we convince the world that our capacities are organized no nation will have any desire to establish bases on the Western Hemisphere or make any attack upon us now or any other time.

Human liberty may need take refuge upon this continent. We must efficiently be prepared to defend it as the last hope of the world.

Who Are the Friends of Labor?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

ARTICLE FROM THE NEW YORK HERALD TRIBUNE

Mr. HOFFMAN. Mr. Speaker, all too often a few self-appointed spokesmen describe themselves as the friends of labor and charge all who oppose their ideas with being labor-baiters, enemies of labor.

It might be of interest to those self-appointed egotists, those holier-than-thou critics, some of whom would be highly indignant were they accused of assuming the role of champions of labor for political or financial purposes, to know the result of a recent poll on the question as to which of a certain named group had been helpful to labor.

To that end I here quote an article from the New York Herald Tribune of May 28, 1940:

POLL OF WORKERS CALLS FORD BEST FRIEND OF LABOR—"FORTUNE" SURVEY REPORTS MANUFACTURER LEADS BOTH GREEN AND LEWIS

According to a national poll of organized and unorganized workers, the results of which will appear in the June issue of Fortune magazine, nearly three-quarters of American labor believe that Henry Ford has been more helpful to labor than has John L. Lewis or William Green.

Of those polled, members of the Congress of Industrial Organizations, the American Federation of Labor, of independent unions, and of no unions, 44.6 percent believed that John L. Lewis, president of the C. I. O., was harmful to labor, and 18.2 percent believed that William Green, president of the A. F. of L., was harmful to labor. Only 12.3 percent believed that Henry Ford was harmful to labor.

In answer to the question, "Which of these people do you feel have been on the whole helpful to labor and which harmful?" 73.6 percent believed that Henry Ford was helpful to labor, 49.7 percent believed that William Green was helpful, and only 32.6 percent voted favorably on Mr. Lewis.

The list that followed the question included the names of others prominent in labor questions. Senator ROBERT F. WAGNER, who was voted by 51.8 percent to be helpful to labor, received the second largest favorable vote. However, 42.6 percent of the poll voted "Don't know" on Senator WAGNER.

Earl Browder, secretary of the Communist Party, received the fewest helpful votes, only 4.2 percent.

The isolated vote of members of the C. I. O., which organization has been at war with Henry Ford, showed that 51.5 percent of the members believed Henry Ford helpful to labor.

On the question of which of the two leaders of the labor factions was the more to blame for the present conflict between the C. I. O. and the A. F. of L., 39.4 percent accused Mr. Lewis, 21.6 percent accused both leaders, 11 percent believed Mr. Green more at fault, 3.8 percent believed neither to be at fault, and 24.2 percent voted "Don't know."

Another question in the poll dealt with the attitude of labor on the question of the fairness of employers and revealed that in three particulars the majority of those answering the poll believed that more than half the employers were fair on hours, working conditions, and wages.

In answer to the question, "Do you regard picketing as a good or bad method of protest?" 55.5 percent of the votes rejected picketing.

National Needs

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

RADIO ADDRESS BY HON J. W. DITTER, OF PENNSYLVANIA

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by the Honorable J. W. DITTER, of Pennsylvania, chairman of the National Republican Congressional Committee, over the red network of the National Broadcasting Co., station KYW, Philadelphia, Pa., on Saturday, May 25, 1940.

In my well-considered judgment the address is a masterpiece of statesmanship; that is easy to say yet not difficult to justify, if you read it.

This speech was carefully and logically thought out. It bears evidence of Americanism, rather than partisanship.

It is one of the best and most far-sighted speeches delivered in days, or recently. It deserves and should have the careful consideration of all those who care more for this country than they do for the temporary benefits which may accrue to them by virtue of any partisan political affiliation.

The truth is brought home to all of us in unmistakable terms and in unequivocal language that the situation in which these beloved United States of ours, and that means our country, exists by reason of no fault save that of the derelictions of duty, and the continued unjustified experimentations of the present administration, superinduced by its selfish desire, at our expense, to perpetuate itself. This cannot be successfully contradicted or controverted.

Never before, in my opinion, has the situation been more truthfully portrayed, nor has the attention of the people or of the American public been more directly attracted to the exact situation that obtains than in this eloquent, logical, and sensible address:

Ten days ago the President addressed a joint session of the Congress. It was a dramatic appearance. Nothing was left undone to impress upon the Senate and the House the seriousness of the occasion. Not only the Congress but the country was anxious for assurance as the news of the terrible tragedy in Europe became the more disquieting day by day.

You probably heard the President's message on the air that afternoon, or, you may have heard it as it was rebroadcast several times during the evening. He pictured vividly the dangers that modern methods of warfare entail. Our danger was made very real as a mile-by-mile and hour-by-hour imaginary invasion of the country was outlined. Even the cities most distant from the seacoast were included in the possibilities of an invader's attack. An impression of immediate danger was created, and with that impression there came a doubt of our own safety and security at this time. It has become increasingly evident day by day that the unfortunate impression which the President's address made upon thousands of our people was one of fear that an attack by a foreign aggressor was imminent. I believe, and I think you believe, that this fear must be dispelled if we are to think clearly and plan wisely in the days before us, and that the first duty of

national leadership in times such as these is the compelling challenge to a real courage.

The President has asked for an appropriation of more than a billion dollars to strengthen the defenses of the Nation. With scarcely a dissenting voice that request will be granted. The swift progress of the forces of a dictatorship cannot be ignored. Our defenses must be adequate in the light of present world conditions, and whatever funds are needed must be provided.

A unity of purpose seems assured by the Congress. Partisanship will play no part in the effort to solve the gigantic task with which we are confronted. But the magnitude of the proposals, the far-reaching consequences of their enactment, the ultimate effects on the general welfare of all our people and the forces which they may set in motion, invite the careful examination and the critical analysis which our two-party system of government has always provided. Only as such examination and analysis is encouraged can we hope to avoid the inevitable mistakes of arbitrary decisions.

In his message to the Congress the President asked that we appropriate immediately "a large sum of money to procure essential equipment of all kinds for a larger and thoroughly rounded-out Army, to replace all old Army and Navy equipment with the latest type of equipment, to increase production facilities." The message implied that all this was to be accomplished with the additional funds requested. There was no suggestion that the billion-dollar expenditure was only a beginning. Nor was there any suggestion as to how this preparedness program would be carried out, nor as to how the bill for the undertaking was to be paid.

The appropriation requested by the President will be made. It will finance a start in a broad program of expansion and the modernization of equipment for national defense. It will, however, be only an approach to the problem—not its solution. It seems to me that it is vitally important that the Congress consider factually and calmly the actual condition of our armed power and what changing world conditions now imperatively demand. It should help put into high gear the national industrial machine which during the last 7 years has had so little to encourage its expansion and which is indispensable if an efficient and expeditious development of our defense program is to be secured.

As the President suggested, "The Congress and the Chief Executive constitute a team where the defense of the land is concerned." And I say to you tonight, if that team is to perform, if that team is to play the serious game expected of it, the Congress should not adjourn until it has had the fullest opportunity to inquire into the whole program, to ascertain the purposes and the plans, and to determine the means to be used for the payment of that which will be necessary to give the country a sense of absolute security.

I believe, and I think you believe, that team has a real responsibility today. It has a duty, not only to appropriate the necessary funds for defense, but it has an equally solemn duty to decide upon the means by which those funds are to be secured. The two go hand in hand. They are one problem. To magnify the one and ignore the other is neither convincing nor courageous. Deficits do not make good defenses, and to pile one debt upon another at this time will inevitably mean that the very defenses so sorely needed will be weakened. Appropriations are almost always popular, but a storm of protest usually is aroused—yes, I might say almost a universal protest is aroused when tax measures are presented which are intended to raise the revenue for the appropriations which have been made. But as unpopular as a tax measure may be, I believe it to be the duty of the present administration to introduce legislation of this kind at once.

No sooner had the President completed his message than legislative machinery was set in motion by the majority party to carry out the proposals for expansion and modernization. Hearings got under way in both the Senate and the House of Representatives by the regular committees to provide both the authorization and the appropriations contemplated by the President's proposal. Every expedition was afforded to speed the enactment of the necessary legislation, but up to the present time no proposal whatever has been made by the Democratic majority which would give either the Congress or the country a hint as to how the bill is to be paid.

Nor should it be forgotten that while the President in his message to the Congress on January 3 of this year asked it "to levy additional taxes to meet the emergency spending for national defense," his request apparently has not been pressed, for no action has been taken. If that suggestion was timely last January, as it was, then certainly the enlarged program makes such action imperative at this time. And yet, every indication points to an adjournment of the Congress as a part of the administration's plans without the presentation of any proposal whatever of the methods that are to be taken to finance the new defense program. If the Congress and the President as a team owe a duty, as I believe they do, to make the Nation invulnerable against the attack of any aggressor, that same team, the Congress and the President playing together, owe an immediate duty to study seriously, consider carefully, and enact courageously those measures which will help to make the expanded military machine an effective instrument.

One statement made by the President in his message of a little more than a week ago bears repetition tonight, when he said, "The clear fact is that the American people must recast their thinking about national protection." I believe that to be true—we must recast our thinking about national protection. That protection includes not only the Army and the Navy but the whole economic and industrial life of the Nation. National defense means more than money and men and munitions. No defense can be stronger than the economic foundations which support it or the morale of the people who sustain it.

We must recast the thinking that has found no cause for alarm in the fact that our spending for the last seven years has been far in excess of our receipts; that our national outgo year by year has been greater than our national income; that a philosophy of spending ourselves into prosperity has been advocated by those in charge of our Government; that the warning which has been repeatedly sounded of the dangers of a loose fiscal policy has been ignored, all of which brings us today, in this hour of real need, face to face with the grim reality that profligacy provides little strength in the time of a national emergency.

We must recast the thinking that conceives widespread unemployment to be a necessary and permanent part of our way of life; that insists our industrial machine can no longer turn unless the hand of Government is at the throttle; that fails to recognize the danger of continued tinkering with economic forces; that kills the spirit of adventure by destroying the hope of conquering new frontiers, and that leaves the dynamic energy of men and machines and money standing idle in what should be the thriving market places of the Nation.

We must recast the thinking that has urged a philosophy of scarcity as a solution of our economic ills; that suggests the widespread curtailment of crops as a means of acquiring agricultural wealth; that paralyzes the industrial productive capacity of the Nation by the arbitrary decisions of administrative agencies; that penalizes the right of a man to a reasonable profit for his investments of time and talents and abilities, and that holds the vast resources of our national wealth within the confines of a series of social and economic experiments.

We must recast the thinking that places a premium on paternalism; that urges the benefactions of government as the measure of its effectiveness; that approves bounties as a bartering means for ballots, and that encourages a spirit of dependency among large groups of our people.

Above all else, we must at this time recast the thinking that countenances any encroachment, direct or indirect, on our free institutions; that winks at treason as an essential element of tolerance; that accepts any emergency as an excuse for relaxing established limitations, and that lends its approval to an evasion of constitutional restraints.

The need today is a prompt recasting of much of the thinking that has been indulged in since 1933 and that has formed the basis of national policies during that time. An abrupt about face is needed along many lines. Billions spent for modernizing our machines of war will be wasted unless our thinking is set straight—unless some of the homely virtues are again woven into the fabric of our national life. They are just as essential to our security as weapons of warfare. Without them our rearmament will be in vain. Honesty, thrift, industry must be made a part of the defense plans of the Nation. A unity of purpose must be built on mutual understanding and mutual helpfulness among all our people. It must be bound together by cords of cherished traditions—love of liberty and a will to be free. It must find its life and its inspiration in the great moral forces which from day to day prove our faith in a living God and which challenge our courage to work out the destiny which He has in store for us. To this unity of purpose we Republicans, not as party men but as Americans, pledge our honor and our devotion.

Sunshine Anthracite Coal Co. Case

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1940

OPINION OF THE SUPREME COURT

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the opinion of the Supreme Court of the United States in the case of the Sunshine Anthracite Coal Co., appellant, against Homer M. Adkins as collector of internal revenue for the district of Arkansas.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States. No. 804. October term, 1939. *The Sunshine Anthracite Coal Co., appellant, v. Homer M. Adkins, as collector of internal revenue for the district of Arkansas.* Appeal from the District Court of the United States for the Eastern District of Arkansas. May 20, 1940]

Mr. Justice Douglas delivered the opinion of the Court.

The labor provisions of the Bituminous Coal Conservation Act of 1935 (49 Stat. 991) were held unconstitutional by this Court in *Carter v. Carter Coal Co.* (298 U. S. 238). The Bituminous Coal Act of 1937 (50 Stat. 72) was thereupon enacted. It eliminated those provisions of the earlier act and made other substantive and structural changes.[1] The basic problem here involved is the constitutionality of the 1937 act.

That act provides for the regulation of the sale and distribution of bituminous coal by the National Bituminous Coal Commission[2] with the cooperation of the bituminous-coal industry. Its aim is the stabilization of the industry primarily through price fixing and the elimination of unfair competition. It is provided in section 4 that the coal producers, accepting membership, shall be organized under the Bituminous Coal Code. Some 20 district boards of code members are provided for, which are to operate as an aid to the Commission but subject to its pervasive surveillance and authority. The statute specifies in detail the methods of their organization and operation, the scope of their functions, and the jurisdiction of the Commission over them. The Commission is empowered to fix minimum prices for code members in accordance with stated standards. Under section 4, II (a), each board shall "on its own motion or when directed by the Commission" propose minimum prices pursuant to prescribed statutory standards. These may be approved, disapproved, or modified by the Commission as the basis for the coordination of minimum prices. Somewhat comparable machinery is provided for such coordination of minimum prices "in common consuming market areas upon a fair competitive basis," section 4, II (b), and for establishment of rules and regulations incidental to the sale and distribution of coal by code members, section 4, II (a). The Commission is also given power by section 4, II (c), to establish maximum prices for code members pursuant to standards prescribed therein. The sale, delivery, or offer for sale of coal below the minimum or above the maximum prices established by the Commission is made a violation of the code, section 4, II (e). So are numerous practices, specified in section 4, II (i), as unfair methods of competition. And contracts for the sale of coal at prices below the prescribed minimum or above the maximum are invalid and unenforceable, section 4, II (e). The Commission may, after hearing, revoke the code membership of any coal producer for willful violation of the code or of any regulation made thereunder, section 5 (b).

Section 3 (a) imposes an excise tax of 1 cent per ton of 2,000 pounds upon the sale or other disposition by the producer of bituminous coal produced in the United States.[3] Section 3 (b) imposes an additional 19½-percent tax (based on sale price or in certain cases on fair market value) on sales of bituminous coal by producers "which would be subject to the application of the conditions and provisions of the code provided for in section 4, or of the provisions of section 4–A."[4] Producers who are members of the code are exempt from that tax. As we shall see, the interpretation of section 3 (b) is a subject of controversy. But if, as the Government contends, the 19½-percent tax is applicable to sales by nonmembers, there are strong inducements for joining the code.

Machinery is provided in section 4–A for obtaining exemptions. A producer who believes that any commerce in coal is not, or may not be made, subject to the provisions of section 4 may file an application for exemption with the Commission. Subject to qualifications not material here, the filing of such application "in good faith" exempts the applicant from any "obligation, duty, or liability" imposed by section 4 pending action by the Commission on the application. The Commission shall grant the application or, after notice and opportunity for hearing shall deny or otherwise dispose of it. An applicant aggrieved by such denial or other disposition may obtain a review of the order in the Court of Appeals for the District of Columbia or in the court of appeals in the circuit where he resides or has his principal place of business (sec. 6 (b)). The findings of the Commission as to the facts, if supported by substantial evidence, are conclusive.

Appellant is lessee of coal lands in Arkansas and is engaged in the business of mining and shipping coal. It has not subscribed to or accepted the provisions of the bituminous coal code provided for in section 4 of the act. In August 1937 it filed an application for exemption on the grounds that its coal was not bituminous coal as defined in section 17 (b) of the act.[5] The Commission held a public hearing on that application in October 1937.[6] Appellant appeared, introduced evidence, and was heard on oral argument before the Commission.[7] In August 1938 the Commission handed down an opinion with findings of fact and conclusions of law and entered an order denying appellant's application for exemption on the grounds that its coal was bituminous within the meaning of section 17 (b). Appellant obtained a review of this order in the circuit court of appeals. That court held that the Commission had jurisdiction to determine the status of coal claimed to be exempt, and that the Commission's decision was based on substantial evidence. It accordingly affirmed the order (*Sunshine Anthracite Coal Co.* v. *National Bituminous Coal Commission*, 105 F. (2d) 559). We denied certiorari (308 U. S. 604).

In May 1938, while the above proceeding was pending before the Commission, appellee demanded that appellant pay the taxes, penalties, and interest accruing under section 3 (b) of the act for the period ending February 1938; and filed a notice of tax lien against appellant's property. Thereupon appellant filed its complaint in this suit to enjoin the collection of the tax. A three-judge court was convened, which issued a temporary injunction.[8] Apparently no further action was taken in this case until after the decision of the circuit court of appeals in *Sunshine Anthracite Coal Co.* v. *National Bituminous Coal Commission*, supra, when appellee filed a supplemental answer stating that the decision in that case was res judicata as to the status of appellant's coal under the act and that the district court had no jurisdiction over that subject matter. The court below denied appellant's motion to strike that portion of the answer (31 F. Supp. 125). The case was tried. The court held the act to be constitutional and dismissed the bill on the merits.[9] The case is here on appeal (50 Stat. 752; 28 U. S. C. A., sec. 380 (a)).

I. Appellant argues that it is not subject to the 19½-percent tax imposed by section 3 (b) because that section does not apply to producers who are not members of the code. Its argument rests on the construction of section 3 (b) and section 4. As we have seen, the former places the 19½-percent tax on the sale or other disposition of coal "which would be subject to the application of the conditions and provisions of the code provided for in section 4, or of the provisions of section 4–A." Section 4 provides that the "provisions of such code shall apply only to such code members." Appellant therefore contends that the tax is not applicable to its coal, since the coal produced by a noncode producer such as appellant is not subject to the provisions of the code.

But if the 19½-percent tax is not applicable to noncode members, it is not applicable to anyone, since section 3 (b) exempts code members from that tax. That construction would read the 19½-percent tax out of the act. The essential sanction of the act would then disappear and its effectiveness would be seriously impaired. That alternative will not be taken where a construction is possible which will preserve the vitality of the act and the utility of the language in question. See *Armstrong Paint & Varnish Works* v. *Nu-Enamel Corporation* (305 U. S. 315, 333) and cases cited. Only a highly strained construction of section 3 (b) would lead to the conclusion that noncode members are exempt from the 19½-percent tax. It seems that Congress made a deliberate choice of words when it said that the tax applied to the sale or other disposition of coal which "would be" subject to section 4 and section

---

[1] H. Rept. No. 294, 75th Cong., 1st sess., pp. 2–3.

[2] Though we refer throughout to the Commission, it should be noted that its functions have been administered since July 1, 1939, by the Bituminous Coal Division of the Department of the Interior. Reorganization Plan No. II, sec. 4 (a) and (b), submitted by the President to the Congress May 6, 1939. Public Resolution No. 20, 76th Cong., 1st sess., ch. 193, approved June 7, 1939.

[3] These provisions are now found in sec. 3520 of the Internal Revenue Code (53 Stat. 430). The 1-cent tax was apparently designed to cover the administrative costs of the act. See H. Rept. No. 294, supra, note 1, pp. 2–3, recommending a one-half-percent tax, which in conference was changed to 1 cent per ton. H. Rept. No. 578, 75th Cong., 1st sess., p. 5.

[4] Sec. 4, as we have seen, governs the constitution and operation of the code. Sec. 4–A provides, inter alia, that the Commission shall subject coal in intrastate commerce to the provisions of sec. 4 if it finds after hearing that transactions in that coal "cause any undue or unreasonable advantage, preference, or prejudice as between persons and localities in such commerce on the one hand and interstate coal on the other hand, or any undue, unreasonable, or unjust discrimination against interstate commerce in coal, or in any manner directly affect interstate commerce in coal."

[5] Sec. 17 (b) provides: "The term 'bituminous coal' includes all bituminous, semibituminous, and subbituminous coal and shall exclude lignite, which is defined as a lignitic coal having calorific value in British thermal units of less than 7,600 per pound and having a natural moisture content in place in the mine of 30 percent or more."

[6] This hearing was not restricted to appellant's application. Other producers in the same field intervened.

[7] The liberal notice and opportunity to be heard afforded appellant are illustrated by the following: In January 1938 the report of the examiner was served on appellant. In May 1938 a proposed report of the Commission was issued giving appellant 30 days to file exceptions and briefs and in that event to apply for oral argument. Appellant filed exceptions and asked for oral argument. Notice of oral argument was issued and oral argument was had. Thereafter the Commission issued its order denying the application.

[8] It granted, however, a permanent injunction against collection of taxes prior to December 4, 1939, the date on which this Court denied a petition for rehearing on the petition for certiorari (308 U. S. 638). Appellee has not appealed from that part of the decree. The Court also granted a stay with respect to collection of taxes accruing after December 4, 1939, pending final disposition of this appeal.

4–A. Section 4 is made expressly applicable "only to matters and transactions in or directly affecting interstate commerce in bituminous coal." Hence it seems plain that the tax was intended to apply only to those sales by noncode members which "would be" subject to regulation under section 4. Appellant's coal plainly falls in that class, since practically its entire output is sold to purchasers outside the State of Arkansas. To sustain appellant's position, we would not only have to substitute "is" for "would be"; we would have to override the express congressional plan to make the 19½-percent tax "in aid of the regulation of interstate commerce" in bituminous coal.[9] That would be not only to rewrite section 3 (b) but to remake the whole statutory scheme. Obviously such a task is not for the courts.

II. Appellant challenges the constitutionality of the act on the grounds that the 19½-percent tax is not a tax but a penalty, that Congress lacks the power to fix minimum prices for bituminous coal sold in interstate commerce, that there has been an invalid delegation of legislative and judicial power, and that the division of bituminous coal into code and noncode classes is improper.

Clearly this tax is not designed merely for revenue purposes. In purpose and effect it is primarily a sanction to enforce the regulatory provisions of the act. But that does not mean that the statute is invalid and the tax unenforceable. Congress may impose penalties in aid of the exercise of any of its enumerated powers. The power of taxation granted to Congress by the Constitution may be utilized as a sanction for the exercise of another power which is granted it. (*Head Money Cases*, 112 U. S. 580, 596. And see *Sonzinsky* v. *United States*, 300 U. S. 506.) It is so utilized here.

The regulatory provisions are clearly within the power of Congress under the commerce clause of the Constitution. These provisions are applicable only to sales or transactions in or directly or intimately affecting interstate commerce. The fixing of prices, the proscription of unfair trade practices, the establishment of marketing rules respecting such sales of bituminous coal, constitute regulations within the competence of Congress under the commerce clause. As stated by Mr. Justice Cardozo in his dissent in *Carter* v. *Carter Coal Co.*, supra, p. 326, "To regulate the price for such transactions is to regulate commerce itself, and not alone its antecedent conditions or its ultimate consequences." (See *Tagg Bros. & Moorhead* v. *United States*, 280 U. S. 420.) What is true of prices is true of the attachment of other conditions to the flow of a commodity in interstate channels (*Mulford* v. *Smith*, 307 U. S. 38, and cases cited). Since this power, when it exists, is complete in itself (*Gibbons* v. *Ogden*, 9 Wheat. 1, 196), there can be no question but that the provisions of this act are an exertion of the paramount Federal power over interstate commerce. (See *United States* v. *Rock Royal Cooperative, Inc.*, 307 U. S. 533.)

Nor does the act violate the fifth amendment. Price control is one of the means available to the States (*Nebbia* v. *New York*, 291 U. S. 502) and to the Congress (*United States* v. *Rock Royal Cooperative, Inc.*, supra) in their respective domains (*Baldwin* v. *G. A. F. Seelig, Inc.*, 294 U. S. 511) for the protection and promotion of the welfare of the economy. But appellant claims that this act is not an appropriate exercise of the congressional power. It urges that the nature and use of bituminous coal in nowise endanger the health and morals of the populace; that no question of conservation is involved; that the ills of the industry are attributable to overproduction; that the increase of prices will cause a further loss of markets and add to the afflictions which beset the industry; and that the consuming public will be deprived of the wholesome restriction of the antitrust laws. Those matters, however, relate to questions of policy, to the wisdom of the legislation, and to the appropriateness of the remedy chosen—matters which are not our concern. If we endeavored to appraise them we would be trespassing on the legislative domain. And if we undertook to narrow the scope of Federal intervention in this field, as suggested by appellant, we would be blind to at least 30 years of history. For a generation there have been various manifestations of incessant demand for Federal intervention in the coal industry.[10] The investigations preceding the 1935 and 1937 acts are replete with an exposition of the conditions which have beset that industry.[11] Official [12] and private [13] records give eloquent testimony to the statement of Mr. Justice Cardozo in the Carter case (p. 330) that free competition had been "degraded into anarchy" in the bituminous-coal industry. Overproduction and savage, competitive warfare wasted the industry. Labor and capital alike were the victims. Financial distress among operators and acute poverty among miners prevailed even during periods of general prosperity. This history of the bituminous-coal industry is written in blood as well as in ink.

It was the judgment of Congress that price fixing and the elimination of unfair competitive practices were appropriate methods for prevention of the financial ruin, low wages, poor working conditions, strikes, and disruption of the channels of trade which followed in the wake of the demoralized price structures in this industry. If the strategic character of this industry in our economy and the chaotic conditions which have prevailed in it do not justify legislation, it is difficult to imagine what would. To invalidate this act we would have to deny the existence of power on the part of Congress under the commerce clause to deal directly and specifically with those forces which in its judgment should not be permitted to dislocate an important segment of our economy and to disrupt and burden interstate channels of trade. That step could not be taken without plain disregard to the Constitution. There are limits on the powers of the States to act as respects these interstate industries (*Baldwin* v. *G. A. F. Sellig, Inc.*, supra). If the industry acting on its own had endeavored to stabilize the markets through price-fixing agreements, it would have run afoul of the Sherman Act (*United States* v. *Socony-Vacuum Oil Co., Inc.*, 309 U. S. —). But that does not mean that there is a no-man's land between the State and Federal domains. Certainly what Congress has forbidden by the Sherman Act it can modify. It may do so by placing the machinery of price fixing in the hands of public agencies. It may single out for separate treatment, as it has done on various occasions,[14] a particular industry and thereby remove the penalties of the Sherman Act as respects it. Congress under the commerce clause is not impotent to deal with what it may consider to be dire consequences of laissez-faire. It is not powerless to take steps in mitigation of what in its judgment are abuses of cutthroat competition. And it is not limited in its choice between unrestrained self-regulation on the one hand and rigid prohibitions on the other. The commerce clause empowers it to undertake stabilization of an interstate industry through a process of price fixing which safeguards the public interest by placing price control in the hands of its administrative representative (*United States* v. *Rock Royal Cooperative, Inc.*, supra). That was the choice which Congress made here. There is nothing in the Carter case which stands in the way. The majority of the Court in that case did not pass on the price-fixing features of the earlier act. The Chief Justice and Mr. Justice Cardozo in separate minority opinions expressed the view that the price-fixing features of the earlier act were constitutional. We rest on their conclusions for sustaining the present act.

Nor does the act contain an invalid delegation of legislative power. Under section 4, II (c) the Commission may fix maximum prices when in the public interest it deems it necessary in order to protect the consumer against unreasonably high prices. These maximum prices must be fixed at a uniform increase above minimum prices so that in the aggregate they will yield a reasonable return above the weighted average total cost of the district. And no maximum price shall be established for any mine which will not yield a fair return on the fair value of the property. The minimum prices to be fixed must conform to the following standards: The weighted average cost for each minimum price area must be computed, the elements of cost being defined; a classification of the various sizes and grades of coal shall be made which reflects as nearly as possible the relative market value of the various kinds, qualities, and sizes of coal, which is just and equitable as between producers within the district and which has due regard to the interests of the consuming public; and coordinated minimum prices shall be established for such coal (a) which reflect as nearly as possible, the relative market values at points of delivery taking into account specifically enumerated factors, (b) which preserve, as nearly as may be existing, fair competitive opportunities, (c) which are just and equitable as between the districts, and (d) which, consistently with the process of coordination, yield a return to each area approximating its weighted average cost per ton.

The problem of fixing reasonable prices for bituminous coal cannot be differentiated legally from the task of fixing rates under the Interstate Commerce Act (41 Stat. 484; 49 U. S. C. A., sec. 15) and the Packers and Stockyards Act (42 Stat. 166; 7 U. S. C. A., sec. 211). The latter provide the standard of "just and reasonable" to guide the administrative body in the rate-making process. The validity of that standard (*Tagg Bros. & Moorhead* v. *United States*, supra), the appropriateness of the criterion of the "public interest" in various contexts (*New York Central Securities Corporation* v. *United States*, 287 U. S. 12, 24; *United States* v. *Chemical Foundation, Inc.*, 272 U. S. 1; *Avent* v. *United States*, 266 U. S. 127), the legality of the standard of "unreasonable obstruction" to navigation (*Union Bridge Co.* v. *United States*, 204 U. S. 364) all make it clear that there is a valid delegation of authority in this case. The standards

[9] H. Rept. No. 294, supra, note 1, states concerning this tax (p. 4): "Under subsection (b) a tax of 19½ percent is applied to coal which would be subject to the provisions in section 4 or the provisions of section 4A. Producers who are code members are exempt from this tax. This tax is intended to be in aid of the regulation of interstate commerce in coal provided for in sections 4 and 4A."

which Congress has provided here far exceed in specificity others which have been sustained. Certainly in the hands of experts the criteria which Congress has supplied are wholly adequate for carrying out the general policy and purpose of the act. To require more would be to insist on a degree of exactitude which not only lacks legal necessity but which does not comport with the requirements of the administrative process. Delegation by Congress has long been recognized as necessary in order that the exertion of legislative power does not become a futility (*Currin* v. *Wallace*, 306 U. S. 1, 15, and cases cited). But the effectiveness of both the legislative and administrative processes would become endangered if Congress were under the constitutional compulsion of filling in the details beyond the liberal prescription here. Then the burdens of minutiae would be apt to clog the administration of the law and deprive the agency of that flexibility and dispatch which are its salient virtues. For these reasons we hold that the standards with which Congress has supplied the Commission are plainly valid (*United States* v. *Rock Royal Cooperative, Inc.*, supra).

Nor has Congress delegated its legislative authority to the industry. The members of the code function subordinately to the Commission. It, not the code authorities, determines the prices, and it has authority and surveillance over the activities of these authorities. Since lawmaking is not entrusted to the industry, this statutory scheme is unquestionably valid (*Currin* v. *Wallace*, supra, and cases cited).

But appellant maintains that the delegation of authority to the Commission to determine what coal is subject to the act is unlawful because of uncertainty in the statutory definition of bituminous coal. Section 17 (b) defines the term "bituminous coal" as follows:

"The term 'bituminous coal' includes all bituminous, semibituminous, and subbituminous coal and shall exclude lignite, which is defined as a lignitic coal having calorific value in British thermal units of less than 7,600 per pound and having a natural moisture content in place in the mine of 30 percent or more."

As in the case of the term "interurban" electric railway in the Railway Labor Act (*Shields* v. *Utah Idaho Central Railroad Co.*, 305 U. S. 177), we think the definition of bituminous coal is wholly adequate as a standard for administrative action. The fact that it is not a chemist's or an engineer's definition is not fatal. The definition is not devoid of meaning. We are unable to say that it cannot be applied so as to delineate the areas in which Congress intended to make this system of control effective. The fact that many instances may occur where its application may be difficult is merely to emphasize the nature of the administrative problem and the reason for the grant of latitude by the Congress. The difficulty or impossibility of drawing a statutory line is one of the reasons for supplying merely a statutory guide (Cf. *Piedmont & Northern Railway Co.* v. *Interstate Commerce Commission*, 286 U. S. 299, 312). That guide is sufficiently precise for an intelligent determination of the ultimate questions of fact by experts.

Nor is there an invalid delegation of judicial power. To hold that there was would be to turn back the clock on at least a half century of administrative law. The question of whether or not appellant should be subjected to the regulatory provisions of the Bituminous Coal Act was one which the Congress could decide in the exercise of its powers under the commerce clause. In lieu of making that decision itself, it could bring to its aid the services of an administrative agency. And it could delegate to that agency the determination of the question of fact whether a particular coal producer fell within the act (*Shields* v. *Utah Idaho Central Railroad Co.*, supra, p. 180). The fact that such determination involved an interpretation of the term "bituminous coal" is of no more significance here than was the fact that in the Shields case a decision by the Interstate Commerce Commission of what constituted an "interurban" electric railway was necessary for the ultimate finding as to the applicability of the Railway Labor Act to carriers. That problem involves no more than the adequacy of the standard governing the exercise of the delegated authority. Furthermore, on this phase of the case, appellant has received all the judicial review to which it is entitled. As we have seen, it obtained a review under section 6 (b) of the Commission's denial of its application for exemption. The functions of the courts cease when it is ascertained that the findings of the Commission meet the statutory test (*Rochester Telephone Corporation* v. *United States*, 307 U. S. 125, 146).

Appellant contends that the statutory classification of coal into code and noncode classes and the application of the 19½-percent tax to the latter are improper under the fifth amendment. Its objection is not premised on lack of due process. Nor could it be in view of the elaborate machinery and procedure for the act's enforcement which the Congress has provided. Rather appellant's objection is founded on its claim of discrimination. But the fifth amendment, unlike the fourteenth, has no equal-protection clause (*Steward Machine Co.* v. *Davis*, 301 U. S. 548, 584, and cases cited). And there is "no requirement of uniformity in connection with the commerce power" (*Currin* v. *Wallace*, supra, p. 14). The lack of similarity in treatment of the two classes of coal is an integral and essential feature of this act. As we have said, it is through that device that Congress sought to obtain an effective sanction for the act's enforcement. Coercion is the very essence of any penalty exacted for failure of submission. "It is of the essence of the plenary power conferred" by the commerce clause "that Congress may exercise its discretion in the use of the power" (*Currin* v. *Wallace*, supra, p. 14). A part of that discretion is the selection of the sanction for the law's enforcement. Discrimination constitutionally may be the price of noncompliance. "Inquiry into the hidden motives which may move Congress to exercise a power constitutionally conferred upon it is beyond the competency of courts" (*Sonzinsky* v. *United States*, supra, pp. 513–514; and see *Mulford* v. *Smith*, supra, p. 48).

III. Appellant contends here, as it did below, that Sunhine Anthracite Coal Co. against National Bituminous Coal Commission, supra, is not determinative of the present issues since that case did not involve the assessment of taxes and since the Commission had no authority to determine the status of appellant's coal.

These contentions are untenable. In the first place, the Commissioner of Internal Revenue is merely the agency to collect taxes levied under the act; he is not the administrative agent whom Congress has designated to determine what coal is exempt from the 19½-percent tax. That function is entrusted to the Commission. By the terms of section 4–A it is the Commission which determines whether an application for exemption should be granted or denied. By the provisions of section 3 (b) it is the Commission which certifies to the Commissioner those who are code members and consequently exempt from the 19½-percent tax. Hence the Commission determines the scope of the provisions of the act and their applicability to various producers. The Commissioner is given no administrative functions whatsoever except tax collection. In the second place, the underlying issue in each of these two suits is the same. In *Sunshine Anthracite Coal Co.* v. *National Bituminous Coal Commission*, supra, the question was whether or not appellant's coal was "bituminous" within the meaning of section 17 (b). When that issue was decided adversely to appellant, liability for the 19½-percent tax followed unless appellant joined the code, in which event it would be entitled to a certificate from the Commission evidencing its tax exemption. In the present suit, appellant is seeking to raise the identical issue, since its purpose is to enjoin collection of the selfsame tax.

The result is clear. Where the issues in separate suits are the same, the fact that the parties are not precisely identical is not necessarily fatal. As stated in *Chicago, Rock Island & Pacific Railway Co.* v. *Schendel* (270 U. S. 611, 620), "Identity of parties is not a mere matter of form, but of substance. Parties nominally the same may be, in legal effect, different, * * * and parties nominally different may be, in legal effect, the same." A judgment is res judicata in a second action upon the same claim between the same parties or those in privity with them (*Cromwell* v. *County of Sac*, 94 U. S. 351). There is privity between officers of the same government, so that a judgment in a suit between a party and a representative of the United States is res judicata in relitigation of the same issue between that party and another officer of the Government. See *Tait* v. *Western Maryland Railway Co.* (289 U. S. 620). The crucial point is whether or not in the earlier litigation the representative of the United States had authority to represent its interests in a final adjudication of the issue in controversy. Cf. *Gunter* v. *Atlantic Coast Line Railroad Co.* (200 U. S. 273, 284–289). Cases holding that a judgment in a suit against a collector for unlawful exaction is not a bar to a subsequent suit by or against the Commissioner or the United States (*Sage* v. *United States*, 250 U. S. 33; *Bankers Pocahontas Coal Co.* v. *Burnet*, 287 U. S. 308) are not in point, since the suit against the collector is "personal and its incidents, such as the nature of the defenses open and the allowance of interest, are different" (*Sage* v. *United States*, supra, p. 37).

But here the authority of the Commission is clear. There can be no question that it was authorized to make the determination of the status of appellant's coal under the act. It represented the United States in that determination, and the delegation of that power to the Commission was valid, as we have said. That suit therefore bound the United States as well as the appellant. Where a suit binds the United States, it binds its subordinate officials (*Tait* v. *Western Maryland Railway Co.*, supra). The suggestion that the doctrine of res judicata does not apply unless the court rendering the judgment had jurisdiction of the cause is sufficiently answered by *Stoll* v. *Gottlieb* (305 U. S. 165) and *Treinies* v. *Sunshine Mining Co.* (308 U. S. 66). As held in those cases, in general the principles of res judicata apply to questions of jurisdiction as well as to other matters—whether it be jurisdiction of the subject matter or of the parties. Accordingly the lower court correctly held that it had no jurisdiction to determine whether appellant's coal was "bituminous" as defined in the act. Furthermore, where, as here, Congress has created a special administrative procedure for the determination of the status of persons or companies under a regulatory act and has prescribed a procedure which meets all requirements of due process, that remedy is exclusive. (See *Anniston Manufacturing Co.* v. *Davis*, 301 U. S. 337.)

The decree below subjected appellant to payment of taxes accrued or assessed against it under section 3 (b) after December 4, 1939. To relieve against payment of taxes until final termination of the litigation would be to put a premium on dilatory tactics in a situation where under the authority of *Currin* v. *Wallace*, *Mulford* v. *Smith*, and *United States* v. *Rock Royal Cooperative, Inc.*, supra, the subject of the act was clearly one over which the jurisdiction of Congress was complete.

Affirmed.

Mr. Justice McReynolds is of opinion that the act under review is beyond any power granted to Congress and that the judgment below should be reversed.

Champoeg—Oregon's Shrine to Civil Government

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

HISTORICAL SKETCH AND ADDRESS BY LESLIE M. SCOTT

Mr. ANGELL. Mr. Speaker, Champoeg, situated on the banks of the Willamette River in Oregon, is a place of great historic interest. History records that on May 2, 1843, the Oregon pioneers, in a meeting at Champoeg, voted to create a provisional government and on July 5 subsequently adopted laws and inducted officers into office.

Champoeg should be dedicated and maintained by our Government as a shrine to the establishment of civil government and the ultimate preservation of the Pacific shores to the United States.

Under leave to extend my remarks, I ask that the following short history of Champoeg, written by Mr. Leslie M. Scott, the well-known historian of early Oregon history, together with an address delivered by him July 5, 1937, at Oregon's anniversary at Champoeg, be included in my remarks.

The history and address follow:

CHAMPOEG MEMORANDA—ORGANIZATION OF THE OREGON PROVISIONAL GOVERNMENT IN 1843

(By Leslie M. Scott)

Champoeg was a principal center of travel, trade, and assemblage in 1842–43. The Hudson's Bay Company erected a warehouse there in 1842. It was a river landing, a market, where French Prairie met the Willamette River and connected by boat with Fort Vancouver, and by pack trail leading south. It was also a river crossing for the west-side trail. In the vicinity was an Indian village, and later the French-Canadian Campement du Sable, that is, "camp of sand" or "gravel." A village of white people sprang up there (about 1845), and was swept away by flood (December 7, 1861). French Prairie was the place of the earliest agricultural settlement of the Willamette Valley, named for French-Canadians, the first settlers.

Champoeg is an Indian name meaning "place of the root."[1] The prefix occurs in other names such as Chehalem, Yamhill (Cham-il), Chemeketa, Chemawa.

Champoeg was the scene of the principal and largest meetings of the settlers, in the formation of the Oregon provisional government, on May 2 and July 5, 1843, when the settlers elected officers and adopted laws.

Earlier meetings of settlers, to propose a government, took place elsewhere in 1841,[2] at which sessions the settlers arranged the administration of the Ewing Young estate under a probate judge and elected various inactive officers. The probate followed the laws of New York, but the settlers adopted no laws for the civil and criminal government of the colony. This movement for a government lapsed chiefly on account of the objections of Lt. Charles Wilkes, of the American Navy, then inspecting Oregon for the United States Government, and the apathy and opposition of American and British settlers, and the lack of a code of laws.[3]

At Champoeg a large meeting of settlers took place September 23, 1842, to receive Dr. Elijah White, who came from Washington as an executive officer of the United States, sub-Indian agent, and was greeted with commendatory resolutions of the welcoming population.[4]

The meetings elsewhere than at Champoeg in 1843 were attended by a small number of settlers and were preliminary to the decisive meetings at Champoeg on May 2 and July 5, 1843; at the Methodist Institute near Salem (February 2, 1843); at the house of Joseph Gervais, French Prairie (March 6, 1843), to consider protective measures against predatory animals, first and second "wolf meetings"; at Oregon City (March 17, 1843), organization committee of the second "wolf meeting," "to take into consideration the propriety of taking measures for civil and military protection of this colony," and to issue the call for the Champoeg meeting of May 2, 1843.[5] The main objective was the legalization of land titles.

The provisional government, formed at Champoeg May 2 and July 5, 1843, was the first effective and permanent popular government on the Pacific coast. Several ineffectual efforts to institute government in Oregon had preceded. The laws were taken from the ordinance of 1787 for the Northwest Territory and the statutes of Iowa, and adopted July 5, 1843.[6] Officers were elected May 2 and July 5, 1843.

The official record plainly says that the first vote at Champoeg May 2, 1843, on the question of organization was "no" by a close decision, and that the last vote was "yes" by a "great" majority. Between the first and the last votes on this question there were confusion and long delay, with pullings and haulings and conflict. In this interval Joe Meek called for a divide, says Historian William H. Gray, who was present, and the result was a majority of two in a rival line-up of the factions.[7] Historian Robert Newell, who was also present, does not mention Meek's call, but says the division or line-up showed a majority of five.[8] The final majority, says Recorder Le Breton, who made the motion for the vote, seconded by Gray, was "great." Between the first and the last votes the British Canadians mostly departed. Le Breton's records say that "most of the dissenters withdrew."[9] F. X. Matthieu, who was present, gives the Gray version of two majority.[10]

The influx of American traders, missionaries, and settlers in the decade preceding the Champoeg events of 1843 made rivalry with the British Hudson's Bay Co., which had long monopolized and governed the Oregon country, now known as the Pacific Northwest. The Americans wished the Government of the United States extended over the Oregon country, or a temporary form of government established "until such time as the United States of America extend their jurisdiction over us," as they declared at Champoeg in 1843 in the preamble to the laws then adopted.

The British considered such assumption of political authority an invasion of their rights secured by the existing treaty of joint occupancy between the United States and Great Britain, and viewed with concern and reticent opposition the American political movements.

The proceedings at Champoeg in 1843 echoed this rivalry, and the French-Canadian opposition was a British protest. The controversy ended in 1846 when the United States by treaty gained possession of the Oregon country north to the present British Columbia boundary.

In the 2-month interval between May 2 and July 5, 1843, the movement to create the provisional government gained favor. Many apathetic Methodist missionaries who were absent from the first assemblage, attended the second. Many others who opposed the Government at the first assemblage, raised no objections at the second. The purpose of legalizing land claims drew the several groups together, and the second assemblage, larger than the first, was virtually unanimous in its acts.

The provisional government, enlarged and strengthened in 1844 and 1845, and succeeded in 1849 by a territorial government of the United States, and in 1859 by the State of Oregon, instituted laws and policies which continued into the territorial and State periods of Oregon.

The Oregon country, the Pacific Northwest, was completely in possession and control of the British and their Hudson's Bay Co., fur traders for 21 years, 1813–34; and, partly thereafter for 12 years until 1846. In the 12 years, American missionaries and settlers composed a rival group which had growing numbers and influence, especially in the Willamette Valley, and which finally took the lead in forming the privisional government of 1843.

The territorial claims of the United States began with the discovery of the Columbia River in 1792 by Robert Gray, of Boston, and were strengthened by Lewis and Clark, the explorers, in 1804–06; by the Astor fur traders, in 1811–13, and by American missionaries and settlers after 1834. The British fur traders began their control in 1813, after the failure of the Astor enterprise. British subjects were under the rule of the Hudson's Bay Co., and the laws of Canada; American citizens, while legally free from that authority, were subject to it through the British domination of the Indians and mastery of supplies and trade.

The provisional government, created at Champoeg chiefly by American settlers and dominated by them, took control of Oregon

[1] Cham, "place"; poeg, "root," used for food.

in 1843 south of the Columbia River, and 2 years later, in 1845, north of that river. While some Americans sought to establish United States sovereignty, and their influence made the laws and policies in 1843 unfair to British interests, the later settlers who arrived in 1843–44, made the regime of the provisional government just and tolerant for all classes, and united them all in support of the government; their purpose being, as Jesse Applegate, distinguished American pioneer, said, "to secure peace and order in the country until the United States took it under protection" (letter, October 29, 1865, Oregon Historical Society archives). Again said Applegate:

"Both the Methodist Mission and the Hudson's Bay Co. ceased to be political powers, either to be courted or feared in the colony (1845), and to the close of its existence (1849) the provisional government of Oregon attained all the ends of good government." [11]

A historian of Oregon (R. C. Clark) says of the provisional government:

"It will ever be one of the bright places in Oregon history to find that in spite of antagonism, jealousies, and mutual distrust, a spirit of conciliation and compromise prevailed to bring together all the residents of Oregon Territory, British and American citizens, with the French-Canadians, people of diverse religions and unlike temperaments, into a peaceful union for the purpose of maintaining a government having for its object the protection of life and property." [12]

The scenes at Champoeg May 2 and July 5, 1843, are told by many witnesses and writers of history: F. X. Matthieu, Robert Newell, William H. Gray, George W. Le Breton, Gustavus Hines, who were contemporary with the events; Peter H. Burnett, pioneer of 1843; Lansford W. Hastings, of 1842; and J. Quinn Thornton, of 1846, who were later writers; Mrs. F. F. Victor,[13] Elwood Evans, J. H. Brown, F. V. Holman, M. P. Deady, Harvey W. Scott, C. B. Moores, Charles H. Carey, Dr. R. C. Clark.

The assumption of American control of Oregon, in 1843–45, together with the rapid influx of American settlers in these years and the growing power of the provisional government, contributed to convince the British in 1846, after nearly 30 years of diplomatic delay, that their interests would be best conserved by the immediate adjustment of the Oregon Territory dispute at the forty-ninth parallel. Accordingly, the boundary treaty was negotiated in London in May and June 1846, ratified by the United States June 15, 1846, and by Great Britain July 17, 1846, and proclaimed by President Polk August 5, 1846. In 1845 the Hudson's Bay Co. changed from previous aloofness and opposition to alliance with the provisional government, as Chief Factor John McLoughlin explained in correspondence with his superiors—

"both for the security of the company's property and the peaceable maintenance of its rights. * * * We had to guard against the designs of many desperate and reckless characters * * * the outcasts of society who have sought a refuge in the wilds of Oregon. * * * They were to resort to the acts of skulking incendiary. * * * We had no security for the recovery of our debts." [14]

William Strong, American pioneer of 1850, jurist, Supreme Court of Oregon Territory:

"Oregon owes by far the most of its prosperity and rapid progress to the early formation of the provisional government, the wise laws which were enacted and the inflexible justice with which they were administered." [15]

F. V. Holman, historian:

"This government conducted itself as though it had real sovereignty * * * derived its powers from the consent of the governed * * * was just and fair to all peoples and properties * * * was regarded by Congress as competent." [16]

George H. Williams, pioneer of 1853; jurist, Supreme Court of Oregon Territory, 1855:

"The provisional government was a government de facto * * * and a government de jure. * * * Such a power is inherent in the inhabitants of any country, isolated and separated as Oregon was * * *." [17]

Matthew P. Deady, pioneer of 1849; jurist, United States District Court, Oregon, 1867:

"The people were living under an independent government established by themselves (1843–49). They were an autonomous community in the full sense of the term, engaged in agriculture, trade, commerce * * * made war and concluded peace by their own authority." [18]

Whether the beginnings of the provisional government of 1843 were made in 1838 or 1841; whether the vote in 1843 at Champoeg showed a majority for the government of two or five, or large or great; whether Joseph L. Meek bespoke the American spirit in calling for a count or divide; whether two or six or more French-Canadians voted for the government, are questions secondary to the main issue. That issue is the actual organization, which took place May 2 and July 5, 1843, at Champoeg.

This chain of events shows a train of destiny which probably would have brought about the creation of government after the migrations of 1843, 1844, and 1845 (5,400 Americans). But this probability does not detract from the significance of the events of 1843. The settlers at Champoeg deserve remembrance for their foresight, initiative, courage; their regard for law and the rights of life, liberty, property. The State of Oregon is builded upon the organization of the provisional government effected in 1843 at Champoeg.

Each of the two large assemblages at Champoeg in 1843, May 2 and July 5, was attended by more settlers than before had met together in Oregon; each appears more significant of growing events than any meeting held prior; each fixes historical attention on Champoeg as the apparent birthplace of the Oregon provisional government. If the scene of May 2 be omitted and that of July 5 be studied singly, the latter takes additional importance. Controversies of majority, divide, names, "representation, (which critics raise as to May 2), do not apply to July 5. Properly those controversies seem not relevant to the issue of May 2, when the settlers declared for organization of the provisional government, in rivalry with British-Canadian opponents, elected officers and chose a legislative committee to draft the laws which in the assemblage of July 5 they adopted.

Considered together the two assemblages in 1843, each supplementing and reinforcing the other, present convincing proofs to this observer, and to many others, that the provisional government of Oregon and the sequential Territorial and State governments of Oregon sprang from events of 1843 at Champoeg.

The State of Oregon owns and maintains a park of 106 acres at Champoeg, designated by acts of the legislature as Provisional Government Park. The legislature appropriates funds biennially for maintenance. Public-spirited citizens erected a stone monument there in 1901. An act of the legislature in 1913, appropriating funds for purchase of additional land, cites in the preamble that the meeting of settlers at Champoeg May 2, 1843, was "an event of historical importance, one of the most noted in the annals of pioneer history of Oregon * * * one of the important events which secured to the United States a large extent of territory known as the Oregon Country"; that "this event should be commemorated and held in grateful remembrance by all the people of the State of Oregon." [19]

In 1927 the legislature appropriated $5,000 for a frame building to shelter anniversary meetings from inclement weather, and in the preamble of the act declared: "Through the efforts of the pioneers there assembled, the Oregon country became a part of the United States," and "it is important that this action on the part of our pioneers should be remembered and properly celebrated." [20]

Until the year 1935 the park was administered by the State board of control, consisting of the Governor, secretary of state, and state treasurer; since 1935 the duty has been performed by a special commission of five members, Milton A. Miller, chairman.

OREGON'S ANNIVERSARY AT CHAMPOEG—ADDRESS DELIVERED AT CHAMPOEG, JULY 4, 1937, BY LESLIE M. SCOTT

We are proud to meet here again in this heart of early Oregon; proud of our institutional beginnings which sprang from this spot; proud of our pioneers who here, in 1843, founded the provisional government and called to future generations with these stirring words of the preamble of their laws:

"We, the people of the Oregon Territory, for the purpose of mutual protection, and to secure peace and prosperity among ourselves, agree to adopt the following laws and regulations until such time as the United States of America extend their jurisdiction over us."

Our pioneers voiced these words here at Champoeg on the next day after Independence Day, 94 years ago. Two months before, on May 2, 1843, they voted here to create the provisional government, and here assembled again on July 5 to adopt laws and induct officers into office.

On the previous day, July 4, here at Champoeg they observed the Fourth of July, "glorious in the recollection of every American as the birthday of liberty." We quote the orator of the day, Rev. Gustavus Hines, who next day served as chairman of the convention. His narrative continues:

"Nearly all the Americans in the country and many of the French-Canadians and English assembled to listen to the oration and enjoy a public dinner. The festivities of the day were enjoyed in the true spirit of liberty. As there were no houses to entertain the people during the night, they nearly all camped upon the ground, and the morning of the 5th found them prepared to enter upon the important business that was to come before them, and which resulted

in giving to the Oregonians a tangible form of government" (Hines, Oregon, Its History, 425).

It was the most stirring day that Oregon had ever known.

The records do not tell the number of persons who were then present, but as there were 200 adult American men and 122 adult French-Canadian and English men in the Willamette Valley (authorities vary), it may be fair to estimate those who attended at 200, who were a larger audience than at the May 2 meeting when Joe Meek made the dramatic call: "Who's for a divide? All for the report of the committee and an organization follow me."

It is a latter-day fashion to throw doubts upon the provisional government, as to its time and place of origin and its value, and to wrangle over such inconsequential disputes as the following: Whether the majority vote cast for creation of the government at Champoeg was two votes or five votes or large or great; whether the Canadians who joined the American side numbered 2 or 6 or a larger number; whether some 40 Americans, who were recorded as voting, fitly represented the resident American male adult population; whether Joe Meek called for a divide; whether the provisional government instituted in 1843 with laws was more vital than the ineffectual government set up in 1841 without laws, or than the futile one attempted in 1838; whether the certainty that a strong government would have been instituted in 1844 or 1845 by the later pioneers, reduces the government of 1843 to insignificance.

These questions are inconsequential; the real fact is that the organization of the provisional government took place at Champoeg May 2, and July 5, 1843, after numerous ineffectual attempts made prior.

These questions raise quarrels and wrangles true to the old Oregon habit of factionalism, which long has been the pest of Oregon harmony and progress, and several times lately has defeated projects for the erection of a Federal memorial to the provisional government at Champoeg. Recently these wrangles caused the advisory board of the national parks historical sites committee to say:

"Champoeg has no national significance, and whatever importance is attached to the meeting there in 1843, which gave birth to a provisional government, is merely local."

Authentic history amply attests that the settlers instituted the provisional government here at Champoeg in 1843 at two large mass meetings, which had more members than any previous meetings in Oregon; and that the provisional government for 6 years thereafter was the vital power of law and order in Oregon, and finally merged with the government of Oregon Territory in 1849, and with that of the State of Oregon in 1859, having made a memorable record of security, progress, and prosperity with national as well as local significance, the first effective and permanent popular government on the Pacific Coast.

An ancient fable of Aesop may be in point: A lion and a goat fell to quarreling and fighting as to which of them should first drink at the spring. Ceasing from strife for a moment, they beheld in the sky, hovering over them, a flock of vultures. Whereupon they made up their quarrel, agreeing that it was far better for them to become friends than to furnish food for the vultures.

In 1843–45 the Americans, British, and French-Canadians made up their quarrels and became friends in the provisional government. It would seem that their example and also that of the fable could well be followed by us of the later day.

The settlers at Champoeg deserve our remembrance for their foresight, initiative, courage; their regard for law and for the rights of life, liberty, and property.

Our beloved State of Oregon is builded upon the organization of the provisional government in 1843 at Champoeg.

On this Independence Day we pay honor to the pioneers whose energy and courage led them to this then distant land and inspired them to set up here at Champoeg an independent republic which lives in the State of Oregon, in the hearts of our people, in the spirit of our institutions.

We welcome you all to this Champoeg shrine of Oregon's beginnings.

Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

LETTERS FROM LEWIS J. MURPHY

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters from Lewis J. Murphy, national commander of the Disabled American Veterans:

NATIONAL EXECUTIVE COMMITTEE,
DISABLED AMERICAN VETERANS OF THE WORLD WAR,
Cincinnati, Ohio, May 21, 1940.

To all Members of the United States Senate and House of Representatives.

DEAR SIRS: I am attaching hereto copy of a letter to Gen. Frank T. Hines, Administrator of Veterans' Affairs, and copy of a letter of instruction issued by the undersigned as national commander of the Disabled American Veterans of the World War to our national service department of the D. A. V.

In view of the fact that the enclosures will show that new legislation is necessary to extend the benefits discussed therein to the disabled World War veterans rated under the provisions of the 1925 rating schedule and Public, No. 141, and in view of the fact that we believe these benefits are very timely and necessary, and that proper legislative action should be taken during this session of Congress to provide for them, I deem it expedient to bring this matter to the Members of Congress for your information and guidance.

By way of explanation, a difficulty has materialized in the last few years which amounted to a problem in securing ratings of permanent and total disability for many men with service-connected disabilities. In order that you may better understand the percentage reductions in the service letter of April 2, 1940, the procedure before its issue required that the disabled veteran have one disability standing alone rated at least 60 percent disabling with others combined to make a total rating of 80 percent before the veteran could be rated totally and permanently disabled, and under the system of combining disabilities each succeeding disability had a tendency to cut down the percent of each succeeding disability. If the veteran had just one disability, then it had to be rated at least 70 percent of itself before he could be rated totally and permanently disabled under the rating schedules. A movement was launched to lower these percentage requirements and to take into consideration the advancing age of the World War veteran. Examples of cases were shown where the aggregate combined disabilities would total 150 percent to 175 percent or 200 percent and still a man could not be rated totally and permanently disabled because he had no one disability which first rated at least 60 percent of itself. After representations were made on this matter, the service letter of April 2 reduced these percentage requirements somewhat but not to the level which has been requested. You may compare the reductions by referring to the attached letter of instructions wherein they are contained.

Our problem is to fairly and fully compensate the service-connected disabled veteran for the actual loss which he sustained. Rating schedules are only a means of arriving at that end result, and they must reflect the change of economic and social conditions that has been brought about in the past 20 years with a glutted labor market, advancing age and the fact that age has increased the degree of disability when employment is considered, coupled with the fact that our Government is attempting to guarantee every group of our citizens some measure of social security.

The Disabled American Veterans are enthusiastically in favor of the reduced requirements granted under the service letter of April 2, but the great majority of service-connected cases are rated under Public, No. 141, and the 1925 rating schedule to which the service letter of April 2 does not apply and for which new legislation is required.

I am presenting this matter to the Members of Congress to obtain your favorable support, requesting at the same time your favorable support for the amendment to House bill 8930 which has recently passed the House of Representatives and is now pending in the Senate in order to extend these liberalizing benefits to the service-connected disabled veteran and which are so urgently needed at this time.

Very truly yours,

LEWIS J. MURPHY,
National Commander.

NATIONAL HEADQUARTERS,
DISABLED AMERICAN VETERANS OF THE WORLD WAR,
Cincinnati, Ohio, May 21, 1940.

MR. THOMAS KIRBY,
Director, National Service Department, D. A. V. of W. W., Munsey Building, Washington, D. C.
MR. THOMAS KEHOE,
Assistant Director, National Service Department, D. A. V. of W. W., Munsey Building, Washington, D. C.

Subject: Letter of Instruction.

(Attention: All D. A. V. National Service Officers.)

1. Without reciting the preliminary efforts and events that led up to the release of a service letter signed by Gen. Frank T. Hines on April 2, 1940, on the subject of total disability ratings under Public, No. 2, Seventy-third Congress, and the 1933 rating schedule, it seems necessary to analyze and review the effects of that service letter as it presently stands and applies to the service-connected disabled veterans.

2. Those of us who had sponsored the principles involved now find that the letter of April 2 is not nearly as advantageous from a practical standpoint, as it sounds. It provided in part as follows:

"Total disability ratings under Public, No. 2, Seventy-third Congress, and the 1933 rating schedule may be assigned without regard to the specific provisions of the rating schedule, except as outlined herein, when the disabled person is, in the judgment of the rating agency, unable to secure or follow a substantially gainful occupation as a result of his disabilities: *Provided*, That, if there is only one disability, this disability shall be ratable at 60 percent or more, and that, if there are two or more disabilities, there shall be at least one disability ratable at 40 percent or more, and sufficient additional disability to bring the combined rating to 70 percent or more."

3. I am informed that our field-service officers are confronted with great difficulty right now in explaining to those veterans who are rated under the 1925 rating schedule, in excess of the required percentages, as cut down and reestablished under this service letter of April 2, why they are not entitled to permanent total ratings on the basis of unemployability. Likewise, your commander has been besieged with similar inquiries concerning the nature and extent of that service letter.

4. When this situation came to my attention, I took the matter up with Director Thomas Kirby, and he has advised me that during the recent hearings before the World War Veterans Committee in Congress, that it was definitely acknowledged that the 1925 rating schedule was "frozen" by Public, No. 141, which was passed following the Economy Act, and that the Veterans' Administration now has no power to amend the 1925 schedule, and that it can only be amended by new legislation.

5. The schedule amendments under the new service letter of April 2 applies only to the 1933 rating schedule, and the great majority of all service-connected-compensation cases are drawing benefits under the 1925 schedule and would not be benefited by the reduced requirements now made available by the regulation of April 2.

6. In addition, the language of the service letter of April 2 expressly restricts the application of the age factor to non-service-disability cases and is in part as follows:

"For the purpose of Veterans Regulation 1 (a), part III, only, the above specified 60 percent, 40 percent, and 70 percent percentage requirements may be reduced by 10 percent on the attainment of age 60; and by an additional 10 percent on the attainment of age 65; and there shall be no percentage requirements for total disability ratings in the cases of unemployable veterans who have attained the age of 70. The attainment of age 70 will not of itself warrant rating as permanently and totally disabled; in addition thereto disability sufficient to produce unemployability will be required."

7. The D. A. V. is principally concerned with the service-connected disabled group; all other groups being incidental to any action we might sponsor for the service-connected group. The D. A. V. at the Boston national convention adopted in our legislative program, the principle of age being a factor in increasing service-connected disability compensation. There does not seem to be any sound ground or logical reason why the age factor should not be applied to service-connected disability cases falling under the 1933 schedule for rating purposes, the same as is provided in the service letter of April 2 for non-service-disability cases. In other words, there appears no valid reason why the Government should be more lenient with non-service-connected cases than with service-connected cases. It seems reasonable that age and the age factor is just as applicable to those comrades of ours who secured their disabilities on the front lines or in active service when it affects their employment and renders them totally unemployable. There is no contention that age itself is a disability, but that it is a factor in increasing the degree of disability as it affects the ability to follow a gainful occupation.

8. It is true that the Veterans' Administration, in the service letter of April 2, in concurring in the age factor, has applied it to the nonservice total disability group, intending, as is reported, to spread the benefits over a larger group. The position of the D. A. V. has always been, and must continue to be, that the service-connected disabled veterans be taken care of prior to the granting of any general benefits to those whose disabilities have not been proven to be of service origin, and we cannot agree to the plan of spreading benefits over a larger group of nonservice disability, especially when the principle upon which they propose to base the spread of benefits is entirely applicable to the service-connected group, and this group is omitted and prevented from sharing in such benefits. Therefore, the following analysis and discussion of the principles involved, and recommendations are made concerning the service-connected disabled group.

9. In considering the service letter of April 2, 1940, and reviewing its advantages and disadvantages, it appears there are certain provisions within that letter that require further legislation because of its failure to apply to the service-connected group under Public, No. 141. The service letter states:

"Provided that, if there is only one disability, this disability shall be ratable at 60 percent or more, and that, if there are two or more disabilities, there shall be at least one disability ratable at 40 percent or more, and sufficient additional disability to bring the combined rating to 70 percent or more."

If a large group of service-connected disabled veterans who are now rated under the 1925 rating schedule are not to be discriminated against, the foregoing quoted provision should be placed into statutory enactment.

10. There are disadvantages to the service-connected group under Public, No. 2 which should be eliminated. In the phraseology—

"Total disability ratings, under Public, No. 2, Seventy-third Congress, and the 1933 rating schedule, may be assigned without regard to the specific provisions of the rating schedule, except as outlined herein, when the disabled person is, in the judgment of the rating agency, unable to secure or follow a substantially gainful occupation as a result of his disabilities"—

It appears that the word "may" which is used in the above-quoted portion of the letter is not sufficiently positive in its action and practical application. It is my recommendation that the word be changed to "shall" which leaves no interpretation on the part of any rating agency as to the intent of the language.

11. From the viewpoint of the service-connected disabled veteran, the proviso in numeral paragraph 1 of the said service letter needs correction as the language would bar benefits, apparently intended to be given, in some cases. This proviso reads as follows:

"Total disability ratings, when the above conditions are met, may be granted for deafness, the organic loss of speech, for the amputation or loss of use of either hand or of either lower extremity above the knee (as to these amputations and losses of use, when followed by continuous unemployability after incurrence)."

It is the phraseology within the parentheses that is causing the confusion and the bar to benefits in some cases. For example, if a person had an amputation or a loss of use of extremity during service and has at any time since that date followed a gainful occupation, even though he is unable to follow a gainful occupation at this time, the language contained in the parentheses above would bar him, and we believe this is a distinct discrimination against the service-connected case. Whereas, in contrast, if a person were injured in an accident of any kind subsequent to military service and has now suffered the anatomical loss of the hand or lower extremity above the knee, or has suffered the loss of organic speech or deafness, the language above in parentheses would benefit such non-service-disability cases. Therefore, the provision reacts detrimentally to the best interest of the service-connected cases on the whole. I would recommend the elimination in toto of the wording as contained in the parentheses:

"(As to these amputations and losses of use, when followed by continuous unemployability after incurrence.)"

12. It is observed that the age factor has been carefully considered for the non-service-connected cases only, whereas the age factor as applied to service-connected cases should also receive the same consideration, especially in view of the fact that as the age increases so does the disability increase in ratio to the age. A person over 40 years of age today is seriously handicapped in the entire employment field with being forced to compete with the younger person. If this is true with the able-bodied man over 40 years, then it is more than true with a disabled person over 40 who finds it utterly impossible to compete with a person of sound body and mind in following a gainful occupation. In most every community today, after the lapse of 20 years, the fact that a service-connected disabled veteran has a disability has become to a large extent a public knowledge. To a great extent he has become a marked man, and if he does not already have a job, it is almost impossible for him to secure one because of both his age and known disability. No one wants to hire him—even our own Government. It seems to me that we should not ask private industry or our Government to hire the man who is so disabled by reason of both age and disability that he cannot fully perform the duties that might be expected of him, or that an able-bodied man could better discharge.

That, on the contrary, we should keep in mind the very first principles of disability compensation which was in the beginning and is now, to fully compensate a man for the actual loss which he has sustained and now exists. We know of hundreds of our service-connected compensation cases that today are inadequately compensated, and because they are drawing compensation in some amount, they are thereby barred from receiving any benefits of social security which our Government is now extending to every

other group of American citizens. Surely the service-connected disabled veteran is entitled to be socially secure the same as the non-service-disability veteran, especially when that principle of social security should be superimposed upon the disability which he suffered in the service of his country. Surely the children of the service-connected disabled veteran are entitled to receive an education and the opportunities of life the same as the opportunities afforded those who did not serve their country. This can only be accomplished by the recommendations set forth herein. For this reason, the age factor must be considered from the service-connected point of view, whereas the Veterans' Administration has used this for the purpose of pension only, i. e.:

"Veterans Regulation 1 (a), part III, only, the above-specified 60-percent, 40-percent, and 70-percent percentage requirements may be reduced by 10 percent on the attainment of age 60; and by an additional 10 percent on the attainment of age 65; and there shall be no percentage of requirements for total-disability ratings in the cases of unemployable veterans who have attained the age of 70. The attainment of age 70 will not of itself warrant rating as permanently and totally disabled; in addition thereto disability sufficient to produce unemployability will be required."

13. In view of the above reasons, setting out the viewpoint of the service-connected disabled veteran, the age factor must be brought into the service-connected cases under both Public, Nos. 141 and 142, and the same reductions in percentage disabilities because of the age factor as contained in said service letter, should be made applicable to all service-connected cases. The expense to the Government would be small because of the relatively small number of service-connected cases to which these provisions would apply.

14. In numerical paragraph 4 of said service letter we find the construction of the language is such that it bars from total ratings those cases suffering from psychoneurotic and psychogenic disabilities when they do not have other conditions of organic basis involved either directly or indirectly with their nervous conditions. It is felt that this is distinctly detrimental to that unfortunate class of veterans who are either just or unjustly labeled a mental defective, a psychopathic inferior, or suffering from constitutional psychopathic state with psychotic episodes. We find that many of these cases are unjustly labeled, due to the fact that many of our neuropsychiatrists do not, as General Hines stated during the Boston convention, use "horse sense" in arriving at their diagnosis. They are entirely too prone to label a veteran psychogenic without having delved sufficiently into the history of the case, especially the childhood history, which must show, in accordance with the teachings of neuropsychiatry, a definite retarded mental condition during the formative stages of childhood, and further, in a great number of cases, especially by their failure to delve into the history of war neurosis and the predisposing causes arising out of military service that form the basis of such war neurosis (as authority see Medical Diseases of the War, by Arthur F. Hurst, M. A., M. D., F. R. C. P.). It is conceded that such diagnosis as mental deficiency, inferiority, and psychopathic state cannot be acquired. Therefore, without the early history concerning a mental retarded condition during childhood, as mentioned above, it is not fair to label any person with such diagnosis. We have not considered properly the effect that the war would have had on those cases which may not have been as strong mentally as those enjoying good health mentally at the time of acceptance in service. In other words, this type of case would be more prone to break down than a normal person. We must arrive at the logical conclusion that these unfortunate mental and psychoneurotic cases should be awarded total ratings where it is definitely shown that they cannot obtain gainful employment, and that the functional or constitutional neurosis involved is the material and controlling factor in the case. Again, it is the end result that we are interested in and must be interested in by providing to these unfortunate service-connected disabled veterans some social security to which they are entitled by virtue of their unemployability.

15. For the above and foregoing reasons, it is believed that a specific bill incorporating the advantages of the service letter of April 2 and discarding the disadvantages of that letter should be incorporated into statutory enactment for those cases coming under Public, No. 2, Seventy-third Congress, and Public, No. 141, Seventy-fourth Congress. A proper bill, couched in simple language which would be impossible of misconstruction by those charged with the administration of it in the Veterans' Administration, is attached hereto, which, in my opinion, if enacted into law, would accomplish our purpose.

16. To recapitulate our objections which are fourfold as follows, viz:

1. This service letter fails to apply to Public, No. 141, and the 1925 rating schedule.

2. The age factor is not considered or extended as to the service-connected groups of disabled veterans.

3. It eliminated from application those nerve cases without underlying or superimposing organic disabilities.

4. It fails to permit total ratings for certain cases within the service-connected group who have suffered an anatomical loss or loss of hearing or speech.

17. Further, in view of the foregoing and after careful consideration, I am of the opinion that an emergency has been created and now exists with reference to the legislative and regulatory benefits which the service-connected disabled veterans are entitled to receive by the omissions related above, and that in order to secure the prompt and effective remedies and consideration that are necessary at this time, it becomes the duty of your national commander to act promptly under the authority extended in article 7, section 7, paragraph 2 of our national bylaws, which are as follows:

"The director of national service is director and supervisor of legislation, rehabilitation, and employment, and other service activities of the national organization, subject to the instructions of the national commander, national executive committee, and national convention."

Pursuant to the authority above recited and and as national commander of the Disabled American Veterans of the World War, I hereby instruct, order, and direct Thomas Kirby, director, national service department, and all others under his direction in said department, to forthwith carry out the following instructions:

1. To immediately register with Gen. Frank T. Hines, Administrator of the Veterans' Administration, our disagreement with the provisions of the service letter of April 2, 1940, for failing to make proper provision for the service-connected disabled veteran as herein related before. Further, to present to said Administrator the viewpoint of our organization as the representative of the service-connected disabled veterans that the inequalities created in the said service letter as against the service-connected disabled veterans should and must be corrected at the earliest moment.

2. To prepare and present to the Finance Committee of the United States Senate a bill as mentioned above, of which copy is attached, or a proper amendment to H. R. 8930 now pending before said committee, after having been passed by the House of Representatives, and which would amend said bill by incorporating thereunder the substance of said service letter of April 2, 1940, making it applicable uniformly to both the 1925 rating schedule under Public, No. 141, and the 1933 rating schedule under Public, No. 2, Seventy-third Congress, and being so written as to eliminate the objectional features hereinabove recited.

3. To present such evidence before such Senate committee or House committee as is necessary to establish the case of the service-connected veteran and to call as witnesses before said committee expert field service officers of our own organization from the field, and experts outside of our own organization to testify.

4. That the incorporation of these rating principles and rules into legislation by Congress be given the immediate and primary consideration of the national service department, of the Disabled American Veterans of the World War, and the director thereof shall make due report of his progress and accomplishments to the national commander from time to time which in turn will be referred to the members of the national executive committee by the national commander.

5. The matter of legislation as set forth in these instructions shall be handled by Thomas Kirby, director, and the matter of policy as set forth in these instructions shall be handled by Thomas Kehoe, assistant director, and they shall coordinate their various activities and cooperate to the extent of achieving the objectives set forth in this letter of instructions.

LEWIS J. MURPHY,
National Commander.

A bill to provide liberalized benefits for disabled veterans of the World War and modifications of certain provisions already pertaining to benefits granted under Public, No. 141, and Public, No. 2

Be it enacted, etc., That the provisions of Public, No. 141, and Public, No. 2, and the 1925 and 1933 rating schedules pertaining to these provisions be modified by the following enactments covering the benefits of the World War disabled.

Total disability ratings under Public, No. 141, and Public, No. 2, and both the 1925 and 1933 rating schedules may be assigned without regard to the specific provisions of the rating schedules mentioned when the following requirements have been met:

(a) When the disabled person is shown by evidence unable to follow a substantially gainful occupation as the result of his service-connected disabilities and their complications: *Provided*, That there is one disability which shall be rated, under either the 1925 or 1933 rating schedule at 60 percent or more and that if there are two or more disabilities, there shall be at least one disability ratable at 40 percent or more (under either the 1925 or 1933 rating schedule) and sufficient additional disability to bring the combined rating to 70 percent or more (under either the 1925 or 1933 rating schedule).

(b) Total ratings, when the above conditions are met, shall be granted for deafness, organic loss of speech, for the amputation or loss of use of either hand or of either lower extremity above the knee as single disabilities, or his other organic disabilities.

(c) The above specified 60 percent, 40 percent, and 70 percent requirements shall be reduced by 10 percent on the attainment of the age of 60; and by an additional 10 percent on the attainment of age 65; and there shall be no percentage requirement for total-disability ratings in the case of unemployable veterans who have attained the age of 70. Nothing contained in this paragraph will prevent a total-disability rating for such disability or disabilities, and/or combinations of disabilities, including loss of use of two extremities, loss of sight of both eyes, being helpless or bedridden and other disabilities, as are now, and have been assigned under previous regulations and acts pertaining to Public, No. 141, and Public, No. 2, specific ratings of 100 percent for the severity in question.

When total disability under this paragraph is under consideration, the claimant will be required to submit a sworn statement in affidavit form covering his employment or unemployment over a period of at least 1 year prior to his application for these benefits, or at least 1 year prior to rating action covering benefits if application has not been made.

II. A disabled person of the World War, meeting the regulatory and schedular requirements for a 100 percent rating, is entitled to a total disability rating, regardless of employment. Other cases which do not meet the requirements of this act, or the regulatory and schedular requirements under previous acts and rulings pertaining to Public, No. 141, and/or Public, No. 2, but which, in the opinion of the rating agency of the Veterans' Administration, represent a total disability on the average basis—that is, whose employment represents highly exceptional effort or ability to overcome the handicap of disability—are entitled to consideration on Veterans' Administration R. and P. R. 1142 and should be submitted to the proper authority under the Veterans' Administration for consideration as outlined. All reasonable doubt shall be resolved in favor of the claimant in all matters pertaining to benefits under the World War enactments under Public, No. 141, and Public, No. 2, both as to this act and other acts in the past.

NATIONAL HEADQUARTERS,
DISABLED AMERICAN VETERANS OF THE WORLD WAR,
Cincinnati, Ohio, May 21, 1940.

Gen. FRANK T. HINES,
Administrator of Veterans' Affairs, Washington, D. C.

DEAR GENERAL HINES: I am writing to express to you on behalf of the Disabled American Veterans of the World War objections to certain inequalities that appear to us to exist under the service letter of April 2, 1940, promulgated by you on the subject of total disability ratings under Public, No. 2, Seventy-third Congress, and the 1933 rating schedule.

These inequalities appear to amount to discriminations against those cases with service-connected disability, who by reason of unemployability would be eligible to share in the benefits made available under said service letter as distinguished from those benefits given to beneficiaries with non-service-connected disabilities.

For the sake of brevity and because of lack of time, instead of discussing these objections and their importance directly in this letter, I am attaching hereto a typewritten copy of a letter of instruction which I have issued to the national service department of the Disabled American Veterans of the World War, and which contains an analysis with argument as to why we believe certain inequalities in the service letter should be corrected in order to prevent discrimination against the service-connected disabled group.

I appreciate that for some time past the leaders of some veteran groups have been crying on the shoulders of everybody with a plea for additional benefits to those non-service-connected cases who are totally disabled by reason of unemployability. I fear it is for that reason that in this instance the service-connected disabled veterans have been forgotten. Nevertheless, the fact remains that many men in the service-connected group today are faced with unemployability and principally by reason of his service-connected disability. Many of these service-connected cases have been surveyed out of industry as industrially dead, and in many cases paid off under industrial insurance policies as permanently and totally disabled. They have become marked men in their local communities, and they cannot get even emergency relief for themselves and their families because they draw compensation. They cannot get on W. P. A. in most communities because they draw compensation—but, the compensation which they draw is inadequate to support themselves and their families, and to give their children an education.

For 20 years now, it has been admitted on all sides by the Government and by all veteran groups that the first duty of our Government was to the service-connected disabled veterans.

Therefore, I must register vigorously the opposition of the members of our organization to the inequalities in the service letter of April 2, 1940, which directly discriminates against the service-connected disabled veteran. If unemployability is to be made the basis for extending benefits, then the age factor surely affects the service-connected disabled veteran in like manner as it does the non-service-disability case, and for that reason the question of age should not be confused with the disability having arisen in service. The service-connected disabled veteran is getting older every year also, and under our present economic and social system the age factor is bringing about the unemployability of the service-connected disabled veteran to the same extent and degree as it does the non-service-disability case. The present inadequacy of the rating schedule to cover the case of the service-connected disabled veteran who is unemployable exists to the same extent that it does for the non-service-disability case.

On behalf of the service-connected disabled veterans I request that you reconsider the principles involved in this situation with a view of eliminating the discriminations outlined against the service-connected group in the service letter of April 2, 1940.

Your careful and kind consideration will be appreciated to this request.

Very truly yours,

LEWIS J. MURPHY,
National Commander.

The Ballot—Bulwark Against Concentration of Economic Power

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

TESTIMONY OF SENATOR ELBERT D. THOMAS BEFORE THE HOUSE JUDICIARY SUBCOMMITTEE IN SUPPORT OF ANTI-POLL-TAX BILL, H. R. 7534

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the testimony of Senator ELBERT D. THOMAS in support of the anti-poll-tax bill, H. R. 7534, before the House Judiciary Subcommittee on May 18, 1940. Because of the monopolization of economic power by a relatively small number of individuals, Senator THOMAS said, it is essential that political power be distributed as widely as possible if we are to maintain our republican form of government. Senator THOMAS in his testimony made the very important point that it is within the power of Congress, it is the duty of Congress, to take such steps as will effect the widest possible distribution of political power. One such step is the abolition of the poll tax as a requirement for voting in Federal elections.

The testimony of Senator THOMAS follows:

In these days of world crisis we cannot but watch events abroad and wonder what they mean to the United States. Not only the fact but the principles of democracy are under fire over there.

It is, therefore, vital at this time to talk about poll taxes—more vital today than ever before. The abolition of the poll tax as a prerequisite to voting in Federal elections is essential in the strengthening and defense of democracy in our own land.

THREAT TO DEMOCRACY

With concentration of wealth goes great political power. In order that our republican form of government may continue undiminished it is essential that political power be distributed widely so that the interests of all groups in the population can be adequately represented. To this end the rights of suffrage must be available to all our citizens. In a period when so many of our common needs are met by the Government—when the average man looks to Government for the education of his children, for protection on the job, for security in his old age—more than ever before it is important that this average man should have a voice in selecting those who represent him so that through the democratic process the greatest opportunity and security should be retained by him.

The testimony which you have thus far heard with respect to the poll tax as a requirement for voting in eight Southern States has shown widespread disfranchisement of poor farmers, croppers, industrial workers, women, and Negroes. It has shown the small vote by which Representatives to Congress are elected in these States in comparison with the votes on the basis of which their colleagues from non-poll-tax States hold office. It has shown the "rotten boroughs" within States, which are maintained by vote of the Representatives from such districts.

VOTING IS PART OF THE AMERICAN WAY OF LIFE

The United States did not start its career with universal suffrage, even manhood suffrage. Only the frontier State of Vermont, among the Thirteen Original States, had no property qualifications for voting. It was the common presumption that only those who had enough stability and enough stake in the community to be property holders merited the vote.

In the 150 years since the Constitution was adopted, two things have happened to change the situation. The principles of political democracy have become part of the American way of life and at the same time concentrated economic power has challenged the effectiveness of democratic methods.

In 1800, when he was a candidate for the Presidency, Thomas Jefferson declared himself in favor of a general suffrage. His stated reasons were the same as those which prompt this bill. "I believe," he wrote, "we may lessen the danger of buying and selling votes by making the number of voters too great for any means of purchase." Faith in the good sense and integrity of the common man, upon which political democracy must rest, grew under the leadership of Jefferson and his followers and of Andrew Jackson and his, and was reflected in the revision one by one of the old State constitutions and the substitution of manhood for restricted suffrage. By the end of the 1830's only

a few remnants of restriction on manhood suffrage remained—apart, of course, from the slave population—but it took nearly 100 years more for women to be included within the concept of responsible democracy. The poll tax, however, introduced as a substitute for property qualifications in order to broaden the franchise, hung on in several States, and was available to be used as a means of again restricting the vote when certain forces gained the upper hand in the new South. Although the specific poll-tax legislation now under fire came in only at the turn of this century and is a southern institution, the issue is far older and more widespread in our national life. The southern State of North Carolina abolished its poll tax as a voting requirement more than a decade before the northern State of Pennsylvania. The present fight against the poll tax is a southern fight only because these are the last States where this particular obstacle seriously limits suffrage. The effort today to extend the right to participate politically is less an effort in a single section to regain lost liberties than it is a part of the continuing national effort, of which the original Constitution was one step, to secure effective democracy on this continent.

BALLOT INCREASINGLY IMPORTANT

At the time that the Constitution was adopted, the ballot was less of a necessity than it is today. For most people, voting had little to do with the important things which preoccupied them—with the daily business of earning a living. In a country of small farmers, small traders, and small artisans, individuals enjoyed basic freedoms which they could largely protect without using the Government. The population was small and the country vast. There was employment and educational and religious opportunity for all. The result was a Nation with great physical and spiritual energy.

But now our people have increased in number and spread over the entire continent. The physical resources have many more demands on them. Jobs are scarce and there is no free land to take up. On the farms, tired soil and tired men are backed up because our economy does not use them. Our people are beginning to know what it means to live with despair day in and day out, year after year, as a result of the flowing into the hands of a relatively few persons the ownership and control of our means of making a living.

In eight States the poll tax serves to limit the right of the ballot to those few who can afford to pay for it. Ironically, these are the poorest States in the Union. Clearly where the cash income of the average family is only a few hundred dollars a year, many hundreds of thousands of citizens find themselves denied this basic right, under our republican form of government, of voting for those who are to represent them.

ECONOMIC CONTROL IS CONCENTRATED

The need for effective democracy is far greater today than it was 150 years ago. The growth of concentrated power in the economic sphere has greatly enhanced the importance of widespread suffrage and a truly democratic political regime.

The giant corporation has come to dominate an increasing proportion of our national economic life. The Temporary National Economic Committee reports that 1 percent of the corporations today own 52 percent of the assets of all corporations. Of all corporations, less than 5 percent own 87 percent of all the assets of all of them.

Nor is it true that the common people share in the profits of these large-scale enterprises. In 1929, a year of prosperity, three-tenths of 1 percent of the population got 78 percent of the dividends. This is the same as one person getting 78 cents of the dividend dollar while 299 persons must share the remaining 22 cents among them.

The effect of the concentration of wealth is further reflected in the distribution of national income. The National Resources Committee showed that in 1935–36, 47 percent of all American families and single individuals living alone had incomes of less than $1,000 for the year; and at the other end of the ladder a little less than 1½ percent of the Nation's families received incomes which in dollars and cents was the equivalent of the total income of the 47 percent at the bottom.

In 1939 one large insurance company, owning 7,000 farm, worth about $78,000,000, was the biggest farmer in the United States, and received the largest A. A. A. check—over $257,000. And in that same year the number of farmers who were operating as tenants was put at 42 percent of all farmers.

Secretary of Agriculture Wallace is continually pointing out that a dangerously large percentage of the Nation's farm people are forced to live far below the decency level. Their numbers are increasing daily. Mr. Wallace recently estimated that there are about 8,500,000 farm persons trying to struggle along on an average income of about $2 each week.

All this exists while the family of a single large manufacturer was able to contribute $65,000 to the campaign fund of a certain political party in 1936.

No clearer statement of the implications of this wide variation in economic power can be made than that stated by President Roosevelt in 1936: "The first truth is that the liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself."

STATESMANSHIP NEEDED

Three generations ago Daniel Webster said: "The freest government, if it could exist, would not be long acceptable if the tendency of the laws were to create a rapid accumulation of property in a few hands and to render the great mass of population dependent and penniless. In such a case the popular power must break in upon the rights of property or else the influence of property must limit and control the exercise of popular power."

He prophesied that in such a situation statesmanship would be really tested. And it is being tested—our statesmanship, gentlemen, here and now.

DISTRIBUTION OF POLITICAL POWER ESSENTIAL TO DEMOCRACY

It is history today that the industrial revolution has brought with it the accumulation of ownership and the monopolization of economic power by a relatively small number of individuals. An oligarchy might well become the expression of such a group in the field of government.

In view of this situation, the time has now come when the widest possible distribution of political power is essential to the maintenance of a republican form of government. It is now necessary that our Government be thoroughly democratic if its republican form is to be maintained.

Since the Constitution of the United States grants to the Congress all power to enact legislation necessary to maintain a republican form of government in each of the States, it is within the power of Congress, and it is a duty of Congress, to take such steps as will effect the widest possible distribution of political power. One such step is the abolition of the poll tax as a requirement for voting in Federal elections. This is a minimum necessity.

The Challenge

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

RADIO ADDRESS BY HENRY R. LUCE

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Mr. Henry R. Luce over WJZ and a coast-to-coast network on May 22, 1940:

After 30 days in Europe—in Italy, France, England, Holland, Belgium—I returned by clipper Monday. In those days came the conquest of Norway, one of the most brilliant campaigns in the history of war, followed by a cabinet crisis in London as spectacular as any in the three centuries of the English Parliament. Holland, a country famous throughout the world for being honest, solvent, peace-loving, and superneutral, was partly destroyed and wholly conquered in less than 100 hours. Hundreds of good Dutch burghers, men, women, and children, whom I passed on the crowded streets of Amsterdam less than 2 weeks ago, are dead today. Belgium, with an army three times as big as the Army of the United States and whose defenses were considered infinitely stronger than in 1914, was overrun in 10 days. And as I left Europe the people of America were already seeing the specter of the subjugation of Great Britain and France by Adolf Hitler.

I have not been invited by N. B. C., however, to give you one more version of events concerning which you are already well informed. But I am grateful for this opportunity to talk to you as one citizen to another. I speak out of a profound conviction that our America is now confronted by a greater challenge to its survival as a land of liberty than any it has had to face in 80 years.

When I sailed for Europe the American people were not willing to face the challenge. I believe they are willing to face it now.

What precisely is this challenge? The fundamental truth is very simple. Let us not be distracted by if's and but's. The truth, fully attested by every competent observer of world events I know, is simply this: That the American way of life is bitterly opposed by mighty and ruthless military nations. And the fundamental truth is, further, that nothing will stop those mighty and ruthless military nations—not money nor cajolery nor friendship—nothing but superior force.

The events of the last few weeks have shocked the American people. But these events were not things which happened by accident. They were not events like earthquake or famine or plague or fire. These were acts of men—long and carefully planned. They were planned with cunning and efficiency and implacable purpose. The grim outline of these events had been foreseen—and still the force and fury of their actual occurrence were indeed stupefying. These events were an inevitable climax of the history of the last few years. But they are only one climax. Greater climaxes, of good or evil, are yet to come, and soon. The final defeat of Great Britain and France would be another climax the immensity of which even now defies the imagination. Hoping with all my heart that this catastrophe may not occur, I cannot believe it will. But if Great Britain and France fall, we know that we and we only among the great

powers are left to defend the democratic faith throughout the world. And if Great Britain and France succeed by a miracle of heroism in beating off the enemy, we know that Great Britain and France, weakened with loss of blood and treasure, will need our ungrudging cooperation in order to restore in half the world a peace of justice and humanity. We may never fight side by side, comrades in arms of France and Britain, but we know now that, fundamentally, their struggle is our struggle.

The frame of mind of the American people has changed amazingly in the last few weeks. I am amazed to find an attitude almost amounting to one of intense alarm. Now if the alarm is like the alarm on an alarm clock, reminding us what time of day is it, then that's fine. But there is no occasion for the kind of alarm that gives way to panic.

What is the actual situation? The actual situation is this. Certain stupefying events have happened in Europe. And we realize we have to take action. What we have to do I would summarize under two heads. First we have to arm ourselves. We have to prepare ourselves to meet force with force—to meet force with superior force. That is a colossal job. The second thing we have to do is to make up our minds what we are willing to fight for. That for us as for all free peoples is an even harder job.

The job of arming America physically is a job which we all agree cannot be delayed—to which I would add the following points:

First, armaments are expensive—the most terribly expensive things in the world. They are a sheer and appalling economic waste. That means that all of us are going to be a lot poorer than we otherwise might have been. But we will not cry about that. Along with all other democracies, we will take our full share of the blame for not having done our share toward creating a better world and for not having erected stronger bulwarks against monstrous aggression.

Secondly, the arming of America must in itself be the first practical test of our ability to act as a united people. For many years we have been anything but a united people. We have been a very expensively divided nation. The arming of America must be our first great act of national unity.

Thirdly, the arming of America must get fully under way now, under the leadership of our President. Franklin Roosevelt is in many respects a very great leader. But he has his faults. Who hasn't? There are two faults—two of the defects of his virtues perhaps—which we want him to guard against now. One fault is his tolerance of incompetent people. A very nice fault—but one we cannot afford just now. The other fault is his intolerance of extremely able people who don't happen to agree with him. We all know that during the last few years Franklin Roosevelt hasn't got on at all well with most of our ablest industrialists. It may have been their fault or it may have been his. Never mind. Today we need the services of the ablest industrialists in America for the most efficient arming of America.

There is no need for a coalition government. But the job of arming America must be removed from politics and should be handled by the nonpartisan military services and by a really nonpartisan War Industries Board, under the leadership of our President, and with broad grants of power and money from Congress.

Fourthly, let us constantly remember that appropriations are not armaments. Adolf Hitler is not afraid of big dollar signs in the newspapers. Hitler will only be afraid of actual airplanes, actual tanks, actual guns, and actual pilots and actual gunners. Hitler knows right now just how many actual airplanes, tanks, guns, pilots, and gunners we have—and he'll keep on knowing every step of the way. During some possible lull in the European scene you may lose interest in the arming of America, but Hitler won't. The price of military domination is eternal vigilance—and it is also the price of liberty.

Finally, let us face frankly the handicaps of democracies in their inevitable contests with autocracies. Autocracies foster above all else the will to fight, even the love of fighting—what is called the martial spirit. And, except on rare occasions, democracies just do not foster the will to fight. That is a very great military handicap. Billions and billions of dollars' worth of airplanes and tanks and guns aren't worth the trouble of dumping them into the sea, unless—unless there are men who have the will and the courage and the daring to use them. For many young men and women, who have grown up in a period of great revulsion against war, this is a very unpleasant truth. I am afraid it is the truth, nevertheless. For 7 long years Hitler and all his storm-trooping henchmen have been sneering at us democrats because, they say, we are soft and effeminate and self-indulgent and greedy for comfort and pleasure. There is, I fear, only too much truth in that sneering indictment.

But, of course, democracies have fought wars and they have won wars—otherwise they wouldn't exist today in this very imperfect world. Good democrats, good peace-loving democrats, have fought with supreme courage and skill. For what do they fight?

This question brings us to the second thing which we, the American people, have to do. We have to make up our minds what we are willing to fight for.

Our Government has the constitutional duty of deciding exactly where and when and how the United States shall fight. But our Government cannot and will not decide what we, the people, are willing to fight for. Only when our Government knows what we, the people, are willing to fight for—only then can our Government face the world with an intelligent and resolute policy.

In the end the great decision has to be made in the heart and in the private conscience of each and every American citizen. It is a responsibility which is personally yours and personally mine. You cannot escape it. I cannot escape it. It is the greatest responsibility which will ever come to us as citizens of the America we love. I have made my decision as to what I am prepared to fight for with everything I have and am, and as one citizen to another I will tell you as best I can how I have decided.

In doing so I should like to feel that I am talking to Americans who deeply love their country. There are millions of Americans who would give up their lives in battle for America. I hope they will never be put to that test of ultimate devotion. There are millions of Americans who will gladly give up their fortunes and all their prospects of personal success whenever that sacrifice is needed for the survival of American democracy. I hope America will not become an impoverished nation, but only those who are quite calmly willing to face privation—only they can dare to face the challenge which confronts us now.

And to all these I give as my personal answer that what I am willing to fight for is, of course, America, but not America as a geologic mass, not for its mountains and plains and rivers, greatly though I love them and much though they have concerned me. The America I want to fight for is the America you too love best, the America of freedom and justice, the America which has stood throughout the world for the hope of progress in the democratic way of life and for faith in the ultimate brotherhood of man. America belongs to us, the lucky 130,000,000 people who are living here today. But America does not belong entirely to us. A little of America belongs to every man and woman everywhere who has had faith in democracy and hope in a world of peace and justice. We, the living, who control the destiny of America today, are the heirs of a great inheritance from men who lived and from men who died to make men free. What they meant by America is what I would wish to mean by America. And for that America I am willing to fight. And I am the more willing to fight because if I know anything I know that that America, the America we love, has small chance of surviving the tyranny and chaos which everywhere advances unless those who love America make it plain that they are willing and ready to fight.

If something like this is the answer which will be given in the coming weeks and months by the American people, then I for one am completely willing to trust our leaders, whoever they may be at any time, in the White House, in the State Department, and in Congress to decide exactly where and when and how the American people shall take their stand at Armageddon.

Proposed Study of Ways and Means To Reduce Governmental Costs and Increase Revenues

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

Mr. SMITH of Ohio. Mr. Speaker, I am introducing a resolution which seeks to meet the urgent financial needs of our Nation. It is self-explanatory. The times demand that we take a forthright stand and face squarely the critical situation that confronts us. Only by doing so can we hope to achieve our pressing needs.

The resolution follows:

Concurrent resolution providing for a study by the Committee on Ways and Means of the House of Representatives and the Committee on Finance of the Senate to determine ways and means to put our financial house in order and to meet adequate national defense costs

Whereas our country faces a grave situation in that world conditions are such as to require substantial improvement of our national defense; and

Whereas our internal economy is in an unhealthy condition; and

Whereas our monetary and financial structure is also seriously diseased; and

Whereas appropriations are now exceeding the legal debt limit of $45,000,000,000; and

Whereas healthy economy, sound money, and finances are basic to the needed improvement in our defense arm; and

Whereas these conditions make it imperative that drastic economies in Government cost be promptly instituted and additional taxes levied to meet the added defense cost; in short, that our financial house be put in order; and

Whereas this demands a willingness on the part of every American citizen to sacrifice sufficiently to fully meet the situation that confronts us; and

Whereas the full confidence of the people in the Government is necessary to cause them to be willing to make this sacrifice; and

Whereas that confidence will not be forthcoming unless the Government itself is disposed to lead the way: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That the Committee on Ways and Means of the House of Representatives and the Committee on Finance of the Senate jointly are hereby authorized and directed to study methods and provide ways and means to—

First, abolish all Government expenditures and all political jobs that are not vital to the life of our Nation, and reduce Government salaries commensurate with the sacrifice demanded of the people in general; and

Second, levy sufficient taxes to bring the Budget in complete balance within the next year or two; and be it further

Resolved, That said committees shall report this recommendation to their respective Houses before adjournment of the present session, accompanied by proper legislation to effectuate the same.

Roosevelt Criticized for Defense Blunders

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ARTICLE BY DAVID LAWRENCE

Mr. THILL. Mr. Speaker, the following news article by David Lawrence criticizes President Roosevelt for defense blunders. Where was our "ear-to-the-cables" President when Germany was rearming? Why did not he give some of his knowledge—if he had it—of Germany's advances in armaments to the people of this country? Did someone hear Roosevelt say he would keep the Congress and the country informed of serious developments?

Is it fair for Roosevelt to say to the country in his so-called fireside chat that we have on hand and on order 1,700 tanks, when, as a matter of fact, there are only 10 light tanks and 18 medium-sized tanks on hand? Anything on order or in the blueprint stage cannot be used in the battlefields. The President grouped combat cars and tanks together. This, too, is deceptive, because combat cars are transportation vehicles and only slightly armored, while tanks are actually heavily armored offensive weapons.

Some of the American people are beginning to think the defense crisis originates in the White House.

SITUATION IN UNITED STATES HELD CRITICAL—ADMINISTRATION IS CASTIGATED FOR DEFENSE BLUNDERS

(By David Lawrence)

The "home front"—namely, the situation in the United States—is more critical than the average man knows. Mistakes and blunders of immediate consequence to America's national security are being made. Weeks or months hence, when it is too late to remedy them, alibis will be heard and scapegoats created.

Outside of Washington is a Nation ready to cooperate. The rank and file of labor is loyal, unselfish, eager to aid national defense. The rank and file of business and industry is in the same mood.

The big battle in Washington today is not whether America can be saved, but whether the New Deal can be saved. This is but a realistic way to describe the contest between the members of the administration who want to retain control over every phase of defense preparations and the businessmen of the country, mostly anti-New Deal, who want to see reforms sidetracked wherever the national defense requires it.

In between are the Army and Navy. Under the rules of military discipline, these officers are muzzled.

SENSE OF SECURITY PROPAGANDA

Efforts to get at the truth through congressional investigation are choked off by the New Deal majorities in both Houses of Congress. The whole machinery of Government propaganda is turned on to give the people a sense of security when there is no security.

What are the facts about America's defenses? We have a pitifully small air defense, hardly any antiaircraft guns, hardly any tanks, a small standing Army, and a Navy that is too little for the job that may have to be done to defend America in the next 18 months.

Almost the entire American fleet is at present in the Pacific Ocean. There it will remain frozen in and around Hawaii, watching for a Japanese "blitzkrieg" in the Pacific aimed at the Dutch East Indies or the Philippines or even Hawaii. Certainly the fleet cannot get back into the Atlantic quickly if the Panama Canal isn't defended. Our defenses in the Canal Zone area are inadequate.

The Nazis have strong "fifth column" units in Brazil and the northern part of South America. If Italy enters the war, it means Portugal and Spain will be enveloped within Nazi rule and then the Cape Verde Islands—nearest to South America—will be a short hop for Italian air forces. Northern coasts of South America have bases which the United States cannot now defend without more aircraft and a more aggressive policy.

THE BRITISH FLEET

If England should be invaded and defeated, the most important piece of defense strategy the United States could effect would be to keep the British fleet afloat. Presumably the British fleet would become part of the Canadian Government.

In the face of this gloomy future, what is the policy of the United States? The militarists in Japan are working hand in glove with the Nazis. There is a substantial element in Japan which would welcome a friendly working arrangement with the United States. Peace in China can be brought about by American diplomacy. It is an essential part of our defense strategy. Friendship with Japan would release America's fleet for use in the Atlantic. Battleships cannot be built overnight.

The biggest requirement, however, on the home front is to get faster production for aircraft and mechanized weapons. This is a job for industry and labor. It can be accomplished only if the class warfare engendered by New Deal reform laws is stopped at once. The President can stop it. But he cannot be effective until he restores fair play inside his own administration.

EXAMPLE CITED

This very week, under orders from the White House, the administration leaders in Congress are working tooth and nail to prevent the ousting of Labor Board members already demonstrated to be unfit to hold public office.

The President's latest "coordinating" plan whereby experts from business, communications, finance, etc., are being brought to Washington is, therefore, doomed to failure for a simple reason. It's because business and industry know the scheme is mere window dressing. It is a dramatic effort to cover up the real crisis, but the real reason why "coordination" will not work is because the coordinators will have no authority or power. The White House has already announced that these outsiders will be merely "advisers." They will be able to issue no orders. They will have no authority to decide things.

Precisely such a plan known as the Council of National Defense was under way in the early part of the Wilson administration's experience after the World War began. It was a tragic failure because the advisers had to try to teach Cabinet officers the rudiments of industrial production. The new scheme will fail much quicker this time because the present Cabinet is incompetent and it is through the present Cabinet that the war machine is supposed to function.

Either American businessmen can be trusted to decide what ought to be done to accelerate production or they ought to be brushed aside and the new dealers put in charge of factories and management.

President Roosevelt may be thinking that he cannot be reelected if he puts industry in the saddle insofar as war preparations are concerned, if he listens to the earnest pleas of high Navy and Army officers for relaxation of certain laws that hamstring industry today. But the President would stand a far better chance of reelection if he renounced ambition and did not concern himself with political maneuvers. And until politics is swept from the Washington scene and the fresh air of genuine patriotism begins to guide decisions, America will drift along while her Government fiddles in the midst of the biggest challenge democracy has ever faced, involving the biggest potential threat that has ever come to the United States of America. When will the people wake up to the crisis in Washington?

Air Mail Pick-Up Service

EXTENSION OF REMARKS

OF

HON. ANDREW EDMISTON

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ADDRESS BY HON. ANDREW EDMISTON, OF WEST VIRGINIA

Mr. EDMISTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by me yesterday:

The purpose of this meeting is to discuss informally the future of the air mail pick-up service.

For the past year, as you know, the Post Office Department has been conducting this service under an experimental basis through West Virginia, Pennsylvania, Delaware, and Ohio. Several of the towns in my district were on the West Virginia route which extended between Pittsburgh and Huntington, W. Va. This route covered 30 communities in southern Pennsylvania, West Virginia, and the southwestern part of Ohio. A second route which extended between Pittsburgh and Philadelphia covered 31 communities in Pennsylvania and 1 in Delaware.

Service on the West Virginia route was terminated on May 11 and on the Pennsylvania route on May 13 due to the expiration of the air-mail contract held by the operating company which was the All-American Aviation of Delaware.

Last December this company filed with the Civil Aeronautics Authority, pursuant to the Civil Aeronautics Act, an application for a certification of public convenience and necessity which would have placed the experimental service on a permanent basis. This application also proposed to extend the air pick-up service into 125 additional communities in the same general territory making 227 in all that would receive the service.

This number included 132 communities in Pennsylvania, 36 in West Virginia, 25 in Ohio, 17 in New Jersey, 10 in western New York, 2 in Kentucky, and 5 in Delaware. The application also sought the right to carry express and passengers in addition to air mail.

As I understand it, the plans of the company included the establishment of passenger service on a flag-stop basis. In other words, landings will be made at station points where suitable airports are available for the accommodation of passengers, but when none are available, the pick-up service will be used for the collection and delivery of mail and express.

Hearings on this application were completed by the Civil Aeronautics Authority early in March and the final date for filing briefs under the Authority procedure was April 1. At that time it became apparent that the Authority did not have sufficient time in which to act on this application before the expiration of the air-mail contracts on the experimental routes which threatened a lapse in the service on these routes.

In an effort to avoid a lapse in the service conducted under the experimental act, the Post Office Department on April 10 advertised for new bids for the routes and in the meantime the situation had been thoroughly canvassed with the Civil Aeronautics Authority and it was found that the Authority apparently was without power to prevent a suspension of the service before a determination of the application for a certificate of public convenience.

The bids under the readvertisement of the Post Office Department were to have been open on May 10 but on that day the Postmaster General canceled the advertisement. He announced the reason for his action was because the air pick-up service, having proved a success, was no longer an experiment, and, therefore, it had passed beyond the jurisdiction of the Postmaster General. He also announced at this time that the Department was sending a report to Congress on the merits of both the air pick-up service and the autogiro service between the Philadelphia roof top and the Camden airport, which was established under the same experimental act.

This report of the Post Office Department was submitted on May 14, from which I quote the following pertinent paragraph:

"Both the pick-up service and autogiro service have proved to be very reliable and satisfactory, and the percentage of performance is such that it is believed by the Post Office Department that this type of service need not be considered any longer as in the experimental stage. It is the recommendation of the Post Office Department that permanent service of this type be established by the Civil Aeronautics Authority by means of certificates of convenience and necessity, as provided for in the Civil Aeronautics Act of 1938."

Under the heading "General Summary" the Postmaster General, in this report, stated:

"The experiments conducted by the Post Office Department in compliance with the wishes of Congress, as expressed in H. R. 7448 appear to have demonstrated conclusively that both the pick-up and the rotary-wing services can provide improved air-mail service, and it is recommended that such types of service be authorized by Congress on such routes as are granted certificates of public convenience and necessity by the Civil Aeronautics Authority."

The rest of the report is devoted to a review of the operations of both the pick-up service and the autogiro service, and conducts high praise of both.

For example the report says that in one place from a safety standpoint, the performance record of the air pick-up service is perhaps without a precedent for a new type of operation.

The air pick-up service was very popular in my district, and I received many protests over the suspension of the service.

After the action of the Post Office Department in canceling the new bids, it became apparent that the only hope for the immediate restoration of the service lay in getting a favorable decision by the Civil Aeronautics Authority on the pending application for a certificate of public convenience and necessity. However, new complications have suddenly appeared in this matter with the issuance of the examiner's report on this application which recommended its dismissal for want of jurisdiction.

In this report the examiner stated: "It is clear that services established under the provisions of this act (referring to the Experimental Act) remain in an experimental status until such time as Congress determines that such services are useful and essential and passes further legislation establishing them on a permanent basis."

The examiner's opinion, of course, is not final. He may be overruled by the Authority, which may hold that the air pick-up service has now assumed the same status as any other air carrier and as such comes within its jurisdictional powers. From what examination I have been able to make, I think that the Civil Aeronautics Authority has this power already.

However, it is a controversial point, and in the interest of facilitating the reestablishment of the service it has been generally agreed an informal discussion with Members of Congress, the Post Office Department, and the Civil Aeronautics Authority that perhaps it would be best to remove all doubt about the matter through an act by Congress clearing up this ambiguity.

Several methods of doing this were discussed, and finally the matter was taken up with Representative LEA, chairman of the Interstate Commerce Committee of the House. I understand that Congressman LEA made a very careful survey of the situation and came to the opinion that the best way of clarifying the matter was through the repeal of the Experimental Air Mail Act. A bill to accomplish this purpose was introduced in the House this afternoon by Mr. LEA. I am informed that the bill will have the support of both the Post Office Department and the C. A. A., which are just as anxious as we are to clear up the matter.

I think that with the support of the chairman of the Interstate Commerce Committee we can get favorable action on this bill in the House, despite the short time remaining before adjournment. I understand that a companion bill will be introduced in the Senate tomorrow, and I am sure that under the circumstances it also will be possible to pass it over there.

This meeting has been called to acquaint the Members of Congress through whose States and districts the experimental routes operated and the proposed routes will run to enlist their support in the movement to eliminate the technical obstacle that threatens the whole plan for the restoration and extension of the service.

My interest in this matter is inspired solely by the desires of my district for direct air-mail service, to which I believe it is entitled. However, I agree wth the Post Office Department that All-American Aviation, Inc., has done a splendid job in operating the service and in demonstrating the feasibility of the pick-up idea.

I think that the whole purpose of the experimental act was that if the pick-up service, or the autogiro service, or any other experimental service that was set up under it proved a success, it was to be continued on some permanent basis. In this case success has received a penalty instead of a reward, and I think that something should be done to remedy this extraordinary situation.

The National Defense

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gen. Hugh S. Johnson published in today's issue of the Washington Daily News:

[From the Washington Daily News of May 28, 1940]

ONE MAN'S OPINION

(By Hugh S. Johnson)

NEW YORK.—The President is right when he suggests that some people didn't raise hell earlier about our defenselessness because they didn't realize what was going on. It is true that he "did not share those illusions." But he is very subtle in seeming to find any support in the terrible events of the last few days for his policy of our sticking our necks into that mess. The existing battle situation completely liquidates his interventionist leanings by proving plainly that we had no business there and couldn't have done any good by doing one thing more than we have done.

This brings up the vital question of our defenselessness. Those who didn't realize the danger abroad may be excused for going to sleep on it. But how can the President be excused? With full information, he went to sleep on preparedness.

His comparison of the money spent on defense during his 7 years with the preceding 7 years is purely political and unfair. In the 7 years before Roosevelt there was no menace from Germany and no need for vast preparation. There were treaty limitations on naval increases. The Allies held Germany helpless.

Hitler came with Roosevelt and began the 7 years of rearmament and preparation of the vast force with which he is destroying Europe. The Allies could have stopped him any time up to 1936.

They neglected to act. Mr. Roosevelt also went to sleep. This column constantly called attention to this situation, beginning with its very first issue early in 1935.

It is no alibi to refer to the amount of money spent on defense. It plainly was not enough, and it wasn't spent to the best advantage. It was not "wasted" or "poured down a rat hole." But it provides no excuse to minimize our woeful lack of landward preparation to kick at critics who insist on the truth. The naval job has been well done in part, but the job in aviation, Army, and provision of strategic bases is woefully inadequate.

Pollyanna statements made by the President and over the air on the same night by other officials do not agree with expert testimony before congressional committees. Lumping our equipment as "on hand" or "on order" is meaningless and misleading.

All these things are bygones. Our job is to correct these blunders. But we can't correct them without recognizing them. These attempts to gloss them over are of themselves a danger and a continuing blunder.

The President is right in saying that, for unified defense, we must avoid hatreds. He has produced them in mass. Even in his fireside chat he warned against war "millionaires," promised continued handouts, and at least seemed to say that in this period of sacrifice and extreme effort by everybody none will be demanded from labor. And yet prices are to remain low regardless of increased costs and no control. Perhaps it was a gesture toward "unity" that no new taxes were suggested and financial aid was promised to industry. People who pay taxes are far more realistic. They are demanding increases. No truly American industry seeks profits due to war. No truly American worker is unwilling to do his part.

Nothing in the fireside chat suggests the stern, tough administration that this situation requires. To any veteran of our greatest American defensive effort, it cannot fail to bring goose-pimples of apprehension. It did not face or truly tell the facts. It promised speed and efficiency and offered no convincing plan for getting them. It reeks with a kind of timid fumbling that has carried England and France to the brink of destruction. It was a third-term political document rather than a formula for immediate and effective defense.

Reconstruction in Finland

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

SPEECH BY THE FINNISH FOREIGN MINISTER AND PROGRAM OF THE NEW FINNISH GOVERNMENT

Mr. HOOK. Mr. Speaker, in the midst of the turmoil abroad, with millions of men engaged in a death struggle, we might well pause to take spiritual courage from the example set by the courageous Finns in their fight—now a fight of peace instead of war. Their problems are the problems that all Europe will have to face once the mantle of peace descends upon the war-torn battlefields.

The courage and fortitude evident in the speech to the Finnish nation of Foreign Minister Vaino Tanner, of Finland, on March 13, when the hostilities between Russia and Finland ceased, deserves to be recorded in the pages of our history.

Under leave granted me, I desire to insert into the CONGRESSIONAL RECORD a report of the speech of Mr. Tanner, together with a statement of the Finnish Government, issued March 27, 1940, on the program of the Republic of Finland in the work of reconstruction following the war.

SPEECH BY FOREIGN MINISTER TANNER

Finland has been engaged in war for three and a half months. Finland was drawn into war through no fault of her own. Territorial demands were presented to her, and she was prepared to satisfy these demands to a reasonable extent. This notwithstanding the negotiations broke down. Finland trusted, however, in the agreements concluded with her neighbor and in the desire for peace repeatedly proclaimed by this neighbor, and did not believe war would break out. Nevertheless, war did break out, and the country was compelled to defend herself.

Right from the beginning it was evident that the struggle would be an unequal one. As we had not been able to believe that we were on the threshold of war, we had not furnished ourselves sufficiently with war material with which we would have been capable of resisting an invasion for a long period. There was a direct lack of many decisive instruments of war. Still less had we even thought of seeking in our support guaranties or promises from other states. After the outbreak of the war it has been possible to some extent to reinforce our equipment. Similarly we have received financial support and humanitarian aid.

The battle has been stern. Defending ourselves against a superior enemy, our Army has been compelled to exert itself to the utmost. It has, nevertheless, brilliantly fulfilled its task. Our defense has exceeded all expectations. Our task was generally believed to be hopeless, but that did not prove to be the case. The command of our Army was equal to the demands placed on it, and our rank and file have done good work. They have behaved—I will not say as heroes, for that would be too everyday a word, but as men. Because of this, our Army has several fine victories to its credit. It has inflicted heavy losses on the attacking enemy. Only on the main front have we retired a little. On other fronts we have been able either to hurl back the enemy or at least check his advance.

The home front, too, has stood well all the terrorism which the total war waged on us brought with it. Despite the almost daily aerial bombardments the spirit of the home front has remained magnificently confident and a model efficiency has been maintained in work.

All our efforts meanwhile have been hampered by one great deficiency. We are a small nation and can set against the enemy only a fraction of the forces which have been set rolling against us. Because of this the same men have had to remain under fire the whole time, and even the pluckiest troops gradually become weary. Gaps, too, are always caused in the ranks in war. Thus we were in sore need of reinforcements. But these have not been forthcoming. A number of volunteers have hastened to our aid, but their number, compared with the assistance needed, has been very small. And it is only during the past few weeks that these too were ready to take their place in the fighting line.

We have continued to send out appeals for help for the overcoming of this deficiency. Our neighbors, the Scandinavian States, for whom it would have been easiest for geographical reasons to send troops to our aid, have not regarded themselves as being in a position to do so. The attitude of neutrality adopted by them has prevented them from doing so. Numerous inquiries and appeals in these quarters led to no result. A negative answer in this respect was even made public, with great harm to the military position of this country.

The western Allies, after hesitating for some time in the beginning, have announced their willingness to send to this country a fully equipped expeditionary force if this country so requests. This promise has been frequently repeated during the past weeks. On the latest occasion, a couple of days ago, the Prime Ministers of both countries, Chamberlain and Daladier, have given public assurances that their respective nations are ready, immediately on a request to that effect by Finland, to stand by our side in the struggle with the aggressor.

Our military command has carefully studied this scheme for our assistance. Its details have been exhaustively discussed. It has been found to be effective in every respect. Yet it contains one weak point. How are these reinforcements to reach this country? The geographical situation of Finland places difficulties in the way. So long as the Baltic Sea is closed, the sea route is out of the question. The route to Petsamo is long and difficult, and is further held by the enemy. The only possible route lies across the Scandinavian countries, through Norway and Sweden.

On Finland's part, the Governments of these two countries have been approached on several occasions with a request for permission for Allied auxiliary forces to pass through their territory. A similar request has been made by the Governments of the Allies. This permission, however, has been strictly refused on behalf of both the countries concerned. In this case, too, the obstacle was the attitude of neutrality adopted by them. This firm refusal has placed an obstacle that appears to be insurmountable in the way of assistance by the Allies.

Thus our country has been left to settle its relations with our powerful opponent alone. We had no wish voluntarily to surrender our territories and rights. Contrary to certain earlier examples, we ventured to oppose demands of this character. When our country was attacked, we proceeded to defend ourselves determinedly. We have shown the path which small nations must take in the face of demands by dictator states. It has not been our fault that the democratic states have either been unwilling or unable to help us in this unequal struggle. All that can be said against us is that as a nation we are too small. In spite of the great success of our defense we cannot alone carry this struggle to a victorious end. As no help is forthcoming, the outcome of the struggle is plain. Should the war continue, this country might be conquered and its population placed in a hopeless position.

When this eventuality became plain, we began to explore the possibilities of peace. Feelers to that effect have been sent out for some time. For some weeks already the Government has been in contact with the Government of the Soviet Union. These contacts finally led to the departure of delegates of the Finnish Government for Moscow on March 6, to open direct negotiations with the Soviet Government. Meanwhile, however, hostilities have proceeded as intensely as ever. It is probably a unique phenomenon that the delegates of a state proceed in the midst of a fiercely raging war to an enemy capital to negotiate without a previous armistice. The Soviet Government, however, was not desirous of agreeing to an armistice before peace had been concluded.

During the negotiations held during the past few days in Moscow the delegates of the Soviet Union have presented their terms for peace. These terms are unexpectedly severe compared with what the enemy has so far succeeded in achieving by war. They also greatly exceed the demands presented by the Soviet Government last autumn in the name of the increased security of Leningrad. Our delegates have attempted during the negotiations to secure an alleviation of these terms, but in vain.

In spite of the severity of the terms the government has regarded assent to them as being in the national interest. As we have no hope of securing better terms by continuing the war, it has been preferred to agree to the present terms rather than continue a hopeless war. Finland having consented, the treaty of peace was signed last night, and at the same time it was agreed that hostilities should cease today.

The details of the peace treaty are not known to us at the present moment. They will not be revealed to us until our delegates return from their journey. Our eastern frontier, however, will run approximately where it was fixed at the peace of Uusikaupunki in 1721. Cape Hanko will be ceded. Similarly our territory on the Rybachi Peninsula in Petsamo. On the other hand, no political demands have been presented to us. The Soviet Union does not intend to interfere in either our domestic or our foreign policy. That would indeed have been a demand which we could not have accepted. Further, the right of this country to self-determination remains inviolable. The Kuusinen government, to which the future fate of this country was to be entrusted according to the scheme drawn up to the beginning of the war, has been thrust aside.

As will appear from these preliminary reports couched in general terms, the peace imposes a heavy burden on this country. Only with great hesitation has the government consented to it. The decision was all the more difficult to reach in that no one could foresee what the near future would bring. In this case it will become evident only at a later stage, as is the case with all great political decisions, whether the decision was right or wrong. The government, meanwhile, has had to shoulder the responsibility. In the government's opinion the wisest course was to conclude peace while our resistance was still unbroken.

Peace has thus returned to this country. But what a peace! Henceforward the nation will continue its existence in a state of mutilation. Its old frontiers have been altered. Areas of vital importance have to be surrendered, including important industrial and agricultural areas. The population of the ceded areas will have to seek new dwelling places. Our future possibilities for defense are weakened. Nevertheless, in the government's opinion peace was better than to go on with an uncertain war.

With the restoration of peace we shall return to a more normal existence in the measure in which the proceeding war between the great powers allows. In this connection new and great tasks in abundance will be imposed on us. We must begin to remedy the wounds struck by war. A new work of construction must be begun. New dwelling places must be found for the inhabitants of the areas to be ceded, and a livelihood assured to them. The destruction wrought in the country must be repaired by our joint efforts.

In all this, I am convinced we shall succeed. The Finnish people are hard working and resistant. They have shown this in war, but the same qualities appear with even greater clarity in works of peace. Our country has been devastated before this during the course of its history. Its population has once been reduced by nearly a half. Even from such depths we have ascended again. Finland will become a vigorous nation and her people prosper as before. We have land in abundance. Our opportunities for fruitful work are boundless. And our Army is still whole. It can keep watch that our peace will not be disturbed in the future.

One thing, however, is essential. The unanimity which the war brought us we shall, it is to be hoped, preserve. It was created by outside pressure. So long as European affairs are in their present state of confusion, the danger of new complications is constantly present. Because of this we must continue to hold together, united and therefore strong. It would indeed be easily comprehensible if opinion among us were to be divided in regard to the decision now made, so many are the arguments that can be brought against it. Such differences of opinion, however, should not be allowed to disturb the united front achieved by us. We shall certainly need it during the days of peace now beginning as much as we needed it during the war. We must forget the past and look to the future.

If we succeed in this, it will be a promise of regeneration for Finland after the blow we have endured.

THE PROGRAM OF THE NEW FINNISH GOVERNMENT

MARCH 27, 1940.

At the first session of the new Government Prime Minister Ryti presented the following program:

The new Government regards as its most important task the speedy inauguration of a comprehensive work of national reconstruction and the creation of the conditions for its successful realization.

Our foreign policy must be a policy of peace and neutrality; it must aim at creating and maintaining friendly and confidential relations with all nations, and thus at consolidating our international position and guaranteeing and promoting the work of reconstruction.

Our defense must be planned and built up with a view to the new conditions and the experience gained.

About one-eighth of our population have been deprived of their homes and livelihood. They must be settled as useful, productive citizens within our new frontiers. This calls for initiative, courage, and patience from the citizens concerned and great sympathy and a national sense of responsibility from all those in a position to offer them work and a roof over their heads or to help and support them in other ways with a view to providing them with a new start in life.

But it also calls for speedy and effective measures by the governmental authorities. For the part of the evacuees who are accustomed to the practice of agriculture and wish to devote themselves also in future to the cultivation of the soil suitable land must be arranged, so far as is possible, all ready for the approaching summer, and the first essential buildings provided for their new homes. The professional skill and experience of others we must seek to direct into the service of the national economy in such employment and such fields of labor where they can best profit their country. In the case of those who, owing either to the war or the peace treaty, have lost their property, or an appreciable part of it, these losses, if no other compensation is forthcoming, must be jointly borne to the extent of our capacity. To make this possible, those whose property has been largely preserved must submit to a once-for-all sacrifice in accordance with the decision which will be made in due order in this matter.

A nation compelled in the long run to live on and consume only as much as it is capable of producing, and to build or make other capital investments only to the extent of its savings.

We have lost a good tenth of our arable land and our industrial capacity. We have further lost important raw-material areas and considerable sources of power. The loss of Karelia has deprived us of about 17 percent of our railways, badly mutilated our network roads, and disorganized our inland water-transport routes, now that the mouth of the Saimaa Canal and Viipuri Bay are no longer within our frontiers. The loss of important harbors will place difficulties in the way of our overseas trade. In addition the war has been a great burden on the state finances, and the stability of our currency is imperiled.

We must set boldly to work in order that we might within our new borders regain all that we have lost, and even increase in all fields our useful production beyond what we have earlier been able to achieve. In spite of the reduced arable area, we must produce more food than before by intensified cultivation methods and by adding to the area under cultivation. The care of our forests must be made more effective. Our industrial output must be expanded and extended to new fields. To provide more power for industrial use we shall have to harness rapids that have hitherto remained untouched. Especially must we speedily begin to exploit our ore and mineral resources. Our railway, road, and water transport systems and our harbors must be built up and developed to meet the new situation. Our foreign trade, in particular our export trade, must speedily be revived. A sane balance must be restored in our public economy and the stable purchasing power of our currency secured.

These gigantic tasks call for gigantic efforts by the Finnish people. They demand of each of us that we work more than before; that we abstain from much that we have previously been able to permit ourselves, and to sacrifice for the common good more than before. We can speed up and facilitate our work of reconstruction with the aid of foreign loans, and we have the right to expect the help of our friends in this respect. But even though this hope were to fail us, we must embark boldly and with confidence on the reconstruction of our country, and in that work success is sure to crown our efforts.

Another New Deal Spending Spree

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

EDITORIAL FROM THE TOLEDO BLADE

Mr. REED of New York. Mr. Speaker, we have had 7 years of unscrupulous generosity with the taxpayers' money under the New Deal policies, which is strikingly presented in an editorial of the Toledo Blade. Under leave to extend, I am including it as a part of my brief remarks.

[From the Toledo (Ohio) Blade of April 27, 1940]

ANOTHER NEW DEAL SPENDING SPREE TO INFLUENCE THE ELECTION

There is perhaps no more discredited cure for depression than government spending of the New Deal variety. For more than 7 years this panacea has been fed to our ailing economy; at no time has it produced more than temporary results, leaving the disease as bad as before, or worse, and the bill for the treatment larger than ever.

Experience, it has been said, is the best teacher. Seven years of failure to achieve recovery by means of billion-dollar spending programs should be sufficient evidence to convince even the most stubborn supporters of such a course that it is vain.

Yet the Roosevelt administration is going right ahead in its blind devotion to this futile, dangerous remedy. The biggest spending program in which the New Deal has yet indulged is about to get under way. It is not being heralded with the fanfare and bright promises which have preceded earlier sprees of this kind. But the fact remains that, in the 6 months beginning July 1, this year, our Government will spend some $5,000,000,000, more than we have ever spent in an equal peacetime period before, even during the New Deal.

This sum—about twenty-eight millions every day for 6 months—is so staggeringly large that its significance is difficult to picture. Some idea of its size may be gained from the fact that it is considerably more per day than Great Britain is spending to fight the war.

To waste present funds and mortgage future revenue in this manner is sufficiently reprehensible. But the sinister motive which underlies this rise in Government expenditures at such a time is even more to be deplored.

For the third time the New Deal is faced with an important national election. And for the third time the rate of Government spending is to be materially increased for the months of the campaign. The spend-tax-elect technique swings into use again.

The matter can hardly be dismissed as mere coincidence; the New Deal may truthfully say, "We planned it this way." But 1936 and 1938 were merely the beginning. This year the spending is to be more open-handed than ever. The new dealers are desperate and they will "buy" the election if possible.

Nearly one-third of our people now profit from this money the Government is handing out. Thus does the New Deal bureaucracy seek to perpetuate itself in office. It is this to which Mr. Wendell Willkie referred when he said recently that the New Deal had a vested interest in the depression. For recovery would end this ability to keep such a great number of voters under a kind of obligation for favors received.

But even those who have for the moment benefited from the New Deal spending spree will honestly admit, if they face the situation squarely, that the game of deficit financing cannot continue forever.

By election day it will be nearly 8 years since Mr. Roosevelt and his clique of new dealers began experimenting to achieve recovery and restore employment. Not only have they failed, but they have raised the national debt practically to its legal limit of $45,000,000,000.

We must not fool ourselves into believing that this so-called pleasure trip of the new dealers can continue forever. A day of reckoning must come. When it will be is difficult to say, but it cannot be far off. No one can spend $2 for every dollar he takes in without going bankrupt eventually.

Mr. Roosevelt is doubtless confident that he can meet the situation simply by piling on more taxes. But the people will not always have the money to pay the ever-increasing demands of the Government.

The future of our country is in serious danger unless some change takes place in Washington soon. If you are an American, if you want our form of government to continue, then you should forget politics in the face of our serious economic condition. It can only be corrected by putting some sensible and experienced men in charge of the administration before it is too late.

The Art Project at Gardena High School

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

ARTICLE BY OLIVE HENSEL LEONARD, LIBRARIAN, GARDENA HIGH SCHOOL

Mr. GEYER of California. Mr. Speaker, in the fertile Gardena Valley, midway between the Great Los Angeles Harbor and the metropolitan Los Angeles area, lies the little city of Gardena. Within this city, housed in spacious buildings mostly constructed with P. W. A. assistance, is one of the several high schools of the Los Angeles city high-school district.

Gardena High School has a student body of about 1,500 students and a faculty of some 50 members. This school lies almost in the geographical center of the Seventeenth California Congressional District. It is not only the geographical center of the Seventeenth District but the art center of southern California. As one who has been a member of the faculty of this institution for the past 10 years and is even now on leave of absence from this institution, I am naturally enthusiastic about its accomplishments. In the belief that other schools should emulate Gardena High School, I am inserting in the RECORD an article by Olive Hensel Leonard, librarian of that institution. Mrs. Leonard, along with former Principal John Henry Whitely and the vice principal, Miss LaVeta Crump, and other faculty members, has been tireless in her efforts to put over the project which means so much to the school, the community, and southern California:

THE ART PROJECT AT GARDENA HIGH SCHOOL, GARDENA, CALIF.

(By Olive Hensel Leonard, librarian, Gardena High School)

Gardena High School takes inventory on her art project after 21 years of senior class purchases of western canvases, 13 of which have been associated with purchase prize exhibits. The project shows very satisfactory results, or shall we say trends? The school now owns 53 canvases painted by outstanding artists.

During these 21 years we who have watched the experiment have seen a country town of small cultural attainments and contacts become art minded. Several hundred of our citizens pay hard cash for membership in the Gardena Art Association every year, and every civic and fraternal organization in the town is back of the project 100 percent. Our people throng the galleries throughout the annual exhibit of pictures and bring their friends from outlying towns. We have found it a unifying civic project, one in which there is great joy and no conflict.

Another aspect of the project, more satisfying than any other, is the interest and pleasure many of our students take in the canvases.

Incoming seventh-graders look with awe upon the collection at first and gradually select their favorite pictures. Year after year they familiarize themselves with the different subjects, artists, and techniques, and by the time they are seniors it is truly remarkable what clearness of judgment and uncanny discrimination they have in valuing a painting. The contacts they have with artists, too, is most valuable, and social training of the long and frequent contact with the public as hosts and hostesses during the 2 weeks of the art exhibit is a splendid training.

The gallery is now assuming prestige among the picture collections of the West. Stanford University borrowed the entire exhibit to hang in her beautiful art gallery for 4 months last year and the Friday Morning Club of Los Angeles featured a part of the collection in their rich, spacious clubrooms during February and March 1940.

This year, as usual, a dinner and reception initiated the formal opening of the purchase prize exhibit. Four hundred and fifty guests enjoyed the tasty dinner, seasoned by witty speeches and repartee by the large number of southern California artists who always attend the opening dinner.

Gardena High School is satisfied that there are so many cultural, social, and civic advantages in a school and community project of this kind that it is well worth all the time, money, and energy that it takes to put it over.

Fifty Thousand Civilian Pilots

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

EDITORIAL FROM SHREVEPORT TIMES

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport Times for May 25:

[From the Shreveport (La.) Times of May 25, 1940]

FIFTY THOUSAND CIVILIAN PILOTS

President Roosevelt's plan to train 50,000 civilian pilots during the fiscal year which starts July 1 is an ambitious one. But it is by no means too ambitious. Just such a difficult, far-reaching program is needed as a challenge to public patriotism and resourcefulness.

Clearly the success of this particular defense enterprise will be determined largely by the American people themselves. Their enthusiasm will set the pace for training activity and enrollment of students. If the people support the movement aggressively, this country can speedily launch the greatest air preparedness drive the world has seen.

Skeptical readers may wonder whether public sentiment will surge strongly in favor of a training program which will send thousands of young men into the realm of the air.

The answer to this skepticism is that the American people are thoroughly air-minded in dealing with the problem of national defense. They were convinced long before their military leaders were that air power would become the decisive military factor which it is now conceded to be.

Back in the early 1930's every poll of public opinion revealed overwhelming majorities favoring great expansion of the Army and Navy air forces. Before Hitler put in motion the vast aerial rearmament drive which has given Germany quantity leadership in the air, the average American was registering his emphatic belief that his country's military aviation ought to be made the most powerful on earth.

While the admirals and generals were stressing the limitations of air fighters, the people were saying, in every test of their opinions, that aerial warfare possesses tremendous potentialities and that the Nation's armada of the skies should be expanded.

These facts are in the record. There is no need to worry about the public reaction to the President's civilian air-training plan. The people were ready for it in 1935. They are more than ready for it now.

Membership of Hon. William D. Byron Upon Committee on Military Affairs

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

Mr. MAY. Mr. Speaker, the Committee on Military Affairs, of which I have the honor to be the chairman, has for one of its members the gentleman from the Sixth District of Maryland, the Honorable WILLIAM D. BYRON. Today I would like to report to the House this his selection by the Ways and Means Committee has proven to be a wise one. WILLIAM D. BYRON has made good as a member of the House Military Affairs Committee.

As you well know, a great many Congressmen are selected for this committee who have large military establishments in their districts and can best serve their constituents as a member of it. This is as it should be and applies to Members of both political parties.

However, as you all know, the selection of the gentleman from Maryland, Congressman BYRON, was made with consideration for his background and experience which admirably qualified him for the important post on the committee.

He was the son of a distinguished officer of the Army, the late Col. Joseph C. Byron, in whose honor the post of the Spanish-American War veterans in Washington County, Md., is named. The gentleman from Maryland [Mr. BYRON] himself served his country in the World War. The particular service that he saw, first as a pilot in the flying corps and then as an officer instructing others in tactics and in aerial gunnery, I believe enhances his value to the country at this time when the angry flames of war are surging through Europe and Asia.

The importance of maintaining the security of American peace through a program of military preparedness for national defense has become a problem of the National Government of grave concern, and the work of the Military Affairs Committee of this Congress has become of first-rank importance. In such critical times I am glad to have his advice and counsel in the committee.

He has shown marked ability and thorough understanding of the many perplexing problems of our country's defenses. I am glad to say that he has at all times manifested deep concern as to our military objectives and has been courteous and cooperative.

He enjoys the confidence of all the members. Although representing a district which is close to Washington and which by its proximity necessarily keeps him especially active in behalf of his constituents, so far as I can recall he has rarely missed a meeting of the committee during his time of service on it.

It is my desire and hope that he shall, in these crucial and trying times, remain a member of this strategically important committee of the House of Representatives. In his experience so far he has demonstrated his ability for this particular work.

An Open Letter to His Majesty, George VI, King of Great Britain and Ireland and of the British Dominions Beyond the Seas, Defender of the Faith, Emperor of India, Buckingham Palace, London, England

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

LETTER FROM J. FRANK WEBBER, NATIONAL REPRESENTATIVE MAKE EUROPE PAY WAR DEBTS COMMITTEE

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to King George VI, of Great Britain, from Mr. J. Frank Webber, national field representative of the Make Europe Pay War Debts Committee. It is my opinion that the sentiments expressed by Mr. Webber in his communication to the reigning monarch of Great Britain are the sentiments of every red-blooded American.

AN OPEN LETTER TO HIS MAJESTY GEORGE VI, KING OF GREAT BRITAIN AND IRELAND AND OF THE BRITISH DOMINIONS BEYOND THE SEAS, DEFENDER OF THE FAITH, EMPEROR OF INDIA, BUCKINGHAM PALACE, LONDON, ENGLAND

MAKE EUROPE PAY WAR DEBTS COMMITTEE,
Washington, D. C., May 25, 1940.

YOUR MAJESTY: Your Majesty's insistent invitation to take part in the latest garden party in Flanders has been received and duly noted. We regret, Your Majesty, that we are unable to attend this affair because the cakes and ale the last time turned out to be at our expense—notwithstanding England's promise to repay, and we are still paying for it—with interest.

In plain Americanese, Your Majesty, we call it getting stuck with the check.

As Your Majesty probably noticed, Your Majesty's visit here nearly a year ago to the day, which strangly enough preceded the present war by less than 90 days, properly overwhelmed us, whipped up quite a little enthusiasm for the empire. As we had only been expecting Your Majesty or Your Majesty's Governor of the Bank of England officially for 20 years, Your Majesty's social visit took us by surprise. Tell me, Your Majesty, when a king comes begging, does he bring a tin cup or one of gold with the royal crest?

In fact, the last redcoats to visit the Capital were greeted with a hail of lead. That was in 1814. If we had suspected that Your Majesty's presence here merely foreshadowed the events of September and subsequent attempts to involve us in another costly European war—on us—the reception which Your Majesty received might have hearkened back to the bitter days of a century and a quarter ago when royal lobster-backs made a bonfire of the Presidential Mansion and Capitol. Of course, Your Majesty did not have incendiary ideas, beyond inviting us to a war—as usual, at our expense—and this was advanced by repeal of the arms embargo just for the sake of Auld Lang Syne.

Evidently, it is easier for Your Majesty to forget the war debt of approximately five and one-half billion dollars than our supposed Anglophilia. How repugnant Hitler's plan of taking over some of the Union Jack must seem. The idea of conquest is abhorrent to Your Majesty. But, by the same token, it is remarkable how righteous imperialism can become with the passing of time. Now, the great proportion of the world's real estate worth owning is held by the British. Even the German colonies taken in the last war. Your Majesty should have realized that when the time became propitious, the Reich would first politely request and—failing in that—start out to recover them the same way you did—by diplomatic and military "blitzkriegs."

But hold on to them you British will, even if it costs France her last man and the United States her last jackass. The British Empire must be like the acres in Heaven—sacred, inviolate, and unscorched.

Of course, this is just small talk, the point remains, Your Majesty, it looks like the sand is fast running down the glass and Your Majesty's last blue chip is down. Naturally, Your Majesty

needs more cash because it takes a lot of money to wage a war, and when Your Majesty is up to his royal ears in debt, the scratch has to be raised somewhere. Most people have to put something in the hock shop to raise ready cash. Empires are no different. This is just a suggestion. Why not cede Bermuda and the West Indies to the United States? They would make a nice down payment on the old bill. And it's a cinch that if things keep going the way they are, Your Majesty won't have anything left to cede. Can't you imagine British Honduras, Bermuda, and Jamaica under the swastika? Not pleasant to contemplate, is it? Particularly, not for us. And when it comes right down to the question of national defense—we need 'em.

The day preceding Your Majesty's latest invitation, Sir George Paish suggested giving us an island or two in the West Indies, but undoubtedly he had in mind a few pelican rookeries. After placing these "gems" under the glass, they don't seem to have the proper depth and brilliance upon which to make a substantial loan—let alone settling the score for the last time. We would like to have a more imposing offer—say, Bermuda, the Bahamas, Jamaica, and a couple of the others we really need for our own national defense. Suppose they all do raise a lot of valuable commodities. What good are they to Your Majesty if these commodities lie at the bottom of the ocean?

From time to time, we will probably be hearing further from Your Majesty regarding this little matter of sending men and millions to stem the advancing tide of grey-clad troopers. We believe the last time it was to save "civilization." This time it is to save "democracy." It couldn't possibly be like the bitter medicine sugar-coated—to save the British Empire?

We're afraid, Your Majesty, that we will have to paraphrase General Pershing's historical remark before the tomb of the great French patriot—"Lafayette, we are here"—and, by golly, that's where we're staying.

Yours respectfully,

(Signed) J. FRANK WEBBER,
National Field Representative, Make Europe Pay War Debts Committee.

National Defense

EXTENSION OF REMARKS
OF
HON. ANTON J. JOHNSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

Mr. JOHNSON of Illinois. Mr. Speaker, our Nation is growing extremely conscious minded on strengthening of our national defense, but national defense interests should not be wholly armament minded. In times of war, a nation's strength is largely dependent upon resources of raw materials for industry and its food resources for man and beast. We are blessed with an abundance of food but are dependent upon the rest of the world for many raw materials needed in industry, principal of which is rubber.

We can produce and are producing rubber in a small way today in California from the guayule plant, which is native of Texas and Mexico. Experiments have proven its adaptability to most of the southwest part of the United States.

The guayule plant is a shrub and grown from seed in seed beds its first year, then set out in rows the following year as seedlings, much as we set out cabbage plants. Cultivated as a row crop, at 4 years it produces up to 1,800 pounds of raw rubber per acre. Rubber is about 23 cents a pound. A 4-year-old field is about 2 feet tall and bushy, somewhat similar to privet hedge. Its roots are spreading and penetrate below ordinary plow levels. In harvesting, a sharp-edged but heavy steel-bar drawknife drawn by a tractor cuts the roots about 8 or 10 inches below the ground surface.

Present tropical rubber is "milked" daily from trees, while guayule rubber is produced in one process—that of grinding the entire plant in a pebble grinder under water, while the rubber itself floats to the top. An acre of guayule produces about the same amount as tree rubber and has the advantage of being available at all times as the needs may be. The guayule plant may be left to grow for 10 years, when it will produce about 3,500 pounds per acre, or it may be let to grow for 30 years, gradually increasing in rubber content.

There are 6,000 acres of cultivated guayule growing in the Salinas Valley of California now, and already 200,000,000 pounds of guayule rubber have been produced in California and Mexico.

As has already been demonstrated, we can produce our own rubber in our country and not be dependent upon war-torn foreign countries for such a great essential.

It appears to me that this should be one of the first steps toward national defense. We now depend upon the East Indies for most of our rubber, and we all know of the precarious position we are in for a dependable supply of rubber from that source, should war spread to include the East Indies. Less than a month ago rubber was 18 cents a pound, and in less than 2 weeks rose to 23 cents a pound.

Why not be prepared by having our own source of rubber supply, while at the same time protecting the American automobile owner against exorbitant automobile-tire costs, and at the same time providing work for millions of men in industry and giving the American market to the American farmer?

Conglomeration, Inc.; A. Hitler, President

EXTENSION OF REMARKS
OF
HON. EARL R. LEWIS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1940

ARTICLE BY W. H. McWILLIAMS

Mr. LEWIS of Ohio. Mr. Speaker, in this anxious hour, when people everywhere are profoundly disturbed by events transpiring in Europe and when dismay at the prospects of a quick German victory over France and England has led many people to the conclusion that we must ourselves be almost immediately involved in that terrible war, we should not give way to our fears nor permit our energies to be dissipated by hasty, ill-considered action nor our aims and purposes to be thwarted by premature and hence inefficient attempts to accomplish them. If there ever was a time that demanded stout hearts, calm minds, and level heads, it is now; and it is heartening to know that here and there, through the newspapers of our land, journalists and columnists are trying to call us back to the realities of the situation and to calm our minds by putting present events in proper perspective and to achieve thereby the most efficient action possible in the rearming of the Nation.

Eastern Ohio has had for a number of years a columnist whose sage but homely and sometimes witty comments on current events has both delighted and instructed his readers. Recently, in the issue of Monday May 20, 1940, of the Daily Times, of Martins Ferry, Ohio, this columnist, who writes under the pen name of Hi Waters, but who is in real life Mr. W. H. McWilliams, of St. Clairsville, Ohio, has made a real contribution to the return to mental stability and calm determination that is so essential at this time. Following is the article to which I refer:

[From the Daily Times, Martins Ferry (Ohio), May 20, 1940]

CONGLOMERATION, INC., A. HITLER, PRES.—BUT ADOLF DOESN'T WANT UNCLE SAM

(Editor's note: The following article was written by W. H. (Hi Waters) McWilliams, noted Belmont County columnist and propounder of homely philosophy. The article was prepared for Mr. McWilliams' regular Views from the Bench column and we, thinking the thought expressed might be good for troubled minds in troublesome times, asked Mr. McWilliams' consent to publish it here.)

Europe's line-fence dispute, involvin' some half billion neighbors, seems enterin' its final stages.

The dispute, the thirty-second which has occurred in modern European history, was started back in the days when men in iron armor, not men in German field green, Poilu blue, English brown, or Italian drab, argued, parried, and thrust for the right to bargain for a ton of wheat, a load of coal, a tank of oil, or even a cartload of wooden fagots.

Almost with the regularity of the moon's change, the "line fence of Europe" was tore up, reset, and new post holes of frontier lines dug in the blood-soaked soil of that turbulent country.

And all for what?

That this people, that people, this ruler, that ruler, might live, grow rich, survive, or perish.

At each new outburst a new board of directors were selected to run the country and to supervise the trade between this neighbor and that neighbor, and to supervise the division of the profits, the losses, and gross receipts squeezed from the reddened land and from the hearts of the people.

And each outburst, from the first to the thirty-second, the quarrel appeared the worst, appeared more violent than the last. Each new outburst brought men of the hour to bloom awhile—then wilt. Until finally, as war's vengeance or peace's tribulations took their toll, they dissolved amid their own oblivion.

EACH ONE WAS GREAT

There was Alexander the Great, who "wept because he had no more worlds to conquer"; there was Genghis Khan, the Terrible; there was Caesar himself; there were the Franks, the Huns, the Northmen, the Normans, the Saxons, the cunning Spaniards, and the greatest of them all, Napoleon Bonaparte, the Little Corporal from the Isle of the Blue Mediterranean.

Conquerors, all!

Each brought a crisis to the land beyond the Atlantic—each brought themselves honors, defeats, victories, problems, fears, and heartaches. Each, in turn, passed away.

The world, in spite of them, rolled onward.

Twenty years ago the greatest line-fence dispute of them all, lit, burned, flickered out. It was the Kaiser, then, who wanted more trade, more money, more wheat, more oil, more coal—more power.

A Bismarck before him sought, and gained for a while, those ends. Then he, too, flickered and went out.

Napoleon achieved much, gained much. Land after land, country after country, nation after nation, fell to his might. He was the greatest landlord of history—almost as great as was Caesar, before him, or of Alexander the Great, or of Genghis Khan—but like them, Napoleon tottered and fell.

WHY ALL THE FUSS?

The reason for history's meanderings?

It's simple. They were great in war—but small in peace!

It's easy to conquer a people—it's impossible to keep them conquered. It's easy to bite off too big a chunk—it's impossible to digest it.

Adolf Hitler is smart. He may take a lesson from the past. He may work with his defeated enemies instead of working against them. He may, with his 100,000,000 people, try and keep order with his 500,000,000 "subjects" instead of keeping order against them.

But he's got a tough job.

Tougher than even Napoleon; tougher than even Alexander; tougher than even Genghis Khan. Napoleon had even more people under his thumb and he lasted just 10 years!

Do you think Adolf Hitler, smart guy as he is, would want to take on 130,000,000 more people 3,000 miles away from his home base, and try to keep them in a good humor—try to keep feuds, disputes, riots, revolutions, plots and counterplots, from happening, knowing that all the great conquerors in the past couldn't keep order with a space half the size of the United States and convert a subjected people that they had ground beneath the heel of their military might?

Do you think Adolf Hitler or any other conqueror of Europe—smart as they must be to win over there—would be dumb enough to attempt to get twice the headache by acquiring us over here?

Not a chance!

GIVE HIM POWER

Give Adolf Hitler today all of Europe; give him a destroyed England, a ruined France, a mutilated Italy, a blasted Belgium, a conquered Norway, a raped Poland, a wrecked Balkan—and it would take him a thousand years—a thousand vain, troubled, hopeless years to hold what he won.

Give Adolf Hitler all of that, and time will reveal again what history has revealed in the past—that no conqueror, from the days of eternity's dawn to the present time, has ever kept peace in his family of defeated people within the borders of a blood-soaked Europe.

The wings of victory—if they fly that way—will hand Adolf Hitler an elephant, and say, "Here, carry this!" Would he want for two elephants to carry?

Adolf Hitler, victorious even beyond his wildest dream, wouldn't want—besides—an America with 130,000,000 fighting wildcats to help his ultimate overthrow.

He would want, I predict, a stable America to carry on the trade in a normal way when peace settles—for a while—over war-torn Europe; he would want a stable country on this side of the troubled territory as a pillar on which to tie a disrupted world economic condition; he would want a stable America to remain stable and a foundation—far from the theater of war—where the product of his conquered lands might be consumed.

No, from a standpoint of danger of attack, your country and mine is safe from Adolf Hitler. Adolf Hitler doesn't want us, because Adolf Hitler couldn't digest us if he had us! Victorious in war, as he might be in Europe, Adolf Hitler will have all he can handle for the next quarter century—even if he's successful in peace.

DO WE WANT TO GET IN?

America is not in danger of Adolf Hitler, unless America decides that Adolf Hitler should not conquer Europe. That's another question.

It would be easy for America to become embroiled in the war; easy if we decide that the "corner post of frontier No. 745" is not where it should be; easy if America decides that the "line fence between Ignatz Giesgenszzi's garden and Georges Tiercourt's farm, and John Bull's pasture" shouldn't be moved.

It would be easy for America to get in the war, if we want in.

Why should we get in the war? * * * They don't want us—we don't want them.

Personally, I am in favor of the present "board of directors" over there in Europe's "conglomeration, incorporated." I wouldn't want to see a new board of directors voted in, headed by Adolf Hitler. I think President of the Board A. Hitler is pretty much of a crook, a thief, and a thug.

But we've got all we want to handle over here, and more, too, it looks like. We've got a little "board" trouble ourselves, without messin' up in somebody else's headaches. Why do it?

We tried that once. Remember?

Did that end the line-fence disputes in Europe? Nope; and 10, 15, or 20 years from now they'll be stagin' their thirty-third major war of modern history over there * * * the thirty-third line-fence dispute of modern times.

LET'S GET READY

But should we prepare? Should we get ready in case? Should we be on guard? Should we put up our guard and stand ready for any possibility, however remote * * * stand guard against enemies within as well as without * * * stand guard with the defense that's ours to defend with?

Sure; that's smart business.

If it takes a billion or two billion, let's spend it. We can harm no one by bein' prepared. I don't think we'll ever need to be prepared to that extent, but if we do need to be we are. We'd better be prepared and not need to be, than not be prepared and need to be.

But danger of attack from Adolf Hitler?

Silly.

If we get in this war, it will be because we wanted in it—wanted in it just like we did in 1918; however good we thought the excuse might have been. Now, we know it wasn't good enough then * * * a similar one oughtn't to be good enough now.

Sure, Mr. Roosevelt, I think you should go ahead and use the billion for defense, mebby you might have to use another billion to bring the defense up to par * * * best be on the safe side.

But don't kid us, Mr. Roosevelt.

Adolf Hitler's legions don't want us. He wouldn't take us served with cream. He couldn't digest 130,000,000 Americans and he knows it.

He'll have enough of a bellyache over there digestin' 500,000,000 people even considerin' he gets 'em.

Let's keep our shirts on * * * and our guns cocked, and you, Mr. President, please don't try to scare the hell out of us.

Are We Men or Mice?

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ARTICLE BY HON. SAMUEL B. PETTENGILL

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by my predecessor, Hon. Samuel B. Pettengill:

ARE WE MEN OR MICE?

(By Samuel B. Pettengill)

The big push appears to be on to frighten us into war. As in 1917, the hysteria is in high, and in high places. Every acre of the Western Hemisphere is in danger. And so forth.

Are we men or mice? Are we going to be scared into another World War?

This column is for Western Hemisphere defense and for whatever sea and air forces are necessary—with a good factor of safety. Let us not twiddle our thumbs, as England and France have done, and then expect us to liquidate their folly.

But before we get yellow around the gills, let us take counsel of our courage and of the facts of modern war. Hitler has done an

astonishing job so far against nations which were asleep at the switch. But Germans are still nothing but men less than 6 feet tall. They are neither gods nor magicians. Their guns are still made of steel and their planes still burn gas. Let's not get fooled on some elemental facts. Blood and iron are formidable, but blood without iron is nothing.

Modern wars are fought with metals and mineral fuels. Political boundaries may shift but mineral depcsits do not. This, and the facts following come from the Mineral Map of Europe, just off the press, compiled by Theron Wasson, one of the leading geologists of the world.

By a supreme effort, by 5 years of guns without butter, Germany has made an impressive showing—so far. But she is not ready to jump the Atlantic.

The facts are that Germany is deficient in nearly every natural resource necessary to sustain a long war. She can make planes, but not petroleum. Of the three most important resources—iron, coal, and petroleum—she has a surplus only of coal. Her iron ore is so low grade that in other countries mines like hers would not even be worked. For iron she must now depend chiefly on Sweden. She had two routes to Swedish iron. One by salt water from Narvik. That is now cut off and is not likely to be reopened. The other is the Gulf of Bothnia, which is blocked by ice in all but a few months of the year.

Germany is deficient in iron, petroleum, aluminum, copper, lead, manganese, antimony, magnesite, pyrite, asbestos, mercury, mica, lumber, leather, cotton, rubber, gold. She is not only deficient, but in some, like rubber and cotton, she has none whatever.

And besides metal for her guns she needs food for her soldiers and civilians.

Before we turn yellow let us compare Germany and the United States with respect to petroleum—an absolutely indispensable necessity for gasoline, without which bombers are grounded, and for fuel oil, without which submarines are anchored.

Greater Germany, which now includes Poland, Czechoslovakia, and Austria, produces 5,609,000 barrels of petroleum annually. She is short 47,620,000 barrels. That is, she has to get from outside Germany 9 barrels out of every 10 that she has to have. (And, of course, in war her consumption increases terrifically.) Where is she to get these vital 9 barrels either to carry on protracted war in Europe or to fly across the Atlantic?

Rumania and Russia are her only sources of supply now available. Suppose she got the entire surplus of these countries. Add them together. The United States produces 11 times as much as the total. And our gasoline and fuel oil is on our side of the Atlantic and her supply is on the other side of the Atlantic.

The United States produces 61 percent of the petroleum of the entire world. And there is more in Mexico and South America. The result is that if Hitler got his hands on every oil well in Europe, Africa, and Asia, we in the Western Hemisphere would still have—on our side of two oceans—twice as much war fuel as Hitler on the other side of those oceans.

And, Mr. Ickes to the contrary notwithstanding, our known petroleum reserves are now greater than at any time in history. Besides we have the finest industrial plant and transportation system in the world to get our petroleum into the gas tanks of our bombers and fighters.

Facts versus fright is so important that I shall discuss it further in my next piece. If we are men and not mice, no combination of dictators need scare us into war. But they should scare us into being prepared for war.

Why the Present Reciprocal Trade Agreement Program?

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

EDITORIAL FROM THE NEW YORK JOURNAL OF COMMERCE

Mr. CRAWFORD. Mr. Speaker, when the present reciprocal trade agreement program was launched the world was in a very dissimilar mood than that which prevails at the moment. Certainly we cannot claim, and justify that claim by accomplishments visible, that the program has added one bit to world peace. Since the very inception of the program, the whole world has moved rapidly towards war, towards further trade restrictions, towards a dissimilar economy to that advocated in the trade-agreement approach. Restricting our approach to the Western Hemisphere alone we cannot claim solidly very much accomplishment for the program.

Now, as we face a recasting of economic, industrial, and agricultural relations between the countries constituting the family of nations in the Western Hemisphere it certainly appears that from a defense program alone we shall have to recast our trade-agreement approach. The signing of the Inter-American Bank Convention by our State Department, the defense program which is now being launched by Congress, and the pressure which we shall be forced to exert on the Latin American countries to the south of us will all contribute to our reexamining the entire trade-agreement philosophy. We may now face a situation where the most-favored-nation clause will have to be entirely abandoned and where we shall have to think primarily in terms of a direct relationship between the United States and the other countries of the Western Hemisphere. Under permission granted by the House, I now submit the editorial from the New York Journal of Commerce:

OPPOSITION TO SILVER LEGISLATION

Despite the fact that not a single persuasive argument has yet been advanced for retaining the Silver Purchase Act of 1934 on the statute books, cessation of purchases of foreign silver by the United States Treasury appears to be as far away as ever. The Senate has passed the Townsend bill to halt the buying of silver abroad, it is true, but the House Ways and Means Committee proposes to kill this measure for all practical purposes by taking the stand that it is a tax bill, and as such should have been originated in the House. It seems quite doubtful that a new bill originating in the House will be passed at this session.

The chief reason advanced for continuing the purchases of silver is the desire to maintain American exports. It is claimed that the United States may hurt its exports if the Treasury stops buying silver abroad, however useless this metal may be. This contention would be just as valid if it were asserted that the Treasury should buy trainloads or shiploads of gravel from some foreign country at an artificially high price, in order to give that country buying power for our goods.

In point of fact, the desire of the administration to continue the silver-purchase program reflects its failure to evolve an effective foreign policy with regard to Latin America. The good-neighbor policy, well-intentioned though it was, failed to bring about that close economic and political collaboration between the United States and Latin American countries which was desired. Fearing to antagonize Mexico, despite the cavalier treatment accorded by that country to a number of American interests, the administration has fought for a continuation of the silver-purchase program, which benefits Mexico far more than any other country. It has vague fears that to do otherwise might cause Mexico to draw closer to authoritarian regimes abroad.

The United States should cooperate wholeheartedly with Latin-American countries especially now when defense of the hemisphere is a practical issue. Sound relations will not be promoted, however, by favoring nations which trample on American interests and discouraging those which are ready to cooperate on a reasonable basis with us. A firmer attitude toward Mexico, for example, and a friendlier policy toward Argentina, which has sought in vain to negotiate a reciprocal-trade agreement with the United States, would be far more likely to promote sound pan-American relations.

Let's Adjourn Politics

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. SHAFER of Michigan. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Chicago Tribune which, in my opinion, should be placed in the hands of all new dealers who, during the debates of the past few days, have been exhorting the Congress to adjourn politics. As stated in the last paragraph of this editorial, it is quite apparent to all who have listened to the arguments of the

New Deal that it is only the other fellow's politics that the new dealers want to adjourn.

The Tribune editorial follows:

LET'S ADJOURN POLITICS

General Hysteria is riding off in all directions in Washington and New York. His radio commentator and columnist lieutenants are shrilling nonsense about coalition cabinets and postponing the election. The new dealers are cleverly exploiting the panic in western Europe in the hope of instilling similar panic on this side of the Atlantic. They are raising the cry that in this crisis, which in its domestic aspects is largely of their manufacture, the Nation must adjourn politics.

All right, let's adjourn politics.

Let's adjourn the political manipulation of the National Labor Relations Board.

Let's adjourn the use of W. P. A. funds and the ruthless intimidation of W. P. A. workers to elect Democratic politicians to office.

Let's adjourn Henry Wallace's political juggling of agricultural subsidies to buy farm votes.

Let's adjourn the political use of the Walsh-Healey bill to bludgeon manufacturers supplying the Government into letting the lady fellow traveler in the Labor Department fix their wage rates.

Let's adjourn the political fixing of hours of labor under the wage-hour bill, which is hamstringing efforts to expand industrial production essential to our own and the Allies' defense.

Let's adjourn Secretary Morgenthau's and Mr. Eccles' political manipulation of the money market to divert funds into the administration's deficit financing.

Let's adjourn the punitive tax schedules that have prevented industrial expansion in order to perpetuate unemployment as a vested interest of the New Deal politicians.

Let's adjourn the political waste of the Nation's substance on T. V. A., Grand Coulee, Passamaquoddy, and all the other ventures into state socialism and screwball engineering and economics.

Let's adjourn the political fixing of prices under the Guffey Act, which is loading millions of dollars of additional costs on industry and home owners in order to repay another installment of the Roosevelt campaign-fund debt to John L. Lewis.

Let's adjourn "Donald Duck" Ickes and the rest of the verbal tarantulas who have spent the last 7 years fanning class hatred in America.

Let's adjourn the political use of Federal funds by State political machines by enacting the Hatch bill, which the Roosevelt administration has succeeded in killing in Congress.

Let's adjourn progress toward a Nazi legal system by passing the Walter bill to give proper court review of the rulings of New Deal administrative tyrants.

Above all, let's adjourn the scaremongering that is trying to convince the Nation that the United States is in danger of invasion day after tomorrow, the sole purpose of which is to make plausible the cry of "Let's adjourn politics."

All this isn't the kind of politics that the new dealers want adjourned. President Roosevelt has said that there will be no relaxing of what he misrepresents as his social reforms. Secretary Morgenthau has told the plane manufacturers that private industry will get the first chance to build 50,000 planes, adding in effect that the Government is going to keep right on beating them over the head while they try.

It is only the other fellow's politics that the new dealers want to adjourn.

What the Press Thinks of the Labor Board

EXTENSION OF REMARKS

OF

HON. HARRY N. ROUTZOHN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

Mr. ROUTZOHN. Mr. Speaker, last August I found myself placed on a committee of the House headed by the gentleman from Virginia, Representative HOWARD WORTH SMITH, to which had been assigned the task of investigating the activities of the National Labor Relations Board.

Committee activities attracted a great deal of attention. News stories went out every day. There was a great deal of editorial comment. It would be interesting, I thought, to make a measure of the national newspaper editorial approval and disapproval of the activities of the National Labor Relations Board. So a Government clipping service—which unquestionably is unbiased—was requested to send to each member of the five-man committee all editorial comments on the hearings without regard to opinion, for or against. I then concluded to analyze these comments and report on them to the House, hopeful that they thus would serve a more extended and useful purpose.

My study of the first 1,000 clippings, which preceded the filing of the Smith committee report, is contained herein. It shows condemnation of the Board by the press of the Nation to be practically unanimous. From coast to coast, from Canada to the Gulf, there is but one single paper, as far as my search revealed, that had a word to say in defense of the National Labor Relations Board. And the support of this paper is a doubtful recommendation to the Board or to the course it has pursued.

That paper is the Daily Worker, of New York, house organ of the Communist Party in the United States, voice of Earl Browder, recently convicted of fraudulently securing passports, and stanch defender of Joseph Stalin, spearhead of the bloody invasion of Finland.

Here is the way in which I proceeded in studying these editorials. I divided them as to geographical sections and States beginning with New England. Taking the editorials as they came, I quote verbatim the central thought or conclusion which each contained. Thus I give each only the space that seemed necessary to portray the gist of it. Examples follow:

The Worcester Telegram:

Remembering the large percentage of flubdub and hokum elicited by many congressional probers, it is really remarkable that the Smith committee has hewn to the line so steadily and effectively. From members and officials of the Board it has drawn some illuminating, and in some instances, damaging, admissions. Since its establishment it has been a question in many minds whether the Labor Board was not transcending its powers and departing upon occasion from the intent of the Wagner Act. Already the question has been answered in the affirmative. And it has been answered in the affirmative not by dubious characters but by persons of the greatest authority on the subject—members and officials of the Board itself.

The Boston Christian Science Monitor:

If the ballot box is to supersede the rough-and-tumble in deciding American labor issues, as contemplated in the Wagner Act, there must be a considerable tutelage in the democratic process as applied to the workshop in elections held by the National Labor Relations Board. * * * At present the principal method seems to be through a choice between rival unions. * * * Some of these campaigns have become quite expensive in outlays * * * for the paraphernalia of political campaigns. It is not inconceivable that a kind of Corrupt Practices Act, like that which limits congressional campaign expenditures, may be necessary to supplement the Wagner Act.

The Boston Transcript:

It is obvious that some changes should be made to permit employers to discuss labor matters with their employees. At the same time care must be exercised lest by word of mouth a reactionary employer, hostile to unions, is able to coerce and intimidate his workers. * * * The act should be amended or reinterpreted so that the Board, in determining the proper bargaining unit, does not have the power to upset labor relations in single plants where harmony prevails. The job of Congress is to preserve the principle of collective bargaining and to eliminate the excesses of both labor and capital.

The Boston Post:

The chief objection to the administration (of the Wagner Act) is that these young examiners have at all times acted as prosecutors, judges, and juries. Any semblance of legal procedure has been disregarded. One member of the three-man Board is clearly so biased against employers that he was proved to have instigated a strike in a large concern for the purpose of bringing the case before the Board. The Board itself has been extremely repugnant to suggestions that less stiff attitude in administration would be desirable. No doubt the administration of the Wagner Act is much more objectionable than the law.

From one end of New York State to the other, home of the author of the act creating the Board, has come unmeasured condemnation.

Utica Observer-Dispatch:

Enough testimony has been heard by the House committee investigating the National Labor Relations Board to show how far the Wagner Act, which the Board administers, has come from its avowed object of promoting harmony in industry. Not only has it created new friction between employers and employees but it has greatly aggravated the quarrel between the A. F. of L. and the C. I. O.

New York Sun:

One of the worst defects in the Wagner Act * * * is the absence of any restraint on labor unions to prevent them from applying pressure to employers and to workers not on their membership rolls.

Buffalo Courier Express:

If it is true that the House committee investigating the Labor Relations Board is already convinced that the Wagner Act is due for some national major amendments, that may be taken as proof of a returning common sense.

New York Herald Tribune:

The Board has in shameless disregard even of the Wagner Act's intentions thrown its weight to labor against the employer and to one faction of labor against the other * * * We can ask ourselves whether this agency as at present set up, torn with internal dissention, the sport of labor politics and seething with its own, can further serve any useful purpose.

Wall Street Journal:

Enough has already appeared to emphasize again the vital importance of personal qualifications in those administrative boards which have so increased in numbers during recent years and have been endowed with such great authority over their fellow citizens. The Labor Board has, from the beginning included men lacking in the qualities essential to those entrusted with quasi-judicial functions, together with others. That is no reflection on them. It is simply to say that one who is by nature a zealous advocate is not by nature qualified for administrative work, though he may be immensely useful to society in other capacities.

Brooklyn Eagle:

Democratic leaders * * * will shortly present * * * definite suggestions for modifying and amending the National Labor Relations Act. * * * Republicans, popular rolls, large sections of labor, most employers, and now Democrats are for the change. * * * There is no longer much doubt that an intrinsically sound law has been made ridiculous in its administration.

Rochester Democrat and Chronicle:

Dr. Leiserson (Board member) believes that law should permit the Board to promote industrial peace and that its administration should be fair as between employers and employees, and as between different groups of employees. All of which seems like a pretty sensible and fair attitude It is to be regretted that Dr. Leiserson is in a minority position on the Board. But the President, if he is wise, will not delay too long in correcting that situation.

Buffalo News:

In the airing of the clashing views and administrative discords Congress and the public are certain to realize that administrative weaknesses stem from fundamental weaknesses in the law itself. Many cases have proved the need for reform of the Labor Relations Act as well as the agency by which it is administered. In particular, the law should be amended to place equal responsibility on labor and the employer for maintaining fair labor practice in the collective-bargaining relationship. At present the law is weighted against the employer. It will be a task of the committee to make recommendations looking toward a stronger and fairer law, in the interest of labor, the employer, and the public.

The Troy Record:

The disclosures of N. L. R. B. terrorism have come out of the Board and records. William M. Leiserson, a veteran of railway mediation, who has a Nation-wide reputation as a sincere and intelligent friend of labor, was promptly confirmed by the Senate. And it is largely because of his appointment that the public is getting a sight at the N. L. R. B.'s dirty linen that the congressional committee is hanging on the line. It justifies the demand that Congress either repeal the Wagner Act and start afresh or alter it so radically that not a vestige of power to terrorize American industry and labor will remain with it.

New York Herald Tribune:

Given the one-sided provisions defining unfair labor practices and the virtually unrestricted power of the Board to designate the bargaining unit, and it was a foregone conclusion that not justice, but Mr. John L. Lewis, would govern the law's application, at least so long as he had the ear of the White House. Meanwhile, the obvious remedy is no more change in the Board's personnel, however desirable, but a thoroughgoing revision of the act to protect the employer as well as labor from coercion and intimidation and deprive the Board of its arbitrary authority to dictate the pattern of unionism. The country's industrial relations have suffered long enough from bureaucratic favoritism.

New York Times:

It would probably be necessary to go back to the days of national prohibition to find another law which has been the subject of such bitter and continuous controversy as the National Labor Relations Act. * * * The Board has made a tactical mistake and probably exceeded its authority in the matter of deciding according to its own judgment what form of labor unit is best for the purposes of collective bargaining. It has been guilty of irregularity in its procedure in the consolidation of cases. In many instances there has been mismanagement and "bungling." * * * What is needed primarily at the present time is not an investigation of the competence or the impartiality of the Labor Board or even a report on desirable amendments of the law itself. It is nothing less than a study of the whole problem of labor relations (in which the N. L. R. B. is only a single factor) and the drafting of a comprehensive program. * * * The committee has a rare opportunity to use its investigation as a basis for framing a constructive and balanced program in the broad interest of good labor relations and industrial recovery.

The Daily Worker:

It becomes clearer every day that the Smith committee itself is a part of a huge plot against the American labor movement and its struggle for better conditions, and for a position of independent strength * * * A combination of the Smith committee and the administration is a powerful one, and spells danger to the labor movement.

Passing from New York to the District of Columbia, where there are four daily papers, all inclined toward nonpartisanship, I found them all tending to denounce the Board. Here they are:

The Washington Post:

William M. Leiserson has gone a long way toward shattering confidence in the National Labor Relations Board, of which he is a member. When due allowance is made for Mr. Leiserson's candid and outspoken manner, his testimony before the House investigating committee leaves the N. L. R. B. in a very serious predicament.

Washington News:

Our own opinion, of course, is that the Labor Board has made a bad record which was only partly redeemed by its grudging retreat under fire when it modified its own rules, and by the appointment of the temperate and able William M. Leiserson to the Board. We believe that power to misinterpret the law should have been taken away from the Board by amendments clarifying the Labor Act, and that the administration of the regular labor committees of Congress made a great mistake in restricting and delaying amendments. If, now, the special investigation should result in emasculating amendments, those friends of the law who stalled off action through the recent session of Congress can blame themselves.

The Washington Star:

The practices of some of the Board's officials and employees which have been brought to light are more than sufficient to demonstrate the need of this inquiry. * * * The committee already has shown that change in personnel will be necessary if the Board is ever to function satisfactorily as the quasi-judicial agency it is intended to be. * * * Obviously, the recommendations which the Smith committee will make after completing its hearings will have a profound effect on the future economic welfare of the country.

The Washington Times-Herald:

The N. L. R. B. is finding out how it feels to be on the griddle. In times past governmental investigators and governmental inquiring committees, including those of Congress, have taken all kinds of liberty with unlimited authority to put people in bad lights. Injustice has resulted with national consequences. It must give Mr. J. P. Morgan a little pleasure to see the boys squirm these days under the same kind of lash that has been laid across his own back by the familiar Simon Legrees of Capitol Hill.

Turning westward into my native Ohio, I found the attitude of the press was sane and sound, but nowhere did I find a defender of the Board. Here are some of the expressed opinions:

The Cleveland News:

It is to the credit of the Smith congressional committee that it has discovered an enormous number of young women lawyers working for the National Labor Relations Board in obscure offices in Washington, abstracting cases and making a considerable number of legal decisions for the Board. These inexperienced young women, the testimony shows, are all determining matters on which a large part of the Wagner Act enforcement and interpretation, and many thousands of dollars for industries, depends. The country does not generally know that so many women are at work in this important Government department. Before it closes, the Smith committee should inquire further into the sources of their selections.

The Dayton News:

Out of the congressional investigation now under way of the operation of the Wagner Act has come a conclusion of wide acceptance. The testimony of Member Leiserson of the Labor Relations Board went far to establish the fact that the trouble with the law has been in its administration rather than with the law itself. The law attempted to establish a simple and now little-disputed rule. It intended merely to insure the worker the right, now little opposed, to organize for collective bargaining. * * * The clear purpose is to get the subject out of the approaching

melee of politics. It is more than likely that neither political party will be averse to this. You cannot stay in politics today and stand out against collective bargaining.

The Toledo Blade:

At last it looks as though Congress will hear from the country on the matter of what is wrong with labor relations as handled by the Wagner Act. From this may be mined the information that Congress should have on this weighty question.

The Cleveland Press:

Our own opinion, of course, is that the Labor Board has made a bad record.

The Cincinnati Enquirer:

What the latest findings of the House investigating committee indicate is the imperative need for revision of the Wagner Act, along with revision of the personnel of the Board.

The Cincinnati Times-Star:

The National Labor Relations Board has done plenty of things that no administrative body in a republic has a right to do. It has built up one large group of labor unions as against another. It has sought to put "fear" into the hearts of employers. In various plants it has shattered harmonious relations between employers and employees. It has rendered decisions based on its own prejudices or presuppositions, unsupported by trustworthy evidence. It has even ordered mills to pay back wages to workers whom State courts had jailed for physical violence and sabotage. In a word, it has sketched the main lines of a national picture which shows baffled and hamstrung employers, and workmen striking not only at their bosses but against each other.

The Akron Beacon-Journal:

What the House committee must do is to determine whether this weighting of the scales in labor's favor has not gone on long enough, and just how to go about changing the law so the weight will be shifted back sufficiently close to the center.

The Canton Repository:

Investigation must not ignore the thing behind the Board and behind the act which it administers. Fact is, the Board itself is inconsequential, being merely the front of an administrative policy that has been placed in question both by popular opinion and congressional action. If the House committee performs properly responsibility will be placed where it belongs—not on the administrators of a law that seems to mean what an administrative agency says it means, but on those whose principles members of the Board are interested in upholding.

Further west the feeling against the Board seemed to intensify. In Illinois it was exceedingly bitter. Here are a few examples:

The Chicago Journal of Commerce:

The proposal of the Congress of Industrial Organizations that the Wagner Act be amended to provide criminal penalties (for employers only) is an excellent clinical example of pressure groups psychology. To persons who have followed the enforcement of Government policy under this legislation it will be significant that when the C. I. O. cries aloud for change it seeks an alteration that would make the act more one-sided than ever.

The Chicago Tribune:

When Mr. Madden and the Smiths endeavored to turn American industry over to Mr. Lewis they did no more than Madam Perkins, Mr. Farley, and particularly Mr. Murphy when he was Governor of Michigan. The New Deal nearly succeeded in this by promoting a civil war in industrial cities and allowing the revolutionary vanguard to defy the courts, fight the police, and take over properties they needed as bases of operation. When Mr. SMITH of Virginia has completed the work of his committee's investigation and has laid the reports before Congress it may then become much safer for the plain Mr. Smiths to go to Washington and get out again still with their personal possessions in their pockets.

The Chicago Times:

A House committee in Washington is investigating the Labor Board and the workings of the Wagner Act. Characteristically the report started out with a list of those present. It named the three members. * * * And following 22 attorneys in all. We were prepared to expect legal complications and technicalities. * * * But when it takes 22 lawyers to hold up the legal end of the affair, we bow in awe.

The Rockford Star:

There have been many boards and commissions set up by Congress with lavish authority to police our economy. They have in most cases been given the sanction of the courts in their general activity, even though the courts have from time to time made mild protest against assumptions of authority. The Smith committee is simply taking one of these boards apart to find out what happens when authority is delegated in lavish degree. Its findings in some instances are almost incredible. The effect of these hearings will be immediately felt in Wagner Act revisions, it seems certain; beyond that they will be felt in a greater niggardliness on the part of Congress to pay out to any commission so much rope.

The Province Journal-Transcript:

Revelations that Nathan Witt, Secretary of the National Labor Relations Board, wrote a memorandum to Charles Fahy, general counsel of the Board, in which—9 days before any complaint was made—he advised C. I. O. officials and attorneys how to proceed to create a case against the Inland Steel Corporation, is justification enough for general public demand for complete change in personnel of the Board and its servants, if not for repeal or modification of the Wagner law under which the Board operates. The memorandum Witt wrote clearly indicates not merely that his sympathies were actively against the company and for the C. I. O., but that he even went so far as to tell attorneys for the union that, if they did thus and so, they would be putting the company in a position where, unless company executives were exceedingly shrewd, a complaint could be made to the Board. * * * When a Government official takes sides in a labor controversy, even before the controversy has developed to the point where it can be adjudged by proper authority, the whole system of American fair play is in jeopardy.

The feeling lessened not at all in the great open spaces of the West. Here are examples from papers in that section.

The Kansas City Kansan:

The country is not satisfied with its labor-relations situation. The ranks of organized labor divided. Damaging strikes have occurred. There are all sorts of charges and countercharges hurled by employees and employers at each other and at the Government. And all this follows a long-debated and highly tainted National Labor Relations Act which comes labeled as enlightened legislation, the kind which should spare employers, employees, and the public from all this difficulty. Something is wrong. Some say the law ought to be changed. Some blame the members of the National Labor Relations Board. The country isn't out of the economic woods yet. It needs the path to be made just as smooth and well-marked as possible.

The Topeka Capital:

This [labor] law was not intended to be fair. It was not intended to promote collective bargaining which originally was announced to be its purpose. The very word bargaining infers that there are two sides and that they stand on an equality, each entitled to the same rights as the other. When one is strong enough to dictate to the other and compel it to submit to certain conditions, that is not a bargain; it is tyranny. Laws that are unfair to either the employees or the employers will eventually work to the detriment of both. Instead of helping the cause of organized labor as was expected, the Wagner Act has greatly injured it, by creating public sentiment against it.

Salt Lake City Tribune:

The Board has made tactical mistakes, exceeded its authority, played favorites, and defeated objects of the act, according to evidence before the congressional committee now investigating its records.

Spokane Spokesman-Review:

The National Labor Relations Board, long under suspicion of bias, and therefore unfit to act in a semijudicial capacity, is shown by the congressional inquiry, which has barely started its investigation, to have been not merely partial, but militantly partisan in industrial disputes.

It may be that the maximum of indignation against was reached in San Diego, the point farthest to the continental Southwest. Observe the following:

The San Diego Union:

Judging from what has been revealed in the first peek behind the scenes of the National Labor Relations Board, it is about time the lid was taken off that organization and the whole country given a glimpse of what has been going on. Any organization holding the authority this Board holds over millions of workers and employers should have its every act carefully scrutinized. It is hoped that it (the investigation) will bring out into the open all the reasons why this new arm of government has taken upon itself dictatorial powers over the lifeblood of the Nation—labor and commerce Unless and until this important agency of the New Deal's program is cleaned up and subjected to the glare of publicity, there cannot help but be grave suspicion of the motives behind those who direct it.

The Oakland Tribune:

From business and labor have come concrete suggestions for the improvement of an act which may be said to be admittedly faulty even by those who oppose amendment, when they declare it can be made to work fairly by a change in the administering board. What is needed is a law free from possible abuse or exploitation by any board which, at the moment, may be in office.

The San Francisco Chronicle:

Revision, however, will not be easy. Taking only the labor movement into consideration, Mr. Green, of the A. F. of L. wants changes that will stop the pro-C. I. O. prejudice he claims has

dominated the National Labor Relations Board. Mr. Lewis, of the C. I. O., wants changes that will freeze the ground gained into the law and prevent any change or prejudice in the Board from adversely affecting his organization. What change can be made that will reconcile such opposed motives is difficult to envision. It is the hard task that Mr. Roosevelt faces unless the Wagner Act is to be a 1940 battleground for politics as it has been for labor and industry.

The Fresno Bee:

The National Labor Relations Board has been its own worst enemy. Starting with the thesis that the employer is never right, the Board seldom took the judicial attitude toward cases brought before it. In fact, it often went out of its way to carry out the policy by methods that were detestable. Peculiarly enough the Board's attitude has won for it neither appreciation nor esteem from labor. Both the C. I. O. and the A. F. of L. are demanding drastic changes in the law, each charging the Board has shown marked favoritism to the other.

The Los Angeles Times:

The Board has now decided, in a case involving the Waumbec Mills, Inc., of Manchester, N. H., that if an employer rejects applicants for work, he may be required not only to put such applicants on the pay roll but pay them back wages from the time of their application, notwithstanding that they have never before been employed by him. You guessed it—it was a C. I. O. union they belonged to. The Labor Board holds that discrimination against the two men might tend to discourage union affiliation on the part of other workers and hence is an unfair labor practice.

Democratic Texas is no less indicative than Northern States that are habitually Republican. Note the following:

San Antonio Express:

The appellate court reversals of National Labor Relations Board orders occur almost weekly—revealing evidence—first, bias, improper procedure or even misrepresentation to benefit favorite plaintiffs, notably the Congress of Industrial Organizations unions; second, Federal court reviews have shown that the Board repeatedly has ignored its constitutional right to work; third, it has furthered compulsory unionism by denying rights to nonunion workers and small independent labor organizations. It has substituted surmise and guess for proof, condoned violence, and denied defending employers a fair voice in Board hearings.

Beaumont Enterprise:

If the National Labor Relations Board is done for, it will cause few regrets. The Board has antagonized both of the labor factions, is unsatisfactory in its personnel and its operations to business, and has created in the public mind grave doubts as to its wisdom and fairness.

Dallas News:

Conspicuous in the studies of the operation of the Board and its representatives has been the free and easy acceptance of evidence and testimony without due regard to its authenticity. Congress in granting wide powers in hearings to the Board may have considered a just criticism that courts govern testimony on too technical grounds. The National Labor Relations Board has swung as far in the other direction. Rules to tighten admission of testimony should lie somewhere between the two evil extremes.

Wichita Falls Record News:

One would have to search the records of Government activities with diligence to find a department or bureau with as sorry a record as that of the National Labor Relations Board. American industry, both large and small, is at the mercy of the Board. So is labor. Its acts can leave an influence upon the Nation's prosperity and well-being far above those of any other bureau or board. Instead of exercising this power in a judicial manner, testimony so far presented shows that the Board or its agents frequently treated cases before it purely on a political basis. Apparently there has been small effort to bring impartiality into its proceedings, particularly in the early history of the Board, there appear to have been persecutions of those opposed to the political concepts of Board representatives.

Note that Oklahoma's attitude toward the Board is anything but complimentary:

Tulsa World:

Friends of the Wagner Labor Relations Act face this situation: Unyielding support of the National Labor Relations Board as now constituted and insistence upon vindication of all its acts so far will certainly result in discrediting the law and possibly in substantial repeal. Apparently the Board is not even a quasi-judicial body but is more a dummy or front for somebody or other. There are allegations of uniform favoritism for the C. I. O. and this Wagner Act is not going to function rightly until suspicion is removed.

Tulsa Tribune:

Every day evidence is piling up in the congressional investigation of the Board, the worst possible enemy of the Wagner Act. It is outspokenly biased in favor of the employee. It has not been a fact-finding body. It has set out to prove the employer wrong in every case.

Coming up through the deep South the comment of the Democratic press is little less complimentary. Note the following:

New Orleans Times-Picayune:

There are many who believe the Board is rather to be blamed than the law for the developments which have provoked Nation-wide criticism and protests even from the grand divisions of organized labor.

Asheville (N. C.) Citizen:

The administration which the National Labor Relations Board has given to the Wagner Act has been of the type to invite and to justify criticism. In its zeal to safeguard the rights of the employees, it has been unjust to the employers in all too many cases. If this prejudiced administration of the Wagner Act is not ended public sentiment will harden so completely against the act itself that Congress will be compelled to alter the law.

Charlotte Observer:

The law which this Board has been attempting to administer is itself unsound in a number of essential respects, and then, on top of this, has come a Board that has been obviously one-sided, prejudiced, and unfair in its construction of the law and its application as well.

Macon Telegraph:

It is a familiar fact that the Wagner Act makes no provision whatever for the Labor Relations Board to serve as a mediator in labor disputes. It does act under authority of law as prosecutor, judge, jury, but, significantly enough, it is given no authority to function in a conciliatory capacity. And yet, in one instance after another, when trapped by the investigating committee in matter that did not concern them, and always in the interest of John Lewis' C. I. O., the alibi of these Board agents has been they were trying to "mediate."

Memphis Commercial Appeal:

Not even the Labor Board itself can claim it has a good name, for it is patently the most unpopular of all the New Deal agencies. Designed to reduce labor controversies, it has multiplied them. Supposed to create better feeling, it has become the target of acid criticism from all concerned with its operations, including employers and both wings of organized labor.

The surprising thing about all of this is the unanimity of the condemnation of the National Labor Relations Board. There are, doubtless, papers in some of the States that are not communistic that defend it. If I had searched through additional hundreds of them I might have found such defenses. But certain it is that condemnation is practically unanimous. Those of us who are new in Congress are inclined to assume that those issues that continue to be controversial have groups of antagonists arraigned against each other, that they meet on some hypothetical political battleground and fight it out as might two football teams. But here we have a political bone of contention in which practically all members of all parties are on one side. It is hard for those of us who are novices where there is any disagreement. If Democrats and Republicans, workers and employers, C. I. O.'s and A. F. of L.'s, all agree that the National Labor Relations Act and Board is illy conceived and improperly officered, manned, and operated, why not remedy the situation forthwith? If there are lessons that have been learned from the vast and tragic experience through which we have passed, why not collect those small nuggets as the slight salvage obtainable and go on from there? But why waste further time in pulling and hauling back and forth other issues in which agreement is already unanimous?

Secretary of Labor Perkins

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

Mrs. O'DAY. Mr. Speaker, the Secretary of Labor needs no defense from me. Her record during these turbulent years speaks for itself.

We have voted to remove the Bureau of Immigration and Naturalization to the Department of Justice and, personally, I am in entire accord with the transfer. The proposal is not a new one. The Bureau never properly belonged under Labor and Secretary Perkins, herself, is known to favor the change.

But I am unwilling to permit this proposal to go through with the charges that Secretary Perkins has mishandled the Bureau unanswered. Such is not the case. As head of the Department under which the Bureau of Immigration and Naturalization operated, Secretary Perkins has directed it both humanely and well. In contrast to certain former Secretaries, whose interpretation of the law was often harsh and unreasonable, she has been willing to concede that the alien, an American in the making, was also an individual, each with his or her own personal problem. That we, as Members of Congress, have also realized this is evinced by the many private bills introduced to help individuals whose cases fell outside the law or just over the border. Did we believe that all aliens, those who had by mischance or otherwise fallen afoul of our laws, were criminals there would be no private bills before the Committee on Immigration and Naturalization.

When the transfer is effected I hope to see these individual cases decided by an impartial committee composed of representatives of the Departments of State, Labor, and Justice. Such a committee would insure the strangers within our gates the justice and mercy that we, in our introduction of our private bills, have endeavored to obtain for them.

Since I have been given leave to extend my remarks in the RECORD, I wish to pay tribute to Secretary Perkins as the efficient and capable public official she has been for many years of her life. As head of the New York State Labor Department for 13 years she did a job that commanded the admiration and respect of wage earners, employers, and the general public.

As Secretary of Labor of the United States she has done a thorough, conscientious, and admirable job in the interest of the men and women of this Nation who work for their living.

The United States Department of Labor is now more efficient and better administered than it ever has been since it was established by the Congress in 1913. Secretary Perkins has overhauled the Department with the view of making it more effective for carrying out the underlying purpose as expressed in the basic act—to foster, promote, and develop the welfare of the wage earners of the United States. Procedures have been simplified, duplication of effort and responsibilities has been eliminated, bureaus having different functions but utilizing the same material for their information have learned the art of having one common pool for statistical and economic information. Inspection and investigation services also have been pooled so that no duplication of effort or waste of motion takes place. Business management has been centralized, and all this has been planned for the purpose of getting the best and most complete results on the small amount of money spent, but functional organization and approaches have been maintained.

Secretary Perkins was chairman of the President's Committee on Economic Security which made the recommendations upon which the Congress based the Social Security Act, one of the most far-reaching beneficial statutes enacted in the history of the United States.

Among the programs designed primarily to benefit the wage earners, but also in the public interest to promote the general well-being of this generation and those to come, which have emanated out of the Department of Labor since Secretary Perkins took office in 1933 are the following:

First. An immediate recommendation early in 1933 that there be some quick relief in the way of Federal appropriations to assist the States and localities in meeting the primary relief needs of the people who were then unemployed and had been unemployed for a long time in the emergency of general depression.

Second. A program of straight public works. The recommendation for it and the justification for it and the basic figures and information came out of the Labor Department. The conception of finding special work for those who could not be absorbed on straight public works also sprang from a meeting of labor leaders, Government officers, and others in the Department of Labor early in 1933.

Third. The Wagner-Peyser Act, which established well-equipped, free public employment offices, also came from recommendations of the Department as a method of taking care of the effective placement of persons looking for work where there was work to be had, so reducing the loss and waste of poor placement of the job hunting.

Fourth. The labor sections of the N. I. R. A. were contributed by the Department and its advisors in an effort to offer employment opportunities and labor protection in private industry.

Fifth. The Public Contracts Act, which required not over 40 hours and a fair minimum pay on Government contracts in manufacturing. This act sprang out of the recommendations of the Department, advised by a conference committee of State labor department officials and labor leaders.

Sixth. The Wage and Hour Act, which was the first effort to establish on a Federal basis a floor to wages and a ceiling to hours. This grew directly out of the recommendations of this Department, advised again by a conference of State labor department officials and labor representatives following the abandonment of N. I. R. A.

Seventh. Unemployment compensation, which is an adjustment for the loss of wages due to the accident of unemployment. Again this had its origin in the studies and recommendations of the Labor Department and its advisory committees.

Eighth. Contributory old-age insurance for the future and Federal assistance to the States for providing old-age assistance to aged needy persons. These programs were adopted partly to enable the elderly to leave the labor market and so offer more employment to persons at the peak load of their responsibilities.

Ninth. Limitation on the employment of young persons under 16 years in the N. I. R. A. Act and later in the Public Contracts Act and Wage and Hour Act. These provisions were aimed partly at keeping the immature workers out of the labor market and so offering more jobs to those in middle life.

Tenth. The C. C. C. as a form of constructive educational employment for young persons also had its inception in the Department of Labor.

This is a record that needs no defense. It represents an accomplishment of which any public official may well be proud.

Freedom and Unity

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I insert the address which was delivered by the gentleman from Massachusetts, Hon. JOSEPH W. MARTIN, Jr., Republican leader of the House of Representatives before the Republican State convention at Montpelier, Vt., May 24, 1940, and broadcast on a coast-to-coast network.

The address is as follows:

Mr. Chairman, when your able and genial Representative in the House, CHARLIE PLUMLEY, extended to me the invitation to address this convention I was delighted to accept.

It is an honor, a pleasure, and an inspiration to address this Republican convention in this great State, distinguished as the only one which has, in every Presidential election, been loyal to the Republican Party ever since the day Vermont's electoral vote was cast for Abraham Lincoln and Hannibal Hamlin in 1860.

Of course, Mr. Chairman, the stalwart idealism, the devotion to liberty, independence, and good government which kept Vermont in the Republican column all these years will keep her there this year.

Your State motto has in these strange days a deep meaning for this entire Nation. That motto on your State seal is "Freedom and unity." Those words might well be adopted as the Republican slogan for this campaign, "Freedom and unity."

I want to take those words as a text for a few minutes and point out why they have such a deep and fateful meaning for the people of this Nation in these times.

The world is divided by wars and national hatreds; schisms, bitter and deep, exist between different classes and sections even within the nations themselves.

We are all watching the future with grave anxiety and heavy hearts. We can and we must have recourse to a strong faith in an all-wise and all-powerful Providence; we must have that high courage of Stark and the Green Mountain Boys at Bennington; that courage which sustained the Allens, Jacob Bayley, Bradley, Chipman, Clark, Chittenden, and the other brave and sturdy pioneers who, through their energy, vision, and courage, helped establish the great, enlightened Nation that is today the United States of America.

While we watch with heavy hearts the merciless, ruthless conflicts in Europe, we must be vigilant that our own domestic problems do not literally become Trojan horses. We must be alert to the danger of unemployment; of increases in our already stupendous national debt; of continuing deficits; of agricultural distress, oppressive taxes; of discouraged and disheartened business; of oppressed individual initiative. We must prevent these problems becoming sprouting beds, as it were, of discouragement, of a distrust and disgust of constitutional government, which might aid propagandists in their efforts to overthrow our constitutional government in this Nation.

"Freedom and unity!" Three words holding more of the hopes of the American people than, perhaps, any other three words in the English language. Three words representing the dreams and ideals for which our forefathers fought, bled, worked, sacrificed, and saved.

"Freedom and unity!" Was there ever a time since the Stars and Stripes became the symbol of this free Nation when there was so great a need for unity to preserve our freedom as there is in this dark hour, when the philosophy of ruthless force seems to be sweeping over such a great part of the civilized world?

Many grim problems confront us. It will be only through the unity possible because of our common love of freedom that we will be able to solve these problems and keep the torch of liberty burning for the rest of the world.

There have been many disquieting disclosures in the last few weeks about the national defense. The Republicans in the Congress have stood solidly for both the principle and the practice of a national defense adequate to protect this Nation and the Monroe Doctrine against aggression by any nation or any combination of nations.

A most important part of that national defense is the financial solvency of our Government. Grave, indeed, is the situation which confronts us. You have seen the public debt mount, year by year, until it has reached a figure which no citizen, in 1932, even dreamed would ever be approached. We have had deficit after deficit; taxes have mounted until they have become almost confiscatory.

When we entered the first World War in April 1917 our national debt was $1,100,000,000. In the 18 months of our participation we spent more than $35,000,000,000. To meet those expenditures we raised about ten billions through taxation. We borrowed the remainder, and came out of the war with a national debt of twenty-six billions.

Compare that to our present situation. We have piled up a huge national debt. If we should be drawn into a war of first magnitude we should have to start with a debt of at least 45 billions, probably more, and then finance the effort on top of that debt. It is a prospect which must concern every thoughtful person in the land.

No one at this time can foresee accurately the measures we might have to employ if we were drawn into war; but all of us can visualize the danger to our institutions if we were forced to inflation, confiscation, and ultimate repudiation. Could our free institutions survive such a strain? Similar institutions have perished in other lands within our time. Driven to such measures, it might well be that we actually would fail in our defense.

To deny that a healthy economic condition is vitally important to our Nation's defense would be absurd. Our ability to mobilize and maintain the resources of the country in a major effort depends fundamentally upon the strength of our national economy.

We should very closely examine and consider changes which may be necessary in the fundamental plan of our national defense. We must not mislead the people into thinking something has been accomplished merely because Congress rushes through another appropriation. The whole future is too uncertain, too many problems confront us, for any such action as that. The American people must be made aware of the fact that the whole plan, the whole fundamental idea of our defense, upon which we have relied, may have to be altered.

It is entirely possible our system of national defense, based on the assumption that our interests and our national security will never be threatened on more than one of the two oceans at the same time, and never by a naval power as strong as ourselves, may have to be completely changed to meet the possibility of a very strong threat to our security in both oceans at the same time.

Now, there is another kind of defense we must also prepare. You have watched a political bureaucracy—the greatest and most expensive political bureaucracy ever created in this Nation—grow up under the present administration at Washington; you have seen it send its tentacles into every corner of this Nation; you have seen it in its very processes of sapping the substance of the citizens through taxation, and of using that substance—public funds—for the purpose of further entrenching itself in power.

Bureaucracy is not a new invention of the present administration. It is not an innovation in government. From time immemorial the liberties and privileges of individuals have been restricted or destroyed by bureaucracy.

History shows certain well-defined facts concerning bureaucracies. They invariably followed a pattern. Although a benevolent despot sufficiently wise might, theoretically, establish the finest form of government for the people, three difficulties always confronted the people in such a despotism: The first was to find a despot who would remain benevolent after he attained absolute power; the second was to find a benevolent despot wise enough to be intelligently benevolent; and the third was to find administrators with the benevolence and the vision of the despot to carry out his will without abusing or imposing upon the people under them.

Age-long experience with bureaucrats taught men that, without fail, powerful bureaucracies always became corrupt, dictatorial, arrogant, and stupid. Regardless of what motives might be animating the ruler, the bureaucrats became so numerous the despot could not keep his eye on each one of them personally. Abuses crept in; the possession and exercise of power changed the natures of men; greed and pride blinded them; and the people suffered in consequence.

In the United States in later years, our great political bureaucracy has behaved exactly according to the historic pattern.

This trend toward bureaucracy, Mr. Chairman, is inexpressibly more dangerous than the people realize. Look back to 1904, when the total number of employees in the Government service—all employees—in Washington and over the United States, exclusive of the military forces—was 301,000. In 1913 the number was 443,605. The World War came on, and the number grew by 1918 to 917,760. After the war it dropped again in 1923 to 515,772, and in 1930 was 580,494; and then, with the advent of the New Deal administration, it began to grow by leaps and bounds, and rose from 563,487 in 1933 to 945,826 in 1940.

The safety of the United States, the financial well-being of this Nation, and the security of the people's liberties, all demand that we reverse this trend toward an ever-increasing bureaucracy and more complex government and get back to a more simplified form of government, fewer tax eaters on the pay rolls, and more returns per dollar of salaries and expenses in government.

"Freedom and unity." If we are going to maintain political freedom in this country, we must maintain unity in the Republican Party after the convention at Philadelphia in June has decided who the candidates shall be. We must, every man and woman of us, put our shoulders to the wheel and work together with every ounce of energy we can summon to turn out of office this great New Deal bureaucracy which has plunged this Nation into debt to such a dreadful degree.

The campaign this year, my fellow Republicans, is not a campaign in which the Republican Party is merely seeking to recapture public office. It is a campaign to save this Nation from financial insolvency. It is a campaign to save this Nation from certain bankruptcy, which faces us if we continue along the road we are traveling now. It is a campaign to reestablish firmly the foundations of free constitutional government in this Nation.

Common sense and common logic tell us we cannot successfully defend, maintain, and perpetuate liberty, freedom, enlightenment, constitutional government, and American ideals by abandoning every tenet of liberty, freedom, enlightenment, and constitutional government at the first assault upon them.

The only way under God's blue sky we can successfully maintain freedom and Americanism in this country is to refuse to abandon under any circumstances the principles and the tenets of freedom and Americanism.

This Nation has come to a critical hour. The problems which confront us, the dangers which beset us, the temptations which surround us, all require that if we are to continue to be a free, constitutional Republic we must stand united as a people, above all sectionalism, all partisanship, all class suspicions, and hatreds. The motto of the dictator is "Divide and Rule." In country after country we have seen long-constituted governments swept away by those who, through their crafty and treacherous ways and means, divided and took over the rule of the government and the people.

We all realize, of course, that conditions of modern warfare necessitate absolute mobilization of entire populations. Such

would be the case in our own country if we became involved in a war. The very first act we would be required to perform in this free country of ours in event we were in a crisis due to the imminence of war would be to submit to the mobilization program which the administration has ready. That would mean—and mark you well what I am saying—that would mean the abolition of freedom and the extinction of personal liberty in the United States; the setting aside of constitutional government; and the absolute regimentation and mobilization of every man, woman and child in this Nation. When, if ever, we would return to free government would be highly problematical.

I said a while ago that we could not protect and maintain the liberties and the privileges and the freedom of Americanism by abandoning at the first crack of a gun, so to speak, all the principles and tenets of Americanism. Let me say to you that this is no time for this Nation to allow emotional surges to supplant logical thinking. We must face conditions as they are, realistically and rationally. There is nothing about world conditions today, and there is nothing about our domestic condition today that demands or requires or justifies any abandonment of our traditional two-party system of government. In times of stress like these there is always the tendency to cry down any criticisms. Let me say to you, my fellow citizens, that the surest and quickest way to mistakes and failure is to silence and penalize constructive criticism.

There is not one single reason why we Republicans should lower our voices, limit our words, or silence our protests against the extravagance, the waste, and the mistakes that have been made in the last 7 years. There is no reason why we should not urge that the Republican Party be given control of the House of Representatives and of the White House. I want to say to you that the record of broken promises, the record of contradictions, and the record of failures in the last 7½ years constitute the best argument today that the conduct of our national defense and the future affairs of this country should be turned back to Republican hands.

The great danger to this country is that we will become infected with a hysterical fear that in some way some great and invincible enemy is crashing at our doors or approaching our shores.

I want to recall to you what I think was the most profound statement of truth Franklin D. Roosevelt ever made in his life, and that was when he declared that "the thing we have most to fear is fear itself." I say to you and to this Nation today that in this hour the thing we have most to fear is fear itself—synthetic fear—manufactured to sway us against our better judgment and our reason.

Let us not forget that our course must be a peaceful one because any other course must be paid for, not alone in dollars but in the blood of our youth and the wordless agony of the hearts of the fathers and mothers of America.

So, then, let us go forward to next November conscious that we have done our duty as a minority party in criticizing fearlessly and constructively that which we felt merited criticism, and which we still believe merits criticism. Let us have the courage to continue to criticize constructively—not merely from a partisan standpoint but constructively—whatever deserves constructive criticism. Le us not be afraid to help put the brakes on emotionalism. Let us not be afraid to raise our voices and exercise our energies in keeping common sense and logic in control in America.

Let's keep on being Americans in the American way.

Field Mass, Arlington Cemetery, May 26, 1940

EXTENSION OF REMARKS

OF

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

SERMON BY BISHOP JOHN F. O'HARA, C. S. C.

Mr. MAAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon by Bishop John F. O'Hara, C. S. C., at the field mass at Arlington Cemetery on Sunday, May 26, 1940:

"Cleave ye unto the Lord, your God, as you have done unto this day; and then the Lord God will take away before your eyes nations that are great and very strong, and no man shall be able to resist you * * * because the Lord, your God, Himself, will fight for you, as He hath promised. This only take care of with all diligence, that you love the Lord your God" (Joshua xxii: 8–11).

We have gathered here today in justice to honor the gallant dead, who have died that we might live, and in charity to beg of God a merciful judgment on all who shed their blood for their fellow men. We meet in peace to thank God for sparing us from war; we unite in common petition that by divine mercy brotherly love may be restored to all the children of God.

We meet on ground hallowed as the last earthly resting place of men who have offered themselves for the supreme sacrifice; and the form of our prayer is the sublime sacrifice of the mass, in which we offer to the Heavenly Father the divine victim who is the supreme exemplar of self-immolation.

Men who believe in God and in eternity have little difficulty in accepting the fact that there are things worse than war. If God is our Creator, and our last end, the greatest evil is whatever keeps us from God. If Heaven is our only true home, and death is the door through which we pass to that home, then death is a blessing—a blessing to all who are prepared to pass through that door. It is in this sense that the Holy Ghost spoke through the mouth of the wise man: "The souls of the just are in the hands of God, and the torment of death shall not touch them."

"In the sight of the unwise they seemed to die, and their departure was taken for misery, and their going away from us for utter destruction; but they are at peace. And though in the sight of men they suffered torments, their hope is full of immortality" (Wisdom iii: 1–4).

Short of spiritual destruction, but grave in their temporal consequences, there are other evils worse than war. The dignity of the human person finds expression in temporal as well as spiritual ends, and liberty to attain worthy temporal ends is a right with which God has endowed our souls. Three such rights are enumerated in our Declaration of Independence; the rights to life, to liberty, and to the pursuit of happiness. Other correlative rights are protected by our Constitution, and particularly by those amendments which we style "the Bill of Rights." These are rights given us by the natural law and defined by our charter of government, and we recognize the duty of our duly constituted authorities to defend these rights even by recourse to arms when all other means of defense prove fruitless.

Every civilized nation recognizes, in some form or other, the necessity of placing before its own people and before the world at large a just cause for any war in which it may engage. Every nation feels impelled to show, by white books or other documented apologies, that the impelling motives to war imply greater evils than war itself. In the emotional fever which accompanies the state of war it is difficult, often impossible, to pass impartial judgment on conflicting claims. It sometimes happens that centuries pass before there is anything like unanimous agreement on the morality of a particular war. We must leave to God the judgment of those who provoke unjust war, and we must in all charity restrain the temptation to judge harshly those who have borne arms under an unjust aggressor, for they may easily have been deceived in the heat of passion.

Here today, surrounded by the earthly remains of men who offered themselves in the supreme act of charity, here by the grave of a man whose identity is known only to God, but who gave his life in the belief that he was saving civilization from something worse than war, here in the shadow of the cross and the flag, symbols of our devotion to God and to country; here we may judge more calmly, we may plan dispassionately, and pray without rancor for the peace which the world cannot give. And in our prayers and our plans for the future of America let us have before our eyes and in our hearts the warning that Joshua gave to the people of Israel, "But if you will embrace the errors of these nations that dwell among you, and make marriages with them, and join friendships: Know ye for a certainty that the Lord your God will not destroy them before your face, but they shall be a pit and a snare in your way, and a stumbling block at your side, and stakes in your eyes, till he take you away and destroy you from off this excellent land, which he hath given you" (Joshua xxiii: 12–13).

I am afraid that in the heat of passion we have forgotten this prophecy and all that it implies. God warned the people of Israel that if they would embrace the errors of the nations about them, He would not destroy those nations, but would allow them to remain as a pit and a stumbling block in their path. The history of the world bears out this prophecy. Look down through the years, not only through the history of the people of Israel, but through all the history of Christendom, and you will find that nation after nation, after a conquest of its enemies, fell victim to new vices that it learned from the vanquished foe.

What error shall we avoid? Every error. Every false philosophy of life. And the all-pervading false philosophy of life that has thrown Europe into chaos today is the philosophy of materialism. It is the philosophy of those who place all paradise here on earth. It is the philosophy of those who see only the material want of the moment, which they would satisfy to the detriment of the immortal soul. It is the philosophy of those who are depriving our Nation of millions of babies each year, while the purchasing power of the farmer is destroyed because there are not enough mouths to feed. It is the philosophy of those who would educate children in all that affects their physical and economic well-being, but deprive them of all knowledge of God and of eternal life. It is the philosophy of all who exclude God from human calculations.

This false philosophy was not in the minds of our forefathers when they founded this country; it is not the mind of our State and National Governments today. But it is a "fifth column" philosophy that has affected American life to a dangerous extent, and we cannot ignore its existence.

Here in the green hills of this noble State of Virginia, on soil hallowed by the blood of brothers in blue and gray, who died for principles which they saw as right, it seems not inappropriate to recall that in the darkest days of that tragic War between the States, the Government of the Confederate States of America thought it proper to send a high commissioner to the court of His Holiness Pope Pius IX to plead the morality of the cause of the Confederacy. The commissioner chosen was Bishop Patrick M. Lynch, of Charleston, S. C. His commission was signed by the Honorable Jefferson M. Davis, President of the Confederate States of America. His letter of instructions from the Honorable J. P. Benjamin, Secretary of State, has been preserved to us. It is a beautiful document, and I hope I may be pardoned if I quote from it somewhat at length.

After complimenting Bishop Lynch on the high appreciation of his character and ability which President Davis has shown by entrusting him with a mission so delicate and important, Secretary Benjamin goes on to say:

"The recent correspondence between the President and His Holiness the Sovereign Pontiff Pius IX, of which a copy accompanies these instructions, was, as you will perceive, not political in its nature, but it exhibited in a striking manner the very benevolent character of His Holiness, his earnest desire for the restoration of peace on this continent, and his readiness to do whatever can be properly done by him as head of the Catholic Church to promote so desirable a result. The spontaneous action of His Holiness in addressing an exhortation to this effect to two of the highest dignitaries of the church, North and South, elicted from the President the expression of the feelings excited not only in him, but among all the people of the Confederacy, by so striking a manifestation of Christian charity and benevolence.

"It has seemed proper to the President that in further testimonial of the cordial sentiments entertained toward the Sovereign Pontiff and of respect for his character and eminent position, a Commissioner should be sent to reside near the court of the Vatican for inaugurating such political relations as may be suitable under the circumstances in which the Confederacy is placed. He knows no person to whom this duty could be entrusted that would probably be received by His Holiness with greater satisfaction than yourself. It is scarcely necessary to explain that by a policy as unprecedented as we believe it to be unjust the great powers of Europe have hitherto declined to recognize the unimpeachable title of this Government to admission into the family of nations; nor would there be any utility in entering into discussion of the reasons by which this denial of our rights is justified in the opinion of those powers. It must suffice to say that we can under no circumstances admit in our relation with foreign governments, either expressly or by any implication, however remote, that the Confederacy stands on any footing other than that of perfect equality with all other nations, and especially with the enemies who are now waging a war of invasion for the subversion of its right and independence.

"While maintaining this position, however, we would be scarcely justified in expecting that the cabinet of the Vatican should assume the responsibility of being the first to recognize our independence and thus to cast a seeming censure on the Great Powers which control the general policy of Europe on this question. To make a formal demand for our recognition by His Holiness would therefore seem to be ungracious and inconsistent with the friendly feelings which prompt this mission. The President is consequently unwilling to instruct you to pursue any course which would compel His Holiness, however well disposed, to decline acquiescing in our claim, in order to avoid injuriously affecting his relations with other powers. The honor and interest of our own country is, however, paramount to all other considerations.

"It will be your delicate task to keep in view the great advantage which would accrue to our cause by the formal recognition of this Government by the Sovereign Pontiff, and the establishment with him of the usual diplomatic intercourse. If an occasion be presented which in your judgment offers a reasonable prospect of the successful issue of such a step, the President expects that you will not fail to avail yourself of the opportunity. If, on the contrary, you become satisfied that the result would be unfavorable, you will content yourself with the maintenance of those informal relations which are usual in the case of a government not yet formally recognized. It is rather to the indirect than the direct effects of your misison that we are disposed to look for fruitful results. Combining, as you will, the advantages of eminent ecclesiastical and political position; located, as you will be, in the center from which radiates the influence of the Holy See; brought, as you must necessarily be, into immediate contact with not only those who control the policy of the states of the church, but with the trusted representatives of all the Catholic powers of Europe—opportunities will be afforded for enlightening opinions and molding impressions of which the President is confident you will avail yourself with signal benefit to the cause of our country. The errors prevalent in Europe in regard to this people and the struggle in which they are engaged, the unfounded prejudices and false impressions which have been industriously created and fostered by our enemies constitute weapons against which we are more helpless than against invading armies."

Thus far the letter of Secretary Benjamin. Its further comments you may read, if you will, in the published Messages and Papers of the Confederacy. The scars of that conflict have healed, and brothers of both North and South are united in bonds of esteem and affection to work out a common destiny in fear and love of God. For myself, I like to think that the beginning of that harmonious spirit of cooperation began at Gettysburg in the afternoon of July 2, 1863, when Father William Corby, then chaplain of the Irish Brigade, and later president of the University of Notre Dame, gave general absolution to all the men before going into the charge of the peach orchard. It is probably the first time that this happened in the United States of America.

Major General Mulholland described the scene as follows:

"Father Corby stood on a large rock in front of the brigade. Addressing the men, he explained what he was about to do, saying that each one could receive the benefit of the absolution by making a sincere act of contrition and firmly resolving to embrace the first opportunity of confessing his sins, urging them to do their duty, and reminding them of the high and sacred nature of their trust as soldiers and the noble object for which they fought. * * * The brigade was standing at 'Order arms.' As he closed his address, every man, Catholic and non-Catholic, fell on his knees with his head bowed down. Then, stretching his right hand toward the brigade, Father Corby pronounced the words of the absolution:

"'* * * ego absolvo vos, a peccatis vestris, in nomine Patris, et Filii, et Spiritui Sancti, Amen.'"

In describing this ceremony years later, Father Corby stated that the general absolution was intended for all, not only for the Irish Brigade, but for all, North or South, who were susceptible of it, who were about to appear before their Judge. Then he added: "Let us hope that many thousands of souls, purified by hardships, fasting, prayer, and blood met a favorable sentence on the ever memorable battlefield of Gettysburg."

We must be as charitable today. We must leave judgment to God—judgment, that is, of all save ourselves. Our hearts must be pure, our hearts clean, for these men who lie here bequeathed our Nation to men of pure hearts, and to men of clean hands.

The National Defense

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ARTICLE BY JOHN T. MOUTOUX

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a short article appearing in the Knoxville News Sentinel of Sunday, May 26, written by its Washington staff representative, John T. Moutoux, who is a capable and well-qualified reporter and columnist:

[From the Knoxville (Tenn.) News Sentinel of May 26, 1940]

LET'S TAKE A LOOK AT F. D. R. DEFENSE WORK; CAN G. O. P. CRITICIZE?

(By John T. Moutoux)

WASHINGTON, May 25.—Certainly the frightful news from Europe this week demonstrated the need of a first-class air force in modern war, or for defense.

Immediately Americans ask: Do we have such an air force? If not, why not?

Last week I showed in this column how more than 2 years ago President Roosevelt asked Congress to authorize a naval expansion program, and how his request was ridiculed by such Republicans as Senator VANDENBERG, who referred to it as "a super, super Navy," and by the late J. Will Taylor, of Tennessee, who asked the need for this "super, gigantic Navy."

This week I want to refresh our memories on another phase of our defense program—strengthening our air force. Let us see what the President did about it, and how some of the Republican leaders in Congress reacted to his request.

IN A SPECIAL MESSAGE

On January 12, 1939, President Roosevelt sent a special message to Congress. I wish there were room here to print the whole message, because it shows with what remarkable foresight the President anticipated the situation now confronting us and the world. But I will cite excerpts, as follows:

"In my annual message to this Congress I have spoken at some length of the changing world conditions outside the American Hemisphere which makes it imperative that we should take immediate steps for the protection of our liberties. * * *

"Careful examination of the most imperative present needs leads me to recommend the appropriation at this session of Congress, with as great speed as possible, of approximately $525,000,000. * * *

"The survey indicates that of this sum approximately $450,000,000 should be allocated for new needs of the Army, $65,000,000 for new needs of the Navy, and $10,000,000 for training of civilian air pilots. * * *

"In the case of the Army, information from other nations leads us to believe that there must be a complete revision of our estimates for aircraft. * * *

"Military aviation is increasing today at an unprecedented and alarming rate. Increased range, increased speed, increased capacity of airplanes abroad have changed our requirements for defense aviation."

The President suggested that the bulk of the fund recommended be used for the purchase of new planes for the Army and the Navy and that the balance, some $110,000,000, be used for the purchase of "critical items" of equipment, including tanks, antitank guns, antiaircraft artillery.

The President said he considered his recommendations "a minimum program for the necessities of defense," and he closed by asking "quick action on this emergency program."

WHAT MR. FISH SAID

Let us see what Mr. HAMILTON FISH, ranking Republican on the House Foreign Affairs Committee, thought of the President's request. He expressed his views over the Mutual Broadcasting System on January 19, 1939, exactly a week after the President had sent his message to Congress. I can quote only excerpts.

Mr. FISH began:

"What I intend to say this evening may not be approved or appreciated by New Deal warmongers, hysterical internationalists, war profiteers, superpatriots, and Communists, who are all hellbent on arming the United States to the teeth for the purpose of acting as a policeman for the entire world.

"The contention that this country is in danger of foreign attack is sheer political bunk. It aims to deceive the people into supporting a huge armament program in the guise of national defense, which in reality is nothing but a smoke screen to obscure the depression and economic failures of the New Deal."

Although a number of Republicans are now criticizing the President for wasting and squandering millions of dollars on W. P. A. and other relief agencies instead of using the money to build up our national defense, some of the Administration's critics did not feel that way about it even a year ago. Mr. FISH, for example.

"I feel strongly," he said, "that in the midst of a depression with 12,000,000 unemployed, it is not sound policy or logical to cut down relief for our destitute on the one hand and spend billions for superarmaments and destructive purposes on the other * * *."

Later in his speech Representative FISH said: "I challenge President Roosevelt to tell the American people what nation or nations has the faintest idea or capacity to attack or invade the United States. * * *

"The President asks for 8,500 airplanes. Against whom are they to be used? * * *"

NOT A MAJORITY

Mr. FISH, it should be added, did not represent a majority of the Republicans in the House. As a matter of fact, the Republicans in the House held a caucus just before a bill was brought to the House embodying the recommendations of the President. At that caucus a majority agreed on a statement which set out their views—the official views of the Republicans in the House.

That statement, presented to the House by Representative JAMES WADSWORTH, of New York, expressed concurrence in all parts of the program recommended by the President except the rate at which the air force was to be built up. The President had recommended that the Army air force be built up to 6,000 planes as rapidly as possible. The Republicans thought it would be better to spread out the plane-building program over 3 to 4 years. They gave two reasons for their position—the planes would be less likely to become obsolete, and the "financial strain" would be lessened.

The last paragraph of that Republican report is especially interesting at this time, in view of the charges now being made by many Republicans that the President neglected this country's national defense. (For instance, Ernest T. Weir, chairman of the finance committee of the Republican National Committee, said in New York this week that the President had left this country as unprepared against invasion as Finland or Norway.)

This is the concluding paragraph of the Republican caucus' report: "In any event, with an Army Air Corps at a maximum strength of 5,500, with additional Army personnel trained for its operation, coupled with a naval air force approximating 3,000 planes, we believe the air defense of our country will be adequate."

TWO DAYS' DEBATE

After 2 days of debate the Republican amendment to limit the number of new planes to 1,000 a year was defeated 136 to 183. The RECORD does not show a recorded vote, but it is fair to assume that the 136 who voted for the amendment were largely Republicans.

Later that same day the bill was passed by an overwhelming majority.

HOW VOTE WENT

When the bill reached the Senate it was opposed by the isolationists—Nye and Borah among the Republicans and Clark of Missouri among the Democrats. There were others, of course, but the trio just named led the fight which consumed almost 2 weeks.

Much of the time was consumed assailing the President for permitting the sale of American planes to the French. In fact, the discovery that a French mission was in this country buying American planes created quite a scandal for a while. I imagine that most people in this country now wish that the French had started buying American planes a whole lot earlier—and had bought more of them. And I doubt if there are many in this country who would now attack the President for permitting sale of the planes to the French.

The President's foreign policy also came in for heavy attack, the charge being that the President wanted to police the world.

However, when the vote came only eight voted against the bill. Not even all of the isolationists voted against it.

And so the President's program for expanding the country's air force got under way. The President started it; the Democrats, or most of them, backed him; and a majority of the Republicans went along.

NOTE.—Despite Mr. FISH's attack on the President's air force expansion program, the New York Republican on Monday of this week said on the floor of the House:

"Mr. Speaker, the newspapers of the country have been acclaiming President Roosevelt for his appeal for additional funds for national defense, particularly as applied to our Army. The President has been in office for 7 years, and the European war had been going on for 9 months before the Commander in Chief discovered the deplorable conditions of the Army for purposes of defense. Instead of praising the President, he should be condemned for permitting this condition to develop."

Army Promotion System

EXTENSION OF REMARKS

OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

ARTICLE BY DREW PEARSON AND ROBERT S. ALLEN

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include the following timely article from the Washington Merry-Go-Round by Messrs. Drew Pearson and Robert S. Allen, appearing in today's Times-Herald:

Real secret of the Army's stagnation is the promotion system. It is based entirely upon the time when a man walked into a recruiting office during the last war, or graduated from West Point. The whole basis for promotion is length of service.

An officer may be the most brilliant youngster in the Army, or the laziest. It makes no difference. He keeps his rank until a sufficient number ahead of him die off. Then he is promoted.

The effect of this on Army morale is devastating. There is no premium on efficiency. There is no impetus for outstanding ability. Every officer knows that if he keeps reasonably sober, is not absent without leave, keeps his company accounts straight, and lives long enough, a certain number of years will see him promoted. If he works harder he will not be promoted faster. If he tries to work out new plans for mechanization and motorization it will not hasten his advancement one iota. He merely has to wait.

It is this system of promotion by inertia that has contributed so materially to the present somnolent state of our military defense. And building a billion-dollar edifice of national defense upon the faulty foundation of personnel inefficiency is like throwing good money after bad.

The Army has some superb officers—in fact, some of the finest in the world—and if given free rein they could build up a real national defense. But they are bogged down and sapped by the system that surrounds them.

What the United States Army needs is a surgical personnel operation, not the mollycoddle bill in Congress, which merely retires colonels who have reached the age of 60.

Reply to Former President Hoover

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29 (legislative day of Tuesday, May 28), 1940

ADDRESS BY HON. LOUIS JOHNSON

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address

delivered by The Assistant Secretary of War, Hon. Louis Johnson, on May 28, 1940, in reply to former President Hoover.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I wish to report tonight to the American people on the status of our American defense plans which are of such vital importance in this crucial period of world affairs. I have two purposes in mind: First, to give an honest summary of the military situation as it now exists; second, to clear up some of the misconceptions that may have arisen as a result of former President Herbert Hoover's radio talk on national defense last night.

We realize that this is no time for party bickering or partisan considerations. In Boston in November 1938, in launching the President's armament program, I said, "There are two things, in my opinion, that transcend party politics—the first is foreign affairs; and the second, national defense." From the very first President Roosevelt and the War and Navy Departments have directed their energies to lifting the grave problem of defense above political or partisan considerations. It is not our pupose to say that any party or any individual is responsible for any shortcomings that may exist in the defense program. The sole object is to bring a united Nation behind the Government's plan to provide adequately for any emergency that may arise. First, however, I think it is fair to clear up the record on Mr. Hoover's speech. The former President was originally scheduled to speak over this national network early Sunday night. After it was announced that President Roosevelt was to address the Nation later that night Mr. Hoover's talk was postponed. Obviously, this was done in order that he might have an opportunity to reply to President Roosevelt, although the Chief Executive in no sense intended his talk to the people to be a partisan effort.

Mr. Hoover's speech was a reply to the President. The New York Times of today carried a report on page 19, the headlines of which said:

"Hoover Denounces Arms Board Plan * * * Single Expert Must Control Munitions Making, He Says in Reply to Roosevelt." On the next page, the Times printed a speech by a prominent candidate for the Republican Presidential nomination. He demanded that we immediately establish a nonpartisan national defense board to plan and direct our program of rearmament.

From these conflicting advices, the need for coordination between the Republican spokesmen seems much greater than is the need for any coordination of the defense activities of the Government. These, I assure you, are proceeding along lines as planned and coordination in the defense program is proceeding on a most efficient basis.

We are facing today a definite challenge to our security. National defense is at the crossroads. It is heading in the right direction. The road is long and the going may be rough. We must travel it at the maximum speed compatible with safety and efficiency and we must see to it that it remains true to the course of adequate preparedness. We must assure ourselves that at the end we will find an America ready to meet any military crisis; an America so well prepared on land, on sea, and in the air that no prudent enemy will be tempted to attack us, and that no reckless foe will be in a position to defeat us.

Our work is cut out for us. We must mobilize our thoughts and our energies behind the President's national-defense program. It is nonpartisan in its nature and has the overwhelming support of the political leaders and the rank and file of both parties. It is practical and capable of achievement.

If we had launched such a program in the fall of 1938, immediately after the so-called Munich appeasement, which forebode the world situation of today, its objectives would have been nearer to realization at this time. Unfortunately, however, most Americans at that time were not awake to the dangers to us that lay dormant in the volatile European situation. They were annoyed at the disturbance of international peace in Europe, but they were not aroused to its possible repercussions.

For instance, whenever the President tried to call the attention of America to the impending catastrophe overseas, cries of "alarmist" and "warmonger" greeted his remarks in the press and on the radio. When he called a conference of influential leaders to the White House to give them the benefit of the information he had gained from experts, some in the group intimated that they had more reliable information that pointed otherwise. When he talked of quarantine, there were some who blatantly charged that the President was leading us to war.

When it was patent to every student of military science that the war in Europe threatened the very foundations of Great Britain and France, our former President, Herbert Hoover, tried to allay the fears of America by assuring us that they could not possibly lose. I quote from an interview given by Mr. Hoover to Mr. Roy W. Howard, editor of the New York World-Telegram on October 3, 1939:

"The war is only a month old. But the major factors are already emerging. The British and French can, and will, control the seven seas despite submarines and airplanes, and can sit there until their enemies are exhausted. By their sea power the Allies can protect England and all the outlying possessions of both empires from invasion. Their manpower can defend France unless they blunder into taking wild adventures in military offensives and exhaust their manpower. Aerial warfare may be destructive, but that works both ways and, so far as all experience goes, is not conclusive of any war."

I continue to quote Mr. Hoover:

"If one surveys the whole front—sea, land, air, and economic resources—I am convinced the Allies can defend their empires. The end may be victory for them. At worst, it might be stalemate. I do not see any possibility that it can be defeat."

Tonight, this analysis of the situation seems curiously unreal in the light of news from abroad that the King of Belgium has capitulated.

Nowhere in this interview did Mr. Hoover urge national defense. On the contrary, its very tone and spirit encouraged Americans to feel that we were not concerned with the war overseas.

On October 20, 1939, Mr. Hoover made a speech in which he vigorously defended his neutrality plan, calling for prohibition on the sale of offensive weapons to the warring nations, including the sale of bombing planes, their ammunition, and submarines. He said only defensive weapons and not offensive weapons should be sold to the belligerents. This was another unreal and perhaps tragic misconception of the war in Europe. Moreover, the distinction between offensive and defensive weapons is so tenuous that no military man would have dared draw such fine lines.

National defense has always been a cardinal principle in the Democratic program; the basic law of self-preservation as laid down by society since time immemorial and as emphasized by our Constitution, we have made every effort to obey.

From 1922 to 1933 many of our citizens naively believed that if only we would disarm the rest of the world would follow. They honestly thought that if only we gave up our Army and our Navy, international peace would prove inevitable.

Well, the United States did disarm. Our Army was skeletonized. Our Navy was reduced to a level within the reason of other nations. The rest of the world, however, merely gave lip service to our impracticable idealism and continued to build up their armed forces. In the terms of the solemn treaty that they had signed, they found loopholes which enabled them to defeat its clearly defined purposes.

Our responsible leaders knew, or should have known, that our idealistic gesture of disarmament was proving itself unilateral, yet they did nothing to awaken America to its dangers. They offered no concrete program to strengthen our national defense. Far worse, they kept right on reducing our Army and weakening our Navy, and pointing with pride to their saving of a few pennies here and there. At the direct order of President Hoover the Marine Corps became but a shadow of defense. Saving, indeed, at the expense of national insurance.

Consider for a moment to what a low state of readiness our Army and Navy had been reduced by March 4, 1933, when President Roosevelt came into office.

Our Navy, in 1922 the mistress of the seas, had been scuttled. While other nations that had signed the Washington Treaty of that year for the limitation of naval armaments complied only to the extent of tearing up blue prints, we junked, scrapped, and actually sank men-of-war. As a gesture toward international peace, our Government in one fell swoop destroyed three-quarter million tons of ships that had cost us more than $150,000,000; and, as if that were not enough of a sacrifice, this country gave up another 175,000 tons in 1930 as a result of the London Treaty. We had the right, under our treaty promises, to keep up our Navy on a 5–5–3 ratio, but we did not do that.

On land and in the air we fared even worse. With the armistice began the unilateral disarmament of our Army. Our American Expeditionary Forces, the strongest military machine that has probably ever been assembled in the history of men, we proceeded methodically to break up. Our overseas veterans we immediately brought home. Our soldiers we quickly demobilized. Our reserves of munitions we practically gave away to our Allies. Our standing Army we continually reduced until it became but a shadow of its former self. Instead of a force of several million, most of them ready for battle, we were left, by 1933, with a few loyal legions of Regulars numbering less than 125,000, hardly strong enough to perform routine interior guard duty; and these, in turn, were scattered all over the United States and our foreign possessions. Joint or large-scale maneuvers were impractical and hardly possible.

Furthermore our soldiers trained with arms that were outmoded. They used equipment that, if not obsolete, at least was obsolescent. While foreign armies were motorizing and mechanizing we stuck to the horse and the mule. We had planes which as models were perhaps the best in the world, but in such small quantities that in an emergency their influence could hardly be felt. Our troops lived in dilapidated wartime barracks. Our officers were housed in converted warehouses and reconditioned stables.

True to its fine traditions, however, our Army never lost its spirit, but what a strain our wealthy American Government had placed upon the shoulders of these loyal defenders of our country.

The state of civilian readiness for cooperation with the Army in industrial mobilization showed similar deficiencies. The Army had a plan, and basically it was a good plan, but, so far as the American public was concerned, it was little known and less understood. In criticizing it misguided pacifists and mischievous malefactors were conjuring up a picture of a monstrous military leviathan bent on swallowing up the traditional capitalistic system of America. Nothing could have been further from the truth, but very little was done to correct that false impression.

Then came the election of 1932. The Democratic Party was returned to power. At once the picture changed. First, President

Roosevelt showed his confidence in our armed forces by giving them a remarkable opportunity to prove the value of their services to the American people not only as a factor in war but as a useful asset in peace. He assigned the Army to the job of assembling, transporting, organizing, and equipping the young men of the Civilian Conservation Corps, hundreds of thousands in number—and what a job it did.

No single service of our armed forces in time of peace has done more to enhance the prestige of the Army, and the Navy, too, for it also helped, than the mobilization of the Civilian Conservation Corps in its early days. Our officers, while being trained, proved themselves not only highly efficient but deeply sympathetic, kindly, and understanding.

The President next turned to the Navy. With its problems, he was especially familiar. During the World War he had served it faithfully and honorably. He had realized that unilateral disarmament had failed and set out to awaken America to its needs on the sea. Results immediately followed.

Under his leadership, Congress, in 1934, provided for the building of a Navy up to the limits established by the Washington Conference and the London Treaty, and every succeeding session of Congress has taken further steps toward the strengthening and the improvement of our sea forces. We are building a Navy that should prove second to none and fully capable of protecting our interests on the sea in the present storm-tossed world.

Under President Roosevelt, our Army gained a new lease on life. It began to modernize, to motorize, and to mechanize. We added officers and enlisted men. We strengthened our National Guard. We trained more Reserve officers. We added R. O. T. C. units. We laid the foundations for an air corps that can defend this continent against attack. We built modern barracks. We arranged large-scale maneuvers. In short, we gave moral and material support to the Army and brought it up to a high state of efficiency.

With industry, relations have improved immeasurably since 1933. Never before in the history of our country has there been a keener appreciation of the respective roles in time of an emergency of our armed forces and of industry.

The American businessman knows now quite clearly that there is no intent nor desire on the part of the Army to interfere in the slightest degree with his enterprise at any time during peace or war. He, the Army, and the Navy understand each other and trust each other. That spirit of cooperation that has been nurtured in the last few years may save us days, weeks, and perhaps months in time of emergency, and, what is even more important, the lives of many of our citizens.

Time and again, in the past 3 years, I have had occasion to discuss with the President of the United States the contributions of American industry to our national-defense program. When I told him of my plan to acknowledge these contributions at a national industrial preparedness dinner in New York on April 5, 1939, he enthusiastically applauded and urged me in these words to convey his message to those at the dinner:

"That's fine," he said. "Add these words for me. In the revival of the spirit of national defense, industry is playing a leading and vital role. I am conscious of its loyalty. I appreciate its cooperative efforts. Its patriotic services I commend as an example of good and useful citizenship."

Industry accepted the President's statement in that very spirit. Industry has cooperated in every way. Industry will achieve for us our armament program in the typical American way.

The program for the cooperation with industry in an emergency has been worked out by our armed forces with the cooperation of management and labor. It is described in a pamphlet known as the Industrialization Mobilization Plan, Revision of 1939. It calls for the effective and equitable utilization of industrial resources in time of war. Perhaps Mr. Hoover had this plan in mind when he advocated an individual administrator, or perhaps it is a mere coincidence that he made such a proposal.

But, mark you, we are not at war. There is no need for setting up any machinery to manage our armament program when we have well-established agencies competent to do the job. We are arming in accordance with our well-established principle of peace. Our armament program industry can well absorb without drastic or revolutionary changes.

America has achieved many improvements to national defense under the leadership of President Roosevelt. I do not intend to imply that our problems are solved and that we are prepared to meet any crisis.

I now return to what I said at Boston: "There are two things, in my opinion, that transcend party politics; the first is foreign affairs and the second national defense," and, for my part, I hope partisanship in national defense is at an end.

It is time to quit talking politics. There is work ahead. The air has been cleared. Let us get down to business and get our defenses in shape. The Roosevelt administration will carry out our national-defense program free from politics and partisanship and only in the interests of national security. We will take every worth-while suggestion from every responsible person which will help toward the realization of this objective. We have one supreme goal—the safety of the United States and the security of the American people, which united we shall achieve in the minimum of time.

The Government's Responsibility

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29 (legislative day of Tuesday, May 28), 1940

RADIO ADDRESS BY HON. PRENTISS M. BROWN, OF MICHIGAN

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address which I made last night on "The Government's Responsibility."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A modern Samson is bent on wrecking the temple of civilization. If he succeeds, it will wreck him as it did the biblical destroyer. At such a time our domestic problems fade and our eyes are upon the deadly struggles across the seas.

There are almost 2,000,000,000 people in the world. Over one and one-half billion of them are at war. We are the only important ccuntry in the world that is not at war, on the brink of war, or just emerging from it. Can we avoid being engulfed? I know it is the steadfast purpose of the President and the Congress to prevent it.

I speak to you tonight from the standpoint of one whose mind has been changed by the march of events. I have not heretofore been entirely favorable to large military appropriations. I think that my views were the views of many millions of our people. The change has not come easily or swiftly. I am not an extremist on the subject. I do not believe it is likely, even if the German ruler is finally successful in defeating France and England, that he will turn to America. It is often said here that the Atlantic Ocean is not as wide as it once was. This, of course, in point of time is true, but it is still much wider than the Rhine or the English Channel. It still is and for many years will be a tremendous barrier, a protection to our America.

The German ruler has not yet conquered England and France. He may never do so. But should he do so, the sheer physical exhaustion of his armies, of his people, the exhaustion of his resources, I think it reasonable to say, would make it difficult for even his mind to contemplate the successful invasion of this country. It must be remembered that we are a nation of 130,000,000 people. There are doubtless traitors in our midst. There would doubtless be alien activity here in the event of war, but I believe that democracy, the best government yet devised by the mind of man, has so satisfied the mass of our people that any subversive group that would try to rise and injure us would not last long.

It must be remembered that a greedy-eyed conquerer who looks our way would see the Nation with the greatest industrial power in the world. If he can build powerful tanks, we can build better ones. If he can pile up munitions by the thousand tons, we can pile them up by the 10,000 tons. This Nation, to a greater extent than any other nation of size, is a self-contained economic unit. I say I am sure that these considerations and others that will occur to you would cause him to pause. Invasion of the United States without nearby bases and without a navy much stronger than any that could now be brought together would be required to give even some credence, some hope of success to a successful, dominant nation across the Atlantic or Pacific. These are all considerations that would appeal to a reasonably minded European ruler.

But I want to reason tonight particularly with those who feel that perhaps we are going too far and too fast in the new effort to arm ourselves. Expressed in the language of the sporting world, in my judgment, the chances are a 100 to 1 against invasion or attack. But, my fellow Americans, we cannot take that remote chance. Many of us had thought that civilization had advanced to the point where the international good will that we have been endeavoring to build up influenced the people and rulers of the world, but the events of the last 9 months have driven from my mind the last vestige of that hope. If the United States escapes invasion, it will not be because the German conquerer does not want to invade us. It will be because he does not dare invade us. In other words, it is not our good will, not our reputation for fair dealing, not our let alone and let live policy, but our brute force, our tremendous power that will deter the sinister military leaders of modern Germany.

Therefore, as one who thinks and has thought, as I believe the majority of Americans have, I give the reasons why and how I and many others here have arrived at the conclusion that we must arm ourselves to the point of impregnability. I do this because I believe my mental processes and those of the average American are the same. Therefore, I support the President's program.

There has been much said in the public press and over the radio about the present condition of the defenses of the United States. In my judgment, there has been gross exaggeration of our alleged deficiency. There has been gross underestimation of our defensive power. It is commonly charged that during the past 10 years we have expended $7,000,000,000 on defense, and the question is asked, Why has this not prepared us? A recent newspaper article which, judging by my mail, has had large circulation, in effect charges that this $7,000,000,000 has been spent and has done no good. It has been so stated in recent radio speeches. I cannot take the time tonight to give you the whole picture. I can speak briefly of our first line of defense—the Navy.

Out of this $7,000,000,000, approximately four and one-half billion has been expended for the Navy. If those who make these wild charges had made any investigation whatsoever they would have discovered that approximately three billion of this four and one-half billion was the regular maintenance and upkeep money—wages, coal, fuel oil, etc.—appropriated in part each year for the regular expense of the Navy. One and one-half billion, in round figures, was for new construction. During the 10-year period just closed this money has been used for the purpose of increasing the number and power of our ships.

We have added a grand total of 138 ships to our Navy consisting of 4 aircraft carriers, 18 heavy cruisers, 9 light cruisers, 73 destroyers, 32 submarines, and 2 gunboats. In addition thereto, 7 auxiliary naval vessels, repair ships, etc., and in further addition thereto, two 35,000-ton battleships which will be completed and commissioned next month. In addition to this, there are 8 battleships under construction, including two 45,000-ton ships, 1 aircraft carrier, 6 light cruisers, 24 destroyers, 13 submarines, 12 auxiliary vessels, and others sufficient to make a grand total under construction of 77.

According to the latest figures available, the United States has a total of 369 ships in its Navy with 77 building. Great Britain has 328 with 81 building, France has 176 with 65 building, Italy has 315 with 55 building, Japan 254 with 22 building. The German Navy is weak. We have more battleships than any other nation in the world. We have more heavy cruisers than any nation in the world. We have more destroyers than any nation in the world. Let us not reach the conclusion either that our money has been wasted or that we are weak in sea power.

Our weakness is in air power. We have many airships but are behind other powerful nations. Here the airplane was developed. It is probably fortunate that we did not build up a great fleet, because modern warfare has demonstrated that new armor, great speed, greater safety, such, for example, as the rubber self-sealing fuel tanks, has made the plane we would have built yesterday obsolete. We can now build with the experience of the present to aid us. This program is the one that we now embark on under the leadership of a great President with the support of all our people. I favor the immediate airplane-construction program. It is now our greater weakness. Shortly we will match any nation in the world. Our peculiar genius, our technical ability, our industrial machine that can turn out 3,000,000 cars per year, is surely well adapted to turn out 50,000 planes. Here is where we must, with all speed consistent with efficiency, devote our time and money. That is just what we now propose to do.

Our Army is small but efficient. The recent appropriations made will provide adequate air power and will greatly increase the personnel and efficiency of our Army.

The one real danger that I can see to our country is not an enemy attack from an exhausted Germany, if successful in the present struggle. It is more likely to be penetration through their nefarious methods in some of the nations in the Western Hemisphere. For this we have precious time. But this is not the only defense. The trade policy of President Roosevelt and Secretary Hull with our neighbors to the south and our neighbors to the north—the good-neighbor policy—now stands out in full relief as one of our best defenses. We must continue to cultivate friendship with the Central and South American republics and with Canada to the north, not only because it is right to do so, not only because in the end the good-neighbor policy will improve our trade, but because the Americas can then present an impregnable front to military power or the sinister "fifth column" of which we now hear so much.

There is no hysteria in Washington. There will be no wasteful, careless, planless construction of war defenses. Based on our knowledge of the new weapons now being used in the World War with the advice and counsel of our industrial leaders, with the knowledge that we have a reasonable amount of time, our defense program will go forward and I would give what assurance one Senator can that if the remote chance is taken and a victorious Hitler should attempt to take us, America will be ready. The Government is meeting its responsibility.

One of the most difficult tasks of my legislative career is to vote to spend these large sums for armaments. We Americans could not bring ourselves to believe that this terrible destruction of human life, of property, and of the morale of civilization could come. I confidently believe that it will not come to our shores. There are so many needs for which this armament money could be spent—education, housing, clearance of slums, peaceful industrial development, relief—all are far more appealing to me and I would be far happier to expend these billions upon them, but a war-mad man with the most tremendous destructive power that modern industry has so far constructed is loose, bent upon tearing down this civilization of ours. I cannot believe that it will eventually succeed. This is a time that discourages men's souls. As we view the smoke and flame and carnage of war, as we see the pictures of dead women and children, as we hear the story of refugees machine-gunned to death, we indeed feel that civilization has failed. But we must have hope. We do have hope.

If the history of warfare, carnage, and conquerors teaches anything, it is this: Rulers may come and go, but peoples live on. Austria, Poland, the Czechs, Norway, Denmark, Holland, and Belgium are now overrun. It will not long be so. A victor with gun in hand cannot forever hold a people in subjection. The upsurge of civilization may seem stifled. It will not be so for long. One who fights religion and morality, the church, and the human conscience is lost when he chooses these foemen. Let him remember: He who lives by the sword shall die by the sword. Let him recall the story of the human scourges of the past—the great conqueror of the nineteenth century died a military prisoner on a lonely rock in the South Atlantic. The Roman conqueror was assassinated by his friends. Neither built an impregnable empire on the wreckage of conquered states. Have we reason to believe that fate will be less kind to modern civilization?

We are determined that we shall not suffer as have others. God has given us the power to resist. We will use it. So, my fellow countrymen, I bring you from the Capital this message: Your America will be ready. Your Government is accepting its responsibility.

The Postal Service

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29 (legislative day of Tuesday, May 28), 1940

ADDRESS BY POSTMASTER GENERAL FARLEY AND LETTERS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD a most able address delivered by our Postmaster General, Hon. James A. Farley, in my home city of Asheville, N. C., on last Monday, May 27, at the annual convention of the North Carolina Chapter, National Association of Postmasters.

I further ask permission to have inserted in the RECORD a letter addressed to Hon. J. R. Teague, president of the North Carolina Chapter, National Association of Postmasters, by my distinguished colleague, Hon. JOSIAH W. BAILEY, under date of May 23, and likewise a telegram by me under date of May 27 to President Teague, which letter and telegram make mention of Postmaster General Farley's visit to our home State of North Carolina.

There being no objection, the address and communications were ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
May 23, 1940.

Mr. J. R. TEAGUE,
Henderson, N. C.

DEAR MR. TEAGUE: Thank you for your letter.

It is not likely that I will be able to attend the convention, which I very greatly regret. Let me send you a message of greeting to all present and assurances of my good wishes, and let me also say a word for Postmaster General Farley.

Eight years ago Mr. Farley was little known to our people. In these 8 years he has become one of the best known men in the United States, and he has been put to every test. It seems to me that he has stood those tests in an amazing way. He has grown greater in the estimation of our people day by day. He has come out of every trial a bigger man, and I question whether he has ever met any American citizen without making the impression upon him of being a man of high character, great good will, and of the highest degree of personal poise. He was once classified as a politician and a political manager. It is usually difficult to outgrow this classification, but Mr. Farley has outgrown it. He is a great figure in our land in whom everyone has confidence.

If you will read this to the convention, or have the introductory speaker to read it when he presents Mr. Farley, I shall feel highly honored.

With all good wishes,
Very truly yours,

JOSIAH W. BAILEY.

May 27, 1940.

Hon. JACK TEAGUE,
President, North Carolina Postmasters' Association,
Vanderbilt Hotel, Asheville, N. C.

I shall greatly appreciate your expressing to those in attendance upon your convention today my sincere and genuine regrets that I shall not be able to be with you and associates when our Postmaster General, Hon. James Farley, will address you, because nothing would provide me with greater pleasure than being with you all today. Particularly am I sincerely regretful that on account of urgent governmental matters requiring my attention in Senate at noon today I shall not be able to fulfill my earnest desire as per previous plans to introduce Postmaster General Farley, which invitation was so kindly extended by you. May I say that our Postmaster General is unquestionably one of the finest characters I have ever known. At all times he radiates the expression of friendship toward his fellow man and of all the years I have known him I have never heard him say an unkind word about anyone regardless of who they are. That I believe is one of the highest tributes that could be paid to any human being. His tolerance, his benevolence, his Americanism, are such as might serve as standard by which American people could well be guided in view of his sterling qualities. His unselfish attitude in all respects and his untiring efforts for upbuilding and development of our beloved America. Regards.

ROBERT R. REYNOLDS.

ADDRESS OF HON. JAMES A. FARLEY, POSTMASTER GENERAL OF THE UNITED STATES

It is a pleasure to be here today with the North Carolina chapter of the National Association of Postmasters. North Carolina is a great State. In business, industry, and agriculture it is foremost among the progressive States of the Union. I congratulate you most heartily on the progress you have made and the eminence you have attained in the Postal Service of the Nation.

The unanimous selection of your distinguished associate, Paul Younts, the able and representative postmaster of Charlotte, as the president of the National Association of Postmasters, is not only a great tribute to his sterling qualities of character and leadership, but it is also an honor of which you and every cititzen of North Carolina may well be proud.

I am sure you will be interested to know that the Postal Service is continuing to show marked increases in business. Each month shows more revenue and more mail volume than the corresponding month in the previous year, and I feel that the revenues of the Postal Establishment this year will set another all-time high amounting to at least $755,000,000. You know, and I know, that when business is good in the post office, business is good everywhere. It is an accepted fact that the postal revenues are an accurate barometer of the Nation's business.

The post office is the outstanding example of a business organization in Government. It is the No. 1 agency of the Federal establishment affecting directly the life of every individual in the Nation. Its representatives are found performing their daily tasks in every city, town, and hamlet. Their daily rounds carry them over all of the city streets, all of the important highways, and many of the unimportant highways in the rural areas. Its benefits and facilities are made available to rich and poor alike. Its officials and employees are trained to function efficiently under all conditions at all times. It is a public utility so large that the average citizen finds it difficult to visualize its far-flung organization and operation, and has simply come to accept the well-known fact that if he writes a letter or prepares a parcel and places the necessary postage on it, and deposits it in the nearest mail box, he can do so with full confidence that it will reach the addressee quickly and in good order.

Obviously, there is no reason for the public to be concerned about the operation of the Postal Service. It is and should always be carried on with such certainty and efficiency that public concern and discussion are unnecessary. But to you and to me who are directly connected with the management of its affairs it becomes a duty to give careful thought every hour of the day to its successful operation and to service improvements. That is the principal reason why you maintain this splendid organization of postmasters, and that is why I am always happy to attend meetings of this kind.

The organization of the Post Office Department in its headquarters at Washington is well set up. In each of the bureaus there are men and women who have devoted their lives to the Service, who are intensely interested in their work, and who have followed this business as a career, and who can be counted upon to safeguard its reputation. During my service as Postmaster General I have taken advantage of every opportunity to improve this organization. I have surrounded myself with men in the policy-determining positions in whom you have every confidence. I have backed up these men by selecting administrative officials with long experience in the field services. I am happy to say that we have the finest headquarters staff in the Post Office Department that it is possible to bring together for the effective operation of this vitally important business. We have gone further than that.

We have given more attention and more careful consideration to the selection of postmasters, with the result that we have men and women in those positions who are devoting their best efforts to adequately serving the people in their communities. We have fostered legislation which does away with the short term for postmasters, granting them appointments for indefinite periods during good behavior, which unquestionably will result in better service and better morale of postal employees.

We have approved and have urged Congress to pass legislation liberalizing the hours of labor and the working conditions of the employees generally. I am quite sure that we are the largest business organization in the world that guarantees life tenure to such a great majority of its employees with a guaranteed income and with the assurance to the employees that their hours of service will be regulated on a reasonable basis that leaves them ample time for recreation and rest. We shall continue to give first consideration to the matter of service to the public, and second only to that we shall be alert and take advantage of every opportunity to provide better working conditions for the employees.

Of course, we must always keep in mind our obligation to the taxpayers, for I know it must be obvious to you that whatever money we spend over and above the actual revenues of the service must be taken from the general funds of the Treasury, which means the pockets of the taxpayers of the Nation.

I am definitely of the opinion that the post office renders the character of service that should enable it, under wise and careful management, to pay its own way; and as you know, in all but 1 year of full operation under my administration as Postmaster General, the Department has more than paid its way from that part of its operations which it renders to the public for hire. This is a fine record, and I am indeed grateful to each and every one of you who are connected with the Postal Service for this fine spirit of cooperation which has made this possible. With the continued increase in mail volume it is, of course, necessary to increase our expenditures, but I am quite sure that the efficiency of the organization is improving with this increase in business to the extent that we can confidently expect even better results in the future. I have no doubt of this.

Since I have been Postmaster General I have had an opportunity to associate with and observe postmasters and postal employees. I am pleased to say that the personnel of this Department for loyalty, industry, and efficiency is not excelled by any other group in America. I know that the people of this Nation appreciate the fine work you are doing, and that is another reason why I take advantage of these opportunities to attend your meetings, so that I can tell you about these things and thank you for your wholehearted cooperation. Postmasters are doing good work and postal employees are doing a fine job because they are good people, carefully selected, and happy in their jobs.

We have somewhat rigid disciplinary policies in the post office. If it were otherwise such a large organization could not be so well timed and so serviceable to the people. We avoid, however, any harsh or unfriendly attitude toward our own people or to the public. We have a friendly organization that is eager to serve. I am sure that the postmasters of the State of North Carolina understand and appreciate the importance of their positions and that they will do their part in maintaining the high standards set for them by the Department. If this is to be accomplished, however, no one can assume a self-satisfied air and take it for granted that everything is all right. On the contrary, eternal vigilance is required if we are to maintain efficiency and service, which is so important. We dare not relax in the matter of supervision even for a day.

In the headquarters at Washington we formulate policies, make regulations, and from the executive standpoint manage the affairs of the entire postal establishment, but you folks in the field, who are facing the everyday problems, are the ones who actually make and maintain the Department's record for service. Some of you may at times feel that possibly your part is not of great importance; but let me assure you that the postmaster or employee in the smallest post office, or the person in the most exalted position in the service, is important in his place, and without his sincere cooperation and vigilance the efficiency of the whole organization would be impaired.

You know that while millions of pieces of mail matter are deposited in the post offices in the principal cities of the Nation every day, much of it so deposited is intended for delivery in the smaller communities and on the rural routes. The large post offices would not be so large if they handled only local business. Likewise, the small post offices would not be so successful if their activities were limited to local communities. You must keep before you always the fact that the Postal Service of the United States is an efficient organization because it is made up of thousands of small organizations and units maintained within the system itself. You should be proud of the part you play in this great business, and you may be assured that I personally appreciate everything you do to make it function so smoothly.

It is most encouraging to find so many postmasters in attendance at this meeting. By coming here you show that you have more than a passing interest in your job; that you are anxious and willing to join with others associated in the same business for the exchange of ideas that will help you in the solution of your local problems. This establishment has been in existence for a long, long time, and I doubt that any condition could or would develop in any section of North Carolina that has not existed before in some other section of the State.

Therefore, when you come to these annual meetings you are almost sure to find help in the solution of your local difficulties either by general discussion in the meeting itself or by private discussion with fellow postmasters, post-office inspectors, or the officials of the Department. Aside from that it gives you an oppor-

tunity to know your fellow workers, to cultivate friendships which are lasting, and to have a better understanding of the people with whom you interchange mails and contact in the transaction of other postal business. Where there is a general understanding among men and women there is good will, success, and happiness.

These meetings also give me and the staff of the Department an opportunity of meeting you and securing from you first hand your viewpoint on the things we are doing in Washington. This is very helpful to us. I greatly appreciate this opportunity and look forward to these meetings with genuine pleasure. May I again congratulate you on this fine State chapter of the National Association of Postmasters and wish you wide and continued success.

Senator McNary

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29 (legislative day of Tuesday, May 28), 1940

ARTICLES FROM NEW YORK TIMES AND LIFE MAGAZINE

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times written by Richard L. Neuberger, a well-known editor of Portland, Oreg., reviewing the political situation in the Northwest. Mr. Neuberger's article includes the information that our beloved minority leader is exceedingly popular in his home State, and that the vote of the State of Oregon in the Republican National Convention at Philadelphia will be cast for their senior Senator for President.

I also ask unanimous consent to have printed in the Appendix of the RECORD at the same time another article from Portland, Oreg., as printed in the magazine Life, commenting in a complimentary way on the senior Senator from Oregon [Mr. MCNARY] as a Presidential possibility.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times]

MCNARY'S CHANCES STIR OREGON HOPES—BACKERS CONTEND HE COULD WIN FARM AND LIBERAL VOTES AWAY FROM NEW DEALERS

(By Richard L. Neuberger)

PORTLAND, OREG., May 4.—In Virginia, on the far off Atlantic seaboard, students at Washington and Lee University held a mock national political convention last week and nominated Senator CHARLES L. MCNARY, of Oregon, as the Republican Party's candidate for President. This news from the other side of the continent has been accepted in the Pacific Northwest as a happy omen.

Republicans here resolutely maintain that Mr. MCNARY, who is the minority leader in the United States Senate, has a real chance to be the standard bearer of his party. Supporters of Senator MCNARY are describing him as a Republican who is progressive but not unsound, the Portland Oregonian, one of the foremost Republican newspapers in the West, presented him this week as "a veteran of the Senate who is liberal and has the respect of his colleagues."

The chief argument put forward by the adherents of Senator MCNARY is that he could lasso farm, labor, and liberal votes now regarded as safely corralled by the new dealers. Although at the start of this session of Congress he was unanimously reelected spokesman for his party, Mr. MCNARY sometimes breaks with the regular Republicans to back administration proposals.

ON PREFERENTIAL BALLOT

Senator MCNARY's name will be on the Oregon preferential ballot at this State's primary election, May 17. He is expected to get an overwhelming endorsement from the voters, although the Oregon Voter, a journal of business and finance, has been urging a write-in campaign for Thomas E. Dewey.

In his home State, Senator MCNARY enjoys a standing which his sponsors contend could be his nationally as well. Party conservatives, with only a few exceptions, support him. So do the insurgent Republicans who advocate public ownership of electric power and similar proposals closely akin to the New Deal. The American Federation of Labor in Oregon has long been friendly to Mr. MCNARY and his crusade for the Umatilla Dam was praised this week by the Oregon Commonwealth Federation, which is affiliated with the Congress of Industrial Organizations.

The strategy of Senator MCNARY enthusiasts is based on hopes of a deadlock at the convention between the two dominant candidates, Mr. Dewey and Senator Taft. They believe the hour for the Oregon aspirant will strike if this develops.

[From Life]

M'NARY'S CHANCES

PORTLAND, OREG.—Republicans in the Pacific Northwest are beginning to maintain that the strongest possible candidate the party could select is Senator CHARLES L. MCNARY, of Oregon, minority leader in the United States Senate. This claim gathers emphasis with passing weeks. It is based on the belief that the G. O. P. must get the farm vote to win the election.

As MCNARY's backers see it, the Republicans will make decisive gains in the industrial East regardless of whom they nominate. The election will be decided in the Corn Belt and the Far West. Who among the Republicans would have as good a chance in these areas as MCNARY?

So far as his congressional voting record is concerned, MCNARY is sitting pretty. He has opposed the New Deal on such fundamentals as the court-packing bill, Government reorganization, and scandals in relief. On the other hand, he has gone along with virtually the whole social-welfare program and has excelled Mr. Roosevelt in a desire to aid the farmers.

When Senator TAFT, in February, proposed to slice $5,000,000 off the appropriation for the T. V. A., MCNARY resisted. This gives him the friendliness or beneficent neutrality of Senator GEORGE NORRIS and other public-power boosters. At the same time MCNARY, as Republican floor leader, has the solid backing of the G. O. P. regulars.

Early in 1936 the late Senator Jim Couzens, multimillionaire Progressive Republican from Michigan, wanted MCNARY to run for the Presidency. He offered to put up $100,000 to start the campaign. MCNARY scribbled something on the back of a Senate restaurant menu and slid it across the table to Couzens:

"The Presidential bee is a deadly bug,
I've seen it work on others.
O, Lord, protect me from its hug
And let it sting my brothers."

Now MCNARY has changed his mind slightly. His name is entered on the Oregon primary ballot for the Presidential referendum May 17. He will have the delegates from his home State and the backing or sympathy of the delegates from neighboring Western States, such as Idaho, Washington, and Montana. His friends think that at the show-down he will emerge as the one G. O. P. candidate capable of cinching the rural vote and victory.

The President's Talk

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM BIRMINGHAM NEWS

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Birmingham (Ala.) News of May 27, 1940, entitled "The President's Talk."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Birmingham (Ala.) News of May 27, 1940]

THE PRESIDENT'S TALK

President Roosevelt was never more earnest in a "fireside talk" to the Nation than he was last night. Seldom, if ever, it seems to us, has he been more effective.

It was a characteristically frank talk that Mr. Roosevelt made to the American people. One can hardly imagine how it would be possible for the Nation's leader, in a time of the gravest trouble abroad and of great concern at home, to speak more plainly and more frankly about the matters which he discussed.

This speech was sorely needed. Various individuals and various groups, since the President's defense message to Congress, have been engaging in sniping attacks on the administration's policies. Many rash and ill-considered comments have been made by men in political life and by others, including some newspaper writers who have been chronic critics of the New Deal. Many things have been said, apparently through sheer ignorance, that are demonstrably untrue.

President Roosevelt forcefully demonstrated the untruthfulness of some of these statements in his talk last night. Calmly and without any show of anger or personal resentment, but with a profound feeling of concern, Mr. Roosevelt took due notice of the criticism—usually either petty or altogether unfounded—of the defense measures which have been followed by the United States in the last 7 years and of the expanded program which the President now proposes.

By citing the figures on the greatly increased Army and Navy expenditures during his administration over the previous 7 years, and the concrete results already achieved in terms of additional warships, planes and productive capacity for planes and increased Army and Navy personnel, President Roosevelt showed up the misrepresentations of those who have been picturing our defenses as weak and implying that the Roosevelt administration has been negligent on this score. The President's speech should silence that sort of talk.

Well did Mr. Roosevelt say, "Let us have done with both fears and illusions." While we urgently require stronger defenses in view of the situation abroad, we need not have undue fears concerning the strength of our defenses now; nor should we have any illusions concerning the possible danger to our national security which time may bring, if the Allies are defeated, and the consequent necessity for increasing our arms heavily.

We must be on guard, too, as Mr. Roosevelt warned, against all kinds of subversive activities, including not only "fifth columns" and Trojan horses, but also the undermining propaganda and dissension which he branded "undiluted poison."

Gallup Poll on War Sentiment in United States

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29 (legislative day of Tuesday, May 28), 1940

ARTICLE BY DR. GEORGE GALLUP

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article by Dr. George Gallup in which he advises that war sentiment in the United States has risen but slightly since Germany's invasion of Holland and Belgium. In other words, it appears that the American people are determined to stay clear of the European War insofar as our sending soldiers abroad is concerned.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GALLUP POLL—WAR SENTIMENT IN UNITED STATES RISES SINCE NAZI INVASION BUT REMAINS 13 TO 1 AGAINST ENTRY

(By Dr. George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., May 28.—Sentiment for going to war with Germany has increased since the Nazi invasion of Holland and Belgium May 9, but the increase has been less than 4 percent. A Nation-wide survey just completed finds the country still more than 13 to 1 against American entrance into the conflict.

For many months studies by the American Institute of Public Opinion have found two basic aims governing the attitude of the American people toward the war—first, to do everything possible to aid the Allies; but, second, to stay out of the war. The events of recent weeks have caused increased sentiment for helping the Allies by every means "short of war," but there has been little change in the other basic attitude—to keep out of the fighting.

TREND OF SENTIMENT

The trend of sentiment on going to war with Germany has been as follows:

"Do you think the United States should declare war on Germany and send our Army and Navy abroad to fight?"

	Percent	
	Yes	No
When war started (September 1939)	6.0	94.0
October	5.0	95.0
December	3.5	96.5
After invasion of Norway (April 1940)	3.7	96.3
Today (since invasion of Holland, Belgium, and France)	7.0	93.0

It is interesting to note the relation between events in the war and the trend of sentiment. Some observers thought the Nazi invasion of Norway, with its bombing of open towns, would profoundly affect America's attitude of aloofness. Actually, according to the survey, there was little change.

The dramatic and world-shaking invasion of Holland and Belgium a week later brought a net increase of about 3 percent in war sentiment. But it is clear that, for the present, at least, no war fever of any appreciable size has been generated. What will happen to American sentiment if the Nazis unleash a furious bombing assault against England, or threaten Canada, remains to be seen.

UNITED STATES NOT APATHETIC

The comparative absence of warlike sentiment does not mean, however, that the Nation looks with indifference on what is transpiring abroad.

Public-opinion surveys have consistently shown that national sympathy is overwhelmingly with the British and French, and that feeling against Hitler and the Nazi regime has been mounting since the invasion of Austria in 1938. When war broke out last autumn a survey found the voters in favor of lifting the American arms embargo in order to help England and France.

In a more recent survey a large majority said they would prefer to vote for a candidate who promised the Allies all the help they need short of going to war than to vote for a candidate who promised no more help than is now being given. A small majority likewise favor sending warplanes to the Allies on credit if they cannot pay cash.

Adjournment of Politics

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. GURNEY. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial which I believe to be timely. I hope it is not too late. It is an editorial from the Chicago Tribune of May 24 entitled "Let's Adjourn Politics."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune of May 24, 1940]

LET'S ADJOURN POLITICS

General Hysteria is riding off in all directions in Washington and New York. His radio commentator and columnist lieutenants are shrilling nonsense about coalition Cabinets and postponing the election. The new dealers are cleverly exploiting the panic in western Europe in the hope of instilling similar panic on this side of the Atlantic. They are raising the cry that in this crisis (which in its domestic aspects is largely of their manufacture) the Nation must adjourn politics.

All right; let's adjourn politics.

Let's adjourn the political manipulation of the National Labor Relations Board.

Let's adjourn the use of W. P. A. funds and the ruthless intimidation of W. P. A. workers to elect Democratic politicians to office.

Let's adjourn Henry Wallace's political juggling of agricultural subsidies to buy farm votes.

Let's adjourn the political use of the Walsh-Healey bill to bludgeon manufacturers supplying the Government into letting the lady fellow traveler in the Labor Department fix their wage rates.

Let's adjourn the political fixing of hours of labor under the wage-hour bill, which is hamstringing efforts to expand industrial production essential to our own and the Allies' defense.

Let's adjourn Secretary Morgenthau's and Mr. Eccles' political manipulation of the money market to divert funds into the administration's deficit financing.

Let's adjourn the punitive tax schedules that have prevented industrial expansion in order to perpetuate unemployment as a vested interest of the New Deal politicians.

Let's adjourn the political waste of the Nation's substance on T. V. A., Grand Coulee, Passamaquoddy, and all the other ventures into state socialism and screwball engineering and economics.

Let's adjourn the political fixing of prices under the Guffey Act, which is loading millions of dollars of additional costs on industry and home owners in order to repay another installment of the Roosevelt campaign fund debt to John L. Lewis.

Let's adjourn Donald Duck Ickes and the rest of the verbal tarantulas who have spent the last 7 years fanning class hatred in America.

Let's adjourn the political use of Federal funds by State political machines by enacting the Hatch bill, which the Roosevelt administration has succeeded in killing in Congress.

Let's adjourn progress toward a Nazi legal system by passing the Walter bill to give proper court review of the rulings of New Deal administrative tyrants.

Above all, let's adjourn the scaremongering that is trying to convince the Nation that the United States is in danger of invasion

day after tomorrow, the sole purpose of which is to make plausible the cry of "Let's adjourn politics."

All this isn't the kind of politics that the new dealers want adjourned. President Roosevelt has said that there will be no relaxing of what he misrepresents as his social reforms. Secretary Morgenthau has told the plane manufacturers that private industry will get the first chance to build 50,000 planes, adding in effect that the Government is going to keep right on beating them over the head while they try.

It is only the other fellow's politics that the new dealers want to adjourn.

Educational Orders Essential to War Preparedness

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

MEMORANDA FROM WAR DEPARTMENT

Mr. ENGEL. Mr. Speaker, in the consideration of the war-preparedness program, I want to point out the need for an enlarged program of research and development and industrial mobilization. I have repeatedly said that no country will attack America with its 130,000,000 people, with its tremendous natural resources, its unequaled industrial power, if America is prepared.

Educational orders, in my judgment, is a vital and absolutely necessary part of any program of industrial mobilization. It is only through educational orders, in my judgment, that we can mobilize the tremendous industrial power in this country. By industrial power I mean not only the mobilization of our industrial physical power, but I mean the mobilization of the mental power of the industrial giants who have made this Nation the greatest industrial Nation in the world.

On June 21, 1939, when this House had under discussion the War Department appropriation bill, I used the following language:

Everyone concedes that Germany has attained her present air and military power by using to the limit the industrial power within Germany. The War Department program providing for educational orders under the supervision of the Assistant Secretary of War, Mr. Johnson, was intended to mobilize and make available in case of emergency the tremendous industrial power in this country.

To me, the mobilization of the industrial power in case of emergency is the most important part of the program of the President. The plan calls for tools and dies and jigs to manufacture war material in quantities required during wartime. Because of the inability to manufacture such material in quantity required, we were compelled to use the Enfield rifle and the 75- and 155-millimeter cannon and to disregard our Springfield rifle and our 3- and 6-inch cannon.

Only by industrial mobilization and educational orders can we hope, in case of war, to manufacture and supply an army of any size with the arms and ammunition required in wartime. Again, to me, this is the most important part of the entire program. If this bill is passed we will find not only that we are not putting our idle airplane factories at work and that a few large factories are going to get fat contracts, but we will learn that the committee in this bill has cut the educational orders more than 50 percent. The excuse of the committee was that the appropriation for this item was for 2 years, and they allowed for 1 year only. The entire construction program covers a period of 2 years, including the airplane construction. This is the only item in the bill which was cut 50 percent.

I submit that if it is wise and good legislation to appropriate at this time money for a 2-year program on airplanes and other materials, then it is also wise to appropriate for 2 years on the educational-orders program. As a matter of fact, unless the War Department can be assured of a second-year appropriation they are going to be seriously handicapped in carrying out this educational orders program.

The committee this year again cut the educational orders down from $16,000,000 to $2,000,000. The Senate restored the full amount. I sincerely hope that the conference committee, of which I am a member, and the House will adopt the Senate amendment.

The educational-orders program is under the supervision of the Honorable Louis Johnson, Assistant Secretary of War. I recently requested Mr. Johnson to send one of his best men to my office that I might go over the matter with him and verify the facts which I have. This he did.

The three branches of the War Department that require educational orders are the office of the Chief of Ordnance, the office of the Chief Signal Officer, and the office of the Chief of the Chemical Warfare Service.

The Chief of Ordnance was instructed to furnish me with a statement showing the amount of the production program for 1940 and 1941 and the number of different facilities or factories that would supply their needs for those 2 years; also a statement showing what the ordnance procurement program would require during the first year of hostilities to supply an initial force of 1,000,000 men. The office of the Chief Signal Officer and the office of the Chief of the Chemical Warfare Service were instructed to furnish me with similar information. This information was furnished me through the Assistant Secretary of War at my request, and I am placing it in the RECORD at this point:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
Washington, May 22, 1940.

Memorandum for: Office of the Assistant Secretary of War.
(Attention Colonel Kimball.)

Subject: Statement of educational order funds.

1. The 1940 production program of the Ordnance Department is approximately $150,000,000.

2. It is estimated that the total funds which will be available to the Ordnance Department for production orders in 1941 will be $250,000,000.

3. In placing orders with industry in 1940 there were only 19 different facilities which received contracts amounting to $500,000 and over.

4. It is estimated that in 1941 there will not be to exceed 50 facilities receiving education through production contracts exceeding in price $500,000.

5. Production orders are considered the best education possible. However, the 1941 funds, mainly $250,000,000, are relatively insignificant compared with the planned war program involving approximately three and one-half billion dollars in the first year of a war.

6. An ordnance war-procurement program will involve approximately 1,000 facilities with contracts averaging $3,500,000 each.

7. Because of the business risk involved in producing specialized ordnance equipment for which there is no commercial parallel, relatively few facilities are in a position to take on Government work in peacetime. Consequently, there will be a great many repeaters getting 1941 contracts which also produced under the 1940 program.

For the Chief of Ordnance:

A. B. QUINTON, Jr.,
Lieutenant Colonel, Ordnance Department, Assistant.

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL OFFICER,
Washington, May 22, 1940.

Memorandum for: Col. H. K. Rutherford.

Subject: Justification of the Signal Corps educational orders program for the fiscal year 1941.

In compliance with instructions received from your office the following is offered in an effort to justify the Signal Corps educational orders program that has been submitted for the fiscal year 1941.

1. Under existing law educational orders provide the only means whereby the Signal Corps can use selection in placing production orders.

(a) Examination of past records shows conclusively that a few manufacturers, and continuously the same ones, are the successful bidders securing current orders, resulting in only a few having been employed in the manufacture of Signal Corps items.

(b) The examination of records shows that quite often some of the strongest, as well as most reputable firms, from the standpoint of national defense, either do not bid, due to the fact that these manufacturers find it more profitable to produce goods at a higher margin, or if they do bid, are not the low bidders. This results in a condition in which some of the most desirable manufacturers are not familiar with manufacturing Signal Corps items.

2. Only through educational orders are manufacturers required to furnish production analyses, which include sources of contributory items, raw materials, related data, and disclose bottlenecks.

(a) When normal production is completed and the goods received, the account is closed. No information is furnished of any bottleneck with regard to shortage of labor, inadequate machinery, contributory items, and raw materials unless something unusual is

presented; whereas educational orders are subject to critical analysis with respect to every phase of production.

(b) Bottlenecks in production and in the flow of raw materials have been disclosed by the educational orders program in connection with telephone EE–8 and wire 110–B. Such disclosure will be of inestimable value in a national emergency.

3. Only through the use of educational orders can a relatively large production rate be assured.

(a) Studies of results of the educational-orders program in the Signal Corps show that under educational orders for telephone, a daily productive capacity of 1,000 telephones a day will be assured, in contradistinction to the production rate of 200 per day as demonstrated from productive orders in the past.

4. Only by the use of educational orders can a full utilization of the large production capabilities of the United States be realized.

(a) Requirements based on the 1940 mobilization plan, which it is believed may be insignificant in the event of a national emergency, require the maximum effort in scheduling the manufacturer to produce items for the production of which he has had no experience.

(1) It is confidently believed that 6 to 8 months could be saved in connection with tooling up and learning how to manufacture, and arranging for the uninterrupted flow of raw materials. The most convincing example of this can be found in aircraft radio. Aircraft-radio production based on 5,500 planes is, on the face of it, not significant compared to a proposed 50,000-plane air force. But, based on even 5,500, and with the knowledge that there are only 6 or 7 aircraft manufacturers, the Signal Corps has made plans predicated on the hope that through the educational-orders program, certain reputable radio manufacturers could be educated in manufacturing specific sets that have been manufactured by these aircraft producers, but in quantities far short of the productive capacity of those now visible.

(b) A large number of radio sets now being made are done so at the comparative pace of hand production. Radio manufacturing plants could be utilized for accelerated production of components in a development that must, of necessity, come in an emergency.

(c) Even though there has been a reluctance to freeze design of aircraft radio equipment in order that the latest developments could be incorporated, yet it is now imperative that the best possible design be frozen and efforts be concentrated on securing quantity production. The educational order makes this possible. The design that has been frozen can be the subject of an educational order with midwestern radio manufacturers, thus relieving the aircraft radio manufacturer who has been a quasi designer, developer, and custom producer so that these facilities could be kept for utilization in an effort to keep step with the latest development resulting from lessons learned from this strangest of all warfare.

5. The indiscriminate placing of production orders under existing law and without coordination runs the risk of upsetting all procurement planning work that has been undertaken in the past 20 years.

(a) Facilities have been allocated, schedules placed, and arrangements made that can be activated only through the educational orders program, or allocation and negotiation.

(b) The placing of production orders under existing law not only disregards, but actually threatens to upset, all existing planning arrangements, violating the lessons that should have been learned from America's experience in the past war, and heedless of the teaching of the Industrial College, and the policy that has been enunciated by the Planning Branch, and so ably sponsored by The Assistant Secretary of War.

For the Chief Signal Officer:

CLYDE L. EASTMAN,
Colonel, Signal Corps, Executive.

WAR DEPARTMENT,
OFFICE CHIEF, CHEMICAL WARFARE SERVICE,
Washington, D. C., May 22, 1940.

Memorandum for Lt. Col. A. R. Kimball, Office of The Assistant Secretary of War.

1. Pursuant to your telephonic request, the following explanation of the need for educational orders appropriations in addition to contemplated production appropriations for the fiscal year 1941 is submitted:

2. Many of the items for which production appropriations have been requested are not duplicated in the educational order program. Some of these, such as steel containers and gas-mask repair kits, can be made by industry without appreciable preliminary education, while in the case of items such as the standard service gas mask the education of industry has been completed as far as the assembly of this item is concerned. On the other hand, it should be noted that a large percentage of contemplated production for the next fiscal year will be accomplished at Edgewood Arsenal, owing to the immediate need for these items and to the fact that industry is not now prepared to undertake their manufacture. Thus the problem of making up the supply deficiency during the fiscal year 1941 will be solved to the extent permitted by appropriations, but no provision would thereby be made for educating industry to produce these items in the vast quantities desired in a national emergency. For many important chemical-warfare supply items, the maximum production at Edgewood Arsenal represents a minute fraction of that required in wartime.

3. The question of the procurement of component parts for gas-mask assembly and other vital items is not as yet satisfactorily solved for the wartime requirements. Industry can produce these items at normal peacetime production rates and can probably also meet the augmented production rates under the present emergency by tool-room methods. If faced with the problem, however, of supplying these component parts at a rate demanded by the assembly plants on a wartime production basis, the present manufacturers would fall down completely in the absence of an educational-order program.

4. Considering specifically the items recommended by the Chemical Warfare Service for inclusion in the educational order program for the fiscal year 1941, the following remarks are submitted:

a. Non-coconut-activated charcoal manufacture: Two educational order contracts for this item have already been awarded. Two educational orders have been recommended for the coming fiscal year. A total of eight such orders will be ultimately required before maximum wartime requirements can be guaranteed.

b. Whetlerite manufacture: The situation as discussed above in regard to non-coconut-activated charcoal applies equally to whetlerite manufacture, as this represents an additional step in the manufacture of an efficient gas absorbent. In this case a total of six plants to be educated have been recommended, inasmuch as the capacity of the unit set-up is smaller than that of the corresponding charcoal. A total of 24 educated plants will ultimately be required to meet maximum wartime requirements.

c. Noncombatant gas-mask assembly plant: These orders are for the purpose of establishing a model plant for the manufacture of noncombatant gas masks, so that other manufacturers can convert their factories along these lines to the production of this item. There should be at least one such model plant in each principal industrial area throughout the country. An award for one such assembly plant is being recommended for the present fiscal year, and the program contemplates two additional plants for the fiscal year 1941. Obviously it would never be possible to build in advance plants for noncombatant gas masks with anywhere near the proper capacity to meet the demand in time of war.

d. CC2 Manufacture: There is no industry which can produce this chemical at the present time. One company is now working on an educational order in order to become educated in the manufacture of this important chemical. Two educational orders for this item for the fiscal year 1941 are recommended but a total of at least eight educated plants will be ultimately required. For the next fiscal year, however, all production will have to be accomplished at Edgewood Arsenal.

e. Impregnite S3: This material has never been manufactured in industry. Due to its noncommercial character its production will have to remain limited to Edgewood Arsenal until industry has been educated in the process of making it. The exact capacity of one unit set up has not as yet been determined, but a minimum of four or five plants will ultimately be required.

f. Soda-lime manufacture: This chemical is a constituent for gas-mask canisters and represents one of the outstanding bottle necks with respect to the procurement of component parts for gas-mask assembly. This soda lime is made by laboratory methods by several chemical concerns, but there is only one facility in the country which can make it on a production basis and this company uses antiquated processes and rather obsolete equipment. This is one of the few items not produced at Edgewood Arsenal, and, therefore, an educational order to develop additional sources is essential. The exact capacity of one-unit set-up has not as yet been determined, but a minimum of four or five educated plants will ultimately be required.

g. Filter manufacture: The gas-mask filter is another outstanding bottle neck in the procurement of component parts for gas-mask assembly. It has never been manufactured at Edgewood Arsenal and there is only one firm in the country which can manufacture it at the present time. This firm uses modern methods and makes a highly satisfactory product, but it is located in a highly vulnerable position in New England and if anything happened to the plant, the entire gas-mask program would be put out of action. The process is a secret one and can be taught to other manufacturers only by means of an educational order. There should be ultimately at least four educated plants to meet wartime requirements.

For the Chief of the Chemical Warfare Service:

P. X. ENGLISH,
Lieutenant Colonel, Chemical Warfare Service, Executive.

Mr. Speaker, it is interesting to note that the 1940 production program of the Ordnance Department is approximately $150,000,000; that there were only 19 different factories or facilities which received contracts amounting to $500,000 or more. It is further interesting to note that the Ordnance Department production orders for 1941 will amount to $250,000,000 and that these production contracts will be given to approximately 50 facilities or factories, with contracts of approximately $500,000 each.

The statement further shows that an ordnance war program for the first year of a war to supply 1,000,000 men in the field will require approximately three and a half bil-

lion dollars and 1,000 facilities or factories with contracts averaging three and a half million dollars each.

It is pointed out that the contracts each year have been going to repeaters; that is, a great many of the factories which produced under the 1940 program will produce under the 1941 program. The same thing is true with regard to signal equipment and chemical-warfare equipment.

Small industry has no chance against the large industry in this program as it is now conducted, although some of the finest industrial brains are in small factories.

Any program of industrial mobilization should include the following:

First. An inventory should be taken of all the factories in the United States capable of producing equipment needed by the Army and Navy, the amount of the floor space, the facilities on hand, and the amount and kind of equipment each factory can produce. Part of this work has already been done by the Army.

Second. We should determine exactly the amount and cost of equipment we will need as nearly as possible during the first year in case of war to equip and supply 1,000,000 men.

Third. We should determine how many factories and which factories are able to and can produce each type of equipment.

Fourth. We should have tools, dies, and jigs made with which to produce the equipment necessary for equipping an army of 1,000,000 men. If we have the tools, dies, and jigs, we will have saved from 3 to 5 months and not be dependent upon taking these workers from ordinary production.

Fifth. We should have enough educational orders in these factories to train sufficient men so that on short notice we can go into production of the required material and equipment.

To do this, we must have adequate money for these educational orders. Without it, 950 of the thousand factories required to produce ordnance which they will be asked to produce will have no one who knows how to produce it. It will require from 3 to 5 months to make the tools, dies, and jigs before they can even teach men how to produce them.

The things that are true of the Ordnance Department are also true with regard to signal equipment and chemical warfare equipment. I believe it is imperative that an adequate educational order program should be carried on if we are to mobilize our industrial power in case of war.

I might point out that the furnishing of semiautomatic rifles is typical of our needs. We have the Savage Arms Co., the Winchester Arms Co., the Remington Arms Co., and a number of other large companies. Thus far, only one company, the Winchester, has been accepting contracts and is equipped to produce this rifle. It is obvious that in case of war we would find ourselves unable to manufacture these guns fast enough. Our men would be compelled to use the old Springfield instead of the Garand, which has two and a half times the fire power of the Springfield. The same is true with regard to artillery, antiaircraft, antitank guns, and other equipment.

The Lindbergh Speech

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

ARTICLE BY W. D. ARCHIE

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article by Mr. Willard D. Archie, editor of the Evening Sentinel, Shenandoah, Iowa, which appeared last week in the column he writes for his paper. Knowing Mr. Archie as I do and having implicit faith in his ability to judge men and events in their true perspective, I want to say that I am in complete accord with his views and that I consider Colonel Lindbergh's speech of May 19 a quieting and reassuring voice that is appreciated by the people of this Nation, a nation made jittery for a time by the speech of our Chief Executive to the joint session of Congress on May 16.

[From the Shenandoah (Iowa) Evening Sentinel]

ALONG THE BANKS OF THE NISHNA

(By W. D. Archie)

Mr. Lindbergh here I come. It is generally tough to argue against Pot Pourri, and as a rule we agree, but this time I can't help feeling his new dealism is mixed with a brilliantly written defense of the Government defense program. Further, I thought Pot Pourri did not hear all the speech.

The background of Mr. Lindbergh's speech was the one made by the President in asking for 50,000 airplanes and a billion-odd dollars for defense. This was a war speech. It was so timed, and so given, as to arouse our people into thinking we must enter this war to save our country. It was not a speech made to defend our shores from attack. It was a speech delivered to make us think our chance of safety was to send planes—and probably men—to France to help stop Hitler on foreign soil.

Lindbergh was answering this speech. He was trying to calm our people—and what burns them to a crisp in Washington is the fact that he accomplished his purpose.

Lindbergh did not object to the defense program. Call Lindbergh by the name of Churchill and Roosevelt by the name of Chamberlain in the fable by Pot Pourri. When Lindbergh was appointed a special ambassador by the Allies to check German war readiness he came back with a report they were far ahead in airplanes and manufacturing plants. He told them the kinds of planes, the methods of production, and a complete, black story. No one believed him. He was ridiculed for taking a decoration while getting this information.

Later he checked this country's air reserves and air forces. He made another black report, which was lost in the shuffle. Lindbergh is one man that did foresee what was liable to come. His warnings, like the warning of air officers in our own Army and those of Arthur Brisbane, were discarded both by you and myself and by the Commander in Chief of our defense forces, President Roosevelt.

The former Assistant Secretary of the Navy, now President of the United States, was interested only in building up the Navy, a commendable procedure in the light of future events, but only a part of what is needed.

Not one thing in Lindbergh's speech could be said to object to a defense program. Perhaps he is against it, but he didn't say so. In fact, he commended the President's defense program.

He did say we will gain nothing by mixing in this war. He did say we will again be condemned by victor and vanquished alike when it is over. He did say we had better attend to our own affairs and not mix into the power struggle in Europe. He sees little for us to gain in this war.

Lindbergh, since gaining renown as a world flyer, is not, as Senator BYRNES stated yesterday, just an aviator. He has had access to every court and capital of the world. He has continually lived, dined, talked, and investigated defense and combat preparations of many nations of the world. He has served the English and French Governments, as well as our own. He has had a rare opportunity to gain valuable information on world affairs in the past 13 years and has taken advantage of it.

He has been a world ambassador rather than a lucky aviator. If the Allies had believed him 2 years ago, they would not be in such desperate need for airplanes as they are today. If they had believed him, they might have further postponed the war until they had factories working.

On Hand and On Order—What the United States Army Has and Wants

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. THILL. Mr. Speaker, in President Roosevelt's "fireside chat" last Sunday night he unfairly made a comparison between our military strength 7 years prior to the New Deal and the last 7 years of his administration. We know that before Roosevelt came into power the Republican administrations had attempted to pursue a course leading to peace and disarmament.

The war during Wilson's Democratic administration had sapped the economic strength of our country. In 1920, the American people by an overwhelming majority had turned the Democrats out of office because they wanted peace and economic recovery. During the twenties business went ahead under the leadership of Republican administrations. It was not necessary to arm to the teeth. In fact, people were led to believe by Wilson that we had waged a "war to end wars" and had "made the world safe for democracy." But along came 1933, and almost at the same time that Roosevelt came into office Hitler came into power in Germany. England and France permitted Germany to rearm.

Roosevelt took no steps to prevent German rearmament because it is not the intention of the American people to rule and regulate the other nations of the world. But Roosevelt, through superior sources of information which he claims to have at his command, must have been advised of the strength of Germany's war machine. Roosevelt must have known of our own military strength; yet no sound American defense preparations were suggested, nor was the Congress informed, nor were the people of the United States advised by Roosevelt of the military might and productive capacity of foreign powers.

So when the President attempts to excuse our lack of proper defenses, by comparing the military equipment "on hand and on order" in his administration with what we actually had on hand during the preceding 7 years of the Republican administrations, he is making a specious comparison.

Look at the following table and draw your own conclusions:

[From the New York Herald Tribune of May 21, 1940]

WHAT THE UNITED STATES ARMY WANTS

WASHINGTON, May 20.—The actual strength of the United States Army in weapons, ammunition, and other major items of equipment, as of May 1, 1940, and the quantities it expects to have upon completion of the current emergency defense program are shown in the following official War Department tabulation submitted to the Senate appropriations subcommittee for use during consideration of the Army appropriation bill:

	On hand	Completion figure
ANTIAIRCRAFT		
3-inch guns	448	500
90-mm. (approximately 3⅝ inches) guns	None	317
37-mm. (approximately 1½ inches) guns, antiaircraft	15	1,423
.50 caliber machine guns	1,014	1,683
Directors	168	273
Height finders	142	276
Sound locators	194	801
SMALL ARMS		
Semiautomatic rifles (standard infantry equipment)	38,000	240,559
37-mm. antitank guns	228	1,388
60-mm. mortars	3	3,756
81-mm. mortars	183	853
.50 caliber machine guns (pack)	83	962
FIELD ARTILLERY MATÉRIEL		
75-mm. guns modernized (light artillery standard)	141	1,432
75-mm. howitzer (field and pack)	99	319
105-mm. howitzer	None	120
155-mm. guns, long range (heavy artillery)	4	96
8-inch howitzer	None	120
COMBAT VEHICLES		
Scout cars	485	1,346
Combat cars	114	208
Tanks:		
Light M2A4	10	734
Medium M2	18	194

Awake America

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. VAN ZANDT. Mr. Speaker, what we need in this country is a single Department of National Defense with a separate Department of Air Force, Navy, and Army.

The truth of the above statement is daily becoming more convincing as we explore the adequacy of our national defense in the light of present world conditions.

On January 10, 1940, it was my privilege to introduce House Joint Resolution 417 which is designed to create a National Defense Commission for the purpose of surveying our national-defense needs and resources. This resolution is not the result of any new-fangled idea but is supported by competent military authorities.

Outstanding among the many champions for such a survey of our national-defense needs and resources and the creation of a Department of National Defense, was the late Gen. William Mitchell, who in 1929 made the following prophetic utterance:

> The coming of air power has made a greater difference in war than anything in history. Armies are mere holders of land. During the war armies only moved back and forth for 60 miles and killed hundred of thousands. That isn't war—war is getting at the vital centers of the enemy, where they live, their food, their communications. Air power can go straight to them now—3,000 miles away—and destroy.
>
> What we need in this country is a single department of national defense, with a separate department for air force, navy, and army. Until we have that we cannot protect ourselves. No rules or regulations or treaties can do away with the necessity of protecting ourselves. If we don't protect ourselves, no one else will.

House Joint Resolution 417 is the vehicle necessary to translate Billy Mitchell's words into action at a time when we are preparing to explore every angle of our national defense and spend billions of dollars in strengthening our military position among all nations.

Deportation of Aliens

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

SPEECH OF HON. J. WILL TAYLOR, LATE A REPRESENTATIVE FROM TENNESSEE

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of the late Representative J. Will Taylor, made on the floor of the House on November 3, 1939:

Mr. Speaker, for more than 16 years Congress has sought a solution for the economic and social problems of our country which are the direct outgrowth of inadequate legislation dealing with immigration. In the past 3 years there have been several attempts to correct some of the evils which are daily growing more apparent.

On June 10, 1937, this body, by voice vote, passed H. R. 6391, the Dies bill, for the deportation of criminal aliens. This bill never came to a vote in the Senate, but it helped to focus the attention of the people on our alien problem. This bill also drew the fire of some of the alien groups in our country, and by the fall of 1937 there had been set up in New York City an organization known as the American Committee for Protection of Foreign-Born, with headquarters at 100 Fifth Avenue. This committee, claiming to represent 155 organizations, with a membership estimated at 1,055,000 persons, has been particularly active since that time. Among their affiliated organizations were the Communist Party, New York State Committee, International Workers Order, American League for Peace and Democracy, Friends of the Soviet Union, International Labor Defense, National Maritime Union, Workers Alliance of Greater New York, and many other groups identified with the foreign "ism" movements in the United States. The only thing American about this committee was its name, but by January 1938 it was boasting of its victories in 1937. In his report for the year, Dwight C. Morgan, secretary, said:

"We have won some victories with the forces we have been able to mobilize. We have been able to gain at least temporary refuge in the United States for Max Meister, a stowaway from Germany, who was held for exclusion at Ellis Island. We have been able, through Congressman CELLER, to stay the deportation of Hans Goepel, another anti-Nazi refugee. We were able the other day to remove from Ellis Island, Paul List, who was wounded in Spain, and now faces deportation to Germany."

Now, I have mentioned this Committee for the Protection of the Foreign-Born to call attention to the fact that the foreign-born and aliens in our midst, over 4,000,000 in number, are being organized for a united fight against any change in our immigration laws that will, so far as they are concerned, work any hardships upon them. And by these hardships I include fingerprinting and other means of registering, which I believe we will ultimately have to adopt in dealing with this alien problem.

HOW MANY ALIENS IN THE UNITED STATES?

In the 120 years from 1820 to 1939, inclusive, 38,219,687 persons have emigrated to the United States. Of this number, as late as 1930, according to the census, there were 6,234,613 persons who owed their allegiance to another flag, living under the protection of the Stars and Stripes.

Today, according to the most conservative compilations, we still have 4,091,159 unnaturalized aliens in this country competing with our own citizens and those who have become citizens through the process of naturalization, for jobs, for business, and, in many instances, for both public and private charity.

After 10 years of the world's greatest depression, this is a situation which cannot be lightly laughed aside. And the immigrants continue to pour in on almost every ship that arrives at an American port, but we know them now not as immigrants but as refugees. "Refugee" is an easy word that softens our hearts and lowers our guard. In fact, in the recent shaping of events it seems that these European refugees are of more concern to the New Deal than are the 10,000,000 of American refugees who have been walking the streets of our cities in vain for years seeking the economic security that was promised to them back in 1933 by President Roosevelt. But the American people are not to be deceived by this "refugee" bunk. This is just another scheme to bring additional thousands here who are not wanted in Europe. On October 24 last the Swedish-American liner *Drottningholm* arrived at New York with 579 passengers, of whom 279 were Americans. Among the aliens aboard were 93 Germans, mostly Jewish refugees. One was Daniel Sternberg, who conducted the symphony orchestra at Tiflis, Russia. Perhaps Mr. Sternberg will find Americans most receptive to his symphonies, but if I had my choice he would play them elsewhere.

WHO ARE OUR IMMIGRANTS?

Of the 82,998 quota immigrants admitted to the United States during the fiscal year ending June 30, 1939, the racial composition is as follows:

Hebrews	43,450
Italians	6,708
Germans	5,524
English	5,076
Irish	2,968
Scotch	1,968
Scandinavians	1,563
French	2,214
All others	13,525

Are these figures self-explanatory? Do they reveal a situation to our satisfaction?

Mr. Speaker, in 1929 a sincere effort was made to regulate our future immigration when President Hoover, by proclamation, put into effect the quota system. The total annual quota set for all nations was 153,774. These quotas were set according to a formula based upon previous immigration, and the national origin of the immigrants prior to 1920. Under the formula the quotas established for the countries of principal origin were as follows:

Great Britain and North Ireland	65,721
Germany	27,370
Irish Free State	17,853
Poland	6,524
Italy	5,802
Norway (2,377) and Sweden (3,314)	5,691
Netherlands	3,153
France	3,086
Czechoslovakia	2,874
Soviet Union (Russia)	2,712
Switzerland	1,707
Belgium	1,304
Denmark	1,181

The quotas for all other nations are below 1,000.

In studying the immigration records for the fiscal year 1939, one cannot help noticing the apparent disregard of all quota provisions on the part of the enforcement agencies of the Immigration and Naturalization Service, when we find that 30,096 Hebrews have been admitted from Germany during the past year, a number which alone exceeds the national quota by 2,726.

DEPORTATIONS FOR 1939

While 82,998 immigrant aliens entered the United States during the fiscal year ending June 30, 1939, our deportations for the year were the lowest of any in the last 10-year period.

Our deportation record, by years, is as follows:

1930	16,631
1931	18,142
1932	19,426
1933	19,865
1934	8,879
1935	8,319
1936	9,195
1937	8,829
1938	9,275
1939	8,202

Of the aliens deported in 1939, over 20 percent, or 1,638, were criminals; 1,056 had been previously deported; and 3,080 had entered this country without valid passports. Can we afford to allow the condition here revealed to remain unchallenged?

WHOM WE DEPORTED

Of the aliens deported in the 5-year period from 1934 to 1938, inclusive, 3,216 were English, 2,598 Italian, 2,463 French, 1,770 Irish, 1,383 Scotch, 1,483 German, 998 Chinese, 850 Scandinavian, 740 Greek, 510 Hebrew, and 28,486 people of other nationalities.

CONTRACT LABOR IMMIGRANTS

Under the provisions of the Immigration Act of 1917, employers may file petitions to be allowed to import alien workmen into this country.

In 1938 petitions to the number of 1,581, involving 2,515 aliens, were filed by prospective employers. Favorable action was taken on 736 petitions, involving 880 laborers.

During the fiscal year 1939 favorable action was taken on 772 petitions, affecting approximately 800 additional workers.

Can anyone logically assume that these alien workmen were a necessity in our country at a time when more than 10,000,000 of our own people were unemployed?

WHO ARE OUR IMMIGRANTS?

To further illuminate this interesting subject, I now refer to Press Release No. 19, Department of State, dated January 19, 1939, entitled "Immigration Quotas, Vital Statistics" for the year ending June 30, 1938. From this official press release I glean the information that of the 45,712 quota immigration visas issued by American consular officers abroad for that year, but 52 visas were issued to

persons listed as farmers coming to the United States. There were 29 from France, 19 from the Netherlands, and 2 each from Germany and Hungary. So the people who are coming here are not coming to farm but to crowd up in our cities and to compete with our own business, professional, and laboring men.

This situation, Mr. Speaker, would not be serious but for the fact that these aliens frequently are unable to keep up with the swift tempo of American life and easily fall into the habits of their native lands. They crowd into tenements and become dissatisfied with their new-found promised land. Then it is but a step until, in many instances, they fall victims to one or another subversive movement which holds out to them social and economic objectives attainable only through bloodshed and violence. Many of these disillusioned victims have already told their stories before the Dies Committee Investigating Un-American and Subversive Activities in the United States. I wish that every citizen could secure and read a complete set of the committee hearings. It would be well worth the price if the Office of Education could supply a complete set to every school in the Nation, so that the children and their parents might learn exactly what the foreign "ism" elements in this country are doing to wreck our Government and destroy our liberties.

THIRTY THOUSAND ALIENS ON RELIEF—THOUSANDS MORE IN INSTITUTIONS AND PRISONS

Mr. Speaker, through the courageous action of Congress last year, more than 30,000 aliens were removed from the rolls of the Works Progress Administration early this year, effecting a saving of over $1,800,000 a month, which was promptly made available for the relief of our own citizens, many of whom had long been denied the opportunity of public-works employment theretofore extended to the discharged aliens. This was the logical and American way to deal with a most distasteful situation. The taxpayers of the Nation have too long been assuming burdens which normally should have been borne by others.

But there is another burden thrust upon us by the foreign-born and the aliens which we cannot escape. That is the burden of caring for the mentally defective, the insane, and the criminal-alien element. Quite recently the chamber of commerce of the State of New York has made a study of this phase of the immigration problem. In their publication Conquest by Immigration are found many interesting statistics. From them I have compiled the following tables showing the foreign-born inmates of mental and corrective institutions in the several States, and another list showing the alien-born prison population of certain States:

Foreign born and aliens reported in institutions for mental defectives for 1938

Alabama	18
Arkansas	22
California	6,847
Colorado	756
Delaware	163
Idaho	94
Illinois	6,056
Indiana	525
Iowa	251
Kansas	271
Kentucky	25
Louisiana	33
Maryland	404
Massachusetts	1,596
Michigan	5,121
Minnesota	2,577
Mississippi	7
Nebraska	77
Nevada	20
New Jersey	2,043
New Mexico	8
New York	4,562
North Carolina	24
North Dakota	236
Ohio	1,328
Oklahoma	62
Oregon	353
Pennsylvania	824
Rhode Island	946
South Dakota	348
Tennessee	30
Texas	183
Virginia	14
Washington	784
West Virginia	92
Wisconsin	143
Wyoming	148

Foreign-born and aliens reported in penal institutions for 1938

California	851
Colorado	63
Connecticut	39
Delaware	124
Idaho	21
Illinois	196
Indiana	9
Iowa	40
Kansas	26
Maryland	99
Massachusetts	599
Michigan	686
Minnesota	12
Missouri	4
Nebraska	59
New York	946
Ohio	404
Washington	259
Wisconsin	69

THE FRIENDLY BORDERS OF THE UNITED STATES OF AMERICA

Mr. Speaker, our country has long been known for its hospitality to the stranger who comes here for business or pleasure. We have, in fact, been the good neighbor to all countries, particularly to Canada and Mexico.

The records for 1938 of the Immigration and Naturalization Service show 52,993,989 individual entries into the ports of entry along our borders, including each individual crossing of the border by any United States citizen or traveling alien. Of this total, 14,230,131 were alien entries from Canada and 14,421,370 alien entries from Mexico.

Besides the alien entries there were 15,740,505 citizen entries from Canada and 8,601,983 from Mexico.

To check against this horde of visitors is one of the duties of the Immigration Border Patrol. In 1938 the border patrol apprehended 13,655 law violators, 112 of whom were smugglers of aliens, 12,851 illegal entrants were seized, as were 692 persons wanted for other law violations. How many got by the border patrols will never be known, but it is safe to assume that the number runs well into the thousands, for once an alien is across the border and in the hands of friends the possibility of being apprehended and deported is remote.

The border patrol as an organization is small but efficient. Its complement of 850 officers and men cannot be expected to perform the impossible feat of adequately patrolling thousands of miles of our border, day and night. To keep the aliens out we must have additional laws with teeth in them to help.

MISUSE OF PASSPORTS

The simplicity with which persons can enter or leave our country is aptly illustrated in the case of Grover Bergdoll, the draft dodger. From his own story told on the witness stand in his recent trial before a military court at Governors Island, N. Y., we learn that Bergdoll, tiring of life in Germany, made two successful trips back to the home of his mother in Philadelphia, entering the United States each time by way of Canada under an assumed name. All of which took place when Bergdoll was a fugitive from the United States authorities, and his photographs and fingerprints had been broadcast and posted throughout the Nation. There were undoubtedly many "Bergdolls" who crossed our borders in the last few years. But what I cannot help wondering is how many men more dangerous to America than Bergdoll have sneaked into the United States or gone to some foreign countries and back as Communist Earl Browder and Communist Fred E. Beal did on phony American passports prepared for them by friends who knew the ropes and strings to pull in New York to get them.

We need some additional safeguards also to prevent the fraudulent issuance of passports. While I have cited these two instances of the misuse of passports on the part of American citizens, from facts developed in the testimony before the Dies committee investigating un-American activities, it is generally conceded that there are in several of the European capitals well-organized passport rings who specialize in the business of providing fake passports for secret agents of the Communist International to all countries, including ours.

MANY ALIEN SEAMEN JUMP SHIPS AT UNITED STATES PORTS

Mr. Speaker, another source of frequent trouble to our Immigration and Naturalization Service arises from the horde of foreign seamen entering our ports. Many of them, it is known, ship on boats sailing for America, with the intent and purpose of jumping ship when they get here. In the fiscal year 1938 alien seamen paid off and discharged in the United States ports numbered 21,875. In addition to this number there were 1,577 seamen who were removed to hospitals in this country, and 2,841 seamen deserted their ships. Thus, 26,293 alien seamen were dumped in the lap of America. They either had to find jobs on American or foreign ships or haunt our water fronts in search of relief or work.

During the year, 24,539 of these seamen reshipped to foreign ports, but 1,754 alien seamen remained in this country at the end of the fiscal year, unaccounted for. From testimony before the Dies committee it is easy to understand just how many of these alien seamen may possibly have engaged in activities of a subversive nature. Many also possibly have been utilized in carrying on the intensive espionage maintained in this country by Communist and Nazi and Fascist groups in Europe.

Mr. Speaker, if we hope to preserve our free democracy as was handed down to us by an illustrious ancestry; if we mean to perpetuate our liberty, we must immediately take steps to rid our land of these enemy aliens who are busily engaged in spreading the doctrines of hate and discontent, and who are boring from within, with a view to the final overthrow of our Government. It may require some painful surgery to remove this suppurating cancer, but as one Member of this body, I am willing and anxious to support any necessary legislation to accomplish the operation.

These disciples of foreign ideologies continually complain about our form of government. They want to change it to conform to the Nazi form the Fascist form, or the Communist form. Well, Mr. Speaker, if they do not like our form of government, in the

name of God, why do they not get out and go back whence they came. [Applause.]

I regret to say that in my judgment the one thing that has increased the audacity and improved the opportunities of these foreign emissaries to ply their nefarious programs has been the attitude of our national administration during the past 6 years. There has been a well-defined tendency on the part of our public officials to coddle these Reds and "parlor pinks." Along with hundreds of thousands of Americans, I was utterly amazed a few days ago when the President in one of his press conferences characterized as "sordid business" the action of the Dies committee in exposing Government employees who are either Communists or "fellow travelers." This rebuke by our Chief Executive of a congressional committee endeavoring to perform a patriotic service was indeed a melancholy commentary.

All praise to this committee for its courage, its independence, and its determination to stamp out this malignant curse to Americanism regardless of any influence that may be exerted from whatever source.

Mr. Speaker, the greatest menace to this country today does not come from abroad. Our greatest danger lies in the activities of these subversive influences, and the sooner we suppress them the better for our country—the last pure democracy on the face of the earth. [Applause.]

Slum Clearance and Low-Rent Housing

EXTENSION OF REMARKS

OF

HON. EWING THOMASON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

DECLARATION OF THE EXECUTIVE COUNCIL OF THE AMERICAN FEDERATION OF LABOR

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following declaration of the executive council of the American Federation of Labor urging Congress to approve S. 591, which provides for continuation of the slum clearance and low-rent housing program of the U. S. H. A., adopted at the quarterly meeting held in Washington, D. C., on May 20, 1940:

The future of the slum-clearance and low-rent housing program of the U. S. H. A., vitally important to labor, depends on the approval of S. 591 by the House of Representatives before adjournment.

Labor's concern in the future of this progam is intensified by current developments. In the present world-wide crisis the permanent security of America lies in action directed toward domestic betterment. The U. S. H. A. program goes straight to the heart of our most urgent economic problem. The splendid beginning made by the United States Housing Authority toward meeting the workers' need for decent homes has proved this program to be one of the most effective defense weapons of our national welfare. To discard this tested weapon now is to surrender a strategic line of defense of economic security of our people.

In view of conditions in the building industry it is essential that Congress act at this session to prevent a sharp decline in employment in the construction and related industries. The U. S. H. A. is a double-barreled employment program. The present program is providing 512,000 building-trades jobs on project sites in 200 communities. These jobs account for $225,000,000 in wages which go into the pay envelopes of building workers. In addition, employment of 760,000 workers in related building-materials industries is provided by the U. S. H. A. program. Stoppage of the program will wipe out these jobs and cut off the source of buying power derived from these wages. Unless S. 591 is approved by Congress this loss of employment and buying power to labor will come at the crucial time when the crushing burden of unemployment has become unbearable to millions of American workers who are entitled to the opportunity of earning a decent living through their own efforts.

The cost of this program is modest. The U. S. H. A. from its inception has had a consistent record of progress in the reduction of the costs and of the annual contributions needed to rehouse slum dwellers. Labor has cooperated in achieving these low costs by entering into agreements which assure that, after construction has started on a project, work will not be interrupted by jurisdictional or wage disputes.

War abroad is already creating new conditions in our economy, most important of which is the siphoning of wage earners into communities dominated by specialized production. The national defense program will also involve a rapid increase in specialized industrial facilities and their shift to the central cities of the Nation. These developments will create emergency housing situations which must be remedied. Good housing must be provided for the workers who will flock to these industrial centers.

The experience of the U. S. H. A. in the construction of workers' housing will enable it to provide such industrial housing with extreme speed and with thorough knowledge of each local problem. The U. S. H. A., with its Nation-wide network of contacts with local housing needs and with its staff trained and experienced in dealing with local housing problems, is the only agency equipped to plan and administer such a program.

If properly planned, this emergency housing will not be a total economic loss at the conclusion of the emergency, but will become a permanent asset available to low-income families in the future. Termination of the U. S. H. A. program at this time would not only aggravate the already acute shortage of low-rent housing but also deprive us of the tested machinery, in full working order, well fitted to deal efficiently with the emergency we are facing.

The American Federation of Labor, as the original champion of this legislation, has resolved that this program must be continued and expanded to meet the growing needs for reemployment and for rehousing.

Status of Rural Electrification Program in Oregon

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

TABLE COMPILED BY THE RURAL ELECTRIFICATION ADMINISTRATION

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I desire to set out the following brief statement of rural electrification activities in Oregon, as compiled by the Rural Electrification Administration. The statement follows:

Status of rural-electrification program in Oregon

Borrower	Amount	As allotted		May 15, 1940, counties
		Miles	Members	
2, Lane: Blachly-Lane County Cooperative Electric Association, Blachly.	$139,000	97	446	Lane.
4, Lincoln: Benton-Lincoln Electric Cooperative, Inc., Corvallis.	265,000	217	701	Lincoln, Polk, Benton, Lane.
5, Clatsop: Nehalem Valley Cooperative Electric Association, Jewell.	89,000	65	367	Clatsop.
14, Umatilla: Umatilla Electric Cooperative Association, Hermiston.	258,000	240	665	Umatilla, Morrow.
16, Malheur: Malheur Electric Cooperative Association, Vale.	148,000	115	347	Malheur.
17, Douglas: West Douglas Power Cooperative, Roseburg.	132,000	110	376	Douglas.
19, Jordan Valley: Jordan Valley Electric Cooperative, Inc., Jordan Valley.	30,000	4	81	Malheur.
21, Coos: Coos Electric Cooperative Inc., Coquille.	119,500	99	357	Coos.

Common Sense on National Defense

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. CORBETT. Mr. Speaker, psychologists tell us that an earthquake is perhaps the most terrifying of all human experiences. This is thought to be true because in all other calamities people can at least keep their feet firmly planted on the firm ground. Consequently, in any period of mental earthquake, if we can find something solid and dependable on which to firmly plant our mental feet, our fears are reduced and we tend to become calm and reassured.

During the past few weeks the people of the United States have been feeling violent repercussions of the mental earthquake that has hit the people of western Europe. Our thought world has been crowded with fears, mental-conditioning propaganda, charges and countercharges, dire predictions, and hysterical prophecies. We know not what or whom to believe. At a time such as this I am happy to be able to present excerpts from a remarkably authoritative publication which could well become the thought pattern for every loyal American in these trying times. In my humble opinion, there is little else worth saying on the general situation.

The publication referred to is Senate Report No. 1615, prepared and printed by order of the Senate Committee on Naval Affairs, May 15, 1940. I herewith submit pertinent excerpts from its contents:

The views on national defense recorded in this report which the committee considered in arriving at its conclusions and recommendations do not represent the views of any one person or group of persons. They represent composite opinions derived from one or more of the following sources. Statements made by our best-informed citizens who have studied this problem, prior reports made by the committee to the Senate and data presented to the committee during the past 5 or 6 years by the most responsible naval officers and naval experts in America, including such prominent officers as Admirals Stark and Leahy, Chief and former Chief of Naval Operations; Admirals King and Cook, former Chiefs of the Bureau of Aeronautics; Admiral Laning, former President of the Naval War College; Admiral Taussig; and an outstanding national defense expert, Maj. George Fielding Eliot.

INSULAR POSITION OF THE UNITED STATES

From the military point of view the United States must be considered as an insular nation. We are separated from potential enemies on the east and west by broad and deep oceans. On our northern and southern borders are nations which have been friendly heretofore. Across these land frontiers could come no armies of sufficient strength to menace our security. Our situation is not similar to that of the British at the present time. Prior to the advent of air power the British Isles were insular countries. This complete insularity is now compromised in the military sense in that they are subject to damaging attack by aircraft based on the continent.

The armies of Europe and Asia do not menace us. To be a menace they must be transported across the sea in ships. Airplanes based on the continents of Europe and Asia do not menace us. To threaten seriously our continental security they must be conveyed across the sea and operated from bases in or near this hemisphere.

The armed forces of no foreign nation or group of nations can seriously threaten our continental security if we make sure that we command the seas which separate us from all potential enemies.

WITH ADEQUATE SEA AND AIR POWER THE UNITED STATES CANNOT BE DEFEATED

From the evidence available it appears that if we build and maintain an adequate navy, provide ourselves with adequate air power, and a comparatively small, but well-trained and highly efficient army, we cannot be defeated. If our fleet, supplemented by our air forces, is able to exercise control of our essential sea and air communications, our Nation is secure.

An adequate Navy, capable of meeting and defeating an enemy's navy at sea, is the only sure way that war can be kept at a safe distance from our coasts and the only sure way to bring a war to a close.

FUNCTIONS OF AVIATION

Aircraft, without the assistance of surface vessels, have not yet demonstrated that they can deny an enemy control of the sea.

Land aircraft alone, even were they able to present an inconceivably—and impossibly—impregnable defense, would still be only defending. This can never defeat an enemy.

Nothing would be more conducive to aggression on the part of an unscrupulous and reasonably intelligent enemy outside this hemisphere than the knowledge that he could wage war upon this country while exposed only to the negligible injury of the passive defense to which we would be committed by primary reliance on land aircraft. However, everyone is convinced of the very great importance of aircraft in our scheme of national defense. No force, ashore or afloat, can afford under any circumstances to be without ample aircraft support.

AIRCRAFT VERSUS THE BATTLESHIP

There is no recent evidence to show that battleships or other surface craft are obsolete as a result of increased efficiency of bombing from aircraft. The manner of employment of naval vessels undoubtedly has been affected by the comparatively new form of attack from the air and the armament, armor, and protection of ships has been and must continue to be adapted to resist damage as far as practicable.

AMERICA AND THE WAR IN EUROPE

We are doing now practically everything possible to bolster Allied sea and air power, and we are stepping up American production of aircraft and shipping them to the Allies. Some naval experts are of the opinion that due to the superiority of the Allies in surface craft it would not materially change the chances of an Allied victory if we did send out the fleet to operate in European waters.

We are not prepared to participate in the European war, as we do not possess the necessary weapons to make our efforts effective.

American soldiers should never again be landed upon a foreign continent, except to defend the naval or air bases from which it may be necessary for our fleet and our air forces to operate. Can anyone see how we could possibly accomplish anything worth the sacrifices of human lives, of resources, and possible loss of our free institutions, that will be demanded of us by our participation? We should certainly profit by the experience of the last World War and avoid becoming too greatly involved in European affairs.

If we are to remain at peace we must avoid becoming interested financially in the outcome of the European war, and our industries must not become too greatly compromised by foreign war orders.

Some naval experts point out that the view that we ought to fight now when we would have allies rather than take the chance of having to fight victorious totalitarian states flushed with victory at a later date is based upon an incorrect evaluation of actual military facts and military history.

It is an axiom of military strategy that military power can always be exercised more efficiently and to much greater effect within a reasonable radius of action than it can by fighting thousands of miles away.

THE COST OF WAR TO OUR LIBERTIES

If we allow ourselves to become engaged in the war in Europe as we did in the last war one thing is certain, the whole energies of our people, of necessity, will be ordered, regimented, and directed by a single authority. Everything—manpower, industrial power, wealth, production, transportation, liberty itself—will be at the service of the Government.

Why should we go to war to defend freedom if we must begin by destroying it with our own hands? We need not do this. The cold, hard military fact is this: Our Navy, if adequate, supplemented by a highly efficient Army and air force, will be so effective that few nations, not excluding victorious totalitarian nations, will challenge its power; and if any does we shall be the deliverer and not the recipient of the terrible hammer strokes of war.

AMERICA AND THE FAR EAST

Japan is an insular nation * * *. She is therefore vulnerable to attack from the sea. She can be rendered impotent and can be defeated by naval forces without military conquest. She cannot direct a serious attack against us if we maintain our defenses on an adequate basis.

At the present time the United States Navy alone could not undertake a war in Far Eastern waters * * *. To insure victory in this undertaking it will be necessary not only to maintain the 5–3 ratio, but to increase our fleet perhaps as much as 100 percent.

A war fought across the breadth of so vast an ocean as the Pacific is fraught with very great difficulties. The cost to us of such a war would be so great that we must, by every means in our power, avoid the necessity of having to undertake it.

The all-important fact in the Pacific, so far as Americans are concerned, is this: We need not fear aggression or any vital harm from this direction so long as we maintain our fleet in the Pacific at not less than the 5–3 ratio with the Japanese fleet, and maintain adequate naval and air bases from which our fleet can operate effectively.

DEFENSE OF AMERICA

If we realize that the important causes of war are in human minds and emotions, that force cannot change materially human nature, give up the illusion that American armed forces can bring permanent peace to a warring world and confine our military objectives to the defense of this country, we shall find that our problem of national defense becomes relatively simple. An impregnable defense for America will be costly, but infinitely less costly in the long run than engaging in another futile attempt to "save the world for democracy."

WHY NOT FACE THE FACTS?

Why not face the fact that we have not provided ourselves with the necessary instruments of war to assist the Allies or the necessary bases to make our air forces and our Navy effective on foreign continents or in foreign waters and that our prior efforts to build up our defenses were not undertaken with these objectives in view?

Why not face the basic military and economic fact that it is not within our power or means to create Military or Naval Establishments of sufficient strength to police the world, but that it is within our power and means to prevent others from transporting their wars to this hemisphere? Why not face the fact that American armed forces cannot force permanent peace on a

warring world, but that we can maintain peace in our own part of the world?

In doing this we need not shut ourselves off from contacts with other nations, but we can and should command the seas and airways which are the medium of those contacts.

In the words of Washington:

Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?

Why not take adavantage of our pecular situation, develop the sources of raw materials available in this hemisphere, and construct the instrumentalities of war which will enable us to pursue our way in peace, free from the horrors of invasion, the perils of bombs from the sky above us, the burdens of supporting vast armies, and the perils to our liberties which any involvement in war would bring?

Mr. Speaker, here we have in this remarkable document the calm reassuring words of our best authorities. Here we have the sane reasons behind the slogan that I continue to recommend:

Let us keep America out of war, and let us keep war out of America.

Flood-Control Protection Part of Our National Defense

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. TIBBOTT. Mr. Speaker, realizing that flood control is one of the principal needs of the people of my district, I have endeavored since coming to Congress to do everything within my power to bring about an adequate program of flood control, which is of such vital importance to our Nation.

The public knows the enormous loss of life and property from floods. The Nation has been sold on flood protection. It is my belief that there is no more satisfactory work than flood-control improvements. The investment of our Federal Government toward protecting civilization in flood control will result in real economy. It is a wise investment, from which we will receive value from the money spent. Important work remains to be done, especially on the Johnstown Channel, and I trust, for the interest of national defense, that the completion of this project will go forward without delay.

People in my congressional district who have in recent years been under great stress because of the danger of floods know just what it would mean to many of the large factories in and around Johnstown, Pa., should a flood of major proportion occur before the completion of the present project. We know what an important part some of the factories in Johnstown played during the World War in supplying our Government with steel that was necessary to help us win that war. Should a flood of major proportion occur, these factories would be put out of commisison for a long time. If our factories in strategic parts of the country were to be flooded, our military plans would necessarily be greatly hampered.

It is estimated that an additional $1,597,800 will be needed to complete the project in Johnstown. Of course, not all of this will be needed during the next fiscal year, which begins July 1, as the Army engineers believe that the flood-control project in Johnstown cannot be completed until the following fiscal year even though funds were available.

I hope that a sufficient portion of our national-defense appropriations will be set aside for the completion of flood-control projects throughout our Nation.

Origins of the War

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

LETTER FROM HAROLD W. HANCOCK

Mr. KNUTSON. Mr. Speaker, it is most encouraging to note that all Americans have not been swept off their feet by the hysteria that had its origin in the White House a week or two ago. Fortunately, the brainstorm is subsiding and a sound understanding of foreign affairs is replacing the fear and mystification that gripped millions of our people a few days ago. At this point I desire to present for insertion in the CONGRESSIONAL RECORD a letter that appeared in this morning's Washington Post:

ORIGINS OF THE WAR

To the EDITOR OF THE POST.

SIR: The danger that we have feared so much is now here—that the United States may be led into the war. And this danger is brought on by the hysterical reaction of those pledged to keep us out. And why are they hysterical? Because the Allies are having some reverses.

But were not these reverses a possibility in September 1939 when the President pledged to keep us out? He did not say "as long as the Allies are winning."

Why are "we" so interested in the Allies? If Italy joins them, will we love her too? Will we then regard Mussolini as a good fellow who seeks to "reestablish international law and order"—to use Secretary Hull's moralizing words?

Are England and France fighting against domination of the other countries of Europe? Then why did they arm Hitler, knowing that his stated program—Mein Kampf—included conquest of other countries? The answer is clear to all who are not blinded by propaganda: They armed and connived with Hitler because his main aim was the destruction of Soviet Russia.

But Soviet Russia foiled this long-prepared plan by building an army three times the size of Hitler's. That is why Hitler decided, on August 24, 1939, not to attack Soviet Russia. And that is why, 1 week later, England and France declared war on Hitler. He had become their enemy overnight by changing his plan. They now knew that anything further that Hitler took would not be used against Soviet Russia but sooner or later against themselves and their interests.

England and France are therefore not fighting German fascism. If they can reduce Germany's strength to a point where Germany will not be threatening England's Empire, the present war will come to a close.

We should have no part of this struggle between the rival rulers of Europe. If Soviet Russia, near the conflict and in constant danger from both belligerents, can stay neutral, the United States, in a different hemisphere, certainly can. By building her defenses, as Soviet Russia has done, the United States can make herself even more impregnable than Soviet Russia.

HAROLD W. HANCOCK.

MOUNT RAINIER, MD., *May 21.*

A Problem President

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. REED of New York. Mr. Speaker, President Roosevelt for the past 7 years has been stirring up class hatred, arraying group against group, and now when overwhelmed with

debt and faced with unpreparedness to meet the problems arising out of the foreign war, he piously pleads for unity of action and teamwork. However, he still continues to be petulant, critical, and political-minded toward those from whom he now desires teamwork.

The Republican Party rallied to the support of President Wilson in the World War, and the party will show the same spirit of cooperation now, regardless of whatever action President Roosevelt may take, but it would come with far better grace from the President to dismiss his political-mindedness and play the game like a man.

Under leave to extend my remarks in the RECORD I am inserting an editorial from the New York Herald Tribune under date of today entitled "A Problem President," which points out that the President is still playing up to his radical friends by appointing them to positions of trust in the preparedness program, while using two great industrialists merely as "window dressing." No one can dispute the fine character and ability of William S. Knudsen and of Edward R. Stettinius, Jr., but why sacrifice these men for window dressing when their talents should be available, unhampered by New Deal politicians?

[From the New York Herald Tribune of May 29, 1940]

A PROBLEM PRESIDENT

Signs are multiplying that the country is becoming more and more impatient toward its problem President. His fireside chat displayed not only a political petulance that ill became the moment, but also a complete blind spot toward the one essential fact in the preparedness effort. Calling for cooperation and support, he himself refused to cooperate with anybody or support any plan that would enlist the industrial forces of America in the race to make the Nation able to defend itself.

The contrast with the two able Republican speeches delivered the next night was complete. Mr. Hoover and Mr. Dewey covered different ground, but their goal was the same. As Mr. Dewey pointedly said at Dallas, the President "expects to keep the political control of a machinery for increasing production of defense materials and to use industrialists for window dressing." The President promptly came through with the window dressing yesterday, inviting an assorted group of industrialists, New Deal radicals, and a consumer representative from North Carolina to come to Washington and advise the administration.

No one in the country is better qualified than Mr. Hoover to comprehend the problem facing the country and plan its solution. The fundamental of the situation was admirably stated by him in his broadcast when he said:

"The lesson of the whole of the last World War and every step in the present war is that the procurement of munitions in any large volume must be separated from the Army and Navy Establishment. It must be done by an organization separate and independent of either department. It is an industrial job—a manufacturing job, a mass-production job for management and labor. It requires that thousands of factories be coordinated to do their part."

These are not mere generalities to Mr. Hoover. He worked and lived through the last war in the closest touch with the men who organized the Allied supply systems. He is himself a trained engineer and an experienced industrialist. His application of his principles to the problem of the air was especially cogent. We do not want 50,000 planes to put away in hangars, he remarked. In the face of constantly advancing science it would be folly to have 50,000 planes in peacetime. He assumed that the President really did not want such a result. What the Nation really needed he defined as follows:

"What we need is organization in Washington capable of bringing about a coordination in American industry that can produce 50,000 airplanes in a year if they were called to do it. If we could demonstrate that we could supply the Army and Navy with 4,000 planes during a single month that would be ample notice to the world to keep off our grass. Likewise, we need an organized capacity to produce tanks and other arms."

There is nothing secret about these fundamental facts of preparedness. Mr. Dewey and Mr. Hoover stated them with unusual clarity. But the whole country knows what American industry and mass production are, and it knows how to apply them to the defense problem. Only Mr. Roosevelt knows differently. He insists upon retaining personal charge of the job himself, and instead of turning the actual direction over to great industrialists he leaves it to his Secretary of the Treasury, who knows nothing whatever about industry; to a Secretary of War and an Assistant Secretary of War who are not on speaking terms with each other; and to a Secretary of the Navy who is about to resign to run for political office.

The right course is so obvious that it takes all of Mr. Roosevelt's ingenuity to ignore it. But he is unmistakably standing fast on his dictatorial, political resolve. He refuses to end his own private war with American industry even to prepare the Nation to defend itself in a period of great emergency.

The Problems of Unemployment and Social Security

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. THILL. Mr. Speaker, from the beginning of life on this earth down to our present-day complex existence, man has looked for security. No matter what work we do, what profession we follow, what menial tasks we perform, we dream about a day when we can retire in ease and comfort, to live as we wish to live, and do what we feel like doing. But for practically all of us the day of retirement never comes. Depressions wipe out our savings, financial upheavals and wars disrupt the lives of nations, and sickness and death very often take away the earnings of a family. Although there are many causes which lead to economic distress, the worst of all is unemployment.

The American who is out of work lives idly by, day after day wondering what tomorrow will bring. Here in America the unemployed citizen has seen the Government try ill-conceived devices to create employment. But up to the present time these various schemes of "made" work have only pacified the American people for the time being and have shirked the real problem. No temporary relief will satisfy the needs of the head of a family who must look at the years before him, develop his position in life, feed, clothe, and educate his children. We cannot appease the hunger for security with scraps of relief which are inadequate and which stamp the individual with inferiority as one living on Government generosity. There is no reason for such embarrassing charity, no excuse for Government hand-outs at the expense of taxpayers who themselves are burdened with debt and finding it more difficult each day to meet their tax problems.

Unemployment steals from our youth their right to make a living, to secure a good education, to establish homes of their own, to improve their condition in life. The man who trudges the streets going from factory to factory looking for work faces an endurance test forced upon him by unemployment. How much longer can he last, looking and waiting for the job which he should have. The father, mother, and children in so many American homes are staring at present want and future insecurity. What a pitiful picture they make as we look at them with their hopes turned to despair through the loss of work and the resultant loss of courage to carry on in life.

It seems to me, the Government has a special duty to alleviate distressing conditions. This duty is imposed upon those who govern, by religious precepts, with which all of us are endowed as a guide to good and wholesome living. If we forget these fundamental rules of life, we might as well give up all hope of advancing civilization. If legislators fulfill the obligation resting upon them and their Government to recognize the needs of their people, and strive with all the energy they can command to satisfy those needs we should then get equality, justice, and fair treatment for all.

It has been variously estimated that our unemployed number between ten and twelve million; which means that about 1 out of every 5 persons in our employable population is without a job. We know that many individuals are dependent upon these jobless workers, and if we include these dependents, we find that we have a total of about 25,000,000 persons who are the victims of unemployment. This number is greater than all the individuals living in the 10 largest cities in the United States. In fact, our army of unemployed and their dependents are more than the entire population of the United States in 1850.

Now, why do we have so much unemployment? Various speakers have varying ideas about what causes unemployment. Some say it is due to the machine age; others say the capitalistic system is responsible. During recent years we have had a prolonged depression, which some economists say is the result of the stagnation of the capital markets. It is said that taxation policies have tended to drive investors to high-grade tax-exempt securities; that regulation has raised the cost and increased the risk of capital flotations; that persistence of large deficit spending has undermined confidence in public credit; that development of a maze of Government lending agencies has narrowed such private investment channels as remain; that uneasiness over the future of private investment is accentuating the fear of an ultimate break-down of public credit, accompanied by price and wage inflation. Some say that the New Deal has created so many business deterrents that an individual cannot now go into business for himself without hiring an accountant and consulting a lawyer. But, whatever the reasons for unemployment, the legislators should study this problem continuously, and if one group does nothing to solve the problem the voters should put them out of office and elect others who have the courage and energy to do something about it.

We should strive to give security to the people in this country so they will be protected against unemployment and against the rigors of that period in life when men no longer are considered active enough to fit in with our mechanized system in industry. Of course, I realize that to try to give true security to all of the people in this country is almost as difficult or as illusory as a search for the pot of gold at the end of the rainbow. Even when we do devise a method of paying pensions to aged people, we might be confronted with a war or some other major catastrophe which would destroy our retirement plans. But we can at least do our best to bring some degree of comfort and security to the old people who have retired from gainful occupation.

Now let us look at the so-called Social Security Act which is in effect today. The title of the act, "Social Security," is a slogan or a catch phrase which has led many persons in distress to believe that, at last, here was legislation which was going to help them. But how fooled they were. Those unemployed who really needed the benefits of social-security payments were not helped at all. Only those in industry who had a job and had less need for old-age benefits were covered under the act. Millions of other workers, agricultural and domestic, were left outside. We might call this a deceptive law because it does not give the people the security which they think they are getting. It has been stated that the average old-age benefit payment under the act will be $19 a month. This certainly is a small sum and no one can live decently on such a small allowance. It has been charged that the records of the Social Security department were in such bad shape that men now growing old and counting on social security to make their old age comfortable may one day find themselves unable to prove their claims to old-age benefits. Many of those who pay taxes will get nothing in return. A great percentage of those paying social-security taxes will get less than is given free by the State to old people. Those who will receive benefit payments over the next few years will in some instances get an amount of money running into many hundreds of dollars, although their tax payments have been slight. Those who have stopped making contributions and are now receiving their small benefit payments, will be chiseling, so to speak, on the moneys placed in the so-called social-security reserves by those who are now paying the social-security tax. Any plan that offers to pay so much more than it collects is unsound, and any plan that is managed by those who please only a select few is certain to have faults. We should have equitable taxation for security payments in this country.

Is there any reason why the Government should pay more to one individual when he reaches the retirement age, than to another, when the former individual has not deposited enough to meet even one-twentieth of his payments? Is there any sense in requiring the youth of today to make social-security payments only to find when they are old that there will be no funds available for them? Under existing procedure the pay-roll taxes are used for the operating expenses of the Government. No cash and no revenue-producing assets are being set aside with the tax money; only Government bonds or I O U's are placed in the reserve fund. So you can see, as future benefit payments must be made, those payments have to be met by further taxation in the years to come. The Brookings Institution recommended that the old-age annuities should be framed on a pay-as-you-go basis, rather than by collecting a huge reserve. They stated also that the rates for old-age annuities should be temporarily reduced and that the contingent reserves should be invested in outstanding Government bonds at current rates; and that the Treasury should separate its operations from those of the social-security administration. It seems to me that there is much sense in the report made by a group of House Members who have considered the problem of social security. They stated that the annuity system should be on a pay-as-you-go basis and they criticized the present social-security laws, which take such a great amount of money in pay-roll taxes from the people in this country. They urged that pensions be paid to all American citizens over 60 years of age who are retired from industry and they suggested that there should be no difference in the amounts paid to persons in the various States. I can see where there might be some discussion about the fact that most of the people living in the South do not require as much money for living expenses as do the people in the North. Then, too, there is the problem of adjusting benefit payments from time to time as the cost of living goes up or down. The House committee suggested that the revenue should come from a broad general tax as well as from taxes designed to reduce the volume of idle funds. The size of the pension is to be determined by prorating the money derived among all who are to receive the annuity. The House committee claimed that such a system would avoid the complicated bookkeeping now required of the Social Security Board and the employers in the country; that it would do away with pay-roll taxes; and that no particular class would be favored but that it would include all of our citizens.

Certainly Congress must study the problem of unemployment and old-age annuities in order that the people of this country will in the near future be assured of some semblance of security in their old age. Many of the subversive activities prevalent in the country today, are present only because the people are dissatisfied with conditions and will follow cheap orators who promise everything but deliver nothing. Business should be encouraged; restrictions which hamper and bind private enterprise must be removed. In considering the cost of any old-age-benefit program, we might compare it with the cost of the last World War. It has been stated that, figuring World War cost at $250,000,000,000, we could have taken that staggering sum, built homes at $2,500 each, equipped with $1,000 worth of furniture, built on $500 lots and given such a home to not only every family in the United States, but also to every family in England, Scotland, Wales, Ireland, Holland, Belgium, France, Italy, Germany, Russia, and Australia. To every 40,000 people in those countries could have been given a $2,000,000 library, a $3,000,000 hospital, and a $10,000,000 university; the balance properly invested could have paid annual salaries of $1,000 each to 125,000 teachers and 125,000 nurses. Such a vast sum of money could have been used to make over the entire world and rid it of so much misery and suffering.

Oh what worries, fears, and heartaches we could eliminate by assisting the people in this country to get work and security in their old age. There can be no more heroic achievement for any nation than to solve the problem of unemployment and give to every citizen in the twilight of life true security.

The First Inter-American Conference on Indian Life

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29 (legislative day of Tuesday, May 28), 1940

EDITORIAL BY JOHN COLLIER, COMMISSIONER OF INDIAN AFFAIRS, PUBLISHED IN JUNE (1940) ISSUE OF "INDIANS AT WORK"

Mr. THOMAS of Oklahoma. Mr. President, some time ago there was held in Mexico an Inter-American Congress on Indian Life, participated in by persons interested in Indian affairs. The United States was represented at that congress; the head of its delegation was Mr. John Collier, Commissioner of Indian Affairs. Mr. Collier has prepared a statement. I ask unanimous consent that his statement may be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE FIRST INTER-AMERICAN CONGRESS ON INDIAN LIFE

Patzcuaro: Nearly 400 years ago, Spanish cruelties practiced upon the Indians of the State of Michoacan had whipped the populace into long-lasting guerrilla warfare. No white man could venture unguarded out of the towns. There came on foot, and alone, over the big mountains from Mexico City, a priest, aged 60 years. He was Don Vasco de Qurioga. This man in his old age produced one of the most moving chapters of Indian history. He drew the Indians together into numerous community establishments called hospitales. Within an outer wall they lived and did their craft work, and they tilled the adjacent fields. All of them worked, but none worked more than 6 hours a day. The leisure time was organized and used creatively. The many hospitales specialized in varied types of crafts. There went forward an exquisite blending of the pre-Columbian and the Christian institutions. All around the surpassingly beautiful lake, on whose shores Patzcuaro is built, and back into the purple mountains, these Indian communes were both the local self-government and the industry of the countryside.

But in Spain, and from Mexico City outward, there went ahead the parceling of the country into the hands of captains and favorites. The tyrannous hacienda system was being thrust across Indian life. Don Vasco in his old age was called back to Mexico City and he died amid the gathering fatality which very soon thereafter overwhelmed the communes.

There only remain, now, the villages with their many arts and crafts, and there remains the original monastery and the surrounding wall of the first of the communes, and within the wall there grow olive trees 400 years old, of fabulous dimensions.

The bones of Don Vasco repose in the beautiful provincial museum which the town of Patzcuaro maintains, and which is a model for regional museums everywhere.

To each of the assembled delegates President Cardenas presented a book, The Rules and Ordinances for the Government of the Hospitales. The ancient printer's type is reproduced with exactness, and a moving introduction is supplied by Mauricio Magdaleno.

This was the environment of the First Inter-American Congress on Indian Life, and the tradition of Don Vasco surrounded the deliberations. Many countries were present; from a number of the countries opposing domestic elements were brought together; scientists, administrators, and diplomats were all at the meeting; and Indians from countries as wide apart as the United States, Peru, Bolivia, Panama, and Mexico. A high degree of tension prevailed, and it grew in intensity from the opening of the congress by President Cardenas to its termination by the President's representative, Dr. Beteta, at the end of 10 days. What was most impressive and important was this fact—that though strongly contending philosophies and political situations were involved throughout the sessions, there was "give and take" in every critical matter, and all of the important actions, when finally taken, were unanimous.

The subject matter: Four sections continued throughout the 10-day meeting—social-economic, legislative, educational, biological. A subsection dealt with arts and crafts. The Indians held their own summarizing and interpreting sessions and participated in all of the sections and in the plenary meetings. A set of the prepared papers is before me as I write. They total 1,100 extra-length pages. The Acta Final, reporting only the resolutions and actions taken, is 58 single-spaced pages. This Acta Final, in English, will soon be available. From time to time, in Indians at Work, some of the resolutions which were adopted will be reproduced. Here I give one or two of them:

"That the nations of the Americas shall adopt and intensify the policy of offering the amplest opportunity for the display of the capacities of their Indian groups, to the end that the Indian cultures shall not die but shall endure to enrich the culture of each nation and the culture of the world and contribute to the energies of the nations."

Another unanimous recommendation:

"1. That each government shall establish an agency or an office with the object of concentrating attention upon problems of the Indians and of focusing upon Indian need in effective manner the services of the governments for the shaping of Indian welfare and the defense of the Indian.

"2. That such Indian agencies or offices should not monopolize the administration of Indian services but should operate to focus upon the problems of the Indian all the resources of the governments as well as all local resources.

"3. That the offices of Indian affairs should work with the Indians through indirect methods, utilizing the Indian groups as their media, or otherwise developing or utilizing cooperative organizations for the mutual aid and mutual defense of the Indians."

Among the general resolutions, the most important single one dealt with land. It was debated through many sessions and was adopted unanimously. It read:

"Whereas, it is the duty of this Congress to seek to influence the nations having Indian populations, to the end that their political and social policies shall favor the Indian race and shall aid in the integration of the races within each country,

"Therefore, we recommend to the nations joined in this Congress that where there exists an overconcentration of the ownership or control of land, the respective governments shall take appropriate measures, in accordance with equity and justice, to correct whatever abuses of overconcentration may exist; and we recommend that they adopt methods appropriate to their own situations to help the Indian populations in building up their economic life, providing them with needed land, water, credit, and technical facilities."

Generalized from the record, it can be said that the Congress found and announced many elements of Indian power, Indian need, and Indian problems which, with minor local differences, hold good for all of the Indian countries. The beginnings of a real hemisphere Indian policy were laid down. And be it noted that no resolutions were perfunctorily adopted. Always they were presented and argued within the sections and then were reconsidered at a plenary session; and the participants were diplomats, administrators, scientists, and Indians. The final voting, of course, was by countries.

The permanent organizations. Two organizations were set up by the Congress, each looking toward a permanent and uninterrupted activity. One was the Continuing Commission of the Congress, which for its chairman has Dr. Louis Chavez Orozco, the President of the Congress, and for its secretary, Dr. Moises Saenz, the general secretary of the Congress. The representative from the United States is Dr. Sophie D. Aberle. This continuing commission is charged with the procuring of the next congress, with the publication of the proceedings, and with various tasks of unfinished business of the first congress.

The other permanent organization is a momentous one. The Congress created, on a provisional basis, the permanent Hemisphere Institute of the Indian, the provisional headquarters being Mexico City. Though its existence is as yet provisional, the institute is empowered at once to become active in the diffusion of data and the stimulation, coordination, or conduct of research. The main immediate task of the institute is to prepare and negotiate the conventions or documents of affiliation, to be enacted by the participating countries. The president of the institute is Dr. Orozco and its director is Dr. Saenz. The provisional governing board is constituted of technicians or administrators from the United States, Mexico, Guatemala, Peru, Bolivia, and Brazil. These members, for purposes of meetings, may be represented by alternates, chosen by the governing board itself upon recommendation of the embassies and ministries at Mexico City. The representation from the United States fell to myself, and my alternate is Pierre deL. Boal, the counselor of our Embassy in Mexico. The constitution of the institute provides for branch offices in the countries desiring them, and for the creation of technical consultative groups within and between the participating countries.

This report is indeed an abbreviated one. Members of our own delegation (Presidential appointees, and members of the coordinating committee) participated in all of the sections and all of the plenary sessions. A heavy burden was inconspicuously carried by many of them. Through the entire congress, wise and potent aid was given by Mr. Boal, the counselor of the American Embassy, and at a critical moment in the organization of the institute, decisive help was given by Ambassador Daniels. Within the Mexican group, from President Cardenas down the line, there was manifested truly a spirit of statesmanship—of disinterested but impassioned concern for the Indian cause throughout the hemisphere, joined with a chivalrous considerateness for the special situations existing in some of the other countries.

Our Indian delegates, named by the Secretary of the Interior, represented the Papagos, the Jicarilla, and San Carlos Apaches, Isleta Pueblo, Santa Clara Pueblo, Taos Pueblo, the Hopi tribes, the Flatheads and the Osages; and none did better work than they.

The next meeting of the congress, 2 years hence, upon the invitation of Peru, was set for Cuzco, high in the Andes, the capital of the ancient Inca empire.

"Blitzkrieg" That Failed

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

EDITORIAL FROM THE TOWANDA (PA.) DAILY REVIEW

Mr. RUTHERFORD. Mr. Speaker, the New Deal drive to put President Roosevelt in the White House for a third term by use of war hysteria and coalition has fallen flat. The people of this country are not so gullible as the new dealers thought. After 7 years of broken promises they have begun to think things out for themselves and are beginning to take with a grain of salt the suggestions of the President. The Towanda Daily Review, Towanda, Pa., hits the nail on the head in the following editorial:

[From the Towanda (Pa.) Daily Review]

"BLITZKRIEG" THAT FAILED

The most heartening sign that democracy in the United States has lost none of its virility despite events abroad and the "blitzkrieg" engineered by the new dealers to sink the Republican Party into a "ja" adjunct to the third-term drive is the complete collapse of the proposal to erect a "coalition" government for the "emergency," the "emergency" this time to last, presumably, until Mr. Roosevelt had been safely ensconced in his White House seat for another 4 years.

The Republican National Convention will be held in Philadelphia in less than a month, and the campaign will be one of the most torrid in the history of the Nation. That is as it should be.

If the record of the present administration, including the President's admission that the country is defenseless in the wake of record peacetime expenditures for armament—coupled with the papsucker drive to continue Mr. Roosevelt in office forever—do not constitute valid grounds for a sizzling campaign, this is, indeed, no longer a republic, and what is there left to fight for?

Politics has been injected into the Nation's defense program by the President himself, and if he doesn't find it savory he can only find consolation in the knowledge that he outsmarted himself at last. Calling in Republican leaders to discuss the weather may have seemed clever to him at the time, but Alf Landon, a country boy from Kansas, turned the "blitzkrieg" into reverse when he emerged from a free meal at the White House to call upon the President to patriotically curb his ambitions in the interest of the Nation.

There will be an election come November, and those responsible for the sly suggestion that it should be called off are not worthy to be termed Americans.

Gallup Poll Shows 93 Percent of the American People Are Against America's Entrance Into the War

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

ARTICLE BY DR. GEORGE GALLUP

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following article by Dr. George Gallup on the war sentiment in the United States compiled after a Nation-wide survey:

THE GALLUP POLL—WAR SENTIMENT IN UNITED STATES RISES SINCE NAZI INVASION BUT REMAINS 13 TO 1 AGAINST ENTRY

(By Dr. George Gallup, Director, American Institute of Public Opinion)

PRINCETON, N. J., May 28.—Sentiment for going to war with Germany has increased since the Nazi invasion of Holland and Belgium May 9, but the increase has been less than 4 percent. A Nation-wide survey just completed finds the country still more than 13 to 1 against American entrance into the conflict.

For many months studies by the American Institute of Public Opinion have found two basic aims governing the attitude of the American people toward the war—first, to do everything possible to aid the Allies, but, second, to stay out of the war. The events of recent weeks have caused increased sentiment for helping the Allies by every means "short of war," but there has been little change in the other basic attitude—to keep out of the fighting.

TREND OF SENTIMENT

The trend of sentiment on going to war with Germany has been as follows:

"Do you think the United States should declare war on Germany and send our Army and Navy abroad to fight?"

	Percent	
	Yes	No
When war started (September 1939)	6.0	94.0
October	5.0	95.0
December	3.5	96.5
After invasion of Norway (April 1940)	3.7	96.3
Today (since invasion of Holland, Belgium, and France)	7.0	93.0

It is interesting to note the relation between events in the war and the trend of sentiment. Some observers thought the Nazi invasion of Norway with its bombing of open towns would profoundly affect America's attitude of aloofness. Actually, according to the survey, there was little change.

The dramatic and world-shaking invasion of Holland and Belgium a week later brought a net increase of about 3 percent in war sentiment. But it is clear that, for the present at least, no war fever of any appreciable size has been generated. What will happen to American sentiment if the Nazis unleash a furious bombing assault against England, or threaten Canada, remains to be seen.

Mr. Speaker, I am convinced that the Gallup poll, as far as participation in the war is concerned, is correct, and that it reflected with a like percentage in the Congress of the United States.

Social Offensive or Defense?

EXTENSION OF REMARKS

OF

HON. HARRY SANDAGER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

EDITORIAL FROM THE PROVIDENCE JOURNAL

Mr. SANDAGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Providence Journal of Tuesday, May 28, 1940, entitled "Social Offensive or Defense?" which comments pointedly upon the President's fireside chat of Sunday night. The editorial follows:

[From the Providence Journal of May 28, 1940]

SOCIAL OFFENSIVE OR DEFENSE?

The President's fireside chat had the virtue of letting us know in unmistakable language that not one concession would be made in New Deal policy to the program of gearing our industrial production to the needs of national defense.

In other words, Mr. Roosevelt told the Nation that we can have our cake and eat it, too.

Many people may have felt reassured by what Mr. Roosevelt told them we already have in the way of armament. As a matter of fact, that was the most political part of his whole chat. If he had told them, not what we have in the number of guns "on hand and on order," as he repeatedly put it, but what was the protective value of what we have in relation to the continent that we have to protect, the story would have sounded altogether different.

Except for the Navy, the value of which is dependent upon the future of the British fleet and the position of the Japanese fleet, Mr. Roosevelt should have told the people that we have not enough land armament or air armament even to count against a first-class power, let alone such unprecedented and terrifying mechanized force as Hitler has produced.

We submit that the purpose of his putting the statement as he did had a strong odor of bidding for votes.

Neither what we have "on hand or on order," or even are likely to put on order, can solve the problem, but only the capacity to produce through organization, management, and freedom of action for industry in the emergency as the emergency demands.

This, says Mr. Roosevelt, he will not let industry have for fear of injury to the New Deal social offensive.

We believe that Mr. Roosevelt is making the same terrible error of Britain and France, which is costing them heartsickening losses in lives, blood, and treasure and may yet cost them their liberties. This error could have been avoided if their leaders had had courage and truth in their hearts.

We should be compounding the error, believing as we do, if we did not raise the warning while there is still time that the consequences will be inexorably the same—inadequate, insufficient, and botched preparedness against the most ferociously efficient monster that the world has ever suffered under.

The Nazi menace is, obviously, primarily the power of industrial production concentrated upon weapons of mechanized warfare.

The only possible answer to it for the United States is industrial production of armaments.

Eighty million Germans for 7 years have literally slaved for this fiendish production. Lack of natural resources—particularly petroleum—may still defeat them, but so far as the production of armaments is concerned, the Nazis have overwhelmed both Britain and France, though both democracies, with enormous industrial capacity, have themselves concentrated upon armament production desperately, since Munich and before.

If Germany wins she will instantly have ended her lack of natural resources. Swedish steel, petroleum, rubber, every resource needed for war will be hers in abundance. Her military power will be this prodigious industrial production, which was greater than that of Britain and France, plus access to all needed resources.

Germany is on the channel ports now because for 7 years the nation was turned into a forge and arsenal for war purposes, with sweat and sacrifice exacted of her people without parallel in history. The loot of droning empires that failed to read the handwriting on the wall has been promised them for their work.

The awe-inspiring might of Germany cannot be matched and outstripped under a leadership that in the same 7 years spent approximately $60,000,000,000 and failed to lift our industrial production, with the exception of 1 month, to the level of 1929. Consider that Germany, the "have-not" nation, from 1929 to 1937 practically doubled her national income for industry and commerce, and that, on the other hand, the United States in the same period in the same field failed to reach the national income of 1929.

Yet this is the leadership to which has been entrusted the administrative and executive power to do the job that has been so lamentably bungled—increasing the production of the United States. As the President told the Nation, the men to be called from the industrial world are to be advisers, nothing more. They will have no authority to act; they will not have the power of decision; they will have their judgments subordinated to officials who got their training in the vast complexities of the modern industrial machine as gentlemen farmers and social workers.

The shade of Woodrow Wilson, who came to the hard fact that production was the responsibility of men who knew how to produce, could warn the President of a mistake that may be fatal. Mr. Wilson tried the course Mr. Roosevelt has adopted and failed with it utterly. He then substituted a War Industries Board with real executive power. This, Mr. Roosevelt refuses point blank to do. He cannot trust industrial executives with executive authority. It is temperamentally repugnant to him.

With the emergency crying out for production, more production, maximum production, the President offers the Nation a social program, the same program that has tied American industry, like a recumbent Gulliver, with the ligatures of restraint and restriction. Because industry was forced by laws and regulation to live on a day-to-day and hand-to-mouth basis, unemployment remains high, obsolescence has not been adequately surmounted, replacement has been cautious instead of bold, and machinery has moved with a limp.

If the leaders in Washington will not face up to the fact, the Nation must: That the men and methods that have left us in a weakened industrial condition must go, and men and methods that will function efficiently and without waste in rearming the United States must take their place.

We, too, need Churchills, Reynauds, and Weygands.

We need a leader who will tell the workers that for the emergency the deadening hand of coddling legislation must be lifted for the strengthening of national defense. And he will be understood and respected by the workers for so telling them, because they know that their enemy today is Hitlerism and its evil genius which immediately enchains labor.

We need a leader who will oust, instead of continuing in power, the present National Labor Relations Board, which has received the openly declared vote of no confidence by industry, one of the two major labor unions, and public opinion. Its disruptive effect upon industry is already evident and it will deepen unless a more responsible and fair membership is selected to handle and adjust the delicate balances of employer and employed.

We need a leader who will bring to government in this emergency the experience, practicality, and skill that proved indispensable in enabling industry to weather depression.

We need a leader who can accomplish the mighty task of making secure our national defense without imposing too great a strain upon the entire economic structure, who has the confidence of the industrial world, which must do the job, and who has the common sense and reasonableness to achieve the necessary adjustments without social disturbances.

We do not believe that Franklin D. Roosevelt, his Cabinet, his inner circle of advisers have the capacity, in view of their record, to handle the emergency. We do not believe that their methods can do the job.

Importations of Canadian Oats

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

ARTICLE FROM THE CHICAGO TRIBUNE

Mr. CLEVENGER. Mr. Speaker, in view of the distressingly low prices of American farm products, it is disturbing to note from the market page of the Chicago Tribune of May 28 that Canadian oats are adding further to the losses of our farmers. It does seem something should be done to protect us against depreciated currencies and foreign surpluses dumped upon our already overburdened agriculture.

The article follows:

[From the Chicago Tribune of May 28, 1940]

CANADIAN OATS BROUGHT IN TO FILL CONTRACTS

The first Canadian oats received in Chicago since 1934 were being unloaded yesterday at the Northwestern Elevator, East One hundred and twenty-second Street and Torrence Avenue, for Cargill, Inc., Minneapolis grain dealer.

Carrying 378,000 bushels of No. 2 and No. 3 white oats, the steamer *Riverton* docked at the elevator Saturday. The grain was shipped here from Fort William, Ontario.

Wyman W. Fitzgerald, vessel broker and grain trader, said the oats were brought in to help cover May contracts in the grain outstanding at the close of trading May 22.

According to Fitzgerald there were 669,000 bushels of May oats contracts outstanding last week and the cash grain supply was far short of the amount needed.

Canadian oats have been underselling American oats in New England by 2 to 4 cents a bushel for several months.

Depreciation of the Canadian dollar in terms of United States currency, heavy supplies of superior Canadian oats, and a less than normal supply of domestic oats have been factors contributing to increased imports, according to cash grain dealers.

Lincolniana in the Library of Congress

EXTENSION OF REMARKS

OF

HON. CHAUNCEY W. REED

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

ADDRESS OF MR. DAVID C. MEARNS

Mr. REED of Illinois. Mr. Speaker, April 15, 1940, was the seventy-fifth anniversary of the death of President Abraham Lincoln. On that day the Lincoln Group of the District of Columbia gathered at the Hay-Adams House in the Nation's Capital where Mr. David C. Mearns, superintendent of the reading room of the Library of Congress, delivered an instructive address on the Lincolniana in the Library of Congress. Believing that Members of Congress and other students of our Nation's history will be interested in reading Mr. Mearns' description of the mementos in the Library of Congress relative to our first martyred President, I submit herewith his address in full.

LINCOLNIANA IN THE LIBRARY OF CONGRESS

The London Times for April 27, 1865, carried the news of an American tragedy. A great man had been murdered. Among those who read the account was "a very little lady," who was then residing

on the north shore of the Isle of Wight. Writing on that day to a "most beloved uncle" in Belgium, she declared:

"These American news are most dreadful and awful! One never heard of such a thing! I only hope it will not be catching elsewhere."

She was a very sad little lady. Osborne House, where she was staying, had been built from designs drawn by her husband, now 3 years dead, and he himself had superintended its construction. On the broad acres that surrounded it he had run a model farm. The flag tower, the clock tower, the furniture, paintings, statuary, gardens, the very sea air were filled with memories of him. And so it was but natural that her sympathies should go out to another widow. But it was at the prompting of Prof. Goldwin Smith, her good friend and "a great democrat," who urged that "it would do more good than anything else" that 2 days later she took up her pen and with a firm hand wrote:

"DEAR MADAM: Though a stranger to you, I cannot remain silent when so terrible a calamity has fallen upon you and your country, and must personally express my deep and heartfelt sympathy with you under the shocking circumstances of your present dreadful misfortune.

"No one can better appreciate than I can, who am myself utterly broken-hearted by the loss of my own beloved husband, who was the light of my life—my stay, my all—what your sufferings must be; and I earnestly pray that you may be supported by Him to whom alone the sorely stricken can look for comfort in this hour of heavy affliction.

"With the renewed expression of my true sympathy, I remain, dear madam, your sincere friend,

"VICTORIA REG.[INA]."

A month later that letter was acknowledged.

"MADAM [wrote the other lady]: I have received the letter which Your Majesty has had the kindness to write, and am deeply grateful for its expressions of tender sympathy, coming as they do from a heart which, from its own sorrow, can appreciate the intense grief I now endure. Accept, madam, the assurance of my heartfelt thanks, and believe me in the deepest sorrow, Your Majesty's sincere and grateful friend,

"MARY LINCOLN."

Today is the anniversary of that terrible calamity which befell our country 75 years ago, and it has seemed to me appropriate to begin an account of the Lincoln collections in the Library of Congress with a quotation from Queen Victoria's letter, the original of which is enshrined in them.

Just when the formation of those collections was initiated it is difficult to determine. Perhaps they began with the publication of the Lincoln-Douglas debates; but certainly by the time of Mr. Lincoln's inauguration they had begun to take shape, and the records of our borrowers' accounts show that President Lincoln himself sent to the Library of Congress for copies of the campaign biographies written by D. V. G. Bartlett and William Dean Howells.

However, the credit for having assembled the first considerable collection of Lincolniana must go to Andrew Boyd, a publisher of directories in Albany, N. Y., who, in 1870, issued "A memorial Lincoln bibliography: * * * comprising a collection in the possession of the compiler * * *." In his preface to that publication Mr. Boyd wrote: "It is without doubt the largest Lincoln collection extant."

Speaking before the Bibliographical Society of America in 1908 on Lincoln collections and Lincoln bibliography (proceedings and papers, vol. 3, p. 54), so eminent an authority as Daniel Fish, remarked that "Andrew Boyd had ceased from his labors (in 1900), but his collection was intact in the hands of Maj. William H. Lambert, of Philadelphia, to whom all Lincoln devotees bow as the chief of their tribe." Later on, in the same address, Mr. Fish said of Major Lambert: "As before indicated, he early acquired the collection of Andrew Boyd, the basis of the Hart-Boyd bibliography of 1870, upon which ample foundation he has erected the tallest of the literary monuments to Lincoln."

Again, Albert H. Griffith, in an article published in the Wisconsin Magazine of History, volume 15, No. 2, December 1931, entitled "Lincoln Literature, Lincoln Collections, and Lincoln Collectors," made the unqualified statement that the Boyd collection had been sold to William H. Lambert. In a biographical sketch which appeared in the auction catalog of his library it is declared that Lambert "bought Boyd's collection on Lincoln," and that "Boyd's collection was one of the earliest formed, and this will explain how Major Lambert had so many items that other collectors could not find. He got them early * * *." Benjamin Oakleaf, in a note to the subscribers to his Lincoln Bibliography, declared that "Henry E. Huntington, of San Gabriel, Calif., purchased a large portion of the [Lambert] collection, including all of the rare items. These are installed in the library at San Gabriel (sic), known as the Henry E. Huntington Library and Art Gallery."

Thus it may be seen that it is the general belief among Lincoln collectors and bibliographers that the Boyd collection was acquired intact by Lambert and subsequently came, in part at least, into the possession of the Huntington Library.

Behold I shall show you a mystery. Several years ago, in response to an inquiry, I investigated the history of the Boyd collection and, grubbing among old files and dusty records, I was able to assemble the following evidence:

First, that in the Library of Congress Journal [of Disbursement], volume 1, page 220, is the following entry:

"November 3, 1873. Fund for increase of the Library, 1873, to amount paid Andrew Boyd, $1,000."

Second, that in the letter book of the Librarian of Congress, January 10, 1871, to February 20, 1874, page 645, is a letter to the Honorable T. O. Howe, chairman of the Joint Library Committee, also dated November 3, 1873, which reads:

"SIR: I have the honor to enclose for your signature, if approved, the following bills:

L. Martin, fund for improving building, Botanical Garden	$642.40
W. D. Wyvill, fund for improving building, Botanical Garden	23.10
Andrew Boyd, fund for increase of the Library	1,000.00

"P. S.—The owner of the Lincoln collection, after long debate, concluded to accept the offer authorized by you and Mr. Allison last March. We get the whole collection, except such books and pamphlets as are already in the Library, [amounting to] only about 200 articles.

"(Signed) A. R. SPOFFORD."

Third, that there is in the General Accounting Office the account of Andrew Boyd against the Library of Congress. This account reads as follows:

SYRACUSE, N. Y., *March 18, 1873.*

Library of Congress, bought of Andrew Boyd, the Boyd collection of Lincolniana, comprising about 1,500 books and pamphlets, medals, handbills, etc., tokens, etc., to amount of $1,000, as agreed. Received payment.

ANDREW BOYD.

WASHINGTON, *November 3, 1873.*

Fourth, that we have a copy of Andrew Boyd's Memorial Lincoln Bibliography, checked and annotated by Mr. Spofford, then Librarian of Congress, which was used both as an accessions and a finding list. I believe that the items checked represent the purchases, and that the items marked with a "D" are those duplicates which were rejected. After an entry on page 33 is a penciled note: "Mr. Boyd will send two copies"; and on page 133 is another: "A. B. will send this copy." Moreover, we have discovered that the books themselves were marked to agree with their location in the bibliography. For example, a memorial address on the life and character of Abraham Lincoln, delivered at Concord, N. H., June 1, 1865, by Hon. James W. Patterson at the request of the State authorities, is marked at the top of the front cover "66.7," and it appears in the bibliography on page 66 as item No. 7.

Thus we have, I believe, incontrovertible evidence that the Library of Congress secured all of the magnificent Boyd collection in 1873 with the exception of about 200 duplicates. Of course, there may very well have been duplicates in the Boyd collection which were not enumerated in the bibliography, and these may have represented the nuclei of the collection subsequently sold to Major Lambert.

I don't know.

In any event the Government has been collecting Lincolniana for lo, these many years. On the 11th day of April 1916 the children of John Hay, Mr. Lincoln's secretary, presented to the Library of Congress the manuscript of the Second Inaugural Address, and two copies, in the President's holograph of that address delivered at Gettysburg, Pa., on November 19, 1863, consisting of the original, one sheet of which had evidently been written at the White House and the other in Gettysburg, as well as a fair copy, or draft, written sometime before its delivery.

On the same day the daughter of Mr. Lincoln's other secretary, Col. John G. Nicolay, added to our collections that very characteristic Lincoln paper, the Memorandum of August 23, 1864, in which he stated that it seemed probable he would lose the coming election, in which event he would cooperate with the President-elect to save the Union. This memorandum he sealed at the time, and each member of the Cabinet, at his request, endorsed it without knowing its contents. After the election the seal was broken and the memorandum was read aloud to the Cabinet.

In 1923 President Lincoln's papers, which had been on deposit since 1919, were presented to the Library by his son, the Honorable Robert Todd Lincoln, with the stipulation that they should not be opened until 21 years after his death. Mr. Robert Lincoln died July 26, 1926, and so 7 summers must pass before that correspondence will become available for public examination. These are, however, the papers used by Mr. Nicolay and Mr. Hay in preparing their Life of Abraham Lincoln, and having been examined by such competent writers may be presumed to contain little unpublished material calculated to change estimates of men or manners.

In 1927 Mrs. Robert Todd Lincoln added to the collections the letter of condolence from Queen Victoria, a more formal but sympathetic letter from the Empress Eugénie, written, in French, from the Tuileries, on the 28th of April 1865; and a letter referring to personal associations with President Lincoln, from Louis Philippe d'Orleans, the Comte de Paris.

A year later Mrs. Lincoln added to her previous gifts three precious mementos of her great father-in-law, his family Bible, the Bible on which he took the oath of office at his first inauguration, and a gold medal presented to the President's widow shortly after his assassination as a touching tribute from 40,000 French citizens.

The youthful romance of Lincoln has found new expression in the Library of Congress in the very copy of Samuel Kirkham's English Grammar, which Lincoln mastered and then gave to his sweetheart, Ann Rutledge. Through the efforts of Miss Jane E. Hamand, of Schaller, Iowa, the volume was secured from the

surviving Rutledges and given a permanent abiding place in our collections in 1932.

Mary Lincoln Isham, the President's granddaughter, in 1937, added to the Government's treasure by the gift of important memorabilia, including a number of books from Mr. Lincoln's private library.

I have mentioned Kirkham's Grammar. In Lincoln's youth, the mathematical textbook in use in southern Indiana was Pike's Arithmetic. Too poor to buy a copy, the frontier boy indulged his passion for self-improvement by borrowing one and transcribing portions of it for his own use. The sheets so copied were then sewed together in a home-made book. On two of the pages he copied the tables and exercises in linear, land, and dry measure, and in a less serious moment scrawled the doggerel lines:

"Abraham Lincoln, his hand and pen;
He will be good, but God knows when."

These pages were presented to William H. Herndon, Lincoln's law partner and biographer, by Lincoln's stepmother in the fall of 1865. They are a part of the Herndon-Weik collection, now in the possession of G. A. Baker & Co., of New York City, and it may be of interest to remark that there is now pending in Congress a joint resolution to purchase that collection for preservation in the Library of Congress. The preamble contains the following statements: (1) That "Abraham Lincoln, the sixteenth President of the United States, was one of the greatest Presidents of our Republic, whose name will live forever in the hearts of the people"; (2) that "all papers, objects, and effects of Abraham Lincoln which are connected with his exemplary life are, and always will be, cherished by the people of the United States"; and (3) that "it is the desire of the American people and the uniform policy of the Congress of the United States to preserve for posterity all papers, objects, and effects of Abraham Lincoln."

In connection with Queen Victoria's letter, I referred to Prof. Goldwin Smith as the only begetter of it. He himself contributed an article on The Death of President Lincoln, published in Macmillan's Magazine (London) for June 1865, in which he said:

"The small country lawyer of Illinois has died lamented by the nations, and all that is most august in the world has paid its tribute to his grave. What is more, the best men among his own people feel that America has gained one more ideal character, the most precious and inspiring of national possessions. If it be so, the second of the two ideal characters bears a close resemblance to the first. The glory of Lincoln, like that of Washington, has nothing in it dazzling or grandiose; it is the quiet halo which rests around the upright, self-devoted, unwavering, and unwearying performance of the hardest public duty. But its quiet light will shine steadily when many a meteor that has flamed in history has been turned, by the judgment of a sounder morality, to darkness. * * * It has been said that in the work of those whom the world calls great there are always two elements—one produced by their just discernment of their times, which is almost always lasting, the other more individual, and more connected with personal schemes and aspirations, which is apt to pass away. Guizot, in a well-known passage, has illustrated this remark in the case of Charlemagne. No man's work ever had in it more of the first element, and less of the second, than that of Lincoln. No man's work, therefore, by this rule, ought to be more lasting."

Professor Smith's prognosis has been proved correct. No man's work has been (or will be) more lasting than Mr. Lincoln's; because that is so, the Government must continue to collect and preserve the records of his life, and the Angles and the Bartons and the Beveridges and the Townsends and the Sandburgs must continue to interpret it to each generation in terms of its own experience. And as for the records, themselves, they must, I believe, somehow feel at home, for when Congressman Lincoln came to Washington, he lived in the fourth of a row of houses known as Carroll Row, which stood on the site of the present Library of Congress.

National Defense

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

EDITORIAL FROM THE MOLINE (ILL.) DISPATCH

Mr. JOHNSON of Illinois. Mr. Speaker, I ask unanimous consent to extend my own remarks and include therein an editorial from the Moline Dispatch of May 22 on the subject of national defense.

[From the Moline (Ill.) Dispatch of May 22, 1940]

REPUBLICANS AND DEFENSE CRISIS

We've been hearing defeatist talk among Republicans since the Nazis barged into the lowlands and threatened Paris and British soil. It is assumed by some that there isn't any use any longer in keeping up a campaign for Republican principles; that they might as well cancel the convention and let the election go by default. It's a one-man show from now until the end of the European crisis, according to some. One writer even suggests that the next 4 years are bound to bring a lot of trouble regardless of the party in power, and that the Republicans might as well let the Democrats have that trouble.

In the first place, we object to the supposition that Adolf Hitler's antics can interfere in the affairs of the American Government. Why we should have a New Deal Democrat administration every time Germany overflows into neighboring countries is a question that can be answered only by an appeal to emotion, and emotion is a dangerous thing. To assume that Mr. Roosevelt is the only man who can keep the country out of war, build up the Nation's defenses, and participate, if participation is necessary, in a peace conference, is to ignore the record Mr. Roosevelt has established thus far.

Turning the picture the other way, we present the thought that this is a very trying and dark time for the Democratic Party. We would imagine that the Democrats of the old-line type would be glad to get out of the emergency the best way they can and let the Republicans inherit the trouble the New Deal has left as a heritage.

There are millions now alive who remember acutely the theory that Woodrow Wilson was going to keep us out of war. He was reelected on that promise, and he couldn't keep us out of war. Our entry into the World War was justified, but the scandalous inefficiency of the service of supply, the horrible unpreparedness that sent untrained men into battle, and the ridiculous waste of funds that accompanied the war are reflected in the present low estate of business caused by the secondary post-war depression. Wilson laid the ground work and the G. O. P. got the blame.

We would assume today that the Democratic Party should retreat into whatever shell it has at the bare mention of war. For let this be understood: If the United States Government becomes involved in this war without full justification, the Democratic Party will bear the nickname of the war party. If we add to our already unjustifiable national debt purely to preserve the balance of power overseas, the Democratic Party will earn a reputation as a wrecker of treasuries. If we pass on another load of billions to be paid by generations still to be born, the Democratic Party will be classed as an oppressor of children.

The American people go into war wholeheartedly and support it with every nerve, muscle, and brain cell; but after the war they ask questions. They asked questions after the last war, and unreasoningly blamed the munitions makers and British propaganda. Today we are able to detect propaganda, and the industrialists who would make the munitions are on record as wanting nothing to do with war, except in defense.

There are a few third-term fans who actually would welcome war, or a threat of war, as a vehicle for their political aspirations. They are not old-line Democrats, but radicals who don't care what happens to the party after the war, and fondly imagine that a debt is a good thing. After all, we would owe it to ourselves, you know.

Wouldn't you suppose that traditional Democrats would be glad to let the Republicans inherit an empty Treasury and a defense problem, plus millions of unemployed and disorganized business?

Who says the Republicans couldn't organize national defense—and conduct a war—if need be?

The Herndon Collection of Lincolniana

EXTENSION OF REMARKS

OF

HON. CHAUNCEY W. REED

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. REED of Illinois. Mr. Speaker, what American, regardless of political affiliation, does not revere the name of Abraham Lincoln? His lowly beginning, his unfailing kindliness, his patience, his simplicity, his humility, and his humor all are embedded in the hearts of the school children of this and other lands. His courageous struggle against adversity, his successful championship of the oppressed, his firm leadership in a serious national crisis, and his martyrdom to the cause of liberty and union have made him America's great contribution to the ages. In his day he was the foremost defender of that system of government which we call democracy—a system now imperiled in so many parts of the world by ruthless suppression of the God-given rights of individuals.

Lincoln was not an unyielding devotee to partisan politics. Early in his career he was a Democrat. An admirer of Henry Clay, he studied and absorbed the writings and public utterances of that distinguished statesman. His views changed, and he became an ardent and enthusiastic Whig. Suppression of Negro slavery and preservation of the Union of States, however, were to him principles that were above party affiliation and he left the Whig Party to cast his lot and devote his energies with the newly formed Republican Party. He became their first President. Today Democrats and Republicans alike acclaim him one of our greatest Americans.

Lincoln was given to the Nation by Illinois. There he spent his early manhood. There he became a young storekeeper, surveyor, soldier, lawyer, and legislator. There he contended in the debates with the "Little Giant," Stephen A. Douglas, for a seat in the United States Senate—a struggle that he lost as though destined for greater work. We never tire reading of his remarkable career as chronicled by Nicolay and Hay, Barton, Beveridge, Hertz, Sandburg, and others of his numerous biographers. His life, his accomplishments, and his death all have made a deep and lasting impression upon our minds. We in the Nation's Capital are constantly reminded of them by the proximity of the great Lincoln Memorial erected by our Government; by Ford's Theater, the scene of the tragedy that saddened the world; and by the Peterson House across the street where his weary body found eternal rest and his noble character became the inspiration of the ages.

Mr. Speaker, as a Representative from the State of Illinois it has been my privilege in the past to address this House concerning the life and distinguished career of this great man, who, nearly 100 years ago, served my State as a Member of this body. I address you again today to enlist your support of House Joint Resolution 507, a bill which contemplates the purchase, for a permanent place in the Library of Congress, of the William H. Herndon collection of the early writings of the Great Emancipator, most of which are in his own handwriting. The collection is now under examination by the Chief of the Manuscript Division of the Library of Congress.

It is fitting and proper and in accordance with national policy that these documents be placed with the other priceless collections now in that Library, where they may be enjoyed by all. From a small beginning, the Library of Congress has become the greatest in the world. It originated practically with 6,000 volumes from the private collection of Thomas Jefferson. During the latter part of the last century and the early years of this, under Ainsworth R. Spofford, then Librarian, its growth was phenomenal. During his administration the main building was erected opposite the Capitol. Later, under Librarian Herbert Putnam, another magnificent building was erected to accommodate the 5,400,000 books and periodicals necessary to be preserved. In these two buildings are housed many of the most important collections of Americana, including the writings of some of our most famous statesmen. Last year Congress appropriated $55,000 for the purchase of the papers of Charles C. Pinckney, who played such an important part in our early diplomacy and was author of the phrase "Millions for defense but not one cent for tribute." During the administration of President Hoover, Congress appropriated $1,500,000 for the purchase of books printed during the fifteenth century, among which was the celebrated Gutenberg Bible.

Let me give you a brief history of the Herndon collection.

For 16 years prior to Lincoln's election to the Presidency William H. Herndon was his law partner. He was 9 years younger than Lincoln, and was likewise a native of Kentucky. His family had moved to Illinois in 1820, and in 1825 settled in Springfield. An admirer of Lincoln from his first acquaintance with him, he joyfully accepted in 1844 an invitation to become his partner and thereafter worked loyally at his side in the practice of law and in the furtherance of his political ambitions. When Lincoln left Springfield for Washington to assume the office of President, his last request to his law partner was to keep intact the old sign, "Lincoln and Herndon," until his return. As we know, he did return, but only to sleep the sleep that knows no awakening.

Prior to Lincoln's death and for several years thereafter Herndon took unto himself the task of collecting accurate and detailed information concerning the life of the Great Emancipator. He traveled in Kentucky and Indiana accumulating reminiscences of Lincoln's boyhood days from people who were still living and who could speak of him at first hand. He interviewed the members of his family including his stepmother, Sarah Lincoln; his stepsister, Matilda Moore; and Dennis and John Hanks. He talked to judges before whom Lincoln had pleaded cases, lawyers with whom he had been associated in lawsuits, and lawyers who had opposed him. He exhausted the recollections of politicians, storekeepers, and tradesmen. He even corresponded with and personally interviewed girls whom Lincoln had courted. Whenever he attained a lead that somebody somewhere had intimate knowledge of some hitherto unknown fact concerning Lincoln's life, he followed it up persistently and untiringly. With this mass of material and data based on his researches, Herndon planned to write an elaborate biography. He permitted Joseph H. Barrett, Isaac N. Arnold, and Ward H. Lamon to examine his collection but they made slight use of it in the biographies they subsequently brought forth. When he had reached the age of 71, he engaged a young man named Jesse W. Weik to help prepare the work we now know as Herndon's Lincoln, The True Story of a Great Life, published in 1889. Herndon's own manuscript was largely rewritten by Weik and then extensively edited and cut down. A great portion of the valuable material which he had obtained through his exhaustive research was deleted or entirely omitted from the published product. The late Senator Albert J. Beveridge and Ida M. Tarbell, two subsequent Lincoln biographers, are said to have had a limited view of the Herndon collection which to some extent bears the aspect of an unworked literary mine. In 1938, the late Dr. Emanuel Hertz, of New York City, noted Lincoln authority, published The Hidden Lincoln, a work which is rich in hitherto unknown facts and incidents in the life of the emancipator which he obtained from a study of the Herndon collection.

The history of these papers since their use by Herndon and Weik is interesting. Weik inherited them from Herndon and retained them until his death. Thereafter his estate sold them to a firm of autograph dealers in New York for a large sum. This firm planned to sell them piecemeal. It was realized that the manuscripts of Lincoln in his own handwriting were especially valuable and that many of them would bring $1,000 or more each. However, the owners were urged by specialists and public-spirited citizens not to dispose of the papers and documents in that way but to keep them intact so that they might be used as a whole for biographical and patriotic purposes. For several years a wealthy individual is said to have expressed a desire to purchase the collection with the intention of presenting it to the Nation. Recently the owners have withdrawn the option which this individual held and are now willing to sell the collection for deposit in the Library of Congress for a figure said by leading experts to be quite reasonable and less than could be realized if sold piece by piece.

Herndon was an abolitionist. That his opinions on the slavery issue influenced Lincoln to any great extent may be overestimated. Certain it is that he was in close touch with Theodore Parker, Charles Sumner, William H. Seward, Wendell Phillips, Horace Greeley, William Lloyd Garrison, and other prominent abolitionists and undoubtedly he called to his distinguished partner's attention many of their writings and utterances relative to that subject that otherwise would have escaped him. The Herndon collection contains one of Parker's books—a book Lincoln is said to have carried in his pocket and which contains the germ of many of his anti-slavery arguments, even to the extent of almost literal

use of some of Parker's phrases. Throughout Lincoln's political reverses from 1848 to 1858, Herndon's faith in the ability of his friend and in his firm attitude relative to the extension of slavery and the preservation of the Union, never wavered.

To keep him informed on the current developments of the antislavery movement, he compiled a scrapbook containing a mass of information which his partner utilized in his speeches. Then Lincoln compiled one himself, and this is one of the choice gems of the collection. It is a small book, perhaps less than an inch in thickness, 4 inches wide, and 5 or 6 inches long, neatly pasted together, and designed to be carried conveniently in his pocket. In it are some 200 items, including newspaper clippings, quotations, and tables of statistics. It contained the ammunition he thought would be useful in his battle with Douglas in 1858—his campaign textbook, to which he could refer instantly for the facts that would pierce the argument of his able opponent. It brings us very near to the actualities of the momentous encounter on open platforms under the trees of Illinois. As we feel the little brown volume and thumb through its pages, which Abraham Lincoln himself so carefully put together, we realize that we are in intimate touch with one of the great moments of history, when the fate of freedom or slavery, union or disunion, was to be decided. It is quite probable that this memento of the Lincoln-Douglas debates has never been examined with sufficient care to exactly determine the part it played. As a sacred relic of American history, it should be in the Library of Congress, where all may see it, study it, and perhaps glean from its yellow pages some of the thoughts that were Lincoln's when he faced the "Little Giant" in the momentous days of 1858.

In the Herndon collection there are also precious mementos of Lincoln's boyhood. His mother passed away when he was 9 years of age. His father, not long afterward, married Sarah Bush Johnston, the widow of Daniel Johnston, of Elizabethtown, Ky. She became an important and abiding influence in young Abraham's future life and lived for several years after the tragedy that took him away. It was she who told the now familiar story of his ciphering on boards and then shaving them off with a knife in preparation for fresh efforts. It may be that she had a premonition of the future greatness of her stepson. She materially assisted him in his unrelenting quest for knowledge and her deep affection for him never waned. Her pride in him was so keen that she carefully preserved some of his earliest efforts at writing. One of these comprised two pages of homemade arithmetic, which she kept until the last and then turned it over to Herndon. It is the first of his literary efforts of which we have any record and was written when he was about 9 years of age. It is valuable, not only because it bears the earliest signature of Lincoln known to exist but because it proves him to have been a real boy, with all of a boy's natural humor. In the lower left-hand corner of the first page of this early arithmetic lesson he penned the following verse:

> Abraham Lincoln, his hand and pen,
> He will be good, but God knows when.

Surely this treasure should be permanently displayed in the Library of Congress.

Among the priceless manuscripts of the Herndon collection are 750 legal papers in Lincoln's own handwriting covering his entire legal career, which began in 1836. We find in them a multitude of causes pro and con concerning the affairs of the people of his county and State. They show first the youthful and then the matured lawyer employed in diversified legal actions. On some of the earlier of these cases his sense of humor is quite as prevalent as are the argumentative facts and legal conclusions. Among these papers is the famous case wherein he represented the Illinois Central Railroad and for his services claimed a fee of $5,000. Payment was refused, and he was obliged to sue for it. Here we find the testimony of the witnesses as to his skillful handling of the cause of his client and the justice of the bill. Suffice to say he recovered the amount in full.

Many original autographed letters augment the value of the collection. A large number refer to the political maneuverings of the 1850's. There is a letter of Herndon written March 24, 1858, in which he sets forth the information he was able to glean on his tour through the Eastern States regarding Lincoln's Presidential prospects for 1860. There are numerous letters from Mrs. Mary Todd Lincoln and Robert T. Lincoln and about 300 from Herndon to Weik concerning a vast amount of information to be used in the biography they had in mind. There are 15 manuscripts concerning Lincoln, containing about 175 pages and 35,000 words. These constituted Herndon's original labors in writing the biography. There is an 8-page interview by Herndon with Lincoln's stepmother, Sarah Bush Lincoln, and other records of conversations with Matilda Moore, his youngest stepsister. There are records of conferences with a number of Lincoln's boyhood friends, and one with Mentor Graham, who was his teacher and had so much to do with stimulating his thirst for education. Here also are several letters of Horace White, who as a newspaper reporter covered the Lincoln-Douglas debates for the Chicago Tribune.

Perhaps we can better understand the real Lincoln if we read a few sentences from one of the letters contained in this collection. It was written by the man who was President Lincoln's private secretary during the trying years of 1861–65. This man—John Hay—later to become Secretary of State under President Theodore Roosevelt, was the father-in-law of our distinguished colleague Hon. JAMES W. WADSWORTH, of New York. It is intensely interesting, because Secretary Hay was in the White House with President Lincoln during the Civil War years and was probably more closely and intimately associated with him during that crucial period than any other person. Here is what he says:

> Lincoln used to go to bed ordinarily from 10 to 11 o'clock, unless he happened to be kept up by important news, in which case he would frequently remain at the War Department until 1 or 2. He rose early. When he lived in the country at Soldiers' Home he would be up and dressed, eat his breakfast (which was extremely frugal—an egg, a piece of toast, coffee, etc.), and ride into Washington, all before 8 o'clock. In the winter at the White House he was not quite so early. He did not sleep very well but spent a good while in bed. Tad usually slept with him. He would lie around the office until he fell asleep, and Lincoln would shoulder him and take him off to bed. He pretended to begin business at 10 o'clock in the morning, but in reality the anterooms and halls were full before that hour—people anxious to get the first ax ground. He was extremely unmethodical; it was a 4-year struggle on Nicolay's part and mine to get him to adopt some systematic rules. He would break through every regulation as fast as it was made. Anything that kept the people themselves away from him he disapproved—although they nearly annoyed the life out of him by unreasonable complaints and requests. * * *
>
> He was very abstemious—ate less than anyone I know. Drank nothing but water—not from principle, but because he did not like wine or spirits. Once in rather dark days early in the war, a temperance committee came to him and said the reason we did not win was because our Army drank so much whisky as to bring down the curse of the Lord upon them. He said drily that it was rather unfair on the part of the aforesaid curse, as the other side drank more and worse whisky than ours did. * * * I believe Lincoln is well understood by the people. Miss Nancy Bancroft and the rest of that patent-leather kid-glove set knows no more of him than an owl does of a comet. * * * I consider Lincoln's republicanism incarnate—with all its faults and all its virtues. As in spite of some rudenesses, republicanism is the sole hope of a sick world, so Lincoln with all his foibles is the greatest character since Christ.

Mr. Speaker, briefly I have endeavored to describe some of the gems contained in the great Herndon Collection of Lincolniana. Our Government should not permit it to be disintegrated. It is an authentic record of a part of our Nation's history. It belongs in the Capital City and should be given an honored site in the greatest library in the world.

President Roosevelt Desires Dictatorship and War for the United States

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

LETTER FROM MR. AMOS PINCHOT

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

OPEN LETTER TO PRESIDENT ROOSEVELT

MAY 20, 1940.

The Honorable FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: In view of the fact that an effort is being made to break down, presumably with your consent, the anti-third-term tradition—that is to say, the tradition that no man shall be allowed to exercise the powers of the Presidency for more than 8 consecutive years—I am taking the liberty of writing you this letter.

For, occupied as you have been, and indeed overtaxed, by the duties and responsibilities of your office, it is possible that you have not taken time to consider the probable effect of the third-term drive, not primarily on yourself or your party, but on the country and the character and direction of American political thought. For, in the last analysis, it is the people's thinking that will shape the country's future.

Abraham Lincoln, in a little-quoted passage in his first inaugural, said:

"The Chief Magistrate derives all his authority from the people * * *," who have "wisely given their public servants but little power for mischief; and have, with equal wisdom, provided for the return of that little to their hands at very short intervals."

And perhaps he would have spoken more strongly had he known that in the next three-quarters of a century the President's authority would be so enlarged—by statutes, by job and money patronage, and by an overgrown Federal bureaucracy, extending its control to State and city politics in every section—that today any man who has served two terms in the White House and wants a third can override opposition and make himself his party's candidate.

Mr. President, if you renominate yourself, for that is what it amounts to, your party will have to fight, in the coming campaign, on three vital and essentially related issues. They are vital and they are related, because they raise the question: What are the proper limits of the authority of the President of the United States?

These issues will be (a) the immense powers you have already gained, and the far greater powers you tried to secure in 1937 and 1938, through a series of bills which, if passed, would have given you the full authority of a dictator; (b) your attitude toward America's involvement in the war; and (c) your desire to break down the anti-third-term tradition, and become the first American to remain in the White House for 12 years in a row.

I am not a Democrat. And I am not writing this letter out of any wish to see your administration avoid errors that might insure its defeat next fall. On the contrary, I believe it has been in too long and become too strong. And, though it did many needed and beneficial things in your first term, your second term has tragically failed as an instrument of recovery, progress, and reemployment. It has left unsolved every serious national problem. And it is evident that a change is required.

But, what seems to stand out as clear and important in the situation, is this. Any party that goes before the people in a Nation-wide effort to convince them that the President should be armed with the sort of powers that were provided in the bills referred to, will be doing a major disservice. For, it will be defending a legislative program which, had it not been defeated, would have assured a puppet Congress, a puppet Court, a puppet press, and a Government-controlled economic system, to be steered, allowed to go ahead, or hauled back, like a toy boat sailing in a pond at the end of a string.

Later on I will raise the question whether this country should or should not enter the European war. Obviously it is a question on which everyone is entitled to his own opinion. But, at this point, it may be said that, in your handling of foreign relations, you have gone far toward laying down the proposition that you, instead of Congress, should have authority to make the choice between war and peace. More than that, while you have frequently declared your preference for peace, in a more or less perfunctory manner, you have followed up such declarations by making almost every argument that might justify our entry into the war.

No political party in this democracy can afford to defend the doctrine that the President shall decide the issue of war and peace, any more than any party can go to the people on the proposition involved in your third-term drive, namely, that your presence in the White House is indefinitely indispensable. And, Mr. President, if the Democratic Party does defend these propositions—and it will have to if you are its candidate—it will be turning American thinking away from democracy, away from peace, and away from the basic ideas of life and government that have nourished and sustained our commonwealth for a century and a half.

I

YOUR 1937–38 BILLS

Space forbids a discussion of the expansion of Presidential authority which you have actually accomplished from 1933 to the spring of 1937. This was the period in which a subservient Congress, in the name of emergency, gave you practically every power you asked for over agriculture, industry, business, foreign relations, taxation, and the spending of the public funds. And the results are sufficiently evidenced by the country's present condition.

But I would like to refer, at some length, to the powers which were embodied in the White House bills proposed by yourself and your advisors, and defeated in 1937 and 1938. For in these measures we have an authentic, unchallengeable record of your intentions on the subject of concentrating power in the President's hands. Consequently, in order to make clear, in brief form, the purpose and meaning of these measures, I have gathered together some of their more significant provisions and have redrafted and condensed them into a single measure, using simple and untechnical language.

And here I would like to emphasize the fact that there is no provision or even implication in this condensed measure, which, for convenience, we will call the Presidential powers bill, that is not found in the bills they are condensed from. And I may add that, if you will show me any provision in my bill which, in substance, is not found in your bills, I will be glad to send you my check for $1,000 to be donated to any charity you may select.

"A bill to authorize the President to enlarge the powers of the Presidency in peace and war; to control Congress; regulate industry; censor the press and radio; guide constitutional decisions of the Supreme Court, and for other purposes

'TITLE I. REORGANIZATION OF THE EXECUTIVE BRANCH OF THE GOVERNMENT

"SECTION 1. The President is hereby authorized (a) to change the name and functions of the office of President, or (b) to abolish that office and set up another in its place.

"SEC. 2. The President is authorized (a) to change the name and functions of the executive departments, the Interstate Commerce Commission, the Federal Trade Commission, the Federal Reserve Board, the National Labor Relations Board, and all other agencies and offices in the executive branch of the Government, or (b) to abolish them.

"SEC. 3. The President is authorized to nullify and prevent the enforcement of laws passed by Congress by abolishing any or all agencies set up by Congress to enforce its laws.

"TITLE II. CONTROL OF INDUSTRY

"SECTION 1. The President, acting through a board of five persons, appointed by and responsible to himself, is authorized to establish a standard minimum wage not to exceed $1,200 a year, except as hereinafter provided, and a workweek of whatever hours the Board may decide to be fair.

"SEC. 2. (a) The President's Board may at any time set aside the standard wage and fair workweek established in accordance with section 1 for any industry, class of industries, or individual concern, and fix whatever wages and hours it may see fit.

"(b) The President's Board may thereafter change hours and wages as often as it may see fit.

"(c) The President's Board may require any employer to establish, in addition to fair wages and hours, whatever other labor conditions it may see fit.

"SEC. 3. The President's Board may cancel agreements between employers and employees arrived at through collective bargaining if and when it decides that the facilities for collective bargaining are ineffective.

"SEC. 4. Violation of any provision of this section shall be punishable by a fine not to exceed $500, or imprisonment for not more than 6 months, or both. Each employment of a person in violation of this title shall be considered a separate offense. (Example: A publisher or broadcaster employing 1,000 persons in violation of this act would be punishable by a fine not to exceed $500,000, or imprisonment not to exceed 500 years, or both.)

"TITLE III. CONTROL OF THE PRESS AND RADIO

"SECTION 1. The provisions in title II, giving the President authority to change wages, hours, and other labor conditions, at discretion, shall apply to the newspaper and radio industries, to the end that the President shall be empowered to discriminate against or discipline any newspaper or broadcasting company whose policies do not coincide with those of his administration.

"SEC. 2. Anyone who publishes and transports across State lines, or through the mails, any material known by such publisher to be false, shall, upon conviction, be barred from the use of the mails for 6 months, and shall be fined not less than $1,000, and imprisoned for not more than 2 years.

"SEC. 3. The question whether such material was false, and whether the publisher knew it to be so, shall be decided by an appropriate authority.

"TITLE IV. GOVERNMENT CONTRACTS

"Section 1. The President, acting through the Secretary of Labor, is hereby authorized to blacklist, at his discretion, and render ineligible for Government contracts for a period of 3 years, any contractor whom the National Labor Relations Board shall report (but need not prove) to have engaged in an unfair labor practice.

"TITLE V. WAR POWERS OF THE PRESIDENT

"Section 1. Upon a declaration of war by the United States against any nation, large or small, the President is hereby authorized:

"(a) to fix, by proclamation, and to adjust, and readjust, at any time, upward or downward, at his discretion, the maximum price at which any article, or product, or any property, or right or interest in property may be bought, sold, leased, or contracted for, whether such articles, products, property, etc., shall relate to war or not.

"(b) to fix, by proclamation, and to adjust and readjust, upward or downward, at discretion, the maximum wage, compensation, or contract price of all labor and services, whether such labor and services shall relate to war or not.

"SEC. 2. By virtue of the authority granted to the President in the foregoing section, to fix and change at will, and without limit, the maximum prices and compensations for articles, products, and services (which includes the price of newspapers, periodicals, print paper, etc., and the compensation for advertising, entertainment, and other services) the President is empowered to censor the publishing and broadcasting industries and, if need be, to make unprofitable any newspaper or broadcasting company which refuses to follow the instructions of the White House.

"TITLE VI. REORGANIZATION OF THE SUPREME COURT

"Whereas certain provisions of this or other acts of Congress, enlarging the President's powers over Congress, business, agriculture, and other phases of American life, might be held unconstitutional by the Supreme Court of the United States, the President is hereby authorized to add to that Court six new Justices of his own choosing."

I repeat that, incredible as it may seem, each and every power in the foregoing bill is taken from actual bills sponsored by yourself or your advisers in the period referred to. And the fact that they did not shock the country, even more than was the case, was mainly due to two circumstances. In the first place, the bills were introduced at intervals so that their force and meaning was never fully grasped by the people. In the second place, they were radically altered by congressional committees before they were given publicity.

For example, the power, provided in the condensed bill, to change the name and functions of the Presidency, or abolish that office and set up another in its place, is found in the typewritten White House draft of the reorganization bill, dated February 16, 1937, in titles I and V, and also in the revised draft of February 22, but not in the drafts debated on the floor of Congress. Both of the original drafts were made after consultation with you by men chosen and paid by you for the purpose.

Likewise, the highly coercive power to change and rechange, without limitation, wages, hours, and other labor conditions in the publishing, broadcasting, and other industries, was given you in the original Black-Connery bill, introduced by Senator Hugo L. Black, now Supreme Court Justice, on May 24, 1937. And the same is true of the other powers granted you in the condensed bill. Talk about economic royalists. These bills would have established an economic, plus a political, royalism such as was never before contemplated in a free country.

Also, it should be noted that the bulk of these bills made their appearance under misleading declarations of purpose. The Court-packing bill was offered to the country as a more or less routine measure designed to lighten the labors of Federal justices. The Black-Connery bill, which would have set up an executive dictatorship over capital and labor, was introduced as a mere wage and hour measure. As I remember, you referred to it as a bill "to put a few dollars in a poor devil's pay envelope at the end of the week."

The reorganization bill sailed under the colors of an efficiency measure, and was preceded by a message from the White House stating categorically that it would not increase the President's power, while the war-powers bill was printed under the reassuring caption, "A bill to prevent profiteering in time of war, and to equalize the burdens of war, and thus provide for the national defense and promote peace."

Mr. President, your lost battalion of bills was a political and economic monstrosity. It was a reduction to legislative form of a dream of unrestrained Executive ambition, a dream which, unfortunately, was more than a dream, and which still persists, as shown by the unceasing efforts of your administration to strip Congress of its constitutional functions and vest in the Executive more and more power over the economic and political organization of the country. It is evident that, had these bills been enacted, they would have put this country on the path not of creeping socialism but of galloping collectivism and dictatorship. And it seems equally evident that they were drafted by men who, having lost interest in the American way of doing things, were going on the principle that the only good democracy is dead democracy, and that the Constitution is a fine thing to praise but a better thing to maim or destroy.

II

FOREIGN RELATIONS

So much for the issue that would be raised, should you seek a third term, by your program of 1937 and 1938, and your continuing desire to acquire authority at the expense of the legislative and judicial branches of the Government. Now let us turn, for a moment to foreign relations. For here, again, it would seem that no party would be justified in asking the American electorate to accept certain propositions which you have laid down.

In the opinion of many experts of good standing, the worst thing that could happen to England and France would be for the United States to become physically involved in the war. For this would necessarily divert our natural and industrial resources from the Allies. Our entry would mean that our productive energy would be required to strengthen our sadly lacking and obsolete Military Establishment. The job of suddenly putting this country on a war footing would be an enormous one. The Allies do not need man power. They need all the planes and various other kinds of equipment we can furnish, and more.

Unfortunately, though the New Deal has seen the European war coming since 1937, it has been as impractical and inefficient in military matters as in the matter of recovery. It has spent seven billions. It has talked a great deal about modernizing our system of defense, just as it has talked about balancing the Budget, restoring employment and farm incomes, and carrying on a large housing program. But it has done exceedingly little. And now, at the end of 7 years, with war sweeping the world, we have no army to speak of, a very small air force, inadequate coast defenses, practically no antiaircraft guns, and a paralyzing public debt, which will make adequate military preparations possible only at the cost of a serious sacrifice in the standard of living.

For 7 years, under your leadership and that of the "brain trust," your administration has been carrying on an economic war against depression. And the results have not been gratifying. For there has been little coordination or effective administration, less foresight and consistent planning, and no steady application of horse sense. And the question arises, Under the same kind of leadership, could a military war be effectively waged? No, Mr. President; if we want to help the Allies—and 9 Americans out of 10 do—common sense demands that this country shall stay at peace; that it shall keep its shirt on and not be rushed across the ocean into ill-considered adventures in Europe or Asia, where we cannot fight effectively in any case.

And yet you have moved steadily to a position far beyond that authorized by Congress and approved by the American people, namely, that of aiding the Allies by making our industrial output available to them. Indeed, your administration has advanced to a point where, with one foot in the war and the other in the air, it should be comparatively easy for it to throw this country irrevocably into the conflict.

A little over a year ago your personal representative in Paris made an address in the presence of high French officials, which, if less than a promise, was more than a hint that America would fight for France, should war occur. Less than 2 months later, you yourself publicly recorded your belief that, in case of war, America's "physical involvement" would become a "virtual certainty."

In the recently published American "white paper," which must be taken as authorized, since you have publicly recommended it, and it was compiled with the help of at least one member of your official family, and with access to official files—it is stated that, in conversations with the Attorney General and the Secretary and Under Secretary of State, you have taken the stand that, while you will not send an expeditionary force across the ocean, you might be willing to send our Navy and air forces.

A week ago, in your speech before the eighth American Scientific Congress, you again expressed an intention to keep the country at peace. Nevertheless, almost in the same breath, you all but declared war on Germany. And dramatically, in an appeal to fear, you restated the arguments for armed intervention. Last Monday, Secretary Hull, in an address of mysterious meaning, before the American Society of International Law, seemed to say but did not quite say, that we ought to intervene in an effort "to keep alive in the world the principle of order under law."

What do such statements mean, Mr. President? Why this mystery? Why this facility in never quite saying it? I have been convinced for a long time that you sincerely believe that this country ought to enter the war, and that, if you are reelected, you will move rapidly in that direction. But, in any case, your statements indicate a misconception of the scope and functions of the Presidency and, one may add, an overlooking of the fact that the decision between war and peace must, under our Constitution, be made not by yourself but by Congress, in the light of future circumstances, if and when the occasion arises.

In short, your position seems prematurely taken and more prematurely spoken, and inconsistent with your expressed resolve to prevent a black-out of peace. And, what is more, it comes near to laying down the proposition that when the people elect a President they give in advance to a single individual a mandate to commit 130,000,000 people to war, and all that war means.

Again, an analysis of the utterances of various administration leaders—Secretary Ickes, Senator PITTMAN, Under Secretary Welles, etc.—since the third-term drive began in 1937, reveals an intemperate and inflammatory quality better suited to create interna-

tional friction and hatred and a war psychology in our country, than to keep America in such a relation to Europe that, conceivably, it might act as a mediator to bring the present unspeakable disaster to a close.

One does not question the sincerity of these and others among your advisers. In fact, it is their sincerity that makes them dangerous. But it is possible that their judgment may have been influenced by the consideration that, only through an expectancy of war, or war itself, can the feeling against the third term be overcome, and they themselves be assured the opportunity to continue their usefulness to the country in an official capacity.

Nothing can exceed the horror with which public opinion in the United States regards the savage and inhuman course of Adolf Hitler and his government. Yet, what is to be gained by continually shaking one's fist at him across the Atlantic Ocean, or by the endless stream of threats and invective that flows eastward out of Washington? Certainly it has had no tendency either to help the Allies, or to check or embarrass Hitler. In Germany it has probably strengthened Hitler's hold on his people. In America it has undoubtedly excited the public, clouded its judgment, and increased the likelihood of our being drawn into war.

Despite the so-called American liberals who have found pleasure and profit in running down the United States, we have a great country. On the whole, it is a generous and enlightened country, and a tolerant one. It has made mistakes, and will make others, plenty of them. But, in the long account, it has developed a higher degree of freedom and opportunity than has been found in other nations. And this should not be sacrificed in a rash and barren excursion into a war which would help no one, a war for which we are unprepared, a war that might destroy millions of our young people and, at the same time, tear down what we have built in seven generations of effort.

The American people, Mr. President, have done a good deal for themselves in a hundred and fifty years, which, after all, is but a tick of time in the world's history. Likewise, they have done a good deal for humanity. And the possibilities of the future are larger and finer than the accomplishments of the past. And of one thing they may be certain in this time of uncertainty. They should continue on the path of peace and democracy which they have followed, faithfully in the main, and kneel at their own and no other altars.

Sincerely yours,

AMOS PINCHOT.

Debt Chickens Come Home to Roost

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

EDITORIAL FROM THE HOUSTON (TEX.) POST

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Houston (Tex.) Post under date of May 16, 1940:

[From the Houston (Tex.) Post of May 16, 1940]

DEBT CHICKENS COME HOME TO ROOST AS DEFENSE PROGRAM PLANNED

President Roosevelt, in discussing the huge armament and preparedness program which soon will be presented to Congress, said the method of financing defense activities is "a minor detail." The important thing, he contended, is to start the wheels turning, in order that the United States may be made impregnable to attack.

The President's refusal to worry about where money is coming from is nothing new. His confidence that money can be obtained merely by passing an appropriation bill was very much in evidence when the money was needed for purposes much less laudable and less essential to the country's well-being than adequate machinery of defense.

The Chief Executive always has considered revenue-raising a very minor detail. Only in devising bigger and better spending programs has he shown any capacity for detailed planning or any real enthusiasm.

As a result, the United States enters this critical period in world affairs, when international outlaws are on the prowl, with guns in their hands, with a Federal debt approaching $45,000,000,000, the legal limit, and with sorely inadequate machinery of national defense. Confronted with the necessity of spending billions for guns, airplanes, and other military equipment, Congress must levy new taxes or raise the debt limit and adopt a policy of piling more indebtedness on an already staggering total.

Chickens, it is said, always come home to roost. The vast program of concentrated spending which has flooded the country with leaf-raking projects, with boondoggling undertakings and with a variety of programs which left no visible mark except red-ink entries on Treasury statements, are coming home now to roost on the White House door. The President's desire to dismiss financial aspects of the defense problem as "minor details" does not eliminate a very real and very serious problem.

For years the Post has been pointing to the dangers of excessive spending. We have contended that while borrowing may be justified to meet an emergency, that no government can continue to spend twice as much as it takes in without eventually bumping into a real financial crisis.

Since the European war started, we have pointed out that big armies and navies, huge fleets of airplanes, and vast stores of guns and munitions are not enough to assure adequate national defense, but that one of the most important weapons is a sound internal economy. We have contended that the Government's ability to borrow large sums from its citizens in time of war is vital to security, and that our borrowing ability is limited by the size of the public debt.

There is no doubt the Government can borrow enough money to finance necessary defense appropriations, or that taxes can be levied to foot the bill. But there can be no doubt that if war comes to this country, despite everything we can do to keep out, we would enter such a war so deeply in debt that the country might be drained dry economically in financing the struggle.

At this time, we can see very clearly the danger of an official attitude at Washington that spending is much more important than such a "minor detail" as raising the money to be spent. We can see just how much more intelligent it would have been if we had spent billions on defense instead of leaf-raking projects, polo fields, and boondoggling in those happy-go-lucky days when we thought we could get rid of a depression by spending money we didn't have on things we didn't need.

Does the Record Qualify Roosevelt To Play the Role of Moses?—An Estimate From the Northwest

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

LETTER FROM A CITIZEN OF SOUTH DAKOTA

Mr. LEONARD W. HALL. Mr. Speaker, the letter that I include herewith under leave given me to extend my remarks comes from a citizen of the Northwest, from South Dakota, in comment on an address delivered before a gathering of citizens in my State by the gentleman from South Dakota, Mr. KARL MUNDT.

It is a plea for real leadership for America shared by countless thousands of our people, who are becoming frightened at the stumbling, fumbling type exhibited by the Roosevelt administration during the past 7 years.

The writer seeks no rhetorical effect. His style is colorful and gripping, but only because he makes his points, one by one, with surgical directness and incisiveness. Whether we all agree with what he says or not, let the letter speak for itself and let its conclusions be tested by the persuasion of the writer's presentation.

It is as follows:

MAY 22, 1940.

DEAR CONGRESSMAN: Presumably the long-hoped-for emergency which will justify Roosevelt in suppressing his own ardent desires for retirement and compel him to offer himself as a sacrifice for the good of his country has now arrived. Judging from the intemperate hysteria which seems now to afflict new dealers and Republicans alike, one might suppose that all we had to do was to make an enormous appropriation and preparedness would be an accomplished fact. Of course, we all believe in preparedness. We all believe in not only adequate but the greatest preparedness. But in taking sensible steps to prepare we should not forget the cause of our unpreparedness.

I have read with considerable care Roosevelt's speech to the Congress, in which for the first time he definitely puts himself forward as the Moses who is to lead the American people out of the wilderness of military helplessness. He should not be permitted to get away with it. Viewed in the light of the past 7 years' happenings, judged by the actual record which he himself has made, I consider his speech to Congress the most devastating indictment of his own administration that has been delivered by any man—Democrat, Republican, or Communist. Now is the time, before Congress adjourns, that public acclaim should be made of Roosevelt's contribution to our present state of helplessness.

(1) Under 7 years of his administration and with the full play of his dictatorial powers, eight billions were squandered for military purposes. Eight billions on the debit side, and for our military preparedness on the credit side we have twenty-seven hundred obsolete and worthless airplanes; artillery that is outranged by the artillery of the smallest European nations; a navy like the ghost the colored gentleman saw, "jest drappin' behind, jest drappin' behind"; an army in the throes of a heated controversy over the choice of rifles. Does this record qualify Roosevelt to play the role of Moses?

(2) Great as was the contribution of Roosevelt, through neglect and dumbness, in the creation of our wretched condition of unpreparedness, still greater was his contribution, through his persistent and vindictive attacks upon the industrial interests of the Nation. Today it requires the United States twice as long at four times the cost to build a battleship as it does Japan. The National Labor Relations Act and its infamous administration by its still more infamous Labor Board makes it impossible for us under existing conditions to compete with foreign nations in all of the essential requirements of preparedness. The excessive burden of taxation and the inquisitorial and vicious regulations with which he has burdened and handicapped all business activities, and the persistent substitution of governmental and bureaucratic conduct of industrial affairs constitute one of his greatest contributions to our present condition of unpreparedness. He now finds himself in the position to be not the beneficiary but the victim of his insolent, egotistic, and bombastic policy when, in referring to the business interests, he said: "I am their master." On top of all this he has plunged the Nation so heavily in debt that the time soon must come when it can no longer stand the strain, even though that strain be created in a patriotic effort to defend and protect our Nation. If he is to pose as the American Moses, he should be compelled to garb himself in swaddling raiment and hide himself in the bulrushes.

(3) Ignorant of, or unimpressed by, our state of unpreparedness, he must make that condition more serious by his bombastic threats against other nations with whom we were at peace, as witness his Chicago bridge speech, where he advocated quarantining the totalitarian aggressive nations, and still later his perfervid outburst that if any foreign nation dare attempt the invasion of Canada we would not permit it. Sentiments well enough in their place, if robbed of the obvious boastfulness with which our own helpless state clothed them.

(4) Great stress he lays in his recent speech to Congress, which no doubt he thinks will become historic, upon the existence in this country of the so-called "fifth column." In short, the numbers of Communists, Nazis, and other foreign elements who are either actual or potential spies and saboteurs. Common decency should have shamed him from making any reference to these. Aside from the fact that for his own political preference he has arrayed class against class and has overemphasized the importance of ne'er-do-wells, moochers, and profligates, as against the thrifty and energetic, one of his first acts, when his pants were hardly warm in the Presidential seat, was to recognize the Russian Bolshevik Government. Even as late as a year ago, he sent a telegram of felicitations to the bloody Russian Government upon the anniversary of its existence. He should be now compelled to face the humiliating fact that he did all in his power to prevent the continuation of the activities of the Dies committee. For the first time in the history of any important congressional committee, the Department of Justice and all other departments and bureaus, agencies and individual sycophants refused to lend assistance to the Dies committee, and it is a well-known fact that only the force of an outraged public opinion prevented him from eliminating an appropriation for the continuance of that committee.

(5) No doubt you are wondering why I am writing you at such length as to matters on which you are as well informed as I am. It is because I recently read KARL MUNDT's address to the Republican women in New York, from which I concluded that his views on present conditions are quite similar to my own, and I felt justified in adding my views to them in the hope that thereby, in a small way, I might be able to warn you of the impending disaster to our own country and to suggest that now is the time, when Congress is in session, if opportunity offers, to let the public know of this danger. It is the obvious danger of Roosevelt's reelection, the inevitable result of which is the destruction of the present form of American government. This fear is not academic, as is shown by the hysteria which has prompted Dorothy Thompson, in her syndicated articles, and certain so-called political leaders to go so far as to suggest that the Republicans abandon their convention and that all Americans get behind the reelection of Roosevelt. In the face of Roosevelt's demonstrated incompetence to handle successfully our domestic economic problems and his muddling of our foreign relations, he is the last prominent American citizen who should be considered for the task at hand. And apropos of this pseudo-patriotic appeal to forget all domestic controversies, let me remind you of what happened shortly after the November election in 1932, when President Hoover, burdened with the tremendous depression then overwhelming the Nation, harassed by a hostile Congress, made his appeal to President-elect Roosevelt to confer with him as to ways and means to be adopted to remedy the situation, and Roosevelt's conceited, insolent brutal, and would-be witty reply was "this is your baby, not mine." All right, this is Roosevelt's baby, so let him adjust his own diapers.

Reciprocity for Kansas Consumers and Livestock Producers

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

ADDRESS BY HON. JOHN M. HOUSTON, OF KANSAS

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my speech on Reciprocity for Kansas Consumers and Livestock Producers:

Our favorite American breakfast drinks—coffee, cocoa, and tea—come from foreign countries. We obtain them by trading with other nations. While you were drinking your breakfast cup this morning you probably did not think about its connection with foreign trade. But without foreign trade—that is, without exporting some product of the United States in exchange for the imported coffee, cocoa, or tea—you could not have enjoyed the beverage. We sell some of our surplus products to other parts of the world to pay for our coffee, cocoa, tea, and many other items which we consider daily necessities.

Now, Kansas farmers produce more wheat, more meat, and more of other farm products than the people in Kansas towns can consume. So the surplus of these products is traded—either with other States or with foreign countries—for things not produced in Kansas but which Kansas people want. The breakfast drinks I referred to are among those things. So are rubber for the tires of Kansas farm cars and trucks, silk for the stockings of Kansas women, and hundreds of other things that are used in the daily life of a Kansas family, either in town or on the farm.

This trading means that our standards of living in Kansas are raised, and so are the standards of people in other States and in other countries. We are able to enjoy these additional goods for only one reason—the fact that it is possible to exchange our own surpluses for the surpluses of other States and countries.

We are all in favor of selling more of our own products, but attempts are frequently made to cause Americans to fear imports; foreign goods, and even goods produced in other States, are made to seem bad in some intangible way. Secretary Wallace has alluded to fear of agricultural products from abroad as a "farm import devil." This "devil" is supposed to be completely equipped with tail, horns, and a pitchfork. During campaign years this "farm import devil" takes on enormous dimensions, his tail is lengthened, his horns enlarged, and his pitchfork sharpened. Kansas farmers have heard a lot about the "farm import devil," and most of what they have heard is not true. Surely such agricultural imports as coffee, cocoa, tea, rubber, silk, and bananas, not produced by any farmer in the United States, could hardly be called bad.

The coffee, tea, and cocoa, to which I have referred, are not isolated illustrations of so-called agricultural imports. Coffee, it happens, was the second largest item imported into the United States in 1939 among either agricultural or nonagricultural imports. We brought in $140,000,000 worth of coffee in 1939. As a matter of fact, some of the largest industries in the United States are absolutely dependent upon imports of so-called agricultural products. For example, the United States has the largest rubber-manufacturing industry in the world, and every pound of crude rubber it uses is classed as an agricultural import. Crude rubber was the biggest item in all our imports of all types in 1939—$178,000,000 worth of it. The United States also has the largest silk-manufacturing industry in the world, and every pound of its material comes in as an agricultural import.

Neither Kansas farmers nor farmers anywhere else in the United States can produce rubber or coffee or tea or silk or any of dozens of other products, and the imports of products which are not produced at all in the United States make up more than half of all our so-called agricultural imports.

Kansas farmers certainly need not be frightened at a cup of imported coffee or an automobile tire made of imported rubber. And Kansas farmers could not have these things if they and others in the United States did not trade their surplus wheat and meat and other products with the countries that produce the things we import.

A lot of other things, of which we produce certain quantities in this country, are just as essential to our well-being as are silk and rubber and our favorite drinks. But we do not, for one reason or another, produce enough of them to supply to all the people who want them at a price that these people can afford to pay. And, unfortunately, on many of the things the people of Kansas need there are excessive American tariffs which do not permit these things to come into the United States in sufficient quantity to meet consumer requirements at reasonable prices. In retaliation, foreign countries raised their barriers against the products which we desired to export. Thus by 1932 the foreign trade of the United States had reached an impasse.

In order to overcome the harmful effects of these barriers on American producers, American labor, and American consumers, our Government, in 1934, inaugurated the reciprocal trade agreements program to reduce excessive barriers to trade. This is a cooperative program under which foreign countries reduce their artificial trade barriers on our exportable surpluses they need while we reduce some of our excessive tariffs on their exportable surpluses of different things we need. This program is a careful and scientific plan for reviving our foreign trade, and, on the whole, considering the great difficulties to be overcome, it has worked well. Under it the United States has obtained many concessions from foreign countries and has granted concessions of its own in return for those obtained.

Many farmers in Kansas and in other States have not been fully and correctly informed about reductions in duty under trade agreements, particularly with respect to the livestock industry. Stockmen have repeatedly been made the victims of partisan misrepresentation and misstatement of facts about the trade program and its results.

They have been told, for instance, that as a result of reductions in United States tariffs through the trade agreements, this country has been flooded with imports of beef and cattle that have deprived the American cattleman of a large share of his domestic market and lowered the prices that he has received. That is not true.

Opponents of the trade agreements, when talking about cattle imports and trade agreements, never mention the fact that duty reductions apply only to certain classes of cattle, and only to limited numbers in those classes. They do not mention the fact that less than half the beef cattle imported into the United States in 1939 came in under trade-agreement tariff reductions, whereas more than half paid the duties imposed in the Tariff Act of 1930. These opponents say nothing about the fact that in 1939, as compared with 1938, imports of cattle on which no duty reductions have been granted increased by a greater number than did imports of cattle on which the duty has been reduced, and that American feed is used to condition these cattle for market. They never tell the livestock producers that the rates of duty have not been reduced on any kind of beef, including canned beef, in any trade agreement.

But the real test of the trade-agreements program as it affects livestock producers lies in the price and income the cattlemen have been receiving. In 1933, the year before the passage of the Trade Agreements Act, the United States average price received by farmers for beef cattle was $3.75 a hundred pounds; in 1939 it was $7.03, after 5 years under trade agreements.

In 1933 the farm cash income from the sale of cattle and calves for the United States as a whole was $599,485,000; in 1939 it was $1,274,714,000, considerably more than double the pre-trade-agreement figure and the highest since 1929, the last full year before the Hawley-Smoot Tariff Act was passed. The income of Kansas cattlemen from the sale of cattle and calves was $45,698,000 in 1933 and $80,886,000 in 1939.

This increase of $35,000,000 cash income certainly constituted a great benefit and not an injury to Kansas cattlemen. In fact the figures show that the domestic market—practically the only market for beef from Kansas and other beef-producing States—has been materially assisted and benefited by the industrial and business activity to which the trade-agreements program has contributed. Even though domestic cattle or beef are not exported in significant quantities, livestock producers are in better condition when industrial activity is accelerated by thriving export and import trade.

Kansas hog growers, whose marketing conditions are entirely different from those of cattle raisers, have been directly benefited by trade agreements through which market opportunities for their products in foreign countries have been improved. In normal times a comparatively large part of our pork products is exported. Since the droughts of 1934 and 1936 production of pork and lard in the United States has been increasing, and so have the exports of these products. United States exports of hog products, including lard, in 1939 were valued at $43,925,143, a gain of $5,000,000 over the 1938 figure and of $13,000,000 over the 1936 figure. The opportunity to market these surplus hog products in foreign countries helps to support the price that every corn-hog farmer in the United States receives for his hogs.

All the trade-agreement countries, except Brazil and Turkey, have made tariff or other trade concessions on exports of various United States hog products, and approximately nine-tenths of the country's exports of these products go to trade-agreement countries.

Great Britain, normally the largest foreign market for United States pork and lard, removed entirely its 10-percent tariff on United States lard and expanded its import quotas for other pork products. Cuba, in recent years the second largest foreign market for United States lard, reduced its tariff from over 9 cents a pound to about 1½ cents a pound, and also removed its consumption tax. In 1939 Cuba purchased more than 55,000,000 pounds of United States lard, as compared with 14,000,000 pounds in the year ended June 30, 1934, or prior to the agreement.

It is true, of course, that the outbreak of war in Europe has for the time being suspended or offset many of the advantages gained through the trade-agreements program for exports of United States meat products. Defense measures taken by foreign countries have led to strict control and limitation of their purchases of certain American agricultural products. At the same time, however, their increased purchases of many products of American industry have tended to sustain employment and buying power among United States workers and thus to support the domestic market for meat products. Furthermore, if it had not been for our trade agreements with countries now at war, matters would have been worse as far as exports of farm products to them are concerned.

In conclusion, I go back to my original point that foreign trade ministers daily to the needs and convenience of every American citizen. Every day many widely separated parts of the world contribute to our comforts and well-being. In the approaching campaign, don't listen to the partisan apostles of fear who may tell you to look under your bed every night for some form of "import devil" resulting from trade agreements. Tell them that our prosperity depends upon an exchange of goods with other countries. Under normal international trade conditions, to which it is hoped the world will be able to return when hostilities cease, few American industries have more to gain, both directly and indirectly, from the trade-agreements program than has the livestock industry.

God Bless America

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. LANDIS. Mr. Speaker, our biggest and most important job is to keep America out of war. I fervently believe that we should never again soak Europe's soil with American blood. Our main objective is peace, but we must lose no time in strengthening our national defense. It is important that we should realize the extreme and immediate peril of our Republic. We must be ready to give our services and our lives to maintain our American liberties in case we are invaded. Our American people are ready and willing to spend billions for defense, but not one cent for aggression.

This administration has made many mistakes in preparing for our national defense, according to the testimony of Gen. George C. Marshall, Chief of Staff and Maj. Gen. H. H. Arnold, Chief of Air Corps, before the Senate Subcommittee on Appropriations. Regardless of this fact, now is the time to rectify these mistakes and to present a united front. There is a definite need for expert and nonpartisan administration of the national-defense program. Under such a set-up, it would be possible to eliminate bureaucratic delays and uncertainties. Our people are demanding action—not petty political bickering. It is my hope that future generations may be able to turn back to the CONGRESSIONAL RECORD and find that there were many Members of Congress who were willing to cooperate in any national emergency without seeking political advantages. Now is the time for members of all parties to put their country first. It is our duty as representatives of the people to remain in session until our preparedness and safety is assured.

Our political parties must accept the responsibility of maintaining our Constitution in form and spirit. That great document required the Congress, and not the President, to determine whether war should be declared; that Congress, and not the President, should impose taxes; that Congress, and not the President, should regulate the value of our currency. These important functions should be discharged by the Congress which broadly represents the people of the country.

Lest we forget, I wish to refer you to article 4, section 4 of the Constitution:

> The United States shall guarantee to every State in this Union a Republican form of Government, and shall protect each of them against invasion; and on application of the legislature, or of the executive (when the legislature cannot be convened) against domestic violence.

Our American policy must be maintained for the best interests of the American people and against all "isms" which seek to destroy us. We must prevent the growth or spread of influence of any organization which seeks to undermine our form of government. It is our business to look after America and see that no foreign country attempts to destroy by propaganda, sabotage, or force the kind of a government which we

have chosen ourselves. We owe a duty to millions of Americans who have so nobly stood by America, her ideals and institutions, through these difficult years.

The laws we now have on our statute books must be enforced. The earnest effort of all groups of people in the United States will be required if we are to preserve the constitutional liberties which our people have gained through the years of struggle.

With foreign "isms" rampant throughout our land, their infection spreading to high places within our Government, starting a decay from within, we would do well to rededicate ourselves to our country, to our homes, and our God with the inspiration of Lincoln's words when he said:

Many free countries have lost their liberty, and ours may lose hers; but if she shall, be it my proudest plume not that I was the last to desert, but that I never deserted her.

The Strongest Defense

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

EDITORIAL FROM THE ELKHART (IND.) TRUTH

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Elkhart (Ind.) Truth of May 27:

[From the Elkhart (Ind.) Truth of May 27, 1940]

THE STRONGEST DEFENSE

The platform just adopted by the Republicans of Indiana voices the hope of the American people when it says the United States should stay out of any foreign war.

The platform is also right in saying:

"It is our obligation to preserve peace. We must so order our own affairs as to give the world at large a visible, a tangible, demonstration of how a great civilization can be preserved without intolerance, bigotry, class conflict, persecution of minorities or militaristic fanaticism."

To this end, the State platform declares, "we favor the strongest defense required to make our shores secure against any conceivable attack by any foreign power or coalition of powers."

And it is still right in lamenting "our present state of unpreparedness" and in laying the responsibility for that condition to "a shameful waste of defense appropriations."

For while it is true that President Roosevelt saw the war coming when others failed to see it, it is also true that he failed to act in accordance with his prescience.

Instead of using the huge sums obtained by heavy taxation for securing our safety, he allowed many of them to be spent on projects of little worth. Instead of making our farflung outposts secure, he promoted leaf-raking, boondoggling, and social experimentation.

Responsibility for America's sudden awakening to the fact that its defenses, though they may be better than they were, are still far less than they should be, cannot be sidestepped by the administration that has been in power for nearly 8 years, has had unprecedented sums to spend during that time, and has spent a great part of them wastefully.

As Mark Sullivan points out, the Republicans have opposed the administration's tendency toward intervening abroad, but on arming for defense have always been willing to go as far as Roosevelt was. On national defense, as distinguished from the policy of meddling in the war, the administration's political opposition and the people as a whole have supported it completely.

They will still go along with the President on many of the objectives voiced in his fireside talk of yesterday. Loyal, united support of a comprehensive defense plan the President may expect from the country.

But he must also expect the country to remember that he guided it into its present condition—with a heavier national debt and larger peacetime expenditures than ever before, with as many unemployed as ever, with the heavy hand of oppression laid on industry, with bureaucracy entrenched in Washington and theorists and political figureheads in vital governmental posts.

He must expect his opposition to keep reminding the country of these facts, not as a disloyal or destructive attack, but as a constructive means of making certain that the mistakes of the tragic past shall be corrected as speedily as possible, and that similar errors are avoided in the uncertain future.

A Strike by Employers

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. HOFFMAN. Mr. Speaker, many people have wondered what would happen if employers went on strike. At least some employers can afford to strike, notably Ford, and there are a few others, who, if their factories were closed permanently, still would not suffer.

C. I. O. for some time has been continuously assailing Ford. If Ford tired of their persecution and closed his plants, would Lewis or Thomas or any of the other labor organizers, who are living in luxury on their cut out of the worker's check, give a Ford worker a job?

If union racketeers force employers out of business, as they have done in altogether too many instances, then what?

Under the Wagner law, if the employer discharges an employee because of union activities, he is required to reemploy him and pay him for lost time. What a nice thing it would be for the workers, if, losing their jobs through strikes and the closing of a factory, John Lewis and some of the other big shots in the labor organizations, or the union itself, was forced to pay the striker for all lost wages.

That others are thinking of a strike by employers is evident from an editorial by Maurice R. Franks, editor of the Railroad Workers Journal, official organ of the Railroad Yardmasters of North America, Inc., which is as follows:

WHAT A STRIKE!

A strike is really an act of rebellion, a declaration of war by the strikers against those they believe to be unfair. To study the history of industrial strikes is to learn that the real promoters of them are not the actual participants but the big-headed, unmindful, selfish, and unscrupulous employers. With them any working conditions are good enough as long as they reap a financial harvest even though they themselves would not accept these conditions were they the workers. Business with them is merely a racket—a means to an end. The racketeer employer is more responsible for our chaotic industrial situation than even the racketeer laborite. He created the condition for this vulture to prey upon.

Fortunately, the racketeer employer is far in the minority. Nevertheless, the actions of the racketeers have played a major role in bringing persecution to the honest employers.

This being a Nation of opportunity we naturally have opportunists willing to take advantage of this sad situation for the purpose of promulgating their selfish objectives. They do not hesitate in disseminating propaganda blaming all industrialists for abuses practised only by the racketeer class. The propaganda mongers leave no stone unturned in persecuting employers to gain their end. Strikes are being "pulled" on both classes of employers, many of them absolutely unjustified and, in some instances, financed by racketeer employers, with the natural result of destitution to workers and persecution to employers.

I often wonder what the breaking point of tolerance is with our legitimate industrialists who have conscientiously done much to improve the American way of life without domination from politicians who have enacted laws handicapping industry, and without the help of racketeer laborites, unscrupulous industrialists or nit-wit idealists. I wonder what men like Alfred Sloan, Henry Ford, Walter Chrysler, H. W. Prentis, Jr., J. Howard Pew, Col. Charles E. Speaks, Walter J. Kohler, S. Bayard Colgate, Owen D. Young, and others of equal importance, but too numerous to mention here, are really thinking these days. I admire their great tolerance because if they lacked this virtue many of them could use a most dangerous weapon of retaliation.

Men of this type, who have legitimately acquired enough wealth to live on the rest of their lives without ever having a business worry, could close their plants and "pull" a close-up strike. So it is not hard to understand that their activity in the business world is not merely for the accumulation of the almighty dollar, as some would make you believe. Their main interest must be for the betterment of their fellowmen.

Persecution is the underlying force which causes humans to strike. It may be well to remember that captains of industry are only humans, and if continually persecuted, even they may strike. And what a strike!

Frankly yours,

MAURICE R. FRANKS,

Editor, Railroad Workers Journal, Official Organ of Railroad Yardmasters of North America, Inc.

Memorial Day—the Obligations of the Living

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

ADDRESS BY HON. ALVA B. ADAMS, OF COLORADO

Mr. HATCH. Mr. President, last night the senior Senator from Colorado [Mr. ADAMS] delivered a very interesting address, which was broadcast, on the subject Memorial Day—the Obligations of the Living. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Memorial Day is set aside each year to be devoted to appropriate commemoration of those who have fallen in battles waged for their country. Originally instituted to honor those who fell in the War between the States, it has been properly broadened to include the heroes of all the wars to establish and maintain our country, its independence, its rights, and its institutions.

Thoughtlessly we have come to regard Decoration Day mainly as a holiday, a day set apart for amusement and recreation, but when we pause to give thought as to its purpose and significance we become conscious that it should receive a more fitting observance.

Can we not give a few hours each year to thoughts and ceremonies in honor of those who gave their lives for us?

The young men who lie in the graves we so little remember marched forth into the fire and hazard of battle to secure and safeguard the rights, privileges, and benefits which we today enjoy.

We are accustomed to accept the blessings of a free constitutional Government as a matter of course. We complacently use our freedom under the protecting arm of a great Government as if we by our own efforts had gained it. We forget that thousands of men gave their lives and other thousands of men and women suffered and sacrificed to establish and maintain our free institutions. How seldom have any of us really returned thanks and expressed appreciation or gratitude to those to whom we owe so much.

We may write and speak and think freely. We may worship God as we please. We are free from unlawful searches and seizures. We enjoy freedom of elections through which we select those who are to rule over us, and fix conditions and limitations to their authority. We are secure in our legitimate property rights and in the making and carrying out of plans for our lives. The only taxes we pay are imposed by those whom we have elected and clothed with the power.

These great privileges, among others, far from being a matter of course, were never enjoyed by any nation until 150 years ago.

We wear no gas masks to work. We fear no enemy on land, water, or from the air. We can sleep soundly without fear of shells or bombs. No siren warns us of raiders in the sky.

Are these fortunate and happy conditions of our own making? They are not. Ought we not bow and bare our heads in grateful memory and reverent homage to those brave men who gave their lives that we might have these great privileges? They are gifts from the dead, not conquests by the living.

We properly set aside certain days to commemorate individual men whose deeds have justly placed their names high upon the rolls of the great. Most of these men received honor and distinction during their lifetime in recognition by their fellow citizens of their services and accomplishments.

This day is to commemorate no single man, but the thousands whose names are not written on the scroll of fame; who gave their all without recognition or reward, and who served as devotedly as those whose names are sung and whose deeds are acclaimed.

Our debt to them is great. Let us pause in the comfortable and secure round of our daily activities at least a few hours in the year to acknowledge it. Let us not only acknowledge our debt but let us try to pay it. There is one way in which we can at least make some small payment on this great debt. These men gave their lives for our Nation and the principles upon which it was founded. And forget not, the lives of these men were as dear to them as are our lives to us. If these dead could tell us what reward, what payment, they would wish of us they would with one accord say: "Continue the fight in peace or war for the cause for which we gave our lives." Surely this we must be willing to do.

Let us, therefore, both for ourselves and in memory of them, pledge ourselves to the preservation of our institutions in their essential purity and integrity. Nor may we safely sit smugly and complacently at our fireside imagining that there is no danger.

Free governments have been overthrown in many lands in recent days and are threatened in others. Today the principles of democracy are not only repudiated but derided in the lands of the dictators. Today the ability of democracies to maintain themselves against the ruthless might of dictatorship is being tested in the crucible of war.

We have learned that peace-loving, industrious, God-fearing nations in which rulers are the choice and representatives of a free people are not safe so long as there exists a powerful people dominated by might, where leaders are animated by greed for power and territory. With ruthless power on the land, in the air, and under the sea, free governments have been invaded and destroyed. Peoples who yesterday were busy at their peace-time pursuits, on their farms, in factories, enjoying the comforts of happy homes, with ill-will toward none, with no ambition to gratify through the suffering of others, are pitiful refugees and wanderers driven from ruined cities and desolated homes. While other thousands are maimed and murdered without regard to age or sex by aggressors whom they have not wronged.

While it is men who do the dastardly deeds we so abhor, the men are but the implementation of wicked ideals. It is the ideal which inspires their evil deeds. False and wicked ideals may spread like the plague from centers of infection. Let us not sit too comfortably and merely feel sorrow for those across the water. Greed for power may not stop at the water's edge on the eastern shore of the Atlantic. Dangerous and destructive thoughts can span tne ocean in an instant. They need not wait for ships. They ride the electric waves of the air.

As the earthquake destroys the peaceful valley and its cities without warning, so may our seeming security of today be turned to confusion and disaster tomorrow.

Not only may our institutions be destroyed by invading enemies or by the spread of pernicious doctrine from abroad, but within our own land there may be engendered evils and destructive forces such as will bring chaos and disaster upon us.

Among the dangers which might engulf our institutions in ruin would be the prevalence of the idea that while the principles upon which our Government was constructed may have been sound in the early days of our country, they are no longer applicable, and may be disregarded with safety, if not with advantage. Details of the Government, functions or powers of constituent elements of the Government may and should change to meet new problems as they arise, but the purpose of our institutions should ever be faithfully preserved and promoted. Changes in form or structure should be to carry out, not to subvert or alter, these fundamental purposes.

Our heroes died to establish and maintain institutions where justice among free men was the great objective. They made the supreme sacrifice for the perpetuity of a government the object of which was the freedom and welfare of the citizen, not its own power and greatness.

With the increasing complexity of our civilization the problem of preserving the freedom of the citizen is of increasing difficulty. This does not absolve us from our obligations to the honored dead whom we commemorate.

We cannot with clear conscience fail them. The blessings of sound government which the sacrifices of other men have provided for us we must in all good faith and justice pass on unimpaired to those who follow us.

It would be little less than cowardly for us to provide comfort and safety for ourselves at the cost of ruin and destruction to those who are to come after us. As good citizens and true men we cannot rob the future for our own benefit. Rather let us try to pass on a government better for our having lived.

Men are the bravest of living things. The courage with which millions of men in wartime face death and destruction has been demonstrated in many conflicts present and past. Men do not hesitate or falter when ordered to face an enemy's fire. However, those who would willingly sacrifice their life for their country in time of war sometimes hesitate or even refuse to make some minor sacrifice of personal or political advantage to protect their country against a peacetime evil or danger which may be as threatening to the future of their country as an armed enemy in time of war.

Our Nation may be destroyed as thoroughly in times of peace by subversive doctrine, by abandonment of its fundamental principles, by surrender or usurpation of the rights and privileges of the citizens, by an economy which denies to men their political freedom, or by a vicious and wasteful fiscal system which destroys national credit and individual initiative, as by successful invasion of ruthless enemies in time of war.

It is easier to defend against alien enemies than against the slowly creeping paralysis of insidious doctrines and the gradual surrender by a careless or weakening citizenship of its rights to usurping agencies and authorities. Against the armed enemy every citizen eagerly rushes forward to do his part in defense of his country. The attack upon our institutions by insidious and subversive doctrines and practices goes forward imperceptibly, or at least at such a slow rate as not to arouse the citizen from his fancied security. Often this peacetime undermining of our civic structure comes in such pleasing disguise as to lead many to give it welcome and encouragement.

We are apt to forget that history teaches that democracies are not eternal and that as many have fallen victim to internal decay and disasters as from external enemies.

Therefore, in paying our debt to the heroes in whose honor Memorial Day is dedicated, let us be as vigilant in protecting our country against the forces of decay and dissolution within our country as against foreign foes, and let us not forget that while the attack by enemies from abroad is only at long intervals, the internal forces which make for the destruction of our institutions are ever at work.

All we need to protect our country from its internal dangers is that our citizens be inspired in peacetime with the same spirit of loyalty, service, and sacrifice which animates them in wartime—that there be no distinction between wartime patriotism and peacetime patriotism.

Democracy is only for those who appreciate it, who deserve it, and who are not only willing to fight for it but able to defend and maintain it against all enemies at home or abroad. Let us resolve that no matter what the cost, we will deserve it, we will protect it, and we will pass it on without impairment to those who are to follow us.

Tomorrow let us take time to recall in grateful appreciation the services and sacrifices of those who have made possible for us the blessings of the free institutions which we enjoy.

Let us make of Decoration Day a dedication day.

National Preparedness

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. AUSTIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address delivered by the Senator from Ohio [Mr. TAFT] on May 29, 1940, on the subject of national preparedness.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of the radio audience, as you sit quietly in your homes tonight, thousands of men are dying and suffering on the battlefields of France and Belgium. It is impossible for us to realize at this distance how horrible modern war really is. We read of it in the papers. We are deeply shocked and grieved. Still it isn't real to us, because we can't believe that such things can actually happen in a civilized world. We pray for the escape of the British and French armies in northern France, abandoned by their ally. Our heartfelt sympathy goes out to the British Nation, threatened today by ruthless attack on a land which has not been invaded for nearly a thousand years.

Our people are vitally concerned that we shall not find ourselves in similar danger in a world ruled by brute force. On Monday night President Roosevelt discussed the present condition of our preparedness. Tuesday night former President Hoover analyzed the problem. Last night he was answered by Louis Johnson, Assistant Secretary of War.

We are not engaged in war today, and I believe there is every reason to hope that we will not be. I see no reason for a German attack even in the unfortunate event of a German victory. But we cannot close our eyes to the possibility or neglect our defense as did the English. We cannot take a chance. We want no Munich on this side of the Atlantic. Certainly an attack is much less likely if we are completely prepared to meet it. And so there is no disagreement on the necessity for preparedness. There is no disposition to skimp either on the part of Congress or the people of the United States.

But there are substantial differences of opinion as to how preparedness had best be accomplished. It is said that this is a time to avoid politics. If by that is meant that there should be no selfish partisanship, there can be general agreement. In fact, the same advice may well be given in peaceful times. But if it is meant that there shall be no criticism of the President or his administration, then I emphatically disagree. It is not only the right but the duty of those interested in public affairs to discuss freely the fundamental policies necessary for adequate preparedness. If there had been more active criticism in France and England, they might be in better condition today. The objection to a coalition Cabinet is that the minority members must surrender their power publicly to criticize and discuss. Every newspaper editor and every columnist in the country is discussing the question of preparedness and criticizing the present condition. Certainly there is no reason why the Republicans should not do the same without being accused of partisanship.

It has even been suggested that the election be suspended on the assumption that the President is the only one who can carry on a preparedness program at the present time. This certainly is a denial of the very possibility of democracy. The argument is in effect that because the crisis is great, because a war exists in Europe, the people are incompetent at such a time to decide who should be President. If democratic government is sound at all, that is the very time when the people should be best able to decide. George Washington refused a third term in 1796, when world conditions were anything but satisfactory and Napoleon was threatening the conquest of Europe. Domestic affairs were in such a turmoil that many doubted the power of the new Nation to continue, but an election was held in 1796. In 1812 an election was held in the midst of war. In 1864 the administration was bitterly attacked by Democrats and Copperheads, and Grant's defeat at Cold Harbor was not encouraging for the North. But I don't remember that Abraham Lincoln ever suggested that the election of 1864 be postponed. A Presidential election under such circumstances may be conducted in a more solemn and less sensational manner, but that very fact should make it more satisfactory and more likely to reach a correct conclusion There is certainly nothing in the record of the present administration to justify an argument that it is peculiarly equipped to defend the United States.

I wish to discuss, therefore, the whole nature of a program for national preparedness. We have seen what Germany has done. Since Hitler became dictator in January 1933 he has in 7 years built the nation into a great war machine. He has subjected to that end all other purposes in life. The people have given up their freedom, they have reduced their standard of living, and they have staked all on their success. There are men in this country who feel that we must follow that example, that we must give arbitrary power to the President to tell every citizen what he shall do in manufacture, in commerce, in agriculture; to draft manpower and capital; to fix all wages and prices.

On the other hand, the speech of the President on Monday night indicated his view that we need make no change in our life or our economy or our Government policies; that we can have our cake and eat it, too; that preparedness is merely a matter of closing our eyes and appropriating vast sums of money. That position is just as unsound and even more dangerously misleading than the other extreme.

I believe very strongly that we can develop an effective preparedness organization within the form and spirit of democratic government. I believe that democratic government, properly administered, can be as efficient as any autocratic government. I believe we can accomplish as much by cooperation of the people as by regimentation of the people. We can retain both freedom and democracy. But, on the other hand, we can't hope to have everything in the world at one time. We can't have battleships and still go on adding dams and parks and post offices. We can continue to strive against unequal distribution of opportunity, but we can't have all the frills that have looked so tempting during the past 5 years. We can't permit political pressure to take large sums of money out of the Government Treasury for special groups which we ought to spend for preparedness. We can't plunge on toward national bankruptcy and go on fooling ourselves that we can get something for nothing.

In recent years we have averaged Government deficits between three and four billion dollars a year. We have been spending far more than our people have paid or have been willing to pay. That policy has resulted in a steady increase in the public debt until, according to Senator HARRISON yesterday, the debt limit of $45,000,000,000 will be reached in January 1941. Taxes absorb 20 percent of the income of all the people, and peacetime government takes 15 percent of the average workman's income through direct and indirect taxes. Government expenses have been built up in the city, State, and Nation until on a peacetime basis they would absorb 25 percent of the people's income if met by taxes. We have borrowed on the theory that we were in the midst of an emergency. Now we find that far from being in an emergency, we have been living in comparatively peaceful and untroubled times, and should have paid our way as we went.

Now we face a necessary increase in expenditures for defense, an increase which may easily amount to $2,000,000,000 a year, and may go on for many years to come. We see clearly that we have been fooling ourselves and we will fool ourselves more unless our income soon equals our expenses. That means today both a cutting of unnecessary Government expense and a substantial increase in taxation. Yesterday Senator HARRISON proposed to increase the debt limit by $3,000,000,000 and levy a tax of $600,000,000 a year, supposed to pay off this additional indebtedness in 5 years. If that is the only change in fiscal policy proposed, then it is ridiculous to think that this new indebtedness will be paid off for many years, for we will face in 1942 another deficit of three or four billion dollars.

The administration is willing to proceed with the tax now on the theory that the people will accept such a tax at this time because of the need of national defense. They ought to accept the tax, but they ought also to realize that the real cause of additional taxes is the tremendous deficit for ordinary peacetime expenditures plus the colossal size of the existing debt. Obviously we are not increasing the debt limit from forty-five to forty-eight billion dollars, and borrowing $3,000,000,000, just to pay a supplemental defense expense of $1,000,000,000. If our budget had been balanced since 1936, as it should have been, we could well afford to borrow for a year or two for extraordinary defense construction. But now there is no alternative except taxes and more taxes, in fact I believe a complete revision of our whole tax system. Any other course will lead to national bankruptcy, a break-down of the whole economic system on which our industry and prosperity are based.

But the President takes no interest in fiscal matters. Only last week he told the press that he did not care whether Congress raised the debt limit or levied a tax—all he was interested in was getting the money to spend. His record shows his complete incompetence to deal with financial policy. He subscribes to the

idea that the debt is unimportant because we owe it to ourselves. Of course, if you are going to wipe out the debt by confiscation, by abandoning democratic government and adopting a socialist state, then the debt is unimportant. But national bankruptcy is fatal either to a successful defense or to the continuance of the American way of life and the American system of free enterprise. Our people today are convinced that we can spend an adequate amount for defense and still retain a system of free enterprise, but it can only be done if we pay our way as we go.

There is not the slightest indication that the President intends to cut any Government expenses. He is still demanding an increase in W. P. A. appropriations from $1,000,000,000 to the equivalent of a billion and a half. We have just been asked to authorize another half billion dollars for the Commodity Credit Corporation for agricultural loans. The President has not opposed the large increases made by Congress for farm subsidies. Not one cent is to be taken off any of the appropriations of any Government department for the year beginning the first of next July. There is no recognition of the fact that preparedness is a deadly serious business, which can only be accomplished by sacrifice; by changing the whole character of our peacetime establishment; by returning to the sound fiscal principles followed by every previous administration, Republican or Democratic.

We come to the question of the Army and Navy. The money actually appropriated has not been thrown away. The Army and Navy are well organized and competent. But certainly today, in a serious crisis, we find ourselves weak in many of the most important necessities for modern defense. While our Navy is twice as big as those of Germany and Italy combined, progress in the building of new ships has been very slow. If the ships under construction were now completed, there would be little fear of attack by any foreign nation. The mechanization of the Army has hardly begun. Our supply of airplanes is small, and the present capacity for producing airplanes is about 3,600 a year when the President talks of 50,000.

The President portrayed the situation as so serious in his recent address to Congress that the people at once asked why he had let such a condition develop. He felt called upon to go on the radio Sunday night and reassure the people that our Army and Navy were the best in the world, or at least would be when everything under order had been delivered. Unfortunately, orders take a long time to fill.

Last night Louis Johnson, Assistant Secretary of War, tried to put the blame on the Republicans, who went out of office more than 7 years ago. He blamed them for the naval disarmament treaties, which met with the general approval of the Democratic Party and were negotiated by Democrats as well as Republicans. He blamed them because the Army and Navy were small in 1933. He overlooks the fact that the question of armament is entirely relative to those of other nations, and that in 1933 all armaments were small because of the naval-disarmament treaties and the prospect of other disarmament treaties. He overlooks the fact that the Democratic platform of 1932 advocated a survey of the Army and Navy, so that the people in time of peace might not be burdened by an expenditure fast approaching a billion dollars annually. He overlooks the fact that President Roosevelt, in accordance with that platform, reduced the expenditure for Army and Navy during his first year. He overlooks the fact that Hitler came into power in Germany in January 1933, after the first election of President Roosevelt. Up to that time the German Army had been limited by the Treaty of Versailles to 100,000. The present administration saw the repudiation of the Treaty of Versailles, and the increase of that Army to 4,000,000 men with thousands of the most modern airplanes. The increase of the Japanese Navy, which is the only one comparable to ours, did not begin to take place until after 1933. No; if blame is to be attached to the present condition of our defense, it can only rest on the administration of President Roosevelt.

I notice that Assistant Secretary Johnson sneered at former President Hoover because he recently advocated a distinction between offensive and defensive weapons, and attempted to discredit his criticism of the preparedness program by suggesting that this distinction between offensive and defensive arms was "so tenuous that no military man would have dared draw such fine lines." It does not promote national unity or preparedness to have The Assistant Secretary of War sneer at the serious criticism of a former President of the United States. Furthermore, it happens that President Roosevelt would be subject to the same sneer. For President Roosevelt, on May 16, 1933, in a letter to 60 nations of the world, said:

"If all nations will agree wholly to eliminate from possession and use the weapons which make possible a successful attack, defenses automatically will become impregnable, and the frontiers and independence of every nation will become secure. The ultimate objective of the disarmament conference must be the complete elimination of all offensive weapons. The immediate objective is a substantial reduction of some of these weapons and the elimination of many others." As late as 1937, Mr. Roosevelt claimed that the distinction was his own idea. He said: "For the first time in this appeal to the nations, emphasis was placed on two fundamentals of the reduction of armaments: First, that weapons of offensive warfare should be gradually eliminated. * * * The reasons behind these proposals are even stronger 4 years later than they were in 1933."

It is not possible yet to analyze fully the reasons for our present deficiency in defense, but some of them are apparent. The present administration has been primarily interested in spending money for internal improvements and for many different phases of the New Deal. When the first emergency blank check for $3,300,000,000 was voted by Congress in 1933, it was proposed that $2,000,000,000 be spent for mechanization of the Army. The President rejected the proposal, and turned it over to P. W. A. for any kind of public works, which gave little more employment than mechanization of the Army would have done. Billions have been spent for purposes having a much closer relation to domestic politics than has national defense. New Deal spending has been the first love of the administration.

There has been an obvious lack of coordination between the different departments of the Government. Secretary Swanson was ill for many months. Secretary Edison was not appointed for a long time after he died, and now is running for Governor of New Jersey. The Secretary of War and The Assistant Secretary of War are not on speaking terms. Aggressive secretaries would have secured better consideration for the defense programs. Construction work in the Navy apparently has been very slow, much slower for instance than the Japanese work on their new battleships. It has been partly due to unnecessary New Deal restrictions, so numerous and hampering that many businessmen will not take a Government contract except as a matter of duty. Although 6,000 airplanes were authorized over a year ago, the actual delivery of airplanes, Army and Navy and foreign, has averaged less than 300 a month up to April 1, and two-thirds of these have gone abroad. No plans appear to have been made for the development of airplane capacity anything like the capacity of Germany.

The New Deal administration has been characterized by a deliberate hostility to industry, the very industry upon which we should rely to provide defense supplies in quantity production. In spite of occasional motions toward appeasement, that hostility to industry still exists, and shows itself in opposition to every move toward amendment of New Deal legislation. Last September President Roosevelt appointed a War Resources Board of leading industrialists to consider a proper organization of industry for defense. War had already begun in Europe. In less than 2 months, apparently on the demand of the New Dealers within the Government, the Board was dismissed. Nevertheless, it prepared a report which is said to criticize Army and Navy procurement methods and recommend a separate agency to handle industrial mobilization. The report has been completely suppressed. The administration apparently is afraid to publish it on account of criticisms contained in it.

It is reasonable to conclude that the present deficiency in the most vital essentials of defense is due to the neglect of that subject by the present administration in its intense interest in the domestic policies of spending, regulation, and politics.

What should the program be today? There should certainly be a much more definite plan than there is at the present time. The President's recent request for appropriations seems to have been hastily thrown together. It includes a demand for blank-check appropriations, the exact purpose of which the President himself has not clearly defined. Today it is reported that the President will seek from $600,000,000 to a billion dollars of additional funds, which apparently he thought unnecessary a week ago. If that is true, it shows that the first program was hastily thrown together without thinking anything through. There is no agreement on the fundamental question as to just what area we are going to defend. There is no adequate financial plan. There is no plan to mobolize industry.

Yesterday the Reconstruction Finance Corporation submitted to the Banking and Currency Committee of the Senate an extraordinary amendment to existing law. It is proposed that the R. F. C. be authorized to create a Government corporation with any powers the R. F. C. may consider necessary, and then loan unlimited amounts to that corporation for plant construction, equipment, and working capital. Under this authority the Government could go into any business, manufacturing, commerce, or agriculture, for any business would have some relation to national defense. This amendment was quietly proposed without even revealing its real purpose, and is likely to be forced through the Banking and Currency Committee tomorrow morning. It was drafted by Mr. Thomas Corcoran, counsel for the R. F. C. It shows a determination on the part of the administration to extend New Deal principles into preparedness with the same disregard for private industry which has heretofore existed in peacetime. If there is an industrial program, it ought to be presented to Congress. If there are some kinds of war equipment which the Government can manufacture better than private industry, then let us authorize the Government to do that particular thing. But if the proposed act is passed, Congress might as well go home and let the Reconstruction Finance Corporation borrow all the money it wants, and run the Government without appropriation. This was the plan last year of the original spend-lend bill.

It is vitally important that Congress create a joint committee to study the entire problem, to request definite plans from the President, and to recommend the legislation necessary to carry out the plan. On such a committee would be Republicans and Democrats. There would be little difficulty in obtaining an agreement on what is essential. It is not a party matter. If the President desires unity, that seems to me the best way to obtain it, without demanding a coalition cabinet in which Republicans must subordinate their views on fundamental domestic principles essential to the future welfare of the Nation.

In the second place, there should be an agency with a single director to head up the procurement of military and naval supplies,

similar to the secretary of munitions, who was a vital necessity in every European cabinet during the war, similar to the position which Mr. Baruch held in this country. The President has just appointed an advisory board, a step to which no one can take exception. But he has made it clear that its function is entirely advisory. It has nothing to do with the giving of orders or the purchase of material. Furthermore, if we can judge from the present administration's past record with advisory boards, the President is not likely to pay much attention to its advice, particularly if it conflicts with the views of more intimate advisers. For administration purposes a board, particularly in an emergency, is of little value. As General Goethals once said, "A board is long, narrow, and wooden."

Apparently the mobilization of industry is in the hands of Harry Hopkins and Secretary Morgenthau, unless it is now to be handed over to the R. F. C. While each of these gentlemen is able in his own peculiar field, I doubt if either would be selected as experienced in the organization of industry for war. Modern war is a war of machinery. Its success depends as much on industry as it does on men, guns, and ships. Surely it is a job which ought to be given to the most competent and experienced man in the whole field of industry.

In the third place, I believe there should be a determined effort to reduce the regulation of business in order that it may develop more rapidly and efficiently, in order that it may renovate its plant, in order that it may put more men to work and create the wealth necessary to support our tremendous expenditures under a system of free enterprise. I have advocated this entirely apart from the war. Now it is even more necessary. I feel very strongly that New Deal legislation has in nearly every case gone far beyond the actual abuse which it seeks to cure. It is not necessary to subject whole industries to detailed regulation simply because there are one or two crooks in the industry. Legislation has been inspired by the belief of the New Dealers that the solution of every problem is complete Government control, and it can and must be modified. We had an example this week in the La Follette civil-liberties bill. As finally passed by the Senate, it will meet the evils of industrial espionage and strike-breaking agencies at which it was aimed. But the Senate eliminated a vast amount of incidental restrictions which would have deprived employers of the right to find out whether their men were Communists or "fifth columnists" and subjected them to all kinds of bureaucratic restrictions and regulation, particularly with relations to Government contracts. The same thing can be done with many other New Deal laws now hampering industry at every step. We can stimulate prosperity, put men back to work, and develop a prosperous country, able to bear the tremendous weight of national defense. But we haven't been able to do it through planned economy in time of peace, and we can't do it any better in time of war.

If the American people want a national administration which has shown any ability to carry out an effective program of national defense, there is no possible argument for the present administration. It has failed to develop an Army and Navy with essential modern weapons. It has shown its complete incapacity in the field of finance. It has shown its unwillingness to abate by one jot or one tittle its hostility to industry, or its adherence to all the bureaucratic activities of the New Deal. It is proposing to destroy any possible unity in the United States by insisting on a third term, in violation of all the traditions and principles of the American Republic.

Local Politics: Menace to Defense

ARTICLE BY HON. PAUL W. SHAFER OF MICHIGAN

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by the gentleman from Michigan, Mr. SHAFER, which appeared in the May 1940 issue of the American Mercury.

[From the American Mercury of May 1940]

LOCAL POLITICS: MENACE TO DEFENSE

(By PAUL W. SHAFER, M. C., member of the Military Affairs Committee)

The United States is building up an admirable defense—for protection against Indian uprisings and for the satisfaction of assorted local pressure groups. We have no scientifically planned defense program in realistic relation to possible needs in a tempestuous world. Our program, so far as it can be thus dignified, is one of pouring out billions of dollars at haphazard, on the wishful theory that when an emergency arises these billions may, by some happy chance, have been aimed in the right direction. Effective defense has been frustrated for generations by extravagance and blundering.

We have scores of Army posts that are not only useless but would be a positive detriment in the event of a war. We are building, and have in recent months built, naval ships that cannot be sent on a mission in rough waters, because they would be blown over by a heavy breeze. We are handicapping the development of our air forces by split authority and by constant bickering between the services. Somewhere someone in the Government may have a comprehensive and cohesive plan for a sound defense program, based upon analysis of what we must defend and against whom. But if such a program exists, it has been carefully concealed from Congress.

In this article I want to limit myself largely to one aspect of the costly and dangerous situation, the aspect of politics, pork and patronage as barriers to intelligent national-defense expenditure. It used to be said that the tariff was a local issue because every locality wanted protection for its own products and free trade for the products of other localities. The same is true of our national defense. If there is one problem which should be solved in a thoroughly national spirit, this is it. Yet both the Army and Navy have become local issues in the most pork-barrelish style.

Recently a congressional committee, representing the Military Affairs Committees of the Senate and House, made a 25,000-mile tour by air to inspect and study the Army's equipment. I returned from that trip deeply concerned for the fate of this Nation, if ever it has to make a real defense of its borders. Along with this concern, I brought back frightening requests for the improvement and extension of posts which we visited. These requests reached the astonishing total of billions of dollars. If granted, they would provide swimming pools, post exchanges, athletic fields, and other embellishments for an army of at least 5,000,000 men.

Some of these requests were made in formal compilations by commanding officers of the various forts. The greater number, however, were proffered by chambers of commerce, real estate dealers, and other earnest citizens apparently convinced that the way to protect America's coasts is to spend millions to boost trade in their particular areas. It is amazing how many spots in this country have the perfect climate and surroundings for an Army post, and are also, by a fortunate coincidence, perfectly located from a strategic and tactical standpoint. Any chamber of commerce, anywhere in the country, can show you just such a site.

We now have approximately 125 Army camps and posts scattered throughout the country. Any real defense program would cut them to a score or less and would build up and operate that score to meet the real urgencies of real military situations. Most of our camps and forts originated in the distant past, to make available small bodies of troops to keep the Indians in subjugation. They are unrelated to modern needs. But attempts to do away with any of them meet with frenzied opposition by those whose local interest would be affected. By way of exemplification I offer the Fort Moultrie incident:

On returning from our tour, I mentioned that in Fort Moultrie there were defensive guns which had not been fired for years, that they could not be fired because the explosive force would destroy summer cottages and shacks nearby, and that among these cottages was one built by the mayor directly in front of a gun. I was merely citing Fort Moultrie as an instance of a general situation. You would have thought Fort Sumter had been fired on again. The Carolina papers hit the ceiling and the Carolina Representatives were driven frantic with appeals from their folks to save Fort Moultrie. No doubt it was unadulterated patriotism that whipped up the storm.

As another example of waste that results directly from local domination of our defense expenditures, and the lack of correlation that follows, I point to the spring Army maneuvers scheduled in the vicinity of Fort Benning, Ga. The War Department decided that because of world conditions our military force should indulge in large-scale maneuvers this year. (Incidentally, last year's maneuvers, held in the North, proved to be a total failure.) When plans for this spring's activities were prepared, they called for an expenditure of $18,000,000. A break-down of the figures revealed that $9,000,000, or half the total, would be spent for transporting troops to the tactical area. In other words, we spend many millions to bring troops from the Indian outposts to an area which might really be in danger in the event of an invasion. Our scheme of defense, it would seem, does not aim to prevent invasion, but rather accepts the invasion as a fact and aims to protect the interior from the invader's advance.

I wonder how many are familiar with Fort Huachuca. It is a post in Arizona which, according to the Bisbee Chamber of Commerce, "is strategically located for the defense of the Mexican-American border." The good merchants of Bisbee, through their chamber of commerce, provided the committee with an elaborate pamphlet containing 33 photographs of the fort and an analysis of its needs. All of the latter were identified as "immediate needs." They would involve expenditures of nearly $4,000,000, for everything from new barrack buildings to a new well. In presenting the pamphlet, the chamber expressed hopes "that you will file this as future reference when appropriations for the Army are being considered. * * * We can truly say that the Army in this State performs a distinct service."

The Cheyenne (Wyo.) Chamber, to cite another example, stands four-square for the development of Fort Francis E. Warren. The Cheyenne pamphlet presented to us says:

"The Cheyenne Chamber of Commerce emphatically believes that Fort Francis E. Warren should be the headquarters and station for a streamlined division and have prepared the following résumé of the advantage of Fort Francis E. Warren as a location for the headquarters of this division. * * * We believe that Cheyenne's recreation, climatic, transportation, and educational facilities make Fort Warren, which adjoins Cheyenne, a very desirable place for officers and men to reside and to educate and rear their family."

The chamber asked for a modest $3,000,000.

Then we have "Marvelous Marin, Inc.," which is a county chamber of commerce at San Rafael, Calif. "Marvelous Marin" informed the committee that its needs would be met if the Federal Government would build a new route to the Golden Gate Bridge, would establish a submarine base at Richardson Bay, and would locate a dry dock at Point San Pedro. It was joined by other civic organizations of the area in arguing that the Nation's defense would be enhanced by making the Golden Gate Bridge toll-free, with Uncle Sam assuming the responsibility for meeting bonds and interest.

Down the Potomac River from Washington the Army is maintaining detachments at forts which were obsolete before the Civil War and which by no stretch of the imagination could figure in the defense of this country. Some of the guns still in place could not possibly be fired, and no ammunition is now being made that would fit them. The same is true in other sections of the country. The chambers of commerce, and sometimes the commanding officers of posts, felt that maintenance of the particular fort or camp was justified by the fact that in its precincts was the hallowed tomb of some national or local hero. We should, of course, show proper reverence for our heroic dead, but we will add countless numbers to those dead unless we follow a sane defense program, unimpaired by local political interests and the bickerings of rival Army and Navy groups.

These are just random instances of demands for the embellishment of the existing camps and forts, and for the establishment of new ones. They illustrate the pressures operating against a defense program based on genuine needs and unencumbered by considerations of politics.

II

Local interference in what should be a nationally conceived and nationally executed program is, of course, only one of the hindrances encountered by those seeking to work out a planned program. There is also, as an important factor, the historical circumstance that the Army and Navy, instead of working cooperatively, are mutually antagonistic. One will brook no interference from the other in what it considers its special domain. Let me cite a particular instance. One of the stops on our inspection tour was at San Diego, Calif. The party was traveling in three Army planes. The Navy landing field was in excellent condition. The Army field nearby is under construction and at the time we approached was largely under water, making a landing in the big planes extremely hazardous. Yet this congressional committee, trying to find out what is wrong with national defense, was not permitted to land in the safe naval field, but was forced to risk a landing in the dangerous Army field.

No one has estimated how much has been wasted by the refusal of the two services to use property jointly when such joint use would be feasible and practical. We remember the occasion during the World War when the Army got around to equipping its fighting forces only to find that the Navy had cornered the market on a large number of necessary supplies.

That the lesson of that incident has not been learned is evidenced by a recent incident at Tampa, Fla., where the Army is constructing the Southeastern Air Base. The Navy acquired a parcel of land while the Army was negotiating the purchase of the same site. The Navy wanted the property for a quarantine station, while the Army had contracted for part of it as an air base. A quarantine station would have ruined the availability of the entire site. Lengthy and expensive negotiations were necessary before the rival claims of the Army and Navy were settled.

Duplication of facilities exists right in the National Capital; we have Army and Navy air fields adjoining, each refusing to have anything to do with the other. The situation is further complicated in Washington by the fact that Congress is now spending $5,000,000 to build a landing field across the river from the Army and Navy airports for the accommodation of civilian flyers. I have serious doubts whether we need three separate and distinct fields.

The Navy muddle on defense plans is as serious as that of the Army. Anyone in doubt that the pork-barrel figures in the sea and shore program of the Navy can have his doubts resolved by trying to abolish a naval station, no matter how obsolete. The operation of unwisely located naval stations is wasting millions of dollars every year. There are annual drives to lure the fleet into particular waters, not in order that it may be better trained or better based, but in order that the port city may thrive for a time. Here again Washington figures in the picture. Many years ago, when ships were all of comparatively shallow draft and when the Potomac River meant something in the way of shipping, the Washington Navy Yard was constructed. Today scarcely any ship larger than a rowboat can navigate the Potomac, but the navy yard remains. Virtually landlocked, it is being utilized as a naval gun factory; the guns made there have to be transported by rail or on barges before they can be built into the ships—another heavy and useless expense.

These facts, and a mountain of additional facts present a true indictment of our present haphazard system and emphasize the need for the formation of a sound and effective program of national defense. The studies which I have made have convinced me that America can save millions of dollars every year, and at the same time obtain greater protection, if we divorce the national defense from politics and pork-barrel influences.

Kings Canyon National Park Now a Reality

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE FROM THE SIERRA CLUB BULLETIN

Mr. GEARHART. Mr. Speaker, in the long-drawn-out legislative contest which culminated this year in the enactment of my bill to create and establish the Kings Canyon National Park in central California no organization rendered greater assistance in the achievement of the victory than did the Sierra Club, an organization of disinterested citizens who have banded themselves together to preserve the glories and the wilderness characteristics of the high Sierra-Nevada Mountains.

As the author of the enabling legislation, I am pleased to offer for inclusion in the CONGRESSIONAL RECORD a brief article from the April 1940 issue of the official bulletin of this most worthy organization which is entitled "Kings Canyon National Park Now a Reality." As it is indicated at the end thereof, this very interesting essay is from the able pen of Mr. William E. Colby, who, at the moment, is serving as secretary of the Sierra Club.

The unanimous consent of the entire membership having been indicated, the article which has been referred to follows:

[From the Sierra Club Bulletin of May 1940]

KINGS CANYON NATIONAL PARK NOW A REALITY

The signing by the President of the bill creating the Kings Canyon National Park is a cause for great rejoicing. It ends a battle of many years. There was very early thought of making a great national park out of this general region, but it was John Muir who gave the idea real vitality. He had visited the area in his early wanderings in the Sierra. With that uncanny sense which made him our foremost wilderness savior, he recognized its outstanding character and advocated that it be included in a national park as early as 1890. He repeated this recommendation many times during his lifetime.

The Sierra Club has consistently urged the creation of this park. In 1906 it prepared a detailed report on the region. (Sierra Club Bulletin, vol. VI, pp. 115–127, January 1907.) When Stephen T. Mather became Director of the National Park Service, one of his major objectives was to secure the passage of a bill in Congress which would accomplish this. With the able assistance of Congressman Arthur J. Elston, also one of our members, a bill was on several occasions brought to a point where it seemed highly probable that it would be passed. But on each occasion some last-minute obstacle would arise which blocked it for that particular session. Then came opposition from the city of Los Angeles, which made water and power filings on all of the major streams in the area and spent thousands of dollars in surveys. Approval of these filings was refused by the Federal Water Power Commission, which held that the San Joaquin Valley irrigationists had first claim on any such rights. With the gauntlet taken up by these irrigationists the situation looked hopeless. Secretary of the Interior Ickes had other ideas, however, and decided to urge upon Congress the creation of this great park, which his friend Stephen Mather had so actively fought for during his lifetime. The Secretary personally met with and satisfied the irrigationists that their problems could best be solved in other ways, and also promised to urge upon Congress the building of the Pine Flat Reservoir to take care of their needs. Congressman B. W. GEARHART, from Fresno County, was enlisted to introduce the measure. Too much credit cannot be paid him for his fearless advocacy of the bill in the face of powerful local opposition and unsuccessful attempts

similar to the secretary of munitions, who was a vital necessity in every European cabinet during the war, similar to the position which Mr. Baruch held in this country. The President has just appointed an advisory board, a step to which no one can take exception. But he has made it clear that its function is entirely advisory. It has nothing to do with the giving of orders or the purchase of material. Furthermore, if we can judge from the present administration's past record with advisory boards, the President is not likely to pay much attention to its advice, particularly if it conflicts with the views of more intimate advisers. For administration purposes a board, particularly in an emergency, is of little value. As General Goethals once said, "A board is long, narrow, and wooden."

Apparently the mobilization of industry is in the hands of Harry Hopkins and Secretary Morgenthau, unless it is now to be handed over to the R. F. C. While each of these gentlemen is able in his own peculiar field, I doubt if either would be selected as experienced in the organization of industry for war. Modern war is a war of machinery. Its success depends as much on industry as it does on men, guns, and ships. Surely it is a job which ought to be given to the most competent and experienced man in the whole field of industry.

In the third place, I believe there should be a determined effort to reduce the regulation of business in order that it may develop more rapidly and efficiently, in order that it may renovate its plant, in order that it may put more men to work and create the wealth necessary to support our tremendous expenditures under a system of free enterprise. I have advocated this entirely apart from the war. Now it is even more necessary. I feel very strongly that New Deal legislation has in nearly every case gone far beyond the actual abuse which it seeks to cure. It is not necessary to subject whole industries to detailed regulation simply because there are one or two crooks in the industry. Legislation has been inspired by the belief of the New Dealers that the solution of every problem is complete Government control, and it can and must be modified. We had an example this week in the La Follette civil-liberties bill. As finally passed by the Senate, it will meet the evils of industrial espionage and strike-breaking agencies at which it was aimed. But the Senate eliminated a vast amount of incidental restrictions which would have deprived employers of the right to find out whether their men were Communists or "fifth columnists" and subjected them to all kinds of bureaucratic restrictions and regulation, particularly with relations to Government contracts. The same thing can be done with many other New Deal laws now hampering industry at every step. We can stimulate prosperity, put men back to work, and develop a prosperous country, able to bear the tremendous weight of national defense. But we haven't been able to do it through planned economy in time of peace, and we can't do it any better in time of war.

If the American people want a national administration which has shown any ability to carry out an effective program of national defense, there is no possible argument for the present administration. It has failed to develop an Army and Navy with essential modern weapons. It has shown its complete incapacity in the field of finance. It has shown its unwillingness to abate by one jot or one tittle its hostility to industry, or its adherence to all the bureaucratic activities of the New Deal. It is proposing to destroy any possible unity in the United States by insisting on a third term, in violation of all the traditions and principles of the American Republic.

Local Politics: Menace to Defense

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE BY HON. PAUL W. SHAFER OF MICHIGAN

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by the gentleman from Michigan, Mr. SHAFER, which appeared in the May 1940 issue of the American Mercury.

[From the American Mercury of May 1940]

LOCAL POLITICS: MENACE TO DEFENSE

(By PAUL W. SHAFER, M. C., member of the Military Affairs Committee)

The United States is building up an admirable defense—for protection against Indian uprisings and for the satisfaction of assorted local pressure groups. We have no scientifically planned defense program in realistic relation to possible needs in a tempestuous world. Our program, so far as it can be thus dignified, is one of pouring out billions of dollars at haphazard, on the wishful theory that when an emergency arises these billions may, by some happy chance, have been aimed in the right direction. Effective defense has been frustrated for generations by extravagance and blundering.

We have scores of Army posts that are not only useless but would be a positive detriment in the event of a war. We are building, and have in recent months built, naval ships that cannot be sent on a mission in rough waters, because they would be blown over by a heavy breeze. We are handicapping the development of our air forces by split authority and by constant bickering between the services. Somewhere someone in the Government may have a comprehensive and cohesive plan for a sound defense program, based upon analysis of what we must defend and against whom. But if such a program exists, it has been carefully concealed from Congress.

In this article I want to limit myself largely to one aspect of the costly and dangerous situation, the aspect of politics, pork and patronage as barriers to intelligent national-defense expenditure. It used to be said that the tariff was a local issue because every locality wanted protection for its own products and free trade for the products of other localities. The same is true of our national defense. If there is one problem which should be solved in a thoroughly national spirit, this is it. Yet both the Army and Navy have become local issues in the most pork-barrelish style.

Recently a congressional committee, representing the Military Affairs Committees of the Senate and House, made a 25,000-mile tour by air to inspect and study the Army's equipment. I returned from that trip deeply concerned for the fate of this Nation, if ever it has to make a real defense of its borders. Along with this concern, I brought back frightening requests for the improvement and extension of posts which we visited. These requests reached the astonishing total of billions of dollars. If granted, they would provide swimming pools, post exchanges, athletic fields, and other embellishments for an army of at least 5,000,000 men.

Some of these requests were made in formal compilations by commanding officers of the various forts. The greater number, however, were proffered by chambers of commerce, real estate dealers, and other earnest citizens apparently convinced that the way to protect America's coasts is to spend millions to boost trade in their particular areas. It is amazing how many spots in this country have the perfect climate and surroundings for an Army post, and are also, by a fortunate coincidence, perfectly located from a strategic and tactical standpoint. Any chamber of commerce, anywhere in the country, can show you just such a site.

We now have approximately 125 Army camps and posts scattered throughout the country. Any real defense program would cut them to a score or less and would build up and operate that score to meet the real urgencies of real military situations. Most of our camps and forts originated in the distant past, to make available small bodies of troops to keep the Indians in subjugation. They are unrelated to modern needs. But attempts to do away with any of them meet with frenzied opposition by those whose local interest would be affected. By way of exemplification I offer the Fort Moultrie incident:

On returning from our tour, I mentioned that in Fort Moultrie there were defensive guns which had not been fired for years, that they could not be fired because the explosive force would destroy summer cottages and shacks nearby, and that among these cottages was one built by the mayor directly in front of a gun. I was merely citing Fort Moultrie as an instance of a general situation. You would have thought Fort Sumter had been fired on again. The Carolina papers hit the ceiling and the Carolina Representatives were driven frantic with appeals from their folks to save Fort Moultrie. No doubt it was unadulterated patriotism that whipped up the storm.

As another example of waste that results directly from local domination of our defense expenditures, and the lack of correlation that follows, I point to the spring Army maneuvers scheduled in the vicinity of Fort Benning, Ga. The War Department decided that because of world conditions our military force should indulge in large-scale maneuvers this year. (Incidentally, last year's maneuvers, held in the North, proved to be a total failure.) When plans for this spring's activities were prepared, they called for an expenditure of $18,000,000. A break-down of the figures revealed that $9,000,000, or half the total, would be spent for transporting troops to the tactical area. In other words, we spend many millions to bring troops from the Indian outposts to an area which might really be in danger in the event of an invasion. Our scheme of defense, it would seem, does not aim to prevent invasion, but rather accepts the invasion as a fact and aims to protect the interior from the invader's advance.

I wonder how many are familiar with Fort Huachuca. It is a post in Arizona which, according to the Bisbee Chamber of Commerce, "is strategically located for the defense of the Mexican-American border." The good merchants of Bisbee, through their chamber of commerce, provided the committee with an elaborate pamphlet containing 33 photographs of the fort and an analysis of its needs. All of the latter were identified as "immediate needs." They would involve expenditures of nearly $4,000,000, for everything from new barrack buildings to a new well. In presenting the pamphlet, the chamber expressed hopes "that you will file this as future reference when appropriations for the Army are being considered. * * * We can truly say that the Army in this State performs a distinct service."

The Cheyenne (Wyo.) Chamber, to cite another example, stands four-square for the development of Fort Francis E. Warren. The Cheyenne pamphlet presented to us says:

"The Cheyenne Chamber of Commerce emphatically believes that Fort Francis E. Warren should be the headquarters and station for a streamlined division and have prepared the following résumé of the advantage of Fort Francis E. Warren as a location for the headquarters of this division. * * * We believe that Cheyenne's recreation, climatic, transportation, and educational facilities make Fort Warren, which adjoins Cheyenne, a very desirable place for officers and men to reside and to educate and rear their family."

The chamber asked for a modest $3,000,000.

Then we have "Marvelous Marin, Inc.," which is a county chamber of commerce at San Rafael, Calif. "Marvelous Marin" informed the committee that its needs would be met if the Federal Government would build a new route to the Golden Gate Bridge, would establish a submarine base at Richardson Bay, and would locate a dry dock at Point San Pedro. It was joined by other civic organizations of the area in arguing that the Nation's defense would be enhanced by making the Golden Gate Bridge toll-free, with Uncle Sam assuming the responsibility for meeting bonds and interest.

Down the Potomac River from Washington the Army is maintaining detachments at forts which were obsolete before the Civil War and which by no stretch of the imagination could figure in the defense of this country. Some of the guns still in place could not possibly be fired, and no ammunition is now being made that would fit them. The same is true in other sections of the country. The chambers of commerce, and sometimes the commanding officers of posts, felt that maintenance of the particular fort or camp was justified by the fact that in its precincts was the hallowed tomb of some national or local hero. We should, of course, show proper reverence for our heroic dead, but we will add countless numbers to those dead unless we follow a sane defense program, unimpaired by local political interests and the bickerings of rival Army and Navy groups.

These are just random instances of demands for the embellishment of the existing camps and forts, and for the establishment of new ones. They illustrate the pressures operating against a defense program based on genuine needs and unencumbered by considerations of politics.

II

Local interference in what should be a nationally conceived and nationally executed program is, of course, only one of the hindrances encountered by those seeking to work out a planned program. There is also, as an important factor, the historical circumstance that the Army and Navy, instead of working cooperatively, are mutually antagonistic. One will brook no interference from the other in what it considers its special domain. Let me cite a particular instance. One of the stops on our inspection tour was at San Diego, Calif. The party was traveling in three Army planes. The Navy landing field was in excellent condition. The Army field nearby is under construction and at the time we approached was largely under water, making a landing in the big planes extremely hazardous. Yet this congressional committee, trying to find out what is wrong with national defense, was not permitted to land in the safe naval field, but was forced to risk a landing in the dangerous Army field.

No one has estimated how much has been wasted by the refusal of the two services to use property jointly when such joint use would be feasible and practical. We remember the occasion during the World War when the Army got around to equipping its fighting forces only to find that the Navy had cornered the market on a large number of necessary supplies.

That the lesson of that incident has not been learned is evidenced by a recent incident at Tampa, Fla., where the Army is constructing the Southeastern Air Base. The Navy acquired a parcel of land while the Army was negotiating the purchase of the same site. The Navy wanted the property for a quarantine station, while the Army had contracted for part of it as an air base. A quarantine station would have ruined the availability of the entire site. Lengthy and expensive negotiations were necessary before the rival claims of the Army and Navy were settled.

Duplication of facilities exists right in the National Capital; we have Army and Navy air fields adjoining, each refusing to have anything to do with the other. The situation is further complicated in Washington by the fact that Congress is now spending $5,000,000 to build a landing field across the river from the Army and Navy airports for the accommodation of civilian flyers. I have serious doubts whether we need three separate and distinct fields.

The Navy muddle on defense plans is as serious as that of the Army. Anyone in doubt that the pork-barrel figures in the sea and shore program of the Navy can have his doubts resolved by trying to abolish a naval station, no matter how obsolete. The operation of unwisely located naval stations is wasting millions of dollars every year. There are annual drives to lure the fleet into particular waters, not in order that it may be better trained or better based, but in order that the port city may thrive for a time. Here again Washington figures in the picture. Many years ago, when ships were all of comparatively shallow draft and when the Potomac River meant something in the way of shipping, the Washington Navy Yard was constructed. Today scarcely any ship larger than a rowboat can navigate the Potomac, but the navy yard remains. Virtually landlocked, it is being utilized as a naval gun factory; the guns made there have to be transported by rail or on barges before they can be built into the ships—another heavy and useless expense.

These facts, and a mountain of additional facts present a true indictment of our present haphazard system and emphasize the need for the formation of a sound and effective program of national defense. The studies which I have made have convinced me that America can save millions of dollars every year, and at the same time obtain greater protection, if we divorce the national defense from politics and pork-barrel influences.

Kings Canyon National Park Now a Reality

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE FROM THE SIERRA CLUB BULLETIN

Mr. GEARHART. Mr. Speaker, in the long-drawn-out legislative contest which culminated this year in the enactment of my bill to create and establish the Kings Canyon National Park in central California no organization rendered greater assistance in the achievement of the victory than did the Sierra Club, an organization of disinterested citizens who have banded themselves together to preserve the glories and the wilderness characteristics of the high Sierra-Nevada Mountains.

As the author of the enabling legislation, I am pleased to offer for inclusion in the CONGRESSIONAL RECORD a brief article from the April 1940 issue of the official bulletin of this most worthy organization which is entitled "Kings Canyon National Park Now a Reality." As it is indicated at the end thereof, this very interesting essay is from the able pen of Mr. William E. Colby, who, at the moment, is serving as secretary of the Sierra Club.

The unanimous consent of the entire membership having been indicated, the article which has been referred to follows:

[From the Sierra Club Bulletin of May 1940]

KINGS CANYON NATIONAL PARK NOW A REALITY

The signing by the President of the bill creating the Kings Canyon National Park is a cause for great rejoicing. It ends a battle of many years. There was very early thought of making a great national park out of this general region, but it was John Muir who gave the idea real vitality. He had visited the area in his early wanderings in the Sierra. With that uncanny sense which made him our foremost wilderness savior, he recognized its outstanding character and advocated that it be included in a national park as early as 1890. He repeated this recommendation many times during his lifetime.

The Sierra Club has consistently urged the creation of this park. In 1906 it prepared a detailed report on the region. (Sierra Club Bulletin, vol. VI, pp. 115–127, January 1907.) When Stephen T. Mather became Director of the National Park Service, one of his major objectives was to secure the passage of a bill in Congress which would accomplish this. With the able assistance of Congressman Arthur J. Elston, also one of our members, a bill was on several occasions brought to a point where it seemed highly probable that it would be passed. But on each occasion some last-minute obstacle would arise which blocked it for that particular session. Then came opposition from the city of Los Angeles, which made water and power filings on all of the major streams in the area and spent thousands of dollars in surveys. Approval of these filings was refused by the Federal Water Power Commission, which held that the San Joaquin Valley irrigationists had first claim on any such rights. With the gauntlet taken up by these irrigationists the situation looked hopeless. Secretary of the Interior Ickes had other ideas, however, and decided to urge upon Congress the creation of this great park, which his friend Stephen Mather had so actively fought for during his lifetime. The Secretary personally met with and satisfied the irrigationists that their problems could best be solved in other ways, and also promised to urge upon Congress the building of the Pine Flat Reservoir to take care of their needs. Congressman B. W. GEARHART, from Fresno County, was enlisted to introduce the measure. Too much credit cannot be paid him for his fearless advocacy of the bill in the face of powerful local opposition and unsuccessful attempts

to discredit his motives. It is doubtful if any one thing has been done in a long while which in the long run will redound to the greater advantage of Fresno County than calling the attention of the entire country to the scenic marvels included for permanent preservation in this outstanding park.

THE SIERRA CLUB'S PART

The board of directors of the Sierra Club, recognizing that the time was ripe, put the whole force of the club behind the project, and called on its members and kindred organizations to assist. Thousands of finely illustrated pamphlets descriptive of the region were printed (not "hundreds of thousands," as a hostile Congressman charged on the floor of the House when the bill was called up for debate) giving the reasons for creating the park and answering objections. The Sierra Club can justly be proud of the part it played as the rallying point of the western clubs and other advocates of the measure. The club's prestige is enhanced immensely by the outcome. Great credit is due the American Planning and Civic Association and to Horace Albright, its president and former Director of the National Park Service, and to Miss Harlean James, resourceful and vigilant secretary of the Association; also to the emergency conservation committee and Mrs. C. N. Edge, its chairman; to Mrs. Linnie Marsh Wolfe, of the John Muir Association; and to Mrs. Edmund C. Brown. They gave most effective aid at critical times. It would be difficult, if not impossible, to single out and name other organizations and individuals who should receive credit, for their name is legion. Our own members responded nobly on the many occasions when S O S calls were sent out. Mrs. Wolfe wrote from Washington, D. C.: "I have been told that final passage was precipitated by the flood of letters and telegrams that deluged the Senators. They appealed to KEY PITTMAN to withdraw his opposition and let the bill go through."

There is one member of the club who deserves special mention. In 1924, when the Sierra Club party was returning from its summer outing in Glacier National Park, Dr. George C. Thompson came to me as chairman of a committee to raise a fund testimonial to the successful management of the trip, and asked for suggestions as to what should be done with such contributions. I told him that no greater good could be accomplished than to create a fund to draw on for the "sinews of war" necessary to carry on a campaign to bring about the creation of a national park embracing the Kings River area. My suggestion was adopted, and approximately $1,800 was raised in this manner. It was placed in a savings account, and, with accumulated interest, amounted to approximately $2,100 when this latest movement to create the park started. It is certain that, without this fund to draw on, the work of the Club would have been seriously handicapped, for it is doubtful if the directors would have felt justified in authorizing such a large expenditure from the treasury. As a result the regular funds of the club were drawn on for only a comparatively few dollars, and the club now owns the very fine color film of this new park region, taken last summer by David Brower and Richard Leonard, the cost being paid out of this special fund.

NEW PROBLEMS TO SOLVE

The National Park Service will be confronted with some very serious problems in administering the new park area. The recently completed road into the South Fork Canyon will attract a flood of visitors, and criticism is bound to follow because it has not been possible to prepare adequate accommodations. Cedar Grove and other areas within the reservoir site excluded from the new park are now under Forest Service jurisdiction, and the road does not now extend into the park at any point. This is bound to cause confusion because of divided jurisdiction. However, we are certain that those of our members who visit the canyon this year, whether with the annual outing party or separately, will cooperate with Park and Forest representatives in every possible way to lighten their difficult tasks. It will take months and even years to iron out all the problems. We have good news in the fact that Dr. Harold C. Bryant, formerly of the University of California, and in charge of the National Park Nature Guide Service, has been selected to take over the superintendent's duties during the transition period, which will require careful and tactful handling.

Of course, we all regret the exclusion of Tehipite Valley and the Cedar Grove part of the South Fork Canyon from the new park, but the situation is far from hopeless. The creation of the great surrounding park will do more than anything else possibly could to convince the public of the desirability of eventually adding these areas. They are outstanding in impressiveness and scenic majesty, and when the thousands who visit this area recognize this fact, even local sentiment will realize that their greatest value lies in perpetual preservation as a part of the great park to which they naturally belong. The studied and mature reports of the Army and reclamation services indicate that the asserted need for these reservoir sites can be satisfactorily supplied elsewhere in the Kings River watershed.

We wish to thank personally all the good friends of the club who responded so generously to our repeated calls for aid during the progress of this legislation, and I know that they will all share with us the realization that a good fight for the right has been won—that John Muir, in spirit at least, is rejoicing that the great work which he started is being carried on so effectively by the organization which meant so much to him during his lifetime.

WM. E. COLBY,
Secretary of the Sierra Club.

Political Shadow Boxing and Judicial Juggling

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. HOFFMAN. Mr. Speaker, it may be good policy in some instances to keep the left hand from knowing what the right hand is doing.

Large appropriations do not overnight bring adequate national defense, nor does one rule for industry and another for labor tend to create the coordination which is necessary if a nation is to arm.

The President will do well to read, consider, and then profit by the experience of other nations which have met disaster.

From the Chicago Tribune of yesterday let me quote:

[From the Chicago Tribune of May 29, 1940]

BLUM, MACDONALD, AND THE NEW DEAL

The grave news from Europe ought to give pause to those who have been trying to rush this country, unprepared as it is, into the war. The day's budget of domestic news ought to serve further to dampen the ardor of the war hawks. It is all too clear that this country is in the Blum-MacDonald period.

The same papers which reported the surrender of King Leopold told of the United States Supreme Court decision in the Apex Hosiery case. A manufacturing company had been the victim of a particularly inexcusable and violent sit-down strike. The company had sued under the Sherman law for triple damages, alleging an illegal conspiracy on the part of the union to interfere with the flow of interstate commerce. The company had won in the lower court, but the verdict was reversed in the Supreme Court on the ground that, though the offense was grave, it did not fall within the terms of the Sherman Act.

Chief Justice Hughes and two of his associates dissented. It is not necessary at this point to discuss the opposing views of the law; the point which needs to be stressed is that the company saw only a slim chance, if any, of obtaining justice under the State laws of Pennsylvania and has now discovered that the Federal Code offers no protection whatsoever against violent and conscienceless interruptions of industrial production.

Just as in France under Blum, and in Britain under MacDonald, our Federal Government is all sail and no anchor. Our recent legislation has all been directed at establishing the right to disrupt the economy of the country and lessen its productivity. Unions are encouraged to prevent the training of young men in the more intricate trades. Hours of labor even in the armament industries are narrowly restricted. The Federal Government has disrupted the coal industry and the power industry and encouraged revolutionaries to organize the basic metal trades and the motor factories.

The objection is not to unionization but to the encouragement of violent and subversive unionization. Mr. Roosevelt has opened the door of industry to the "fifth column," just as Blum and MacDonald did in their countries, and has taken no steps to impose restraint and regard for the common danger and common welfare upon those he has raised to power. The Federal Government has assumed jurisdiction over the milk industry, but under Mr. Roosevelt does nothing to maintain the milk supply of Chicago. His Supreme Court has said that virtually all industrial labor is subject to Federal regulation, but his laws are all directed against the employer, whose chief desire is to make and sell more goods; none of the laws discourage interruptions of production by men of violence acting under the guise of labor leaders.

The latest of the New Deal laws is the La Follette bill which, even with its amendments, is still vicious legislation. It forbids the employer to take any effective steps to combat a strike, no matter how unjustified the strike may be, no matter how unpopular it may be with the rank and file of the employees, and no matter what forms of terrorism are employed by the pickets. Here is another evidence that the New Deal is determined to make it as easy as possible for the Communist "fifth column" to disrupt industry.

It is this same Government which is edging an unprepared Nation toward war.

Behind the Ballots

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. James A. Farley, chairman of the Democratic National Committee, at Wellesley College, Wellesley, Mass., the night of March 20, 1940:

I am extremely grateful to Miss McAfee for two reasons: First, for inviting me here, and second, for asking me to discuss a subject with which I am fairly familiar. The second reason is important because after many years of experience in appearing before the public I have arrived at the solemn conclusion that a college student body is a very exacting audience. The remark is not intended as a criticism. On the contrary, it is a compliment.

College students are the busiest folks I know and when they set aside an evening to listen to a speaker they expect to be compensated by hearing something that is worth while or at least new. A youthful audience is also an alert audience, and the speaker who might be careless about his facts has small chance of having his errors passed unnoticed.

I am also pleased to be here for a very personal reason. Usually when I attempt a public appearance there is no member of the Farley family in attendance and if the talk happens to be broadcast, the family radio is silent as the tomb. I assume that attendance here tonight is compulsory for one member of the family so that Betty will be compelled to hear me out, no matter how painful the ordeal may be.

The subject of this talk is Behind the Ballots, and the purpose is to reveal something about the business end of electing a President of the United States. By the business end, I mean the work of directing the complicated party machinery by means of which a candidate's claim for the office is put before the public.

The Constitution did not make provision for political parties. Yet they have come into being and continued to flourish until today the part they play in the election machinery could be performed in no other way.

We are fortunate in this country in having the two-party system, by which I mean that the vast majority of voters adhere to one or the other of the two major parties. There are several minor political parties, of course, but very rarely do they command enough support to wield the balance of power or change the outcome of an election. If there were a dozen or more parties, appealing to the electorate on sectional or class issues, the election of a President by majority vote would be impossible. And majority rule is the lifeblood of a democracy.

Democracy is the finest system of government yet devised by man, but it is not self-operating. It has been tried in a number of foreign countries with tragic consequences because the people were not sufficiently disciplined in its use. The reason democracy works so well in this country is due to the fact that the people have been educated to the wise use of the popular referendum.

They have learned the greatest lesson that democracy has to offer—and that is the lesson of tolerance. By tolerance I mean the disposition to respect the opinions of other groups, no matter how distasteful they may be, and a sincere willingness to abide by the decision of the majority. We have witnessed many hotly contested elections in this country in recent years, but when the ballots were counted the losers yielded gracefully and accepted the fact that the will of the majority should prevail until the next national election. There has been no post-election violence and no hint that such tactics should be employed.

I have digressed briefly to show the function of political parties in the election system. Next in order is a consideration of the practical methods employed in the task of trying to elect a President. I shall talk about the Democratic Party because I know more about it, although the Republican Party is organized in essentially the same manner.

The Democratic National Committee is composed of 2 members, 1 man and 1 woman, from each of the 48 States, and also 2 each from the Territories and insular possessions. The committee is a continuing body in that it functions between elections and maintains national headquarters at all times. However, the peak of the work is concentrated in the few months intervening between the nomination of candidates and the election in November. We are approaching that period now.

Party headquarters are peaceful and quiet under normal conditions, but the atmosphere is soon changed when the actual electioneering gets under way. The excitement of political campaigning is intense and all save a few hardened veterans usually become its victims. While much of the daily labor is little more than drudgery, the morale is kept at a high level by this eager interest of the workers in the election outcome.

The ordinary routine of the committee can be carried on by relatively few employees, but during the campaign activities are expanded at a breathless rate. Whole new divisions must be set up, organized, and made to function in the short space of a few weeks. Each division head has a vital part of the election machinery to watch over. There is a labor division, an agricultural division, a businessmen's division, a speakers' bureau, a women's division, a veterans' division, a foreign-language division, and many others.

I failed to mention the finance division, although without this important arm of committee activity a campaign would be impossible. The cost of running a national campaign under present-day conditions runs into millions of dollars, and you can imagine the heavy duty which lies upon those responsible for coaxing such an amount of cash into the party treasury. It may be of interest for you to know that the Democratic National Committee expended $1,876,000 in the 1932 campaign and $3,866,000 in the 1936 campaign. A finance director is usually appointed, with several assistants, and a local finance director in each State. The gentleman selected for the task must be a genius in his line; he must bring in sufficient funds to meet a huge weekly pay roll with only a minimum amount of time in which to make an appeal.

The women's division should be particularly interesting to a Wellesley audience. Based upon our experience in national elections, it has been made a permanent part of the committee organization instead of a temporary campaign device. The decision to make this a permanent division was not arrived at simply as a gesture of gallantry to our feminine coworkers. It was founded on a common-sense realization of the ever-growing influence wielded by women in the field of politics.

When the nineteenth amendment, or suffrage amendment, went into effect, it was said by those who disapproved that the size of the electorate would be doubled without improving the quality. These same critics complained that women had no interest in public questions and would simply vote as the men folks voted. For a few years it may have been true that the influence of women voters was negligible. That is decidedly not true today. They are exercising the right of suffrage on a broad scale, and their views are having a wholesome effect on the kind and character of public issues.

I am happy to give testimony to the fact that women are excellent political workers, and in some respects they are more efficient than the men. They have an intense interest which never lags, and they have less inclination to shirk the small tasks, upon the performance of which so much depends.

The Democratic Party was fortunate to have as the head of its women's division for several years, including the important election year of 1936, Miss Mary W. Dewson, a graduate of Wellesley College. Those misguided individuals who still think that women are ignorant about politics apparently never had the pleasure of knowing Miss Dewson. In all my experience in public life, I never met a person who had a finer talent for political organization and administration than Molly, as she was known to her associates. She had the ability to direct other people with a minimum of effort and she knew how to bring forth the best efforts of her subordinates while at the same time maintaining their respect and good will. She never allowed trifles to pile up and obstruct her view of the goal ahead. This is a high art in politics, and Miss Dewson's grasp of the fundamentals made her a truly great political commander.

Her concern in politics went beyond the mere winning of elections. For many years, before becoming actively associated with a political organization, she devoted her energies to the improvement of social and economic conditions among the lower income class groups. She had sincerity of conviction, and it was this sincerity that enhanced her ability to influence the opinions of others.

The publicity division of the national committee might be described, in military terms, as the ammunition supply base for the rest of the Army. It has the primary duty of providing facts, figures, and arguments to confound the political enemy. It must exploit the attractive qualities of the party candidates and reveal the weak points of those on the other side. The publicity division has many and far-flung activities. In addition to supplying the usual campaign material such as pamphlets, posters, and other types of literature, it must make the fullest use of the new means of propaganda which have been developed in comparatively recent years. I refer to the moving picture, the newsreel, and the radio.

Development of the radio to its present high state of efficiency brought a new factor into political campaigning. While everyone realizes the importance of broadcasting in influencing votes, I doubt if anyone yet has been able to gage its exact significance. It is interesting to note that since the ownership of radio receiving sets became almost universal in this country, there has not been a close Presidential election. This may mean that the voters disregard other appeals and simply reach a verdict by listening to the opposing candidates. Or it may mean something entirely different. In any event, it is easy to understand why the major political parties allocate as much money as they can possibly spare for radio broadcasting.

Having reviewed the work of a few divisions, a question might arise as to the duties of the national chairman. The idea may be gathered that all he has to do is to sit back and watch the others

work. However, the position is not quite as simple as that. First, there is the duty of coordinating the various divisions, of making certain that their activities do not overlap, or, worse still, contradict each other. If a letter of instruction goes out under the signature of the chairman or someone else, a copy must be seen by each of the division chiefs. Otherwise, without that precaution, the workers in the field might be puzzling over very contradictory letters of advice.

The chairman of the national committee must be at his desk from 9 o'clock in the morning until midnight from the opening of the campaign until its close. Much of this time is consumed in directing the work of the various divisions and in replying to letters which number many hundreds daily. He must also be prepared to exchange views with prominent party leaders who arrive at headquarters in a constant stream. These are Governors, Senators, and other individuals of eminence in their own States who have a right to expect a personal chat with the chairman. Very often information is obtained in these personal interviews that can be gotten in no other way.

But the first duty of the national chairman is to act as a field marshal for the Presidential and Vice Presidential candidates. He should be able at all times to tell how the battle is progressing. He should have a correct estimate of his own resources and a fair understanding of the enemy weaknesses. The arithmetic of elections, after all, is comparatively simple. There are 531 votes in the electoral college, apportioned on the basis of State populations. The goal is to win a majority of 266, and a smart commanding general should know where he proposes to get them. A map with State lines sharply drawn, and State electoral votes marked in bold type, is always a conspicuous exhibit at national headquarters. In fact, every individual with a keen interest in election outcomes should have such a map.

Before a campaign is long under way, it is usually possible to determine the doubtful States, or those States whose electoral vote will determine the election. Perhaps you have heard the expression that as New York goes, so goes the Nation. Note I didn't say as Maine goes, so goes the Nation. The reason for New York's importance is relatively simple. Because of its large population, the State has 47 electoral votes, or between 8 and 9 percent of the total vote. A swing of that margin has been enough to win more than one Presidential election. Illinois and Ohio are 2 other pivotal States for the same reason.

The task is to find the States where sentiment is close and to concentrate campaign activities in those areas. A campaign manager who wasted his efforts on States already won might find himself very much embarrassed on election day. How is it possible to gage the drift of sentiment in advance of the actual balloting? In other words, before people vote, how do you know how they are going to vote?

The straw vote, or sampling method, as it is called, has become a favorite preelection sport in recent years. Americans are fond of guessing games and there is nothing quite so fascinating as the pleasure of anticipating the results of a Presidential election. It must be conceded that these straw votes frequently hit the mark with surprising accuracy. On the other hand, they often miss by a wide margin, as did the unfortunate Literary Digest poll in 1936.

The straw-vote method is used sparingly by those directly engaged in political management. The time-honored custom is to depend upon the knowledge and judgment of the vast army of local workers who have become familiar with the voting habits of their neighbors through years of experience. There is at headquarters a list of every Democratic county chairman and woman vice chairman in the United States, numbering several thousands, and in addition the names of national committee members, State chairmen, Governors, legislators, and other active party workers. They comprise the field forces. They are canvassed regularly for their views and they are urged to report at once any shift in sentiment which may come to their attention. This system calls for a large volume of correspondence, to say nothing of the labor involved in sifting and analyzing the reports. But the final result is worth the effort because the method provides an invaluable index of public opinion.

During the 1936 campaign, we had a special list of about 2,500 key workers, mostly in the pivotal States, who were instructed to report at regular intervals. This group was composed of individuals whose judgment had been tested and found dependable in predicting the results of previous elections.

The accuracy of this private survey was remarkable. The June reports disclosed that the Republican candidates were finding popular favor. A couple of months later, in September, interest in the Republican ticket had slumped considerably, and the public was mainly concerned about President Roosevelt's proposed speaking tour, which had not then gotten under way. By late October the reports disclosed a groundswell of sentiment in favor of the Democratic ticket. The final check was made by telephone a few days before election. From headquarters in New York we called literally hundreds of these key workers, who reported that the tide was mounting and not receding. Upon the basis of this information I made a preelection forecast that President Roosevelt would carry 46 of the 48 States, despite the dire warnings of many earnest individuals at headquarters who felt that it was too absurd to be taken seriously by the public.

I refer to this forecast merely to demonstrate the insight possessed by skilled political observers in detecting the tides of public opinion in their home areas. The one thing needed at headquarters is an ability to distinguish between those men and women who know what is taking place and those who are being carried away by their enthusiasm. That, too, is a matter of experience. It is an odd fact that many public men who are excellent vote getters themselves are unable to gage the trend of opinion when they are not candidates for election.

Although a campaign lasts only a few months, the emotional strain often makes it seem much longer. As a rule, the workers are cheerful and optimistic, they are devoted to the candidates, and they feel confident that victory will perch on the party banner. The atmosphere is bright and happy, despite the burden of long hours and hard work. Then comes a depression period. Nearly everyone is enveloped in gloom. The cause seems hopeless and the workers go about looking anxious and woe-begone. This happens in practically every campaign, and it takes swift measures by seasoned veterans to bring about a change of attitude. The spirit of defeat is too contagious to gamble on its spreading. The mood passes quickly and it is difficult to explain why it came or why it went.

Another trying task for those directing campaign activities is to restrain the enthusiasm of overzealous workers. It is a common happening for individuals inexperienced in politics to suggest issuing statements or engaging in other activities that might do the cause more harm than good. One error frequently made is to assail the opposition candidates too viciously. The public has a keen sense of fair play, and an intemperate attack, founded upon ill temper instead of fact, is apt to have a dangerous reaction.

The exercise of patience is needed to handle the volunteer advisers who arrive at headquarters to tell just how the campaign should be conducted. The hardest person in the world to discourage is the individual who thinks he knows all about political management even without practical experience. I must confess that men are more often the offenders in this respect than women. A sense of humor is the only defense for the ridiculous suggestions that pour in from the beginning of a campaign until it closes.

In these remarks I have covered in a general way the mechanics of political management during the period of a national campaign. There has been no mention of men or issues, although these are the vital, living forces that make politics attractive. There have been many dynamic, forceful public figures in our country who have held a wide following for upward of 25 years. This enthusiasm for outstanding leaders has been one of the biggest factors in bringing people into politics and keeping them there.

I suppose many of you would have preferred having me talk about what is going to happen in 1940 rather than what did happen in past elections. I have some well-defined views on that subject. However, politics has taught me one more very valuable lesson, and that is that there is a time to talk and a time to maintain a discreet silence. And this is one of the latter times. So I am going to close by thanking you most sincerely for your courteous attention to my remarks.

Fifty-Year Fight for Kings Canyon National Park

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE FROM THE PLANNING AND CIVIC COMMENT MAGAZINE

Mr. GEARHART. Mr. Speaker, the enactment of my bill for the creation of the Kings Canyon National Park in California culminated in victory a legislative fight which had its beginning in 1881 when Senator John F. Miller, of California, introduced the first bill to accomplish this end so devoutly wished for through all of the intervening years by all true nature lovers and mountain conservationists.

As incomprehensive as it is strange, the disinterested efforts of naturalists and mountain lovers to confer national-park status upon this unprotected area has met with unyielding opposition down through the years from partisans of other administrative agencies and would-be exploiters of the public domain. Because of the nature of this opposition, the length to which they were prepared to go, and did go, in their endeavors to block this most worthy legislative move, the final enactment of the legislation will ever be to me an incident in my legislative career which I will recall with gratitude to those who assisted me throughout the long-drawn-out legislative contest.

It is with pardonable pride that I ask the consent of the membership of this body that an article entitled "Fifty-Year Fight for Kings Canyon National Park Won," which appeared

in the January–March 1940 issue of Planning and Civic Comment magazine be spread upon the pages of the CONGRESSIONAL RECORD. The article, though short, contains much that will be of historical value in the days to come.

The unanimous consent of the membership of the House of Representatives being indicated, the article which has been referred to follows:

[From Planning and Civic Comment, January–March 1940]

FIFTY-YEAR FIGHT FOR KINGS CANYON NATIONAL PARK WON

When on March 4, 1940, President Roosevelt signed the Gearhart bill to create the Kings Canyon National Park, almost the last step was taken to preserve in the national park system an adequate section of the southern Sierra. John Muir, the first proponent, has been dead for more than a quarter of a century. The list of those who have worked hard to protect the Kings Canyon country from commercial uses contains many names of distinguished citizens. John Muir, Col. George W. Stewart, Robert Underwood Johnson, Dr. Charles Sargent, and Stephen T. Mather did not live to see their dreams realized. But William E. Colby, Dr. J. Horace McFarland, Frederick Law Olmsted, and Horace M. Albright, who labored for many years; and more recently, President Roosevelt; Secretary Ickes; Arno B. Cammerer, Director of the National Park Service; Frank Kittredge, director of region IV of the Park Service; Dr. Joel H. Hildebrand, president of the Sierra Club; Mrs. Linnie Marsh Wolfe, secretary of the John Muir Association; and scores of public-spirited citizens and civic organizations of California have lived to enjoy the results of their hard-won victory. Mention of those who contributed to the final result should not omit Col. William B. Greeley, who, when he was Chief Forester, appeared before a committee of Congress to support the inclusion in the Sequoia National Park of Mount Whitney, the Kern Kaweah, and Kings Canyons as proposed in the twenties; the late F. A. Silcox, who, as Chief of the United States Forest Service, appeared before the House Committee on Public Lands to support the Gearhart bill, which has now passed Congress; and John C. Page, who, as Commissioner of Reclamation, appeared before the same committee to testify that the area was not needed for reclamation projects.

This is an opportune time to recall the piecemeal steps which have led to the conservation of the area now included in the Sequoia and Kings Canyon National Parks. In 1875 John Muir made his first trip to the Kings country and the big trees. In 1879 Col. George W. Stewart began to interest himself in saving the Sequoias from commercial exploitation. In 1881 Senator John F. Miller, of California, introduced a bill into Congress to make a national park of the "whole west flank of the Sierra Nevada from Tehipite to a point southwest of Porterville, from the high foothills eastward to the summit of the range." But the bill was never reported from committee because of the objections of local residents. The lumbermen looked with longing eyes on the big trees, not knowing history would demonstrate that most of the fallen giants were wasted economically.

In 1885 the Secretary of the Interior suspended 18 townships of mountain land from entry, including all or part of the Sequoia groves on public lands in Fresno and Tulare Counties. In 1889, following a meeting in Visalia, boundaries were proposed which included the entire forest region from Yosemite (State) Park to some point in Kern County. About that time the pressure on the Secretary of the Interior to rescind the withdrawals from entry became so heavy that Colonel Stewart and his associates investigated the history of Yellowstone National Park. In a letter from Colonel Stewart to Col. John R. White, dated June 8, 1929, Colonel Stewart stated: "We desired to have a large park embracing Mount Whitney, the Kings and Kern Rivers, and the big-tree areas, but because of the strength of the opposition the little band of conservationists confined their efforts to saving the big trees, then in immediate danger." In his letter Colonel Stewart commented: "The river canyons we thought could be added if we once had a park in existence. We didn't think then the enlargement of the park would be so long deferred."

Due to the combined efforts of John Muir, the California Academy of Sciences, and the little group in Fresno, the acts of 1890 created Sequoia National Park and General Grant National Park, the latter badly shot with private holdings, some of which have never been acquired by the Federal Government.

In November of 1891, following the creation of the all-to-inadequate Sequoia and General Grant National Parks, John Muir, at the request of Robert Underwood Johnson, then editor of Century magazine, published the remarkable illustrated article on "a rival of Yosemite, the canyon of the South Fork of the Kings River, Calif.," which was reproduced in summary in the January–March 1939 Planning and Civic Comment.

In 1892 the Sierra Club was organized by John Muir, William E. Colby, Warren Olney, Sr., Dr. Willis Linn Jepson, and Dr. Joseph LeConte, all names closely linked with worthy conservation and scenic preservation movements in California. From that date on the Sierra Club has consistently fostered all efforts to make of the Yosemite country and the southern Sierra fine national parks.

From 1916 to 1926 there was a bill pending before each session of Congress to enlarge the Sequoia to include the Kings and Kern Canyons and Mount Whitney. In 1926 the Kern, Kaweah, and Mount Whitney areas were added to the park, and this, together with private lands purchased, gave the park custody of 27 groves containing thousands of big trees.

But the Kings Canyon country was still outside the park. For some years it was subject to overgrazing by cattle in summer. But the United States Forest Service, recognizing its superior recreational value, has, in recent years, steadily reduced the number of cattle and sheep.

In 1939 Congressman BERTRAND W. GEARHART, of California, introduced a bill to establish the John Muir-Kings Canyon National Park, to include the famous Evolution Basin, the headwaters of the South Fork of the San Joaquin and of the Middle and South Forks of the Kings River, with 81 miles of the John Muir Trail, incorporating General Grant National Park, and authorizing the purchase of 5,762 acres of privately owned land, including a 4,000-acre tract of fine redwoods on Redwood Mountain.

In spite of the fact that the United States Forest Service joined with the National Park Service to advocate the transfer of the area outlined from the Sequoia National Forest to the new national park, the local commercial opposition to the Gearhart bill has been intense, and more than one lobbyist was sent to Washington to block its passage. However, the House passed the bill on July 18, 1939, and the Senate concluded congressional action on February 19, 1940. With the President's signature on March 4, this great new national park takes its place in the system.

But there yet remains one other step. The lower part of the canyon of the South Fork of the Kings River, which Muir described in his Century article nearly 50 years ago, still lies outside the park—likewise, a proposed reservoir site in the Tehipite Valley. A recent report of the Bureau of Reclamation to Congress recommends the Pine Flat Dam for combined irrigation, flood control, and power, and for future development a large power project on the North Fork of the Kings River. Both of these sites lie entirely out of the new park. The effect of these recommendations should be to release the canyon of the South Fork of the Kings and the Tehipite Valley for incorporation in the national park—to complete the conservation efforts of public-spirited citizens begun over 60 years ago.

The gratitude of the entire country should go to those intrepid conservationists in California, led by the Sierra Club and the John Muir Association, who cooperated with Congressmen Gearhart and DeRouen, Senators Adams and Barkley, Secretary Ickes, the National Park Service, and the United States Forest Service to bring about this long-delayed act of justice and sound land-use distribution.

Members of the American Planning and Civic Association who have done their part to bring about this consummation may feel that they have been in good company and have participated in a conservation event which will take its place in the history of the Nation.

Brewing Industry Willing To Do Its Share Toward Raising Additional Revenue in Emergency—Brewery Executive Expresses Views on Proposed Increase in Tax on Beer

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

TELEGRAM FROM ANHEUSER-BUSCH, INC.

Mr. COCHRAN. Mr. Speaker, St. Louis, the city I have the honor, in part, to represent, produces more beer than any city in the United States. The largest brewery in the country, Anheuser-Busch, Inc., is located there.

The products of breweries today are burdened with larger taxes than ever in the history of the industry. Despite this, the officers of these corporations want to do their share in this emergency that requires the passage of a bill raising additional taxes. I have a lengthy telegram this morning from Mr. Adolphus Busch III, the president of Anheuser-Busch, Inc., in which he expresses the sentiments of himself and associates. Mr. Busch promises cooperation, but at the same time he points out careful consideration should be given to factors which he enumerates in his message. I have presented the message to the Committee on Ways and Means for the information and consideration of its members. I feel it should be brought to the attention of the Congress, and therefore, under permission granted, include the telegram as part of my remarks. The telegram follows:

ST. LOUIS, MO., *May 29, 1940.*

Hon. JOHN J. COCHRAN,
Washington, D. C.:

I have released the following statement to the press:

"The preparedness program proposed by the President transcends all other considerations. We stand ready to bear our fair share of any taxes imposed to meet this emergency.

"New taxation, however, should be equitably apportioned so as not to unduly burden any particular industry and thereby adversely affect the welfare of workers now gainfully employed. To reduce the volume and consumption of beer and create unemployment would defeat the purpose of the tax program and considerably lessen the need for agricultural and other products required by the breweries of the country.

"The brewing industry has experienced many discouraging and profitless years. Only within the past few years has it become rehabilitated. It is therefore to be hoped that the $1 per barrel additional tax recommended by the President will not be exceeded, in order not to discourage the sale and consumption of beer, thus reducing instead of increasing the revenue from this source.

"This is a grave emergency in which we all want to help to the fullest extent of our ability."

After 13 years of prohibition the beer industry was reborn in midst of a depression, and because of need for revenue on part of Federal, State, and local taxing authorities it was a natural object of taxation, resulting in the high beer taxes that now exist.

In view of this particular tax history, we feel that best economic judgment suggests consideration of several factors.

No doubt Congress will give careful thought to possible effect of proposed tax increase on quantity consumed and risk of reducing total revenue expected.

Much information is available indicating that higher Federal tax on beer would not necessarily assure greater total revenue. Since repeal several States increased their taxes on beer and suffered loss in total revenue. One State reduced its tax and enjoyed increased revenue from that source. Prior to prohibition there were no State taxes. Today all States have substantial taxes and license fees on beer.

In past 2 years total national beer sales declined noticeably, according to records of Treasury Department.

If it is decided to increase Federal beer tax, we sincerely hope it will provide additional funds expected from this commodity and that tax will be for duration of emergency only. Practical operation of law should be closely watched to ascertain whether it accomplishes its purpose. We sincerely hope it will.

You may care to pass these suggestions to appropriate committee and remind them brewing industry today is taxed by Federal Government alone in excess of quarter-billion dollars annually. In the short period of 7 years since relegalization the industry has invested many millions in construction and plant rehabilitations, and is paying its workers considerably above average industrial wage. Our company alone invested $18,000,000 in plant replacements and improvements, affording vast employment to all industrial crafts.

You and your colleagues recognize we have always cheerfully borne our share of tax burdens—Federal, State, and any and all others imposed. Our country now faced with grave emergency, toward which we want to contribute to maximum our ability. We alone contributed to Federal Government in excise tax last year the sum of $11,500,000. We now want to go along with any program found advisable to safeguard welfare of our country and its citizens.

But we do ask and hope that our industry will not be singled out and discriminated against. There is every willingness and desire on our part to do our representative share. All we expect is fair and equitable treatment, and if the President's recommendation of $1 a barrel additional tax is adopted, you will find us doing our part.

This message is intended to be helpful and to call attention to certain economic aspects as they appear to us as members of the industry.

Please feel free to call upon us for any data you think will be of value.

ANHEUSER-BUSCH, INC.,
ADOLPHUS BUSCH 3D, *President*.

The Sugar Act

EXTENSION OF REMARKS
OF
HON. PAT CANNON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1940

EDITORIAL FROM THE FORT MYERS (FLA.) NEWS-PRESS

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Fort Myers (Fla.) News-Press]

TORPEDOING THE SUGAR ACT

Typical of the absurdities involved in Government control of sugar marketing in this country is an amendment to the 1937 Sugar Act now on its way through Congress.

One of the objectives of that law was elimination of child labor in the beet fields, which had become a national scandal. This was to be accomplished by withholding benefit payments from producers who employed children.

Passed by the Senate and approved by the Agriculture Committee of the House is an amendment which would subject any producer's benefits merely to a deduction of $10 for each day he employed a child instead of losing the whole benefit. If this isn't intended to let down the bars against the employment of child labor, what can be its purpose?

Florida cane growers are not affected, because they have never employed children. Their only interest arises from the fact that adoption of this amendment again demonstrates the ease with which Louisiana and beet-sugar interests are able to manipulate sugar legislation to suit themselves.

So many absurdities, injustices, jealousies, and ironies are bound up in the sugar-control program that it can never be anything but a bone of contention. This very fact may be working to the advantage of Florida's sugar industry, in the opinion of the Fort Myers News-Press.

With other producing areas, certain refineries, and financial interests fighting among themselves over quotas, benefits, and other special favors, it is possible they may not be able to agree on a new law or even on an extension of the old one.

Either result would be a break for Florida. With all controls removed, thousands of acres of rich everglades land could be put to work producing sugar for the American market. This would mean cheaper sugar for the American housewife and untrammeled development of the continental area that is best suited to supply it.

The Role of Reclamation in the National Conservation Program

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1940

ADDRESS OF HON. JOHN C. PAGE

Mr. GEARHART. Mr. Speaker, on May 14 last the Honorable John C. Page, Commissioner of the Bureau of Reclamation, Department of the Interior, delivered a strikingly interesting address before the section on agriculture and conservation of the Eighth American Scientific Congress, in Washington, D. C. Because of the highly informative nature of Mr. Page's important pronouncement, I believe that he is entitled to and should have a far wider audience than the attentive group that gathered about him on the occasion to which I have just made reference.

I therefore ask the consent of the membership that the text of his address may be spread upon the pages of the CONGRESSIONAL RECORD of this day's proceedings.

The unanimous consent of the membership of the House of Representatives being indicated, Mr. Page's address follows:

This morning I bring you greetings from the Honorable Harold L. Ickes, Secretary of the Interior, who has asked that I give you the following message:

"The first European immigrants came to these shores in search of political and religious liberty. They could have had no idea of the vast and varied natural resources that they and their descendants were to enjoy. Following them, waves of people from all parts of Europe came for economic opportunities which were made possible by the richness of our soil, the power and abundance of our waters, and the great stores of wealth that were locked up in forests and earth and rocks awaiting development.

"Ours is a hemisphere of ample resources. We must keep it so by intelligent conservation. We have wasted in the past and abused our heritage, but I think that we are coming out of that now.

"We have the opportunity to keep this hemisphere a place of plenty. In other lands, we see the unhappy contrast of desperate nations fighting fiercely for the very things with which we are blessed in abundance. Cities are falling, destruction is on the march, nations ruthlessly are being wiped out simply because of the drive to get resources which are ours on every hand.

"Our supreme task is to preserve peace by maintaining plenty in our own lands. The world will need the strength we can give if we do so. It is a destiny which will demand patience, self-control, and farsighted wisdom. I hope that we will have the qualities necessary for the undertaking."

This word from Secretary Ickes outlines the scope of our problem and presents a real challenge to all of us in these American countries.

The biggest job faced by conservationists in the United States, as in any new country which feels the strength of its youth, has been to combat the habit of thinking in terms of limitless resources.

Those who came to settle our section of this continent were so overwhelmed by the extent of its forests, its arable lands, its mineral deposits, its wildlife and marine resources, and its opportunities for abundant life that it was easy for them to gain the belief that, do what they would, opulent America would forever feed her people with a silver spoon.

The attitude of the pioneers toward the new homeland still is strong among us. We have seen the hardwood forests dwindle to scattered woodlots; the wildlife needlessly slaughtered. We have discovered and exhausted oil fields, dug and abandoned mines, used up or wasted mineral deposits. We know that once productive farm lands now are useless, that old fields are gullied, and that the top soil is gone from vast acreages. We are aware that floods have been made more numerous and destructive through mishandling of watersheds, and that sweet water has been poisoned by industrial and city wastes.

We have been and are aware of these things, but as yet they have not made forceful enough impressions to cause us to turn completely away from the methods of the pioneers. As a nation, we still pick our way along the Indian traces in our thinking about our resources. We still half believe what our reason tells us is no longer true, that there is a haven for the profligate; that if one forest is destroyed, another will be found; that if farms are rendered useless, there will always be enough land; that new oil fields will continue to be discovered, regardless of how many are drained.

Great leaders have sounded warnings, as did Thomas Jefferson, about conservation needs. Only comparatively recently, however, has the cry of conservation begun to turn back the tide of blind optimism.

I am not pessimistic, and I know of no sincere conservationist who is pessimistic with respect to the future of America. While we have wasted much of our natural wealth through destructive, greedy, and careless use, we still have plenty left for this and future generations if only we are intelligent and conservative in its use.

With the establishment under President Theodore Roosevelt nearly 40 years ago of two important conservation agencies, the Bureau of Reclamation and the National Forest Service, conservation began effectively to displace exploitation, and the public good was raised as the primary objective in our treatment of two important natural resources. From these beginnings the forward movement has been extended along a broad national front of conservation which has received its greatest impetus under the leadership of President Franklin Delano Roosevelt. During these recent years the Grazing Service has been established to restore and maintain the usefulness of about 150,000,000 acres of unappropriated public lands, the Soil Conservation Service to halt wasteful use of farm lands, the Civilian Conservation Corps to provide useful employment of thousands of young men in furthering the whole array of conservation programs. The Tennessee Valley Authority has been created and new coal and oil legislation enacted. The conservation work of the Bureau of Mines has been increased, and the National Park Service has enlarged its recreational areas by adding to the number of its national parks and monuments. The Bureau of Fisheries and the Bureau of Biological Survey have had their activities greatly expanded and the Bureau of Reclamation has started new construction to make useful 2,500,000 acres of desert land by its program on water conservation in the West.

In any discussion of the present state of development of our activities it is necessary that the word "conservation" be defined. Perhaps the best definition is that given by Secretary Ickes, a leading conservationist and the administrator of most of the programs in the conservation field. Secretary Ickes said, "Conservation means the prudent use of our natural resources without waste or needless destruction and having in mind always that, so far as not inconsistent with our own needs, they should be preserved for the use and enjoyment of future generations."

As Commissioner of the Bureau of Reclamation, it is my privilege to engage in one of the most important of the activities under the Federal Government's conservation program.

It is not understood generally that approximately one-third of the land area of the United States, more than 700,000,000 acres, is arid or semiarid. Rainfall over this vast area in western United States shades downward from 20 inches, and little of the moisture which is received there comes during the growing season for crops. Much of this land is desert. Parts of it are in the borderland, where in some years wheat can be produced and in other years even this crop fails because of drought. The great western mountain ranges generally receive more than 20 inches of moisture. It falls as snow in winter and is the reserve irrigation supply. It runs off in freshets or floods when warm weather comes. Most of the western streams flow intermittently, or periodically swell to great flood heights and periodically dwindle to mere tricklets. Without irrigation no cultivated agriculture is safe throughout this tremendous region. Except for diversions to serve comparatively small areas, irrigation itself is unsafe for the most part unless storage reservoirs can be provided to catch the spring floods and hold their waters for summer and fall use.

Irrigation in the West antedates the written history of the region. Indians practiced irrigation in advance of the coming of the white man The Spanish missionaries introduced improved methods, and earliest settlements by the citizens of the United States within the region were founded upon irrigation.

At the present time there are irrigated about 20,000,000 acres in this dry section. This land has been watered and developed by individual initiative, cooperative enterprise, the efforts of the States, and the Federal reclamation program. As irrigation has progressed, the engineering works essential to the development of water supplies for new areas have become progressively more complex and costly. In the past 20 years the Federal Government, through the Bureau of Reclamation, has been responsible for virtually all of the new irrigation developments. This Bureau is the principal agency in the field of water conservation and desert land improvement in the United States.

The Bureau of Reclamation is charged with the responsibility of making investigations of water supplies and land resources in the planning of projects. Beneficiaries of the projects, who are the settlers on the irrigated land, and the power consumers if hydroelectric development is included, are required to pay back to the United States the costs of the projects. With respect to costs allocated to irrigation, however, no interest is charged. This concession is made in recognition of its national benefits. Otherwise repayments are with interest.

A review of our western expansion shows Federal reclamation to be the most carefully planned step taken in providing for the growth of the United States across the North American Continent. At the outset of westward expansion, the public lands were regarded by the Federal Government simply as a source of revenue. Later, under the homestead laws, a part of the humid, rich Mississippi Valley was used in addition as a means of furthering a settlement and development plan. The land was divided into 160-acre tracts, the amount assumed to be adequate to single-family operation. This policy of encouraging a farmer to own his home and farm and to develop only so much land as he and his family could work, is fundamental even in later irrigation development. The homestead plan worked well enough in the humid region of the Mississippi Valley, but it was not altered when western settlement reached the semiarid Great Plains, where 160 acres were insufficient to support a family. Some of the most critical present-day problems of soil conservation and land use can be traced directly to the failure to recognize initially the differences between land which receives 30 inches or more of rainfall and land which receives only 20 inches or less.

In the decades before 1902 when the Federal reclamation policy was adopted, several attempts were made, by modifying homestead laws, to meet the new problems introduced by expansion of settlement into the arid and semiarid West. The land hungry, however, came too fast for temporizing measures. Some land which should not have been plowed was plowed, and over-grazing of the vast public range areas was not recognized immediately as a destructive force. It soon became apparent that in most western areas, irrigation alone would provide the necessary security for a cultivated agricultural production.

Irrigation had been introduced by private, corporate, and cooperative enterprise in the areas which were patently arid at early dates. Irrigation was sponsored by the Federal Government as well, a tacit recognition of the fact that in arid and semiarid regions policies which had been applicable in humid areas would not bring the desired results. For 30 years, however, although the new and applicable irrigation policy had been adopted, the old policy of encouraging settlement through offering homesteads remained in force beside it. It was not until 1934 that the Taylor Grazing Act was enacted withdrawing public lands from entry, and establishing a program under which the remaining public lands could be protected and rehabilitated. Had the break between the old and the new policies more nearly coincided with the advance of settlement across the 20-inch rainfall line, much could have been prevented that now conservation programs must correct.

A review of conservation activities relating to the land shows that most of them are corrective. The Federal reclamation program is an important exception. It is a planned method of establishing conservation controls on water and land in advance of their use and development.

Let me turn for a moment to the scope of this program.

Since 1902, through the operation of the Federal policy, nearly 53,000 new farms have been created in the deserts of the West, and 258 new cities and towns have grown up among them. Nearly 1,000,000 people live in areas served by Federal reservoirs and canals. One hundred and sixty dams and 48 powerhouses have been built. More than one-fifth of the money expended in these developments already has been returned directly to the Federal Treasury through payments by water and power users. Each year the lands of the Federal projects produce crops valued at more than $100,000,000. The influence on our economy of this great crop value is spread and swelled by processing, transportation, and marketing services, and by its exchange for manufactured products which employ labor from coast to coast.

At this time there is in progress a construction program which within a comparatively few years will conserve additional water to irrigate 2,500,000 acres which still are desert. When fully developed, this land will provide homes for 850,000 people, many of whom otherwise might not have an opportunity to gain security and a decent living standard.

These reclamation projects are pioneering areas. To make successful homes in them, settlers must have the same brand of industry, determination, and fortitude in the face of hardships, for which we honor our forefathers. It is greatly to the credit of the settlers that they have not tarnished a great tradition, but have built communities and modern towns that are worthy.

Looking now to the future, let us inquire as to what the limits of this activity may be. First, let it be clearly understood that hundreds of millions of acres in the West can never be irrigated and farmed. The water supply in the rivers is the limiting factor, for the most part, for along most of the streams, or near them,

are to be found tracts of dry but otherwise good soils in extent far greater than can be served. Some do not understand this, failing to perceive that where there is insufficient rain to make crops grow naturally there will also be insufficient water in the rivers to make them grow over all the area even though all the streams should be utilized in irrigation. Let us ask them to what extent the water supply of the West limits prospective irrigation development.

At present about 20,000,000 acres are irrigated. That is about 3 percent of the land in the arid and semiarid States. Projects now under construction will water about 2,500,000 acres more. When they are completed there will be left approximately 20,000,000 acres which might be irrigated with engineering works we can visualize today. That would make a total of 42,500,000 acres irrigable, by present standards of judging their quality, out of 700,000,000 acres of land, or about 6 percent of the total. The available water then would be largely utilized.

This doesn't seem like a large future. It serves to emphasize the need for carefully planned irrigation developments to conserve the water, choose prudently from among the lands, and make these resources serve best ourselves and our children.

Nevertheless, a future which holds the possibility through conservation of developing 22,500,000 acres of irrigated land is promising. The West now supports upward of 12,500,000 people with 20,000,000 acres irrigated. There is no reason to believe that its population could not be doubled comfortably through the irrigation of 20,000,000 more. We see here, then, the elbow room of America, our place for expansion, for creating new opportunities and new markets, a place to expend a part of our great energies in productive labor, building solidly for the future.

On Free Speech

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE BY MARK SULLIVAN

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan:

[From the Washington Post]

ON FREE SPEECH

(By Mark Sullivan)

A PRIVILEGE ABUSED

I listened to President Roosevelt's fireside chat about national defense, especially what he said about the enemy within our gates, the Trojan horse, the "fifth column"—that such must not be allowed in America. I listened to that and felt assured.

Then, next morning, I went through the mail on my desk. I found some announcements from the Communist Party, publicity hand-outs. I read that the Communist Party is about to hold its national convention, this week. I quote and condense:

"The Communist Party's national convention will be held in New York City May 30 to June 2. The probable Presidential and Vice Presidential nominees, Earl Browder and James W. Ford, nationally prominent Negro leader, will deliver their acceptance speeches Sunday, June 2. The speeches will be heard over coast-to-coast hook-ups of the Mutual Broadcasting System and National Broadcasting Co. from 1:30 to 2 p. m., eastern daylight saving time. The Columbia Broadcasting System will interview Earl Browder over a national hook-up from 8 to 8:15 p. m."

So on one Sunday night, Mr. Roosevelt on the radio, saying there must be no Trojan horse in America; on the next Sunday night, the Communist Party and Mr. Browder on the radio.

The party sends out voluminous advance publicity. Obligingly, for the benefit of newspapers, the publicity hand-outs include advance suggestions of what the party platform will contain. Some of it is attack upon Mr. Roosevelt. Up to a year or so ago they used to praise Mr. Roosevelt. Since he showed sympathy for the Allies, and especially since he favored Finland, the Communists revile him. I quote and condense:

"The granting of war credits to Finland revealed the war course of the administration. Repudiate the militarization and armaments program. * * * The imperialist role of the Roosevelt administration. * * * The Roosevelt administration, supported by decisive sections of monopoly capital, is endeavoring to create 'national unity' * * * which aims to tie the American people to the war chariot of the economic royalists * * *."

Most of the platform prospectus is the usual Communist thing. I quote and condense:

"The Communist Party of the United States stands stronger and more united around the banner of Marxism-Leninism. * * * It is necessary to heighten the Bolshevik vigilance of the party. * * * We must develop to the maximum the international working-class solidarity of the American workers with the workers of the glorious land of socialism, the Soviet Union. * * * The present situation demands of the Communists that they act in the way Lenin taught; in the way taught now by the great, wise leader of the working people, Stalin."

That, ladies and gentlemen is what you will hear when you turn on your radio next Sunday afternoon and evening. You can't escape it. It will be on all major chains. The broadcasts, says the Communist announcement, "were granted by the three major chains in response to our request for free time."

The radio people say, truly, that it is not up to them to keep the Communist convention off the air. They have a policy of giving time for speeches of candidates of all political parties, major and minor. They say, accurately, that the Communists have legal standing as a political party.

But could not the radio people change their rules just a trifle? Could they not say, "We will give time to all candidates for President, except such as are now under sentence to jail?" That would bar Mr. Browder. Or could they say, "We will give time to all Presidential candidates except convicted liars and perjurers"? Or the radio people could bar the whole Communist Party by making their rule read: "We will give time to all political parties except such as are affiliated with a foreign government."

But it isn't really up to the radio companies. It is up to the Government. Whether the Federal Government, or the State government of New York, or the city government, I do not know. Except that there is a responsibility on Mr. Roosevelt. He cannot afford to let America go through the experience of hearing what he said against "fifth columns"—and then, within a week, hearing Mr. Browder and the Communist Party on the radio.

The right of free speech? That is for Americans and American institutions. It is not for foreign governments and their agents and affiliates. From the constitution of the Communist Party of the United States I quote article II: "The emblem of the party shall be the crossed hammer and sickle * * * with a circular inscription having at the top 'Communist Party of the United States of America.' And in the lower part 'Affiliate to the Communist International.'" And article V: "All members of the party shall pay an assessment * * * for an international solidarity fund. This money shall be used * * * exclusively to aid our brother Communist parties in other countries * * *."

Our obligation of free speeech to Communists is a matter, not merely of our Constitution or our Bill of Rights, but of international relations with Russia. America can properly give to the American affiliates of the Communist Party exactly that degree of free speech which Russia would give to a Russian affiliate of our Democratic or Republican Party. And all the free speech they would get in Russia would be enough to say, "God help me," as they face the firing squad.

I am not sure the Russians would permit that much. I doubt if they would permit the word "God."

Extension of the Civil Service

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor for May 21, 1940:

[From the Christian Science Monitor of May 21, 1940]

RAMSPECK BILL ENDORSED AT CENTRAL CONFERENCE

CHICAGO.—Civil-service officials from more than 15 Central States meeting here recently were practically unanimous in favoring the Ramspeck bill, now pending in Congress, which would give President Roosevelt authority to transfer more than 250,000 Federal employees to civil-service status.

The civil-service officials were from both State and city agencies in the Central States, meeting in the annual central regional conference of the Civil Service Assembly. Though entirely a nonpolitical organization, the officials aiming always to improve all of the various phases of the merit system, members see in the Ramspeck bill an indirect means of stimulating interest, extension, and improvement of civil service in State and local governments.

To some observers who believe that the bill will mean the "freezing in" of many New Deal special appointees in the alphabetical agencies, for the bill extends to every Federal job in the country outside of the Work Projects Administration, G. Lyle Belsley, executive director of the Civil Service Assembly of the

United States and Canada, explained that in his opinion the present incumbents would have to pass tests given by the Civil Service Commission and that only those qualified would be given their status.

DEVELOPMENT NOT NEW

"The Ramspeck bill constitutes the only practical way to extend civil-service provisions in the Federal Government," Mr. Belsley said in an interview. "Both Democratic and Republican Presidents have used the Executive-order device for extending the merit system in the Federal service. It is not a new development.

The difficulty, as Mr. Belsley sees it, is that Congress itself has specifically exempted thousands of positions from classified civil service. The Ramspeck bill, he emphasized, will merely authorize the President to bring these positions within the classified list so that they can be filled on the basis of merit.

"History shows," he further stated, "that the extension of the provisions of the Civil Service Act to an ever-increasing number of Federal workers has come largely as a result of action taken by the Presidents through Executive orders."

The 3-day session of the Civil Service Commission in Chicago was in the nature of a laboratory working conference in which officials exchanged views on how to test and give ratings to applicants for jobs, how to classify jobs according to the duties performed so that a man doing twice as much work as another, for instance, could also be receiving twice as much pay, how to give training to men and women while employed so they can qualify for something better farther up the scale of civil-service classification.

COOPERATION STRESSED

"More cooperation" was the theme song in one session when George C. Benson, of the unemployment-compensation commission in Michigan, urged a closer working together of civil-service commissions not only on different levels of government but also those operating in the same localities.

Panic, Then War—F. D. R.'s Policy

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE FROM THE WASHINGTON TIMES-HERALD OF MAY 30, 1940

Mr. THILL. Mr. Speaker, the American people are being excited and inflamed by Roosevelt's policies. The many letters I receive from my constituents all indicate the fear they have that Roosevelt is leading this country to war. They fear that the President wants 50,000 planes, not for defense but for the European battlegrounds. They fear that it will be a reckless waste of money to build 50,000 planes without having pilots to fly them. Of course, they think that we should have the productive capacity to turn out thousands of planes, and that industry should be geared up for any eventuality. But they believe with all their hearts America should stay out of the European war. It looks as if panic, then war, is Franklin D. Roosevelt's policy.

Mr. Speaker, under leave to extend my remarks, I include the following news article:

[From the Washington Times-Herald of May 30, 1940]

PANIC, THEN WAR, F. D. R.'S POLICY, SAYS AL WILLIAMS—FORUM HEARS FLYER HINT 50,000 PLANES WOULD GO TO ALLIES

(By Eugene Warner)

Stating "the spirit of Billy Mitchell is at my shoulder as I speak," Maj. Al Williams, famous flyer, joined Colonel Lindbergh last night in decrying the President's foreign policy, saying flatly that "panic first, then war," was Roosevelt's policy.

In a sensational speech at the National Aviation Forum banquet in the Willard, Williams said America was in no danger of invasion by air or sea, that the President's speeches have been "panic creating," and strongly intimated the President's plan for 50,000 ships was not actually for home defense, but to hand over to the Allies.

FARLEY NO ALARMIST

Another prominent speaker, Postmaster General James A. Farley, told the delegates that this country must improve its defenses to "keep America safe for Americans."

Farley emphasized that he could not be regarded as an alarmist, and added:

"You, too, are not afraid. But you are sane and sensible. You know, as I know, that now more than in a long period of history, national weakness invites attack."

The Postmaster General emphasized that Americans "do not intend to be made the victims of any invader."

CHARGES BUNGLING

Scoffing at sea power in the light of events in Europe, Williams said the United States was following the same "bungling mistakes" of British politicians in still placing its hopes in the Navy.

He demanded that, contrary to the President's announced plans, the proposed new air armada be severed completely from Army and Navy control and be made a separate unit, free of their domination. He termed the President's plans in this respect the "foolish British policy," and said Germany's great gains in aviation were traceable to their air arms having unhampered freedom.

CITES WAR ABROAD

"To support my argument against President Roosevelt's wild flight schedule for a foreign air invasion of the United States, I offer," he said, "a single incontrovertible fact:

"With all their air power the Germans could not attack and subdue England from air bases 300 miles to 500 miles distant. Instead they seized air bases on the north coasts of Holland, Belgium, and France—20 to 100 miles distant.

"PANIC FIRST, THEN WAR

"Each and every stage in Mr. Roosevelt's fantastic itinerary for the air invasion of America," he went on, "would have to be conquered first and air bases established.

"The President must know this—but apparently the pattern is, panic first and then war.

"Assume Germany wins and takes over British war power. Then what? Would the Germans be fools enough to send warships against us, using the same ships that had failed the British? Nonsense; the United States is in no immediate danger of air invasion or any other kind of invasion."

SEES PLANES FOR EUROPE

Speaking of the President's demand for haste, he stated:

"I fear the President wants airplanes in great numbers right now—to toss into this war. If he wants thousands of planes as soon as he can get them, without waiting to build our air force first, then production of planes for Europe is his goal, not the defense of America.

"Not one penny for any such system as recommended by the President for buying airplanes. Not one penny until we are sure of a three-department national defense—Army, Navy, and Air. It is the only means by which we can attain the security we deserve, and for peace, instead of panic, in the minds of Americans."

Williams advocated a new Department for Air be established immediately with its own Secretary in the Cabinet, and that a Supreme Council of Defense be set up with the President at its head and members drawn from the House and Senate.

Major Williams' speech at last night's banquet at the Willard followed an address by Mayor LaGuardia, of New York, which closed the 3-day forum held at the Department of Commerce auditorium.

Mayor LaGuardia told the session:

"We should know definitely what is before us," and said it was of paramount importance to have a definite plan before lunging into a vast air-expansion program.

He advocated immediate granting of far-reaching power to the President and Secretary of War to clear away red tape, pointing out that under the present set-up a batch of 201 bombers ordered in March of 1939 would not be completely delivered until September 1941.

Why Mislead the People?

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

Mr. SPRINGER. Mr. Speaker, the President of the United States in his so-called fireside chat, on last Sunday evening, evidently attempting to justify the expenditure of the $7,000,000,000 which have been appropriated for our national defense during the period of his administration made statements to the effect that we had certain munitions of war "on hand and on order." There is a vast difference between the two. With the $7,000,000,000 we should have an abundance of war materials and supplies on hand, because the money has been expended. The munitions of war, which are "on order," will have to be paid for as and when delivered. It is truly a very sad commentary we have to face when the Executive head of our

Nation makes a fireside chat over the radio, taking the people into his confidence, and then by very adroit methods in his statements attempts to leave the impression that we have military supplies and munitions in vast quantities. Yet, they are not "on hand." They are not available now for use. They may be "on order" for delivery at a future date—but when? The record shows that we have on hand only 28 light and medium tanks. When we read that Germany employed more than 3,000 tanks in one engagement in the present war in Europe, we really wonder what the administration has done with the $7,000,000,000 which were appropriated for national defense in this country.

And, too, when the President speaks, as he did in his fireside chat, taking the people into his confidence, and at the same time attempting to leave the impression that we have much war material on hand for our defense of our Nation—when in truth and in fact a very large part of that material is just ordered and not completed, and not paid for in large part—that is very misleading. The people want to know the facts, and they especially expect their Chief Executive to give them the facts about our national defense. This is our country—it is not the country of any one man or group of men, and it is not the country of any political party. The people are vitally interested in their country and in their Government. They want to know the facts about their national defense. They want our national defense to be strong and adequate, they expect that every dollar appropriated for national defense shall be used for that specific purpose and that they will receive one dollar in value for every dollar which is spent. Our people want to protect our country, our people and our institutions, and they do not want their money frittered away by any group of incompetent Army or Navy officials or heads of Government departments. They expect the careful methods of business to be employed in every governmental agency; they expect, as they have a right to expect, that their servants will use care and good judgment in our national-defense program and in its expansion, and that they will conserve the money of the people in every instance. The people do not want another outlay of $7,000,000,000, or of any sum of money, without the full value therefor "on hand."

Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, and to include therein an editorial which appeared in the Palladium-Item, of Richmond, Ind., on Tuesday, May 28, which editorial follows:

[From the Richmond (Ind.) Palladium-Item of May 28, 1940]

HE WAS NOT CONVINCING

During his radio talk on Sunday night, President Roosevelt may have impressed some persons while discussing the equipment of our Army when he gave figures as "on hand and on order."

The joker was in that expression, "on hand and on order." A glance through the appended tabulation will show you how many vital items are "completion figure" or "on order," that is, to be made and delivered in the future, rather than "on hand."

This tabulation is of May 1, 1940. It was provided by the War Department for the Senate Appropriations Subcommittee for use while considering the Army appropriation bill.

Item	On hand	Completion figure
ANTIAIRCRAFT		
3-inch guns	448	500
90-mm. (approximately 3⅝ inches) guns	None	317
37-mm. (approximately 1½ inches) guns	15	1,423
.50-caliber machine guns	1,014	1,683
Directors	168	273
Height finders	142	276
Sound locators	194	801
SMALL ARMS		
Semiautomatic rifles	38,000	240,559
37-mm. antitank guns	228	1,388
60-mm. mortars	3	3,756
81-mm. mortars	183	853
.50-caliber machine guns (pack)	83	962
FIELD-ARTILLERY MATERIAL		
75-mm. guns, modernized	141	1,432
75-mm. howitzer (field and pack)	90	319
105-mm. howitzer	None	120
155-mm. guns, long-range (heavy artillery)	4	96
8-inch howitzer	None	120
COMBAT VEHICLES		
Scout cars	485	1,346
Combat cars	114	208
Tanks:		
Light M2A4	10	734
Medium M2	18	194
TRACTORS AND SPECIAL ORDNANCE VEHICLES		
Tractors:		
Light	93	120
Medium	261	550
Heavy	65	777
Trucks:		
Small-arms repair	79	146
Instrument repair		53
RAILWAY ARTILLERY		
8-inch railway gun and carriage	None	24
AMMUNITION		
Ammunition bomb:		
500-pound	11,928	34,924
1,000-pound	4,336	14,511
Caliber .30 automatic pistol	17,268,000	73,920,000
Caliber .50 ball	25,220,000	53,117,000
37-mm. tank and antitank	75,000	1,205,000
37-mm. antiaircraft guns	46,000	2,624,000
81-mm. mortars	43,000	373,000
75-m. howitzer, high explosive	142,000	382,500
155-mm. howitzer, high explosive	925,000	1,131,000
8-inch howitzer, high explosive	None	29,000
ENGINEER CORPS		
Ponton bridge, 10-ton	1	32
Ponton equipage, 23-ton	1	8
Water-purification unit	4	45
Searchlight, 60-inch mobile	285	1,028
CHEMICAL WARFARE		
Gas masks	407,696	1,297,000
QUARTERMASTER CORPS		
Wool uniform cloth, yards	None	5,500,000
Field ranges	5,000	667,000
SIGNAL CORPS		
Radio set SCR 161	390	1,849
Radio set SCR 171	26	401
Radio set SCR 194	809	2,138
Wire (field wire) (miles)	16,800	65,491
Field telephones (miles)	15,800	47,602
Detector sets	None	182

In the light of these official figures from his own War Department head, the impressive figures mentioned by Roosevelt in his radio address become singularly unimpressive. There is too little on hand, too much on order.

The future—that future which Hitler seems to control so much by his assumption of the initiative—counts too largely as to whether or not we will be prepared if and when Hitler attacks us.

What a deadly gamble we are in now—thanks to the failure of President Roosevelt to bend every effort in the years now past to have the military power of the United States constantly increasing commensurate with the steady growth of the military power of Hitler—to have it on hand instead of on order.

For Peace and Americanism

EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

Mr. KRAMER. Mr. Speaker, today we again honor our dead who gave their lives for our Nation and peace. Much has happened in this twentieth century to awaken our people to the thought of what is ahead, how long it can last, and what will be the ultimate end. Today we find the whole world menaced with wars as terrifying and as devastating as any the world has ever known. We are witnessing unspeakable persecutions and purges and whole lands of people are facing annihilation and servitude. Twenty-two years ago we thought that peace had finally come to a long-troubled world forever, and now again we are witnessing the countries across the sea in their deathly battle. The immediate aspects of this immense subject of peace in the world are the questions relat-

ing to what our Government and our people ought to do, and what they ought to refrain from doing under these circumstances, in order to insure against our involvement in the war in Europe and also safeguard our security with some thought to the American people collectively, and to do anything we can that is consistent with our neutrality laws for peace in the whole world.

No one can tell what the final consequences shall be for these warring nations or what effect the wars shall have on the rest of the world and humanity. We do know that if the war is long continued the result will be devastating beyond comprehension and repair.

Our objectives are to keep the United States out of war upon any other continent, to maintain peace at any cost, and to keep our Nation free from any foreign aggressor.

During the past 7 years we have seen civilization crumble, freedom become enchained, and the lust for power become dominant. The events of the past year have made the issue confronting mankind unmistakably clear. The ultimate conflict of our day is a struggle between democracy and dictatorship, between enlightenment and humanity on one hand and darkness and despair on the other.

The dictatorships are one united menace to the civilized world. The American people, neutral though they should be and are in political action, cannot and will not be neutral or silent in thought. They stand arrayed against aggression, eager to uphold the sacred obligations of preserving humanity and freedom. The majority of our people are strong in their opposition to our country making any move that is liable to expose us to conflict. Our people do not want war, and they shall not have it as long as we can stand and think as one people, the American people. A gratifying element in our favor is the resistance of our people to propaganda. Much of this propaganda originates in our own country, through people with selfish money interests for personal gain. Other comes from well-meaning but misguided people, who let their sympathies warp their usual good judgment. Much also comes from the European countries, who figure that our participation in their wars would be to their advantage. Our people are determined to treat the present war in Europe objectively. They are refusing to become bewildered, confused, and misled by the devices and opportunities of those who wish to see this country participate in war. Our people are wary of foreign entanglements and insistent upon a real neutrality, and their sentiment shall reflect on the Congress of the United States and with all high Government officials.

Everyone, regardless of party, is of the opinion that America's main objective is to keep away from foreign entanglements. Everyone is in complete accord on that matter, but we cannot altogether turn our backs on our sympathies for the victims of warring nations, and our hate for tyranny, lust, and abhorrence of the dictatorships that have ground the peace-loving people into the earth of their country; but we must realize that not our hearts but our common sense shall be our guide.

I rejoice in every action that our Government has taken recently in behalf of mediation and peace. Nothing can be gained for the welfare of mankind through war which cannot be better and more permanently achieved through peace. America is enlisted in the cause for world peace. If we were at war, many great sacrifices would be demanded of us, but we are at peace and we should be willing to make sacrifices necessary to win peacefully what war can never bring.

I am for spending billions for national defense and preparedness, not as a prelude to war, not for weapons, not for aggression, but as an insurance against invasion by any belligerent nation, and a protection against sending any of our American boys to Europe. By being prepared to defend ourselves against a menace that overshadows and threatens the world it will not be necessary to sacrifice a single life, nor will we suffer the fate of the people of Czechoslovakia, Poland, Finland, Norway, Denmark, Holland, Belgium, and France, all peace-loving and valiant citizens whose courage alone was insufficient to safeguard and protect them against aggression.

We also come to the question of doing our honest best for the furtherance of peace, and on that question we will all agree that the last 25 years has showed us that our participation in any entanglement cannot promote peace or save democracy. From the great World War of 1914–18 came communism, fascism, nazi-ism; elsewhere in the world and in our country, too, also came a post-war period of social and political stagnation which finally resulted in the financial panic of 1929 and that long-drawn-out period of depression more severe and prolonged than we have ever before experienced.

Let us band together in driving out the inner forces in our country that want us to sacrifice our freedom and liberty. "Isms" have no place in this land—the land that has been built by Americans, for Americans, and shall ever be the shining beacon of democracy and liberty in the world.

Our young men shall be the instruments through which science shall develop for the good of mankind. Never again shall they be used for the experimentation in the development of instruments of war.

We must follow a prudent and sensible course. We all desire world peace. We have shown evidence of that since the close of the last war. The President left no stone unturned to prevent the outbreak of war in Europe, and he has made it clear that our Government stands ready to assist in a just and enduring peace.

Our fathers have built our country well and have established therein the blessings of free society and a productive economic system. It is our noble task to defend what has been reserved for us and to go forward and keep building for those who are to follow.

Let us pray each day for the restoration of peace throughout the world. Let us pray for a thorough and everlasting peace. American Democracy is our heritage; we are proud of its freedom, its rights, its sovereignty. These precious rights shall be preserved and we shall not become the subjects of dictators.

Let us thank God that we are Americans!

Appropriations for Military Purposes, 1925–40

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

STATEMENT OF THE SECRETARY OF WAR

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Secretary of War:

WAR DEPARTMENT, *May 27, 1940.*

There has been much discussion in recent weeks of the appropriations of moneys to the War Department for its military activities. In order to afford you a factual and long-range picture of those national-defense allotments, I enclose a tabulation of appropriations for military purposes—as distinct from those for the War Department's nonmilitary civil activities—covering a period of 16 fiscal years, 1925 to 1940, both inclusive.

You will note that during that 16-year period the amounts appropriated for the military activities of the Army totaled $6,169,300,000, including $371,300,000 from Federal emergency funds. That total includes not only allotments for the Regular Army, but for the National Guard, the Organized Reserves, the Reserve Officers' Training Corps, the citizens' military training camps, and other military activities.

Of that total of $6,169,300,000 it should be noted that 86.1 percent—that is, $5,314,774,000—were allotted for what are termed recurring charges and improvement of plant. Those items include pay, rations, clothing, repairs, research and development, planning, construction, training, operations, maneuvers, schools, and similar activities. Left for expenditure by the War Department, after those charges, were a bare $854,526,000 for augmentation, modernization, and replacement of arms and equipment, including new aircraft, spare engines, spare parts, bombs, new tanks, antiaircraft and antitank guns, semiautomatic rifles, trucks, tractors, field guns, machine guns, ammunition, and similar matériel.

It should be noted that of this $854,526,000, $509,900,000 went to the Army Air Corps, a comparatively new, but nonetheless vital, branch of the land forces. In other words, of the total of somewhat over six billions appropriated for the military activities of the War Department over a period of 16 years, only $344,626,000, a bare 5.6 percent, were available for the augmentation, modernization, and replacement of arms and equipment for the ground elements of the Army of the United States. In view of these facts it is rather remarkable to me that we have been able to maintain any mobile ground army at all, especially when it is considered that the useful life of much military equipment, such as tanks and heavy motor vehicles, barely exceeds 5 years.

You will note from the break-down that an average of only $21,000,000 per year has been allotted for the modernization, motorization, mechanization, and equipment of the Army's ground forces.

It is my hope that the enclosed tabulation will serve to clear up some of the prevailing misconceptions on the military expenditures by the War Department during the past decade and a half.

Total military appropriations, 1925–40, inclusive	$6,169,300,000
Total spent on fixed charges; food, clothing, housing, training, etc	5,314,774,000
	854,526,000
Total spent on Air Corps	509,900,000
Total left, spent on arms and equipment for ground forces	344,626,000

16 years) $344,626,000 ($21,000,000
32

The grand total in—
Column 2 is 68.1 percent of the grand total in column 6.
Column 3 is 18.0 percent of the grand total in column 6.
Column 4 is 5.6 percent of the grand total in column 6.
Column 5 is 8.3 percent of the grand total in column 6.

100.0 percent.

[1] A total of approximately $36,500,000 was impounded and refunded in 1934. This was taken more or less proportionately from all activities.
[2] Allotments from Federal emergency funds.

Military Training for C. C. C.

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1940

EDITORIAL FROM THE ELKINS (W. VA.) INTER-MOUNTAIN

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Elkins (W. Va.) Inter-Mountain for May 25, 1940:

[From the Elkins (W. Va.) Inter-Mountain of May 25, 1940]

MILITARY TRAINING FOR C. C. C.

A bill which would provide 8 hours of training in military tactics and drill each week for members of the Civilian Conservation Corps was introduced in Congress yesterday by Representative RANDOLPH.

This proposal is not new, but it is especially important at a time when the Nation is embarking on a broad rearmament program which must provide trained manpower as well as machines for waging warfare. Lack of trained enlisted reserves is one of our admitted weaknesses and in our opinion such training for members of the corps would be good for the Nation and good for the boys themselves.

Youths enrolled in the C. C. C. in many instances would be called to service in case of war, regardless of their economic status. In or out of the corps they would be of military age. Called into the Nation's Military Establishment they would find previous training valuable indeed.

There are some who have contended that such training would be in effect discrimination against poor boys, which, of course, is plain nonsense. If war should come rich and poor alike will be called to the colors. In the case of poor boys who would have had military training in the C. C. C., they would have a distinct advantage over their wealthy cousins. They would soon become the corporals and sergeants in the new army.

Yes, by all means, give the youths enrolled in the C. C. C. military training.

Proceedings on the Occasion of Conferring Degree on Hon. James A. Farley by Oglethorpe University

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 30 (legislative day of Tuesday, May 28), 1940

ADDRESSES BY DR. WILLIAM STATES JACOBS, DR. THORNWELL JACOBS, AND HON. JAMES A. FARLEY

Mr. GEORGE. Mr. President, recently Oglethorpe University bestowed upon the Honorable James A. Farley, Postmaster General of the United States, the honorary degree of doctor of laws. The Postmaster General was presented for the degree by Dr. William States Jacobs, of Houston, Tex. The degree was bestowed by Dr. Thornwell Jacobs, president of the university.

I ask unanimous consent to have printed in the Appendix of the RECORD the address of Dr. William States Jacobs and Dr. Thornwell Jacobs at the baccalaureate exercises, Atlanta, Ga., May 26, 1940.

Mr. President, I also ask that the able, practical, and interesting address of the Honorable James A. Farley, on the occasion stated, be inserted in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

ADDRESS OF DR. WILLIAM STATES JACOBS, OF HOUSTON, TEX., IN PRESENTING JAMES A. FARLEY, POSTMASTER GENERAL OF THE UNITED STATES, TO THE PRESIDENT AND BOARD OF TRUSTEES OF OGLETHORPE UNIVERSITY

Mr. President, gentlemen of the Board of Trustees of Oglethorpe University, on this auspicious occasion I present for your dis-

criminating favor a great American citizen whom the people of this Nation have placed in a class by himself in the galaxy of American political statesmen.

It is like sending "Owls to Oxford" to extol the virtues of Postmaster General James A. Farley.

By reason of his role of tribune of the people, he has put himself beyond the reach of the carping critics of politics.

By his adherence to the party of the people he has discarded all armor but the shield of faith, the breastplate of righteousness, and the sandals of peace.

By his choice of a chief he has displayed a comprehension of statecraft that has laid the foundations for an unparalleled career of success in the field of American politics.

By his sympathy he has found favor with the meek who will ultimately inherit the earth.

By his deep study of American life he has become the political seer of his time.

By his radiant blushes—the complexion of virtue—he has left no question as to the sincerity and rectitude of his purposes.

By his masterly leadership he has twice carried the trailing banner of democracy to glorious triumph; and I venture to say that in the fullness of time the American people will crown him with the honor that he has so generously sought for another.

By his clean, high-minded nobility of character and conduct he has raised the profession of politics to a height that has left his competitors on the lowland of despair.

By his matchless smile he has made many a Republican's wife vote the Democratic ticket.

For a decade in American politics he has done the work, while the honors have gone to others; and all he has gathered for reward is the privilege of reading the post cards and the dead letters.

A list of his business activities reads like a business directory of a great metropolis. He has been the president of about everything but the United States of America—and I have it from reliable authoritative sources that he might not be averse to that—though I am not at liberty to divulge anything on this subject.

If I might be permitted a word of personal privilege, I would confess that my only objection to the third term is that it would delay my opportunity to vote for him.

He is an ex-member of everything in New York State, except the penitentiary and the asylum, and I am not informed as to his purposes regarding these.

Universities and colleges have conferred honorary degrees upon him. I do not know how many; but I am confident that he will not stop until he has a safe majority of them. He already has as many alphabetical ensignia as the New Deal, and one wonders whether he got the idea from F. D. R., or whether the New Deal got the idea from him.

It is thought that these degrees have been conferred in the effort to get him to divulge the sources and substance of his matchless political wisdom; but when we remember that he chose a political career early in life, and when we remember his rare ability to know more than he tells, we are forced to the conclusion that the crypt of civilization that bulges from his noble brow is sealed until he chooses to open it.

In fact, it is said that his academic career was cut short by the circumstance that, though he knew all the answers to the questions, that the professors asked, he was not willing to divulge them, not even the source of his knowledge.

There are many reasons why Postmaster General Farley should receive the distinguished honor of a degree of doctor of laws conferred by this great university.

The first is because all America loves Jim Farley, and we want him to have anything that he wishes—from a white elephant to a white house.

He is a man of many moods. In one of them, he is the big, jolly Jim Farley. In another he is like the sphinx in Egypt's sands. In another he is a mighty genius for order and organization. In another he is a political seer, easily ranking with the major prophets. In another he is the spark plug of democracy. In still another he is to the Republicans a flaming "blitzkreig," scattering ruin and desolation over the land. While to us Democrats he is like a great, tall angel standing in the sunlight.

In the name of the countless millions of American citizens I present for the honor of the degree of doctor of laws, one who has taught us the law of divine rectitude in the difficult field of American politics; who has taught us the law of loving kindness in the field of religion; who has taught us the law of brotherly love in the field of human relations; who has taught us equal rights to all in the field of social justice; who has taught us the law of liberty in the great battlefield of American statesmanship.

I affirm that he is a worthy successor to others who have stood in this distinguished presence—such as Woodrow Wilson, President of the United States—who stood here and received the honorary degree of doctor of laws. And of Franklin Delano Roosevelt—who stood here 8 years ago and received the honorary degree of doctor of laws, and was subsequently made President of the United States.

And now, Mr. President, I present for that honor the Honorable James A. Farley, chairman of the National Democratic Executive Committee, Postmaster General of the United States, a member of the President's Cabinet, statesman, Christian, and friend—a normal man to an abnormal degree—and may history repeat itself.

President Thornwell Jacobs, at the baccalaureate exercises of Oglethorpe University, used the following citation in bestowing the degree of doctor of laws upon James Aloysius Farley:

"The degree of doctor of laws upon James Aloysius Farley, Postmaster General of the United States, genius in the world of friendship and human kindness, optimistic and constructive political leader in a dark and desperate hour. Presented by Dr. William States Jacobs."

ADDRESS OF THE HONORABLE JAMES A. FARLEY, POSTMASTER GENERAL OF THE UNITED STATES

Whatever the outcome of this war, one thing is certain: The world in which we live after the firing has ceased will be a new kind of world. Old methods will change. New tasks will confront us all. To the members of this graduating class, the challenge of that new world presents itself. To you, then, as citizens of a new world, I offer, as is the custom, a text: "Take ye heed to yourselves."

When we are young, the things that surround us seem to be permanent and indestructible. What we see immediately around us is, to us, the world. We see our parents, and we cannot believe that they will ever grow old or pass from our sight. We see our home, and we cannot believe that it will ever change. We see our friends, and cannot believe that they will ever leave us or grow away from us or forget the fine relationships we share. I know this, because that is the way it was with me when I was young. I dreamed of going away, of course, as all boys do—of going away to big cities, to big work. But whenever I tried to make these visions definite, the big city was only an enlargement of the town in which I lived. The work was only an enlargement of the work I was doing. The world that I knew was my own community. It did not seem possible that it could change, or that the world into which I might go could be different, that it would have different problems or would present unexpected tasks. So, in a sense, the young truly live with the past and with the present. They only dream of the future.

With the passing of years comes the realization of how much of the world that surrounds us changes. As we grow older we become more and more conscious of the temporary character of most things that we know. But the curious thing about it all is that the more we grow conscious of change, the more we seek for the changeless, the permanent, the secure.

This is the greatest paradox of life—that in the midst of change, fully aware that change is inevitable, we human beings eternally long for the things that do not change.

No doubt the students here conceive of this university which they love as changeless and everlasting. But it will change. It will grow. It will offer wider and wider opportunities for the youth of the future, and in the process of growth many of its characteristics may change. Early in the last century brave and far-seeing men established it. The young men who graduated in those days believed, too, in the permanence of the things they knew. It was their college home—to remember, to revisit, and to love. But, as you know, the desolation of war came and left its trail of destruction. Of the old institution, nothing that was physical and material remained. It vanished. It vanished just as so many of its graduates vanished, with the flower of our country, before the terrible fury of war.

Looking back now, we know that a university is not alone a material thing. It is a thing of the spirit. It lives through every crisis, on and on into the future. The spirit of Oglethorpe lived on beyond its physical destruction. This magnificent institution rose from the ashes, larger, more beautiful, and more capable of human service. It rose again and here it is.

So the history of this university teaches us a great lesson—the lesson of the permanence of things of the spirit despite the passing of material things. And as we plunge into the world of building and of destruction, of creating and undoing and re-creating, we must learn to distinguish between those things that are permanent and those things that are temporary. In this dark hour we must ask ourselves: What is it we must cherish, beyond all things, in the world of the spirit and of the mind?

One of these, most assuredly, is popular government—the right of the people to govern themselves, to choose those who temporarily administer the government. This country has developed and has embodied in our Constitution the great idea of representative government. We have learned, after many vicissitudes, many desperate differences of opinion, how to protect the rights of local and State governments, while we are, at the same time, developing our prestige as a nation.

We have learned how to be 1 Commonwealth and 48 Commonwealths at the same time. We have learned how we can and should protect the rights of the States to choose their own officials, administer their own laws, send men of their own choice to Congress, be represented as they want to be represented, and have their special problems presented in the National Legislature.

Representative government affords protection to minorities. It recognizes that complete and utter control by the majority leads to the end of popular government. We protect religious and political minorities not always because we agree with them, but because we know that unless they are protected, nothing is protected. We permit a fellow citizen to speak his mind not because we agree with what he says, but because we know that if we prevent him from speaking his mind, our right, our freedom will ultimately be destroyed.

We separate the powers between Nation and State and within Nation and State. We recognize the distinction between executive,

legislative, and judicial powers. These principles, established by the makers of the Constitution, conceived by great men out of the experience of centuries, are part of the eternal heritage of America. We must guard these principles, preserve them, and apply them in our day-to-day dealings with the problems of government.

And while I am speaking of the separation of functions in a democracy let me add that here in America, beyond any nation in the world, we have observed the essential need for the separation of the church and state. We can never go far astray if we remember that, in the last analysis, certain constitutional protections are rooted in the doctrines that Christ taught while He was on earth. He taught us that the individual has definite obligations to God and also to his country. In the course of long experience we have learned the importance of the distinction. We have learned the everyday pertinence of Christ's injunction: Render therefore unto Caesar the things that are Caesar's and unto God the things that are God's.

A distinction exists, and properly exists, between the institutions of religion and the institutions of free government. Yet the spirit that a free government should represent is rooted in that deep religious feeling that is common to us all. It is rooted in the idea that we are, each of us, our brother's keeper; that a government must represent the human aspirations of the people or it cannot survive; that government must help the afflicted, lift up those who have fallen, protect those who are weak, give support to those who need it, and, above all, develop the spirit of brotherhood among all classes and conditions of people. A free government must be the government of all the people, and not of a few. It must serve them, be responsible to them, and seek always to move in the spirit of justice.

In the world that is lying before us, full of trials and problems the like of which we have never faced before, we must maintain the ideals and the leadership of the United States. That job will grow harder as the years pass. America is strong. But it must grow stronger to cope with the problems of the New World. With bitter warfare shaking the foundations of the world, the hope of mankind must be found in the West.

It is not to speak in the spirit of selfishness to say that we must, as Columbus did, keep our eyes on the promise of the western world. Nowhere has that been more beautifully expressed than in one of the poems of a genius whom Oglethorpe gave to the world. Sidney Lanier told how the great spirit of Columbus held firm to his purpose as, day after day, discouragement shook his officers and the crew. Constantly they begged Columbus to turn back. They told him that, if he persisted, all would be lost; that the world into which they were heading was dangerous, trackless, empty of all except terror. The one answer that Columbus gave, as Lanier puts it for us, was, "Our help is in the west."

Those words may well be the sentiment of a stricken world when the storm of war is past. When that moment comes America must be strong, must be able to take up her burdens.

I like to think today of what that great American, Woodrow Wilson, said on a similar occasion. Wilson once lived in this State. There was, as I understand it, a special bond of sympathy between the institution of which he was the head—Princeton University—and your own Oglethorpe. I believe they were dedicated to the same religious ideals. Speaking before a graduating class in his last baccalaureate address at Princeton, Woodrow Wilson gave the youth of that day a message that is full of meaning today.

"There is a sense," he said, "* * * in which the spirit of truth, of knowledge, of hope, of revelation, dwells in a place like this. * * * It has made some things certain for you, permanently and beyond conjecture. * * * There must be very few of you, if there be any, who have failed to get a definite undoubting grasp of some things that have here become certitudes for you. * * * Mere comradeships and pleasures cannot have satisfied you.

"You must have been fed upon something and been nourished. * * * You are certain * * * that there are definite comprehensible practices, immutable principles of government, and of right conduct in the dealing of men with one another. * * * You cannot be uncertain how it is that men come by happiness or failure; you are sure that there is such a thing as justice and a noble force in men who are righteous and love the truth; you perceive that some governments are free, some tyrannous and cruel, that there is a way of freedom and of peace and a way of certitude and strife in the affairs of men, and that it is all a rewarding study of human life in its realities, in its actual habit as it lives—that you have looked in the face of life, very noble, very tragical, full at once of pathos and of hope."

It is hardly necessary to add to this message of Woodrow Wilson, but I hope I may be permitted to make just one last suggestion to the members of this graduating class.

You are to be cititzens of a new world. Whatever the outcome of these trials abroad, you, as citizens of that world, must offer the strong fiber of your hope and the vast confidence that belongs to Americans. The most tragic of all losses from this war will be the loss of youth, of the able and hopeful and strong young men who will be left dead on the field of battle. Their loss is a loss not to their country alone, but to the whole world. And that loss puts upon the youth of this country greater and more exacting responsibilities.

And so, go out into the world, make yourselves felt, be worthy citizens of the New World Face the truth, however unpleasant, and tell the truth, however difficult. If you would have loyalty from others, be loyal to others yourself. Carry your responsibilities as Americans must. Hold fast to the old spirit in the midst of changing times. Learn to distinguish between the things that are permanent and the things that are temporary. The burden is your burden. The responsibility is your responsibility. "Take ye heed to yourselves."

Real Air Power for the Defense of the United States

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

RADIO ADDRESS BY MAJ. AL WILLIAMS

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD the speech delivered by Maj. Al Williams last night at the National Aviation Forum.

February 28, 1919, I introduced a bill in the United States House of Representatives calling for a separate department for our Air Service. This was H. R. 16195, Sixty-fifth Congress, third session.

DEPARTMENT OF THE AIR SERVICE

Since that early day many bills calling for a Department of Defense, with separate Bureaus of Air, War, and Navy, have been placed before Congress by numerous authors and in varied forms. I am proud to have pioneered this legislation which must some day become the law of the land. In my endeavors I had the hearty support of Gen. William Mitchell, famous World War aviator. Now we have the endorsement of the daring and able Al Williams, airman known to all American aviation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of America, of all ages, good evening. I have been invited to speak to you on the subject of air power and the national defense of the United States. Let us devote a moment to calm, reasoned thinking—worthy of Americans who believe in themselves, in the destiny of this Nation, and in our determination to preserve this Nation free from the hysteria and conflagrations which today are devastating many portions of the world beyond our boundaries. Let us refrain, therefore, from following the all-too-prevalent practice of making the gestures for putting out a fire by pouring gasoline on the flames. With wide-open eyes and cool minds, let us survey the situation.

MEDDLED IN INTERNATIONAL POWER POLITICS

I am speaking to you as an ordinary American citizen who wants nothing from his Government except peace, stability, and a sense of security—and who is deeply worried because for 5 years this administration has persistently meddled in international power politics and, at the same time, failed to provide an adequate national defense system for the country.

And, above all, I am speaking tonight because I believe that it is the sheerest folly to paint a vision of adequate defense until we have, as the first essential, a separate and independent air force which can plan, develop, and operate real American air power without interference and restraint from the Army and Navy.

This recital is not for the purpose of recrimination, but is directly in line with the old-fashioned American practice of looking backward to see where we have been—in order to appreciate where we are—and where we are going.

KNIGHT ERRANT OF THE HUMAN RACE

This country is not the Knight Errant of the human race. The blood of America belongs to America—to no man or group of men—and it must not be shed or mortgaged again in foreign wars, nor on foreign battlefields. That blood is for the defense of America—to the last drop. Defense of America—her safety, the peace of her people, and the ideals for which she stands—can never sanely be construed as waging a war on the battlefronts of Europe, nor in Asia's zone of influence. As a Knight Errant of the human race, some men would have the United States pose before the world, while the knight's armor, his sword, and his shield are made of tin and of obsolescent design.

According to military experts, about 18 months of emergency effort would be required to equip and train an American Army competent in size and power to rate consideration as a first-class fighting force. Woefully deficient in antiaircraft guns of all calibers, strategic reserves, mechanized and motorized equipment, and lacking even the cloth to make uniforms for an army—that, fellow Americans, is the status of the battle efficiency of the United States Army.

BATTLESHIPS ARE NOT FIT TO MEET NEW WEAPON OF AIR POWER

The Secretary of the Navy, himself, has admitted that our battleships are not fit to meet this new weapon of air power. After 20 years to watch the development of foreign air power—as it worked to a position of dominance in Europe's skies—the Navy now reports to us, in this crisis, that it must remodel. No; to be safe, the Navy wants to scrap all our present battleships and build a new fleet.

General Arnold, of the United States Army Air Corps, says our planes are obsolete. I am speaking primarily as an airman, and it has been my privilege to study intimately the air power of the several European nations now at war. Over a period of years I have acquired first-hand knowledge of their principles, organization, administration, policy, and air tactics. I have flown some of the foreign fighting planes whose performances are tossing war-college textbooks and the tactics of sea power and land power into the scrap heap. And in confirmation of General Arnold's appraisal, I say that there is not one squadron of American Army or Navy planes capable of meeting the performances of the British Spitfires or the German Messerschmitts and Heinkels. In the face of this disgraceful accounting our politicians are following the death march of the British admirals in preventing the full development of real American air power by opposing the creation of a unified, separate air force. Our aircraft production has been muddled through this administration's persistent dumping of everything to the Allies.

THROTTLING THE DEVELOPMENT OF BRITISH AIR POWER

The British people first lost control of the administrators of their Government, and they in turn lost control of the army and navy blocs. These naval and military blocs dominating England's rearmament period—from 1936 to the outbreak of this war—went overboard in buying battleships and the wrong kind of war tools, and in throttling the development of British air power. The British Navy could only see the necessity for defending the air over the water around England. The British Army could only visualize the defense of the air over England. Edward, Prince of Wales, upon ascending to the throne, told England that her first line of defense was no longer the British Navy but the Royal Air Force.

We are confronted by coiners of dangerous international phrases, coined in subversion of the safety and peace of America.

Congress alone can save us, and we alone—we ordinary Americans—can save Congress by telling these representatives of ours that we are determined to mend and put our own house in order; that we are demanding the formulation of a coordinated national-defense system—competently organized, administered, and adequately equipped to protect this country—and above all, a unified air force, free from Army and Navy domination.

THE GALLANT SPIRIT OF GENERAL BILLY MITCHELL

The complete answer, as I see it, is (and I can almost feel the gallant spirit of General Billy Mitchell at my shoulder as I say these words): The United States must have a separate air force under a three-way Department of National Defense—Army, Navy, and Air. The development of true American air power must no longer be left in the jealous hands of the land Army and the sea Navy and politicians. To do so is to court the present plight of England, and eventual disaster. Remember these words—because words of similar import were spoken by the airmen of England time and again to the politicians of England, but these politicians all wanted more billions for warships. They got the billions and England got the warships—instead of the air power she needs today to defend herself against the air power invader. Of course, the President tells you we need more warships—and some air power dominated by warship people. The President's information came to him second-hand. My information as to what air power could and would do was acquired first-hand—and much of it from the cockpits of foreign war planes. And that cockpit experience was shared by none of his advisors.

NEW WINGED WAR MACHINERY

Of course, the President cannot see the new winged war machinery if he depends upon advisors who are blinded with warships, and blinded as was Prime Ministers Baldwin, Chamberlain, and Churchill. Loose-thinking men tell you of the wartime weaknesses in a democracy, compared to the dictatorships. That is falsehood. The weakness of England in air power at this moment was not created in wartime. It was created in peacetime by political lobbies refusing to permit the nation to prepare for the future. Democracy is not on trial—it is these weak leaders of democracy who are on trial. What has the form of government got to do with selecting the right or the wrong kind of war tools? Absolutely nothing—and the excuse is a red herring to cover political falsehood.

The American first line of national or hemispheric defense is to be found in American air power—not in warships, and not in the two tiny air services which act as messenger boys for the Army and Navy. Such messenger boys, under competent management abroad, have developed the capacity of destroying their one-time masters. We must now—and God knows the reason is clear—merge our two air services into a separate department and permit the airmen of America to work out the destiny of real power in the air for the protection of this country.

FAILURE OF BRITISH SEA POWER

The failure of British sea power—the greatest sea power in the world—to cut the line of German sea communications through the Skagerrak because of German air power was the death knell of sea power as any nation's first line of defense. This, with the complete dominance of air power over the present battle fronts of Europe, gives conclusive evidence that no army on the land and no fleet on the sea can move with safety within the range of air power unless control of the air over the combat zone is first established. These factual lessons must be incorporated immediately in our own national defense, and this is no time for half measures nor compromise.

A DEPARTMENTAL SYSTEM OF NATIONAL DEFENSE—ARMY, NAVY, AND AIR

We must have a departmental system of national defense—Army, Navy, and air—the civilian leaders of each to be members of the President's Cabinet. We need a supreme council of defense, headed by the Executive, with members of this council drawn from the Senate and from the House of Representatives. Under such a system the United States would revert to the American way of doing business, with the President and Congress jointly formulating the foreign policy—peace or war—the supreme council of defense interpreting that policy and the joint board of secretaries of the Army, Navy, and air applying that interpretation. These things can and must be done—now.

Under the system of a separate air force, the main striking power of America in the air will be coordinated under a single command.

Air power dominates the European War and spells the difference between victory and defeat. None but the politically blind could fail to see this. None but the blind could refuse to recognize that air power already has relegated land and sea power to secondary positions in this war. None but those who will not see could refuse the prime lesson of this war: the need for airpower, built and administered as an independent arm of national defense, comparable to the Army and Navy.

AIRPLANES TO TOSS INTO THIS WAR

The President knows all this—but I fear that the President wants airplanes in great numbers right now—to toss into this war. If he wants thousands of planes as soon as he can get them—and without waiting to build an air force first—then production of planes for Europe is his goal—not the defense of America.

A Congressional Committee should be formed immediately by Congress to carry out the constitutional responsibilities of formulating a modernized national-defense policy by providing a three-way plan for Army-Navy-Air Departments.

We have time to do this, and now is the time.

OCEANS ARE STILL VITAL FACTORS

Oceans and extended lines of communication are still vital factors in modern warfare. President Roosevelt's panicky flight schedule for the air invasion of America is ridiculous, worthy of Hollywood and certainly not of the White House. Four hours from Greenland to Newfoundland, 5 hours to Nova Scotia, and then 6 hours to New England. As an airline commercial schedule those figures might be sustained, but given to us as the flight schedule of an air invasion of America, they are deceiving and panic-creating for ordinary people who the President knows are not able to interpret them.

Such figures, creating panic and terror, are expected to induce peace-loving Americans to plunge into this conflict now, in the belief that they would be forestalling some future disaster.

FANTASTIC ITINERARY FOR AIR INVASION

To support my argument against President Roosevelt's wild flight schedule for a foreign air invasion of the United States, I offer a single incontrovertible reason. With all their air power, the Germans could not attack and subdue England from air bases 300 to 500 miles distant. Instead, they seized air bases on the north coasts of Holland, Belgium, and France—20 to 100 miles from the coast of England. Each and every stage of Mr. Roosevelt's fantastic itinerary for the air invasion of America would have to be conquered for the establishment of major air bases for the enemy attempting the job. The President must know this—but apparently the pattern is panic first, and then war.

Assume that Germany wins and takes over British seapower. Then what? Would the Germans be fools enough to send warships against us and our air power (if we had air power), using the same ships that had failed for the British against German airpower? Nonsense! The United States is in no immediate danger of air invasion, or any other kind of military or naval invasion.

NONSENSE AND BASELESS PANIC

We, therefore, have time—time to provide a competent air defense—but no more time for nonsense and baseless panic, no more time for shipping aircraft to the Allies by men who are more interested in helping the Allies in licking Germany than in saving the United States.

With real air power we could treat any invader of our shores or the shores of any of the Americas to a series of Skagerraks and Norways. If they (whoever they might be) should attack Central or South America, what would our defense be? If the attack is by air, will we invite disaster and defend the Monroe Doctrine with warships? That would be folly, after what we have seen happen in Europe. Is it not sensible that our defense of the entire Western Hemisphere should be attempted with an overwhelming air power that America can and must build—an air power that will strike and return home in far less time than warships would require to reach a distant scene of action. Air power has a most dominant place as an independent factor in the hemisphere defense as well as in the national defense of America.

LACK OF VISION IS COSTING ENGLAND THE WAR

British sea-navy admirals and land-army generals resisted the full development of British air power, and their lack of vision is

costing England the war and killing thousands of men. Plans and time build air power—not money. All the $18,000,000,000 of gold in Kentucky cannot produce one expert airman or one additional plane for America tomorrow morning. The air is an atmospheric ocean. Its machinery and navigation are complicated, and mastery of them is no matter for part-time careers. We are safe against air invasion now. Who dares say how long this immunity will last? Shall we, therefore, wait until that immunity is actually dissolved before we organize to provide full experts and competent machinery—both of which are only possible under another department of national defense?

AIR POWER BEAT THEM TO THE PUNCH

When the Allies contemplated opening up Norway as a new theater of war with preponderant sea power, air power beat them to the punch. When the Allies pressured Italy with sea power, land power, and some air power, the Italian counterthreat of real air power stymied the Allies.

No matter where we look, air power holds the trump cards. This is a fact, not a theory.

The United States can build American air power only by entrusting its development to specialists and freeing those specialists from service and party politics. From the lessons of this war, sea power never will be used again by sane commanders within the range of shore-based aircraft. And under a three-department system of defense, our strategy should be shaped to fit this startlingly clear picture.

If England loses this war, there will be but two sizable sea fleets left in the world, ours and that of the Japanese. The Germans never will get the British Fleet. That sea fleet will be destroyed in the English Channel attempting to prevent air invasion of England or it will be distributed to the several British Dominions, where it will be beyond the range of major aircraft concentrations.

OUR FIRST NEED DEVELOPMENT OF REAL AMERICAN POWER

But let us never lose sight of our first need, namely, the development of real American air power, for which airplanes are the last thing to be provided. A national air-defense policy must come first—to lay down the principles of our needs, which, in every event, must encompass a separate and unified air force. From there on we will need research—aeronautical research—to find out what kind of airplanes and engines must be built. We will need a flight-training program under air-force direction to fit the selected ships and the tactics necessitated by these ships. Then—and only then—comes the mass-production program, to provide ways and means for building air-power machinery in great quantities. These are the three timing gears of air power: (1) Research, (2) pilot training, and (3) production. Let one of them falter and air power becomes air confusion.

AIR-POWER LESSONS IN THIS WAR

I, for one, resent the warning that "the American people must recast their thinking about national protection." I maintain that it is the President who must recast his thinking about national protection. We see air-power lessons in this war, but we can do nothing about incorporating these lessons into our national-defense system. That is the President's job and the job of Congress. The President is Commander in Chief of the armed forces of this Nation. He knew Germany was building 600 planes a month in 1938—and he did not then warn America to do likewise. His recent hope—publicly interpreted as a recommendation—for 50,000 airplanes has only confused the minds of laymen and experts alike. "Ship for ship," he claims for our Navy, "ours are equal to or better than those of any foreign power."

Again I say, Then what? Are our ships better able to stand up to air attack than the warships of England? Certainly not. The Secretary of the Navy himself admits that they are not. Those 50,000 airplanes—certainly we can't pay for them out of the last emergency request to Congress. Those 50,000 planes would cost between eight and ten billion dollars, and if we started to build 50,000 airplanes right now what kind would we build? Our research facilities are puny when compared to those of Germany, and that is the starting point to air power—research.

FIFTY THOUSAND PLANES—WHO WOULD HANDLE THEM?

But even if we had 50,000 airplanes, who would handle them, and who would handle the half-million men necessary to fly and service them? The Army or Navy certainly couldn't do that job since they evidently are unable to handle their own problems now.

It is a blinding flash of the obvious that we need an entirely new department of national defense to handle the air power of the proportions now under discussion. If we had a competent air department today, and had only 10 airplanes in each category, superior or even comparable to the warplanes of Europe, we then would be 10,000 times better off than we are right now. At least, we would have our homework done and we would be ready to move toward acquiring real American air power. Then—only then—would we be in position to talk in terms of mass production.

FIRST—PROVIDING AN AMERICAN AIR FORCE

But of what avail is logic or reason? The Allies don't want our Army or Navy. They want our airplanes—to make good their neglect to see the light we are trying to make Mr. Roosevelt see—now, and they want those planes right now, and Mr. Roosevelt wants to give them airplanes right now—without first providing an American air-force organization for the permanent air defense of America.

The airplanes are for Europe. Additional proof of this is to be found in the recommendation of Senator PEPPER (who has been close to the administration) to turn our present United States Army Air Corps' planes now in active service, over to the Allies.

We have been inarticulate too long; it is time for the real blood of America to take stock of these men who are running our Government, and to demand that they free themselves from bureaucratic prejudices and taboos, and heed the lessons of dominant air power which are being so cruelly taught in Europe today.

KEEPING AMERICA OUT OF WAR

Stand up, America. Stand on your feet, and make known your demands for actually keeping America out of war and building a modernized, efficient national-defense system, which will cause any potential foreign aggressor to shudder at the prospect of attacking the United States. For this, all our resources and our blood. I am speaking directly and forcibly because I saw British politicians throttle and mismanage the development of air power and bring England to her present crisis—short on airpower.

THE RETURN OF THE LOCUSTS

Not one penny for any such system as recommended by the President for buying airplanes—since this system is typical of the years eaten by the locusts. And not one penny until we are sure that with a three-department national defense—Army, Navy, and air—the return of the locusts will be prevented. Real American air power is possible only under such a system, and it is the only means by which our so-called "mystic security" can be converted into the actual security we deserve for the safety of America, and for peace, instead of panic, in the minds of Americans.

Preparedness and Partisanship

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM THE CHICAGO DAILY TIMES

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Chicago Daily Times of May 28, 1940, entitled "Preparedness and Partisanship."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Times of May 28, 1940]

PREPAREDNESS AND PARTISANSHIP

President Roosevelt's "fireside chat" Sunday night was in effect an accounting to the Nation of his administration's stewardship of our national-defense forces. To all but the most partisan the accounting was satisfactory. Our military and naval strength is still far from what it should be. But we've come a long way in the right direction since 1933.

Since President Roosevelt took office, here is what has been done for our national safety:

The Army has been increased from 122,000 men and officers to approximately 240,000.

The Navy personnel has been increased from 79,000 men and officers to 145,000.

The Navy has commissioned or laid down 215 new warships, including actually now in use 12 cruisers, 63 destroyers, 26 submarines, 3 aircraft carriers, 2 gunboats, 7 auxiliaries, and a number of smaller craft.

Naval aircraft have been increased from 1,127 to 2,892 in use or ordered.

Army aircraft actually purchased since 1933 number 5,640.

Antiaircraft guns on hand or ordered have increased from 355 to more than 1,700. Infantry mortars have increased from 24 to 1,600, tanks from 48 to 1,700 either in use or being constructed.

Those figures and the others cited by the President answer those who have prattled about the waste of billions in national-defense funds. Far from having nothing to show for our money, we have the strongest peacetime Army and Navy in history—inadequate though they may be.

WHAT THE PRESIDENT MIGHT HAVE SAID

Mr. Roosevelt did not make the political capital of these facts which he could have had he been inclined to adopt the tactics used by his bitterest critics. He did not point out that it was under three successive Republican administrations that our Military Establishment was allowed to decline to the point of a national disgrace. He did not mention that it was a Republican administration which sank our newest and finest warships, and Republicans who allowed the rest of the Navy to slump far below the point of safety.

Nor did the President mention that it was the omniscience of a Republican, the late Senator Borah, which was responsible for our failure to amend the Neutrality Act a year ago. Earlier amendment might have postponed the outbreak of war. Surely the Allies could have been better prepared.

The talk was that of the leader of a united American people. In the care with which he abstained from reproaching those guilty of irresponsible criticism of his leadership, there was a devastating reply to their misrepresentations.

For those who accuse Mr. Roosevelt of seeking to destroy private industry the reply was adequate: "We are calling on men now engaged in private industry to help us in carrying out this program. * * * Private industry will have the responsibility of providing the best, speediest, and most efficient mass production of which it is capable."

In those same words was the answer to such malcontents as Gen. Hugh Johnson who have been uttering shrill cries of anguish over the administration's failure to secure the aid of practical industrialists.

THE HOME FRONT STILL COMES FIRST

To those who have called the President a warmonger, have accused him of seeking to drag us into the European conflict, the lie was given by Mr. Roosevelt's declaration of continued devotion to the domestic social objectives of his administration. No President seeking to lead the Nation into war would be concerned over maintenance of the wage-hour law, the protection of organized labor, social security, housing, and the conservation of natural resources.

Mr. Roosevelt's attitude Sunday night, as it has been ever since "total war" broke out abroad, was in striking contrast to that of his political enemies. He has had every opportunity to take political advantage of the emergency. Yet he has so carefully refrained from so doing that his opponents have been driven to impute to him those things which he might have done had he chosen to.

Because the President might have dealt a blow to Republican opposition by forming a coalition Cabinet, his enemies have accused him of attempting to do it, although he invited no Republican to join the Cabinet. Because he could use the emergency to cinch his renomination for a third term, they have accused him of doing so, although he has maintained precisely the attitude he has kept for the past 2 years. Because their party almost ruined our national defense, and pooh-poohed every warning of the President, the Republicans seek to blame him for our unpreparedness.

In contrast to the President's behavior, that of his die-hard critics has been a shabby spectacle. Neither their own cause nor the Nation's is being served by such tactics.

National Defense

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

ARTICLE BY WALTER LIPPMANN

Mr. AUSTIN. Mr. President, I send to the desk Walter Lippmann's column, published in this morning's Washington Post, entitled "For the Immediate Defense of American Interests," the most striking paragraph of which seems to me to be the following:

How many more technically scrupulous neutrals must be destroyed before we understand that we are living in a time when security does not depend upon the favor of others but solely and absolutely upon the power to resist aggression?

I ask unanimous consent to have the article published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 30, 1940]

FOR THE IMMEDIATE DEFENSE OF AMERICAN INTERESTS

(By Walter Lippmann)

The Nation must not be misled into thinking that its task is to prepare itself to defend its vital interests at some unknown time in the future when we have managed to organize the capacity to produce 4,000 planes a month. Time is not our ally. We lost that ally of ours, namely the time which democracies need in order to muddle through, when we refused to lift a finger to prevent the war and when later we allowed ourselves to be bound hand and foot in a stiff and stupid neutrality. Whether all the people of the United States have as yet realized it or not, America has already suffered a tremendous defeat. It is a defeat which can be redressed. But it can be redressed only by enormous courage, unflinching sacrifice, and the utmost lucidity and wisdom in our leaders.

The vital interests of America have to be defended now—in the next days and weeks—and by the means now at our disposal. Let no one throw up his hands. They can be defended. But first of all the air must be cleared of the panic which has paralyzed us for 2 years—a panic born of ignorance of the strategic position in the world, and then assiduously nurtured by native demagogs and foreign agents. I mean the panic about sending our boys to Europe. This panic is now and always has been absolutely groundless because, every other consideration apart, it has always been impossible in this war for us to raise, train, and equip a great army and convoy it to Europe. But the unreal fear that we might have to do this impossible thing has totally blinded the mass of the American people to the things that they have the greatest reason to fear. And it has inhibited them from doing the necessary and effective things to protect themselves.

There is no time left for the muddleheadedness which prevents us from seeing that American vital interests have to be defended now and with the means now at our disposal. This can be done if the back-seat drivers who have got us to the edge of the precipice will quit screaming hysterically and will behave like men.

The means at our disposal are the immense potential resources of this hemisphere. But these resources will count no more than the immense potential resources of the British and French Empires, or the immense potential resources of Russia, or of China, unless we demonstrate at once that we mean to organize these resources and that we know how. No one is going to be in the slightest degree impressed by blue prints, promises, and boasts, neither the Allies, who will be measuring their capacity to resist, nor the coalition of their enemies, who will be measuring their capacity to exploit totally the victory which they think is in sight. For we must understand at once that there are degrees of resistance and conquest; that the degree of resistance and conquest is a matter of the utmost consequence to America; and that the task of defending the vital interests of the American hemisphere consists in acting now to prevent a total catastrophe in Europe and Asia—while we insure ourselves as best we can against the worst that can happen.

The only decisive means of action immediately at our disposal consists of the very genuine respect which every nation has for our potential power. Nobody in Europe respects our present military power. Nobody, to be quite candid with ourselves, now respects our capacity or our will to make ourselves formidable; for universally it is believed that our public men are intellectually lazy and uninformed and on the whole not very public-spirited, and that as a people we have been softened and corrupted by sentimentality and materialism. Yet in order to defend our vital interests we need above all other things to make ourselves respected. But this cannot be done by appropriations and committees. We are dealing with governments and peoples who will not be deceived by the gestures which still deceive us. They have made all those gestures themselves, and they know, better than our people know as yet, what they are worth.

What they will be watching, and the only thing which will impress them in the great showdown which is impending, is whether or not we have learned the lessons of Europe and are prepared to apply them, or whether we have to make all the mistakes all over again all by ourselves. Only we shall be deceived, and no one else, by a defense program which is still conceived and planned in accordance with the fatal errors of the Chamberlain Tories and of the British Labor Party.

What are these errors? The first is that the defense program is not based upon the principle of universal service, and it will therefore, be obstructed at every turn by private interests and by interminable negotiations designed to persuade men to do their patriotic duty. The second error is that the defense program is still being presented to the people by the politicians in both parties as a side show rather than as the main business of our lives, or worse still, as a kind of miraculous device for restoring normal prosperity or instituting peacetime reforms and benefits. With this misconception rampant the defense program will not get the priority it must have over all other considerations nor will it get out of us all anything like the hard work and full devotion which it requires. The third error is that the central organization for leading the Nation in this undertaking is still, as Mr. Hoover demonstrated so brilliantly this week, in the primitive and amateurish stage of hydra-headed negotiating and consulting committees rather than of responsible commanders equipped with all necessary legal powers.

We shall neither make ourselves strong eventually, nor make ourselves respected immediately in the crisis which is at hand, unless we can pass promptly and without lost motion through this fumbling period, which has brought such tragedy to all the other democracies. The crucial question, to put it plainly, is whether—before there is irreparable disaster all about us—we can prove that we shall not make the fatal errors of the others, and that, therefore, our immense potential power must command immediate respect. This can be done only by committing ourselves to the principle of universal service, to the principle of the total dedication of our resources, and to the principle that a nation can be armed only by leadership and authority.

No doubt it will take the country and, still more, the politicians, a little time to get over the shock of the proposal and to accommodate themselves to the novelty of universal service and of total dedication. But the third error can be corrected at once. The Advisory National Defense Commission appointed by the President is on the whole excellently chosen. In the appointments which matter primarily, Messrs. Stettinius, Knudsen, Hillman, Budd, and Davis will rightly have the confidence of the country and of the interests they must work with.

But it is not clear how far they are advisers and how far they are executives, and if they are wise, they will, I suggest, take up as their very first problem this question of how the whole program is to be administered and where authority and responsibility are to be centered. To do this they should not only read Mr. Hoover's speech, which is the wisest and most useful utterance since the crisis broke, but they should invoke his help, because he understands the problem better than any member of the commission. They should invoke his help in drafting an advisory report on how to supersede the very commission of which they are members in order to establish a genuine Munitions Administration.

They will come to this later. All experience proves it. So as practical men they should waste no time in going through useless motions, and by taking this line they will demonstrate to the knowing here and abroad that the Americans know what they are doing. That demonstration now will be worth more than 5,000 airplanes a year hence.

Not even if we adopt all these measures—universal service, the dedication of our resources, and the organizing of effective authority—we shall still not have done all the things it is possible and necessary for us to do in order to prevent the disaster from becoming a catastrophe. If we can get over the illusion that we can defend our security in this hemisphere by the rabbit's device of trying to stay very still in the hope of not being noticed—by doing what is called "not meddling"—there are substantial things we can do which will, regardless of the outcome, be immensely worth doing.

We should appropriate a very large sum of money to feed the ravaged people of western Europe, and we should suspend any legal impediments to the delivery of supplies. We should do it first of all because we ought not go to the day of judgment with it on our conscience that we sat around with a surplus of food while the most highly civilized peoples in the world were allowed to perish. We should do it because their continuing resistance now is worth more to us than any arms we can make now. We should do it because we shall need friends in this world, and we shall have none nor deserve them, if we are too cold-hearted and too timid to go on so obvious and so necessary an errand of mercy.

We should also carry out to the full the pledge given by the President in his message to Congress, not only giving the Allies first call upon anything we can produce but we should go beyond it, by making available to the Allies any weapons we possess which are not immediately indispensable to preserve law and order within the inner zone of our strategic defenses. They have financed and built for us whatever expanded facilities we have for the production of planes and munitions. We are immeasurably in their debt for this service, and as a matter of self-respect and of national prudence we should let them have from our stocks everything that is not clearly indispensable. For they have provided us with the facilities for replacing anything that we let them have.

By doing this we shall not be one bit more "involved" than we are. For the powers that we have to deal with will, if they can, do exactly the things they wish to do whether we have or whether we have not been technically neutral. How many more technically scrupulous neutrals must be destroyed before we understand that we are living in a time when security does not depend upon the favor of others but solely and absolutely upon the power to resist aggression?

There are many other things that we shall need to do. But they lie in the realm of diplomacy, of a far-reaching and discerning diplomacy both in Asia and in Europe. We shall very soon be forced to undertake that diplomacy. But that diplomacy cannot be made effective until the United States of America again commands the respect of the world.

Editorial Comment on West Virginia Primary

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Wednesday, May 28), 1940

COMMENTS FROM VARIOUS SOURCES

Mr. HOLT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD, a few newspaper comments about the West Virginia primary election.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

RUSH HOLT should be well pleased with the good showing he made in the recent primary election, and we are very proud to note that so many West Virginians have given their support to one who has fought for what he has deemed as right regardless of where the political ax would fall.

As United States Senator he has a fine record. He is able, independent, and honest. He bows his head to no boss or ruler. He thinks for himself. His views of national questions are sound. He is opposed to waste, extravagance, and bureaucracy. He stands for traditional American ideals and ideas. He is opposed to dictatorship in every form.

Senator HOLT'S vote was a tribute to a young man who dared to tell the truth; even on those who belong to his own party.

Defeated is RUSH DEW HOLT, but even the boy Senator who rode into the national spotlight 6 years ago as the protege of a liberal Democratic Party and soon after became a "lone wolf" in Congress, went down in a manner that approached being glorious. Without organization, he gave his two opponents a race, to the amazement of many. RUSH HOLT will be through as a Senator next January, but who dares say he will be retired from public spotlight? As a senatorial dissenter he's been a burr under the saddle, yet his vote in the primary proves that there are many who agree with him. Perhaps all concerned in the party are glad that the campaign lacked in bitterness toward him.

SENATOR RUSH HOLT MADE GREAT RACE

One of the outstanding features of last Tuesday's Democratic primary was the showing made by Senator RUSH D. HOLT in his campaign for renomination.

Opposed by two powerful political machines in his own party without any organized backing, bearing his own campaign expenses, and even introducing himself at the few political meetings which he addressed, Senator HOLT polled approximately 80,000 votes (more than 80,000).

Senator RUSH HOLT was defeated, but he won. He won the admiration of all clear-thinking people of West Virginia for his campaign, a campaign that bought no votes, a campaign that did not force a single citizen to cast a vote for him because of fear. His supporters were those who believed in him and his independence.

Charles Brooks Smith commented:

"Then the visiting reporter made the last dutiful call. None too keen for it, he postponed making it as long as he could. Young Senator RUSH DEW HOLT was "at home" to him. There was no crape on the door. HOLT bounced up from his chair to greet the visitor. There was that grin and that felicitous glib. There was no dejection, no Gloomy Gus here. The scribe felt surprise. He could not throttle letting loose a sigh of relief. After that things were just about what they always were before the primary.

"HOLT was, in truth, a dissenter, because he would not and could not be a 'rubber stamp.' In a machine-ridden Washington and West Virginia, refusal to be a 'rubber stamp' is risking political death. Some get away with it, like the nine Senators who went through the fiery furnace of the 'purge,' but the rule has been that most of them were involuntarily liquidated.

"A story projected from the A. P. bureau at Charleston said that there were no tear-wet eyes among the hotdiggitydogs of the New Deal in Washington because of Senator HOLT'S defeat. It made a good guess. The story went on to relate that this feeling toward the West Virginian stemmed from his opposition to such administration propositions and pets as ——.

"Its plan to put the judiciary system under political control of the executive branch by enactment of Congress; its various measures socializing and centralizing Government on a collectivist foundation; condoning the politicalization of W. P. A., facilitating it playing politics with human misery, etc. For his oppositions to such radical and scandalous things as these, HOLT was punished by his party at the primary on May 14. The irony in his defeat is that his party in Washington—in the Senate in particular—vindicated him in a majority, if not all, these things. It did it most emphatically in the Court-packing proposal and the W. P. A. scandal and outrage perpetrated on decent and honest Government. Obviously, this was the reason why Editor Smith wrote: 'Perhaps all concerned in the party are glad that the campaign lacked in bitterness toward him.'

"A study of the returns, county by county, shows the class and quality of the Democrats who contributed to the amazing large sum total received by HOLT. It was supplied by that high grade of electoral personnel which, taken from both parties and combined, can no longer muster a majority at the polls in West Virginia. The need exists more than ever for young men of idealism, courage, sincerity, and ability, such as HOLT possesses in full measure, but the situation isn't inviting and certainly not encouraging. It would be expecting too much of sacrifice from the young to sacrifice all they have to offer, which is inherent within themselves, at the threshold of career.

"West Virginia isn't going the way they want to go. And so it has come to pass—definitely—that the future isn't bright for the RUSH DEW HOLT type of young West Virginians—either sex. The nontype—what will happen to them? What has always happened: They will bare their rump to the branding iron and then be turned into the herd."

The National Capital

EXTENSION OF REMARKS
OF
HON. HENRIK SHIPSTEAD
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 30 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM FAIRMONT (MINN.) DAILY SENTINEL

Mr. SHIPSTEAD. Mr. President, at the recent gathering of the delegates of the American Red Cross a distinguished editor and citizen of Minnesota visited the National Capital for the first time. I refer to Maj. Arthur E. Nelson, editor of the Fairmont Daily Sentinel, of Fairmont, Minn.

Major Nelson served as an officer in the War with Spain as well as in the World War. His father served with Grant and Sherman. His impressions of the National Capital and its history awakened patriotic thoughts of our heritage and the sacrifices made to preserve it. He wrote an editorial concerning the subject that I consider worthy and fitting to be printed in the RECORD on this national Memorial Day. I ask unanimous consent that this be done.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fairmont (Minn.) Daily Sentinel]

EDITORIAL CORRESPONDENCE

(By Arthur M. Nelson)

I have been to Washington.

I have visited the Nation's great patriotic shrines.

I have walked along Pennsylvania Avenue.

It has been a long time between generations of Nelsons traversing that historic thoroughfare. Dad beat me to it by just three-quarters of a century

It was in May 1865 that the Union armies of Grant and Sherman united in the grand review at Washington.

Sherman's gaunt regiments arrived direct from their battles and campaigns of 9 months incident to the Atlanta campaign, the march to the sea, the advance on Joe Johnson's heels through the Carolinas

For 2 days the two great armies paraded in celebration of victory for the Union, a fitting and historic climax of their years of service before being mustered out. Dad was a sergeant of Company E, Fifty-fifth Illinois Volunteer Infantry, and he'd told me a lot about that review. I wondered if ever I'd walk where he marched. It's been a long time but at last it happened.

The patriotic shrines visited, and all good Americans should at least hope to one day see them, were, in the order visited, Gettysburg, Arlington, the Unknown Soldier's Tomb, Mount Vernon, Washington's Monument, the Lincoln Memorial.

I felt urgent need to stand at these shrines. I needed a new baptism in devotion to our democracy; not just an ordinary sprinkling, at least a triple immersion. As yet I can't feel entirely certain that it "took."

The Gettysburg field looked just about as I expected. In the old days when wars were fought by hand I spent many sessions at military schools studying and discussing the Gettysburg maps and campaigns. It was a standard text. So it all seemed familiar. In the study of military maps one is supposed to actually visualize features of the terrain, its elevations, depressions, and so forth. So the geography of the place and general details of the 3 days' struggle were something like reviewing a lesson previously studied. And I had known and talked with many men who fought at Gettysburg. The names of two of them—W. R. Livingston and Henry H. Runyan—are inscribed on the Pennsylvania monument which is one of the hundreds on the field.

As battles are fought now, Gettysburg was a puny affair, but of tremendous import. There armies of brave men sacrificed life for principles, and the perpetuity of this Nation was determined.

The battle lines were approximately 6 miles long. The opposing armies formed on ridges running north and south, separated by about a mile of open ground. The entire operations were in an area of only about 25 square miles. All is readily visualized from any one of several towers erected on the field.

Compare that with the battle fronts of a hundred miles and more in the World War, with the gigantic clashes of arms now occurring in Europe.

The shrine at Gettysburg is not where Reynolds fell, where Pickett charged, where the one Minnesota regiment present suffered annihilation to gain a few minutes of precious time at a crucial period. It is not the spot in the cemetery with its thousands of known and unknown dead where Lincoln spoke.

On Oak Hill, an eminence to the north overlooking the battlefield is the giant pillar holding aloft the eternal light, dedicated to peace, justice, liberty, that "these dead may not have died in vain." It is at this point that one senses most deeply the patriotic significance of it all.

At Arlington, verdure and blossoms profuse and magnificent in the warm sunshine of spring in Virginia, one walks where rest thousands of the Nation's defenders. There, side by side, are the graves of many who in life held the highest military rank, winning their fame and glory by the service and sacrifice of private soldiers resting nearby in graves marked "unknown."

Most of the victims of the Maine are interred in their separate plot at Arlington, its central monument a section of the main mast of the sunken ship. One stands there and reflects that but for the rage and demand for revenge that swept the Nation when the Maine was sunk at Habana 42 years ago last February, we would not have engaged in that war, and the writer hereof would not be a pensioner.

He is indeed callous clay who is not mightily moved by Arlington's hallowed surroundings.

I failed to grasp the full significance and majesty of the unknown soldier's tomb. I think this was because of the distracting crowd, many of its members indifferent, gabbing, laughing, romping about. I felt that I had been robbed. Within the crypt may be resting one with whom I had shared common experiences—a comrade. The reaction was, "Oh, the pity and uselessness of it all! Must it be again?"

Mount Vernon was indescribably lovely in the gorgeous Virginia springtime.

The place is largely a restoration, and there must be many changes from the Mount Vernon of Washington's time. The old mansion is, of course, authentic, a fine picture of the aristocratic living place of a wealthy Virginia planter of the period 1750 to 1800.

There is awe and reverence as one stands at the somewhat modern brick mausoleum at the foot of the garden where, fully open to public gaze, are marble coffins containing the remains of the Father of his Country and his wife Martha. But here again solemnity is destroyed by the milling crowd. A guide told us that there are at this time of year ten to fifteen thousand visitors daily at Mount Vernon. There seemed fully that number when we were there. Mount Vernon smacks of commercialism. You pay as you enter.

Washington Monument is more of a curiosity than anything else. There is nothing particularly impressive about it except that it is the highest structure man has ever created by laying one stone on top of another.

The Monument is hollow. Lots of people who live in Washington don't know that. We talked with a public man who has lived there nearly 20 years but has never visited the Monument, though it is the most obvious thing in the city. He sees it every day. Everyone in the city does.

They started to build the Monument in 1848; didn't get it done until 1884. The ran out of money from time to time. One can tell where one appropriation left off and another succeeded. The workmanship is different.

To see the Monument you must walk up its 900 steps. Very few do. They go up in the elevator. As you walk you can see and read the 179 memorial stones set into the walls by various States, countries, lodges, and societies. They, of course, all face inside of the wall.

Masonic lodges predominate among these memorial stones, though the Odd Fellows are a good second. There are several stones placed by the Sons of Temperance, Good Templars, and other foes of alcohol of former days. One reads such inscriptions as "The safety of the Nation depends on the sobriety of its citizens." There is nothing to counteract this sort of propaganda. United Brewers should get busy.

Well up toward the top there is a slab of pipestone carrying the inscription "Minn.," nothing more. Wonder who put it there.

The stairs are not circular but lead from one landing to another. It takes a middle-aged, overweight person about an hour and a half to make the ascent. The interior is electrically lighted. There are no windows or peepholes to shoot through until you get to the top.

Before leaving Washington, we took up with Congress some improvements we think should be made at the Monument. For instance, all the way up and down there are no sanitary facilities, no place to sit down to rest and refresh one's self.

One, of course, never forgets the view from the Monument's top, but you can get one that's better from an airplane.

I visited the lighted Lincoln Memorial after 10 at night, with Senator SHIPSTEAD. Aside from the guard, always on duty, we were the only persons there at that hour.

Never before had I sensed the artistry of great sculpture, had I known that chiseled marble can be made to speak. A feeling of reverence and awe beyond the power of expression sweeps over one. The colossal figure actually speaks and one feels himself in the presence of the living spirit of Abraham Lincoln. The Lincoln Memorial proclaims, does not merely typify, the great idealism of American democracy. In its portals one experiences a "new birth of freedom," feels kindled anew within himself "renewed devotion" to that great Nation of which he is an infinitesimal part.

Traveling Expenses of Federal Officials

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

LETTER FROM HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD a letter I have written regarding traveling expenses of Federal officials.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR FRIEND: I realize that the news from Europe is taking most of the attention of the people but I thought the citizens would be interested in news from this country.

Do you know that the traveling expense of the Federal officials for this year amounts to $80,416,401? Do you know that the amount spent for travel in the last 10 years was $540,190,337?

An interesting sidelight on travel cost was made public by a committee of the House of Representatives a few days ago. Howard Hunter, No. 2 man of the W. P. A. in the United States, does his traveling at interesting times. The testimony of the House shows that Mr. Hunter found it convenient to travel to Louisville, Ky. (where the Kentucky Derby is held) just at the time of the Derby in 1936, 1937, 1938, and 1939 with the Federal Government paying his expenses. Furthermore, it shows that Mr. Hunter found it convenient to be in New Orleans during the period when the famous Sugar Bowl football classic was being held in that city in 1936, 1937, 1938, and 1939. Furthermore, it shows that official business took him to Miami, Fla., during the time of the running of the famous horse race known as the Flamingo Stakes (February 24, 1940).

Mr. Hunter's travel expense came from the W. P. A. money; money appropriated to feed the hungry and clothe the naked.

These amounts may be small in comparison with the total expenditures but if all of these small items are added together, they make quite a sum. You pay for them whether they be small or large, pay for them in everything you spend.

You have seen the slogan, Travel and See America. Many Government officials have used their positions to accept that advice.

Sincerely,

RUSH D. HOLT.

Selected Weeklies Commend Oklahoma Congressional Delegation

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

RESOLUTION BY THE SELECTED WEEKLIES OF OKLAHOMA

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave granted me I am pleased to include herewith a resolution recently passed unanimously by the Selected Weeklies of Oklahoma which have been adjudged the outstanding weekly newspapers of the State. The names of the selected weeklies in question are as follows: Buffalo Journal, Cherokee Republican, Carnegie Herald, Cleveland American, Cordell Beacon, Drumright Journal, Duncan Eagle, Durant News, El Reno American, Enid Events, Fairview Republican, Frederick Press, Guthrie State Register, Kiowa County Star-Review Hobart, Kingfisher Times, Purcell Register, Walters Herald, Watonga Republican, Wayonka Enterprise, Weatherford News, Woodward Journal, and the Yukon Sun.

Permit me to add, Mr. Speaker, that the sentiment expressed in the following resolution is in keeping with that of a resolution passed this week by a unanimous vote of the Oklahoma delegation in Congress and placed in the RECORD by the chairman of our delegation, the gentleman from Oklahoma, Hon. WILBURN CARTWRIGHT.

The resolution adopted by the selected weeklies of Oklahoma is as follows:

Be it resolved, That we, the selected weeklies of Oklahoma, this 26th day of May, in convention at Kingfisher, Okla., go on record as recognizing the seriousness of the international situation of today and the grave problem facing the United States, feel that our representatives in National Congress can best serve the interests of their State and Nation by remaining on duty at their posts in Washington, D C.; and further recognizing that many of them face opposition for renomination and election, and by remaining on duty in Washington may be jeopardizing their political futures, we feel that they should be accorded special consideration in the forthcoming election; and we do therefore pledge our support and commendation to all those who are making the sacrifice; be it further

Resolved, That in view of the Government's plans for the establishment of aerial training bases all over the Nation in the expansion program of its aerial armament, that we recommend and urge that the remount station at Fort Reno be converted into such an air base, due to its excellence of topographical, climatic, geographical, and every other factor desirable in a great aerial training station.

Air Power the Key to National Defense

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

INTERVIEW OF ADMIRAL WILLIAM S. SIMS AND REMARKS OF HON. ELMER THOMAS, OF OKLAHOMA

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an interview by Judson C. Welliver with the commander of our naval forces of the United States during the World War, Admiral William S. Sims, concerning air power as the key to national defense, and remarks in the Senate by Senator THOMAS of Oklahoma.

May I summarize the Sims interview as follows:

In another war, the best thing to do with our battleships would be to send them as far as possible up the Mississippi River, out of harm's way, and send out submarines and aircraft to do our fighting.

1. Something like a revolution in warfare is even now (1927) taking place.

2. Even before 1914, an influential school of naval thought had questioned the usefulness of the battleship. In England, Admiral Scott had become leader among those who regarded the battleship as obsolete.

3. Admiral Sims' article places emphasis on submarine, airplane, and airplane carrier.

4. In the Washington Conference of 1921-22, efforts were made to outlaw the submarine (by England), but this failed. Other powers, regarding the submarine as their best defense, would not consent.

5. Battleship is no longer an asset. Submarine and airplane have clipped the wings of sea power. Even a minor power could confront a blockading fleet with such a force of submarines and aircraft as would make maintenance of a blockade utterly impossible.

6. There is no defense against aircraft except aircraft and antiaircraft guns. Antiaircraft guns on board rolling ships would have much difficulty in hitting aircraft.

7. The development of the submarine has ended the possibility of any power in the future rating as mistress of the sea.

8. The nations will never agree on abolishing the submarine, and because it is here to stay the whole art of naval war has been remade.

9. With the disadvantage of having two ocean fronts to protect, the United States is compensated by the possession of vast oil resources on either front.

10. Our great population, resources, wealth, and industrial capacity constitute the surest guaranty of peace for a long time to come, provided we pursue wise policies of social and economic justice.

11. A separate department of aviation.

How much aircraft should we have for defense? The first thing to consider is not the enemy's number of battleships and cruisers,

but their force of air power. Find out how many planes their carriers will carry. Then we will need a force of airplanes sufficient to smother the enemy's planes. The enemy might possess thousands of airplanes, but we would be confronted only with such number as they could bring, with their equipment of carriers, to our coast.

12. A combination of powers might present a large superiority in battleships and cruisers. But to attack us they would have to move to our shores, and these vessels can carry only about enough oil for the round trip from Europe. In order to remain here and conduct a campaign they would have to bring colliers with fuel and have an advance base near our coast. So our means of defense against them would be principally mines and our submarines and aircraft, to pick off the colliers and other auxiliaries.

13. A bomb from a plane which falls in the water near the vessel sinks to a certain depth and explodes, like a depth charge, against the unprotected part of the ship below the water line. It is even more deadly than if it had fallen on deck.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

REVOLUTION IN NAVAL WAR ENDS REIGN OF THE BATTLESHIP—SCEPTER PASSES TO SUBMARINE AND AIRCRAFT, DECLARES ADMIRAL WILLIAM S. SIMS, AMERICAN NAVAL COMMANDER IN EUROPE IN WORLD WAR—NEW AND DEADLY INSTRUMENTS WILL RULE SEAS HEREAFTER—NAVAL BLOCKADE IS A THING OF THE PAST—ENTIRE ART OF NAVAL WAR HAS BEEN REMADE—UNITED STATES HAS ADVANTAGES NONE CAN MATCH—STARTLING REVELATIONS BY ADMIRAL WILLIAM S. SIMS, LEADING NAVAL AUTHORITY

In view of the assurance that a conference on reduction of naval armaments will be held this year, the opinions of America's foremost naval authority are timely. They are given in the following interview by Judson C. Welliver with Rear Admiral William S. Sims, United States Navy, retired, commander of the American naval forces in Europe during the World War:

"In another war, the best thing to do with our battleships would be to send them as far as possible up the Mississippi River, out of harm's way, and send our submarines and aircraft to do our fighting."

Thus Admiral Sims summarized his view of the battleship. He made the startling suggestion quite casually, as later he did others equally revolutionary. He was seated in the library of his Newport home, whence he looks out philosophically upon the turbulent processes of things naval during this epoch of rapid change.

Admiral Sims continues in retirement the zealous student and original thinker on all problems of naval organization and sea power. For upon him has descended the mantle fashioned and first worn by Admiral Mahan, whose studies in sea power and world power gave a new understanding of these things.

When the representatives of the United States, Great Britain, and Japan meet at Geneva the coming summer to discuss further limiting naval armaments, the whole question of maritime power will enter a new phase. Something like a revolution is even now taking place.

Even before 1914 an influential school of naval thought had questioned the usefulness of the battleship. In England Admiral Scott had become leader among those who regarded the battleship as obsolete. Their views were urged with much earnestness and were combatted with corresponding fervor.

The Washington Conference on Naval Armaments, in 1921 and 1922, resulted in agreement of America, Britain, Japan, France, and Italy to limit battleship construction and fix a ratio of maximum strength in this unit. Efforts to outlaw the submarine failed, though strongly supported by Britain. Other powers, regarding the submarine as their best defense, would not consent. The conference, however, limited future men-of-war to 10,000 tons and 8-inch guns.

BATTLESHIP NEAR ITS END?

Though the Washington agreements were limited to 10 years, there is general belief they will be indefinitely extended and perhaps at last applied to smaller fighting craft. Will the battleship and battle cruiser become obsolete? Will the cruiser fleets ultimately be definitely restricted in numbers? Will the submarine the bombing hydroplane, the airplane carrier, and the destroyer presently become the controlling elements of naval power?

No American is better fitted by training, experience, and public confidence to judge future developments than William Sowden Sims, commander of American naval forces in Europe during the World War, and long head of the Navy War College. Discovered by President Roosevelt as a young officer of vigor and ideas, he was made inspector of target practice and naval aide. Ever since then, he has been close to all naval conflicts, whether in the forum or on the sea. President Wilson's choice of him for the European command met with universal approval.

SEA POWER'S WINGS CLIPPED

"The battleship was once the backbone of the fleet," declared Admiral Sims; "it is so no longer. The submarine and airplane have clipped the wings of sea power. Not merely have new instruments been devised, but the whole strategy of the seas has been changed. The naval blockade, by which the superior power closed the ports of the inferior and cut it off from communications, is of the past. Even a minor power could confront the blockading fleet with such a force of submarines and aircraft as would make maintenance of a blockade utterly impossible.

"The battleship is no longer an asset. If we can imagine a gun being invented to shoot a 3,000-pound projectile 20 miles from the deck of the fastest ship, and to make a substantial proportion of hits, that will suggest a parallel to what has happened to the battleship. There is no defense against aircraft except aircraft and anti-aircraft guns, and the latter have the greatest difficulty hitting a mark in the air. Even on the western front during the war guns placed on the solid earth are credited with requiring 65,000 shots to one hit against aircraft. And guns carried on the deck of a rolling ship would do still worse. As to the submarine, there is no answer. They are building now of 3,000 tons, carrying oil to circuit the world without refueling. They are safe, seaworthy, and habitable.

"At the Washington Conference, Britain sought to outlaw the submarine. If that had been done, her superiority in fighting craft and naval bases would have assured continuance of her naval supremacy. But the other nations would not agree. For them the submarine and airplane are the sure and comparatively inexpensive instruments of defense. The development of the submarine has ended the possibility of any power in future rating as mistress of the sea.

"ALMOST NO ATROCITIES

"Opponents of the submarine emphasize U-boat atrocities. But there were almost no atrocities. It was charged that submarines fired on boats filled with the people from vessels that had been sunk. In fact, there was only one solitary case of that sort. The U-boat commanders were of a high class. They frequently gave tow to the boatloads of survivors, helping them to rescue. In some cases when they had sunk vessels off the Irish coast and left their crews in boats, the submarines signaled Queenstown the location.

"Submarines operating in mid-Atlantic would capture a merchantman, put a prize crew on board, and use her as a base. As other vessels were sunk their people would be transferred to this base ship, which would be held until it was filled with their people. Then the submarine commander would turn the base ship over to its own crew with orders to beat it to the nearest port. The nations will never agree on abolishing the submarine, and because it is here to stay, the whole art of naval war has been remade."

AMERICA'S BIG ADVANTAGE

Admiral Sims' attention was called to the fact that the battleships *New York*, *Wyoming*, and *Utah*, the last three coal-burning battleships of our Navy, have been ordered converted into oil burners. With their conversion the entire line of battle of the American Navy will be composed of oil burners, while the British Fleet will still include five coal-burning battleships.

"The naval strategy of another war," said the admiral, "will be greatly concerned with assuring ample and continuous supplies of petroleum and its products because it is essential as fuel not only for surface craft, but even more so for submarines and aircraft. England, having no significant oil supplies at home, must keep open the routes to the Near East, the Middle East, the Straits Settlements, because from these she must get her oil. The United States would be concerned about communications with Mexico and the Caribbean countries and to keep the Panama Canal open for movement of oil between the east and west coasts. But the problem is not so urgent with us, because of our huge supplies of oil within our own borders. For a naval campaign in the Atlantic, the fighting craft, whether on the surface, in the air, or under the sea, would be supplied with oil from the eastern and midcontinent fields. If the war be in the Pacific, the California fields would assure ample supplies. With the disadvantage of having two ocean fronts to protect, the United States is compensated by the possession of vast oil resources on either front. Over 70 percent of the world's petroleum production is in the United States, and the industry has seen its greatest expansion in the years since oil began to be used as maritime fuel.

VITAL NEED OF OIL

"Naval people know that Britain has established great stores of oil at her bases all over the world; Japan likewise has accumulated vast reserves of this munition. All navies are now on the oil-burning basis, because oil requires less space, can be more conveniently stored aboard ship, produces 50 or 60 percent more power per ton, and requires a considerably smaller crew. No other naval power possesses its own oil as does the United States; yet so important is oil that there were times during the war when English commanders were under orders not to proceed at more than one-half or three-quarters speed, except when confronting the enemy, in order to conserve oil."

Asked if the American Government had established any great oil stores as insurance against war exigencies, Admiral Sims replied that he was not informed, aside from the well-known fact that large reserves had been set up in the Hawaiian Islands. "But, having resources and production of oil available on both the Atlantic and Pacific coasts," he added, "that is not so necessary in our case."

END OF NAVAL ERA

Conversion of the last three American battleships to oil burning was, in Admiral Sims' view, an interesting incident, but not a vitally important one. Yet it marks the end of an era in the Navy's history. That era was introduced in 1815, when Robert Fulton built for the Government the first steam-driven warship. She was called the *Fulton*, and though of only 38 tons was described as a "fire-eating monster." For a century thereafter coal produced the Navy's steam power; then in 1914 came the battleship *Nevada*, one of the first of our oil burners. Since then oil has become the standard fuel in all navies.

"The fact that the Allies had the great oil resources of the United States to draw on is now recognized as one of the important factors in giving them victory, said Admiral Sims. "But in general the war's demonstration of the industrial and financial capacity of the United States forced a revision of all calculations regarding the seats of power in this world. Our immediate adoption of universal service, the prompt registration of 10,000,000 men under the Universal Service Act, the proof of our unparalleled ability to produce the necessaries of life and of war, the transport of 2,000,000 troops to France in circumstances which the enemy had believed made such a movement impossible, the demonstration of our enormous financial capacity—all these things compelled a sweeping recasting of all calculations about locations and alinements of power. Our great population, resources, wealth, and industrial capacity constitute the surest guaranty of peace for a long future, provided we pursue wise policies. Having no reason for aggression, our Naval Establishment should be adapted to assure the best defense.

AN AIRCRAFT FORMULA

"For instance, as to our requirements of aircraft. Suppose we confront an alliance of 2 powers against which we must defend ourselves. The first thing to be considered is not their combined number of battleships and cruisers, but their force of airplane carriers. Assume that the 2 powers together have 6 carriers with a capacity of 50 planes each. Then we must be prepared to deal with 300 airplanes along our coast, for the modern airplane carrier is considerably faster than a battleship and has a cruising radius of 6,000 or 7,000 miles. So we will need a force of airplanes sufficient to smother the enemy's 300. The enemy might possess thousands of airplanes, but we would be confronted only with such number as he could bring, with his equipment of carriers, to our coast.

"A combination of powers might present a large superiority in battleships and cruisers. But to attack us they would have to steam to our shores, and these vessels can carry only about enough oil for the round-up from Europe. In order to remain here and conduct a campaign they would have to bring colliers with fuel and have an advance base near our coast, and so our problem of defense against them would be principally with our submarines and aircraft, to pick off and sink the colliers and other auxiliaries. On the basis of experience and demonstrations that would be no difficult task, for the big planes can carry a bomb of from 2,000 to 4,000 pounds. Dropped on the deck of any fighting ship or in the water within a short distance on either side, one bomb would finish her, and the proportion of hits in such operations is so high that the fleet would have no chance. It is not commonly understood how big a target a battleship presents to a bomber. If the ship be 600 feet long and 100 feet beam, then a great bomb that strikes her, or within 50 feet on either side, will be fatal; its target represents an area 600 by 200 feet. The bomb which falls in the water near the vessel sinks to a certain depth and explodes, like a depth charge, against the unprotected part of the ship, below the water line. It is even more deadly than if it had fallen on deck.

MODEL NAVY OF FUTURE

"The Navy of the future should be particularly strong in aircraft carriers. We have one, the *Langley*, completed; an experimental craft of only 15 knots. The *Saratoga* and *Lexington*, which are nearing completion, will carry 75 planes each and make about 30 knots an hour against perhaps 23 for a battleship. With such a speed a carrier's program is to keep out of range of the battleships and cruisers and send her aircraft out to bomb them.

"Instead of building more cruisers of 10,000 tons, which are permitted under the Washington Conference agreement, sound naval practice would be to construct aircraft carriers. The battleships and cruisers, with their steaming radius of about 6,000 miles, are not to be compared to submarines, with four times that radius. It must be remembered that normally the submarine steams on the surface, going below only when there are reasons for concealment.

THE MODERN SUBMARINE

"The big, new submarines can do around 100 miles under water at 7 or 8 knots. On the surface they use oil for power; under the surface, electricity from storage batteries. A submarine can lay mines anywhere, even across the widest ocean. If it be suggested that the chance of sinking shipping with mines is rather remote, my reply is that at the height of the submarine campaign the British Admiralty was using 600 vessels constantly as mine sweepers to keep clear the approaches to harbors of the British Isles. That many vessels were lost to other services for which they would have been enormously useful."

Discussion turned to the forthcoming armament conference recommended by our Government, and the admiral observed that, of course, the nation which initiates such a conference assumes serious responsibilities because the success or failure of the conference at once becomes partly a political question. In order to secure results that will make the conference a success, the country concerned is liable to have to trade off some of its own interests. "For example," he said, "at the Washington Conference, in order to get Japan to accept the 5–5–3 ratio, the United States agreed not further to fortify any of its bases west of the Hawaiian Islands. This hamstrings us in the Pacific and means that in case of war the Japanese would immediately seize the Philippines and Guam, and in an effort to retake them we would be handicapped by having no naval base in all the 4,000 miles between Hawaii and the Philippines. The compact not to fortify Guam was a mistake, but was forced upon us because Japan demanded a quid pro quo for accepting the 5–5–3 ratio."

[From the CONGRESSIONAL RECORD of January 23, 1940, pp. 563–564]

BATTLESHIPS ARE NOT OF MUCH BENEFIT IN MODERN WARFARE

Mr. THOMAS of Oklahoma. It is my conviction that battleships are not of much benefit in modern warfare. I think they are only targets for the enemy air forces. I read a squib in a newspaper the other day, or heard it stated, that if a few more of Great Britain's capital ships were sunk, in the event the King desired to inspect his fleet he might have to put on a diving suit.

It is proposed to expend multiplied millions in building battleships. I voted for some of those bills. When I cast my vote I was not satisfied that I was casting a sound vote. I am not satisfied now that I cast sound votes in voting multiplied millions of dollars with which to build battleships.

* * * * * * *

I am advised that a bomb falling near a battleship is more destructive than if the bomb hits the battleship. The ships being sunk today are not being sunk by direct hits, as a rule; they are sunk by torpedoes, and there is no torpedo boat that can shoot a torpedo through the water in such a way as to pierce a battleship and sink it. The damage is not done by the piercing quality of the torpedo; it is done by the explosion of the torpedo. At the end of the torpedo there is a fuze so that when the torpedo hits the battleship it explodes and the concussion, away from the battleship, blows the battleship in two, or blows it in, and destroys it.

IF THE AIR FORCES COULD FIND THE BATTLESHIPS THEY WOULD NOT LAST ANY TIME

As to the relative merits of battleships and the air force, and artillery and infantry, that is another matter about which I am not prepared to give any expert advice. I have my conviction. I do not think battleships are worth very much in present warfare. I am advised unofficially that the greatest English battleship is hid; it cannot be found. If it is hid, of what use is it? It is the greatest ship in the world. If it is hid, it is serving no useful purpose. If that be true, it is my opinion that if we should build up a great navy in the United States and war should come, and some naval power should attack the United States, the safest place in the world would be on one of our battleships. The chances are that the battleships, unless we had a preponderance of power, would be somewhere away up the Mississippi River where they would be perfectly safe. They would have to be in some such place, because if the air forces could find the battleships, they would not last any time. If what our committee saw in San Francisco can be done anywhere in America, a battleship would have no chance whatever.

The battleship today has no chance against the modern bombers with their bombs. The only chance of security is for the same nation that has the battleships to have more bombing planes and more pursuit planes and more of other kinds of planes than the enemy has, so that if a plane attempts to attack our battleships, we can send our planes to meet the enemy planes, and if an enemy squadron makes an attack, we can send a squadron to meet the enemy squadron, and fight it out in the air.

Training Men To Do Skilled Labor

EXTENSION OF REMARKS

OF

HON. M. MICHAEL EDELSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

NEWSPAPER CLIPPINGS

Mr. EDELSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein articles contained in numerous newspapers showing the necessity for training men to do skilled mechanical work:

[From the Wilkes-Barre (Pa.) Record of May 7, 1940]

SKILLED WORKERS AND SCHOOLS

If Wilkes-Barre's school system is to be geared closely to community needs it is likely that renewed attention will have to be given, at a time not far off, to the question of vocational training. Wyoming Valley has been acquiring new industrial plants and already notice has come from several sources that the task of finding skilled workers to man them is becoming more difficult. In view of widespread unemployment, which is still a plague in Wyoming Valley, this may seem strange. But the long period of dullness has made for few apprentices during the last decade and if the hoped-for industrial expansion spreads to this community, as it showns signs of doing, the scarcity of qualified workers will manifest itself acutely and operate against getting additional new plants.

How far the schools could supply the lack through vocational training is debatable, but there is no question that young men with such schooling will be more acceptable for jobs and further training

than those without such a background. The problem which is presenting itself should be examined with a view to determining what the schools can do to contribute to its solution.

[From the Washington Post of May 18, 1940]

LABOR AND DEFENSE

The best-laid plans for national defense, backed by ample funds for financing them, still depend for their execution upon the availability of an adequate labor force. With millions of men unemployed it is a paradoxial fact that the recruitment of a working force capable of turning out modern implements of warfare on a tremendously expanded scale will, nevertheless, be extremely difficult.

Ironical though it seems, the prolonged and widespread depression has already led to labor shortages in many industries requiring the services of skilled men. That is because the depression discouraged the training of apprentices and forced a disproportionately large number of applicants for skilled work into the unskilled labor market. In face of this lingering situation our industrialists are today suddenly confronted by the challenge of a huge defense program.

It has to be remembered that wherever the shortage of skilled labor is acute unfinished work will pile up and precious time, as well as money, will be lost. In short, the industries engaged in work for the defense program not only require a great deal of skilled labor, but that labor must have diversified training to prevent industrial bottle necks from developing.

It is apparent, therefore, that a great deal of time and money will have to be devoted to preliminary training programs in preparation for the plant expansion required to satisfy our defense needs. President Roosevelt has admitted that necessity, and suggested the possibility of broader training programs under Government direction. But the main responsibility will have to be assumed by industrial leaders familiar with the problems presented and equipped with facilities for instructing novices. It is encouraging that this problem of manpower is already the subject of earnest discussion among industrial experts representing manufacturing companies.

Concerns engaged in the production of aircraft have already been slowed up by the lag in production of aircraft engines, and handicapped by a shortage of trained flight crews. To reach the contemplated yearly airplane output of 50,000 units would, therefore, necessitate much more than a quadrupling of existing productive capacity.

Under the circumstances, it looks as if labor shortage may well prove the major obstacle to speedy attainment of the goals set by the defense program. That will certainly be the case unless extensive and varied training programs are launched with a minimum of delay.

[From the Gary (Ind.) Post-Tribune of May 13, 1940]

WORKERS MUST BE TRAINED IF UNITED STATES IS TO BE PREPARED

America faces the task of getting its industrial machinery geared to a preparedness basis. It is more than a problem of material resources alone; it involves our human resources. For there probably is not now in the country sufficient trained manpower to operate our industrial plant at full speed—this despite the fact that there are some 9,000,000 or more persons able and eager to work who cannot find employment.

At our present rate of industrial operations local labor shortages are being reported with increasing frequency from various parts of the country. New or expanding industries, such as plastics, rayon, lithographing, say they cannot find enough trained workers to meet their needs. Thousands of jobs are open for persons possessing occupational skills or basic training—even in some of the long-established industries.

At Hartford, Conn., the State trade school has been operating on a multiple-shift basis during the last 5 months in an effort to meet the demand of local industry for machinists and machine operators. A night course, running from 10 p. m. to 6:30 a. m., offers 5 weeks of basic training. Graduates are qualified for employment at the end of 5 weeks of basic training but they are expected to learn details of their work on the job. While there is no pretense that finished machinists can be turned out with 5 weeks of training, the utility of short courses is demonstrated by reports from Cleveland that employers are hiring men out of trade schools there before they have completed regular machinists' courses.

Vocational schools are being kept busy supplying the need for workers in the fast-expanding aviation industry. From Buffalo it is reported that every graduate of the aviation mechanics' course offered in the public schools since 1934 is now employed in the local or nearby aviation industry or is working in related enterprises. Hundreds of applicants have been turned away from this course in recent years because of inadequate facilities for their training.

In Michigan, where the vocational education program is well advanced, a short course for resort employees was conducted for the first time last year. The school system lacked facilities so resort managers permitted the use of their structures for the course. It is being repeated this year in preparation for the vacation season.

In Pennsylvania a reemployment campaign found there were about 20,000 jobs that could be filled if trained workers were available. It discovered 300 classifications in which there are shortages of employables.

One factor which complicates the employment picture is the fact that many workers who have been unemployed for long periods have lost touch with their trades and are not familiar with new developments. This explains why some employers may complain they cannot find trained machinists while a local machinists' union declares hundreds of its members are out of work. Retraining programs are being started in many localities to "freshen up" older workers. A recent survey in a large city recently showed there were nearly four times as many workers in a going industry who had reached or were about to reach the retirement age as there were workers at the learning age to replace them.

Efforts now are being made nationally, through cooperation with local public-school officials, to plan and execute vocational education programs to meet actual needs. Each program is worked out locally by the school system with the help of advisory committees composed of representatives of labor, industry, and other interested groups. These committees undertake to determine the present and prospective needs for workers in the various fields in the locality and gear the training program to meet these needs. Vocational guidance is given to individual students through the schools.

The number of men available from a military-defense standpoint, or the industrial machinery that is available, depends upon training and not mere population. We have a vast reservoir of material resources and we likewise have a great reservoir of manpower. But sheer statistics do not provide adequate defenses nor preparation for a war's needs. Our physical strength has deteriorated from disuse just as has much of our industrial machine. We need seriously a practical training program for our jobless, whether it is in the interest of preparedness or just in anticipation of prosperous peacetime employment.

[From the Christian Science Monitor of May 16, 1940]

ROOSEVELT'S PLANE PROGRAM WOULD EXPAND UNITED STATES FACTORIES

WASHINGTON, May 16.—Spokesmen for airplane manufacturers said here today that President Roosevelt's request for an annual production of 50,000 military and naval planes would mean a great deal of plant expansion and far more extensive use of subcontracts than at present.

Present annual production, as the President said, is something over 6,000 planes. By the end of 1940 the output will be stepped up to between 12,000 and 15,000 units.

Any such expansion program as the President now proposes, representatives of the industry said, would mean the freezing of production to a few types of aircraft, as has been done in Germany, elimination of practically all further experimentation, and letting out of many more contracts for airplane parts than at present.

Bottleneck of the problem of stepping up production, they said, is chiefly in the engine industry, where there has been a limited number of skilled machine-tool mechanics available.

SCHEDULE EXPECTATIONS

The industry spokesmen said they doubted if any great expansion in production schedules could bring results much before the end of the year.

In normal times, in 1936 and 1937, the aviation industry was producing only about 1,000 military planes a year. The Army today possesses a total of only about 2,800.

Today, 14 companies, working an average of 2 shifts, are engaged in producing combatant equipment for the United States and foreign Governments. Included are Bell Aircraft, Boeing, Brewster, Consolidated, Curtiss, Douglas, Grumman, Lockheed, Northrop, North American, Glenn L. Martin, and Republic.

Active producers of warcraft engines are Allison, Pratt & Whitney, Wright, Ranger, Vought-Sikorsky, and Vultee.

Plans for plane production expansion also bring up the problem of pilot training. "There is no use having capacity to produce 40,000 or 50,000 airplanes a year if we are not to have the men to fly them," Senator Sherman Minton (D) of Indiana, remarked in the Senate.

TOTAL PILOTS

It is estimated that if the United States today called up all reserve pilots, including the 10,000 being trained for civil flying under Civil Aeronautics Authority college courses, the total would not be more than 25,000.

Under the Army training schedule, expanded last June, approximately 396 new applicants are entering the Army flying schools every 6 weeks now, but on March 31, the total strength of the Air Corps was 2,037 officers and 995 reserves.

The C. A. A. is training 9,072 student aviators in the Nation's colleges and 760 in noncollege courses. Another 1,442 have already won their C. A. A. certificates.

It is estimated that there are not more than 3,500 enlisted mechanics available at the present time.

President Roosevelt, in his message to Congress today, made it clear that he would spend a large portion of the $100,000,000 he asked of Congress to put in his own hands, for the training of additional aviation personnel.

[From the New York Journal of Commerce of May 16, 1940]

ORGANIZED DRIVE TO TRAIN APPRENTICES SEEN AS NEED—INTERDEPARTMENTAL COMMITTEE REPORT TO PRESIDENT ON SKILLED WORKERS STRESSES TIGHT MARKET—SURVEY NOW UNDER WAY TO DETERMINE FUTURE REQUIREMENTS

WASHINGTON, May 15.—An emergency calling for mobilization of the skilled manpower of the country at this time would find

methods and facilities for training such workers inadequate, President Roosevelt has been told by labor and business leaders, it was learned today, although assured that despite a relatively tight labor market, plants devoted to immediate employee wants filled.

A report from the Interdepartmental Committee on Apprentice Training is understood to have just gone to the President for his consideration in connection with the emergency defense program which he will tomorrow transmit to Congress.

While details of this report are being withheld from publication at this time, it is believed that it stresses the need for apprentice training on an organized basis. Such program already is in operation in several airplane fuselage and engine plants, and it is understood that the recommendation is made in the report that all such plants, and others that might be engaged in war implements production to do the same thing.

It is stressed that the problem of obtaining skilled workers in a sufficient number to meet emergency needs cannot be solved in 6 months, nor yet a year, but if the period of disaster that has been created abroad is going to be extended for 3 years, as forecast by British Ambassador Lord Lothian, much progress can be made within that time to safeguard our own industrial interests.

A survey is now under way by Government agencies of workers in skilled occupations to determine future requirements and reach conclusions as to how to meet the need. Seriousness of the possibilities that an emergency would find the country short-handed in essential industries is being stressed by many officials who have faced the opposition of organized labor to workers expansion programs, and lack of interest on the part of many industrialists to bothering with large numbers of learners.

It is insisted that a good showing can be made for vast apprentice training for the airplane and machine-tool industries without making a census, but it is in other lines, where the need is less obvious, that statistical data will be found desirable in the presentation of the actual employment situation.

Meanwhile James W. Young, Director of the Bureau of Foreign and Domestic Commerce, reported today that a census of labor in key industries of the United Kingdom is being undertaken in connection with the planning of production and effective distribution of available labor. The result of the census will not be made public. Allocation of raw materials to the key industries is also being studied with a view to integrating production, Mr. Young revealed.

The only alternative to apprentice training is dilution of labor—the simplification of jobs so that one man would have but one portion assigned to him, where, if properly trained, he could complete a whole operation. That has been resorted to in Great Britain despite opposition of organized labor there, and prevailed in the United States during the first World War and found very unsatisfactory.

It was related today that then hundreds of airplane motors were made that could not raise airplanes from the ground because tolerances were so great as to create mechanical monstrosities. Expansion of the airplane-motor industry to 35,000 units per annum, as contemplated, may present some difficulties, which, however, will start with the tool and die industry upon which engine manufacturers have to rely for equipment.

NO ABSOLUTE SHORTAGE

While this is not an easy labor market, it does not seem to present a situation where there is an absolute shortage that would place a limitation on present production. There is certainly not a large number of skilled metal-trades workers unemployed, and the doubling of plant operations would present real difficulties, but over a period of time enough workers could be recruited, largely by shifts from other lines, to meet needs.

For instance, there are unemployed garage mechanics, railroad shopmen, locomotive engineers, and other craftsmen who could be retrained for new duties in relatively short periods of time, labor officials said today. From their ranks also there could be recruited men for further training for the operation of tanks, it not being possible to take the average youth and put him inside such a moving fortress and expect him to be able to operate and repair it in time of need—that takes a mechanic trained in his work.

In Government reports it is emphasized that in time of peace it is desirable to train men as skilled workers for they cannot be matriculated in a couple of months, equipped to do a real mechanical job. The turning out of efficient tool and die workers takes upward of 2 years, and that is true of many lines of endeavor.

Boeing, Lockheed, Pratt & Whitney, and Sperry Gyroscope are pointed to as companies that are looking ahead to the training of men for the airplane industry, having put into effect, under supervision of a joint management-labor committee, a system of training for young men on a 4-year basis. Interest of the engine companies is in mechanics, while those of the fuselage builders would be in such trades as sheet-metal workers and four or five other crafts that they employ.

LABOR IS COOPERATING

Organized labor has maintained all along that it could not tolerate a system of wholesale training of skilled workers, but in the present situation labor leaders appear to be working most harmoniously with management and Government representatives in providing training for the future. A joint committee determines what number of additions to the trained force are needed and that, according to Government officials, is tending to solve a troublesome part of the labor problem.

It was indicated that the President, in asking an emergency defense appropriation at this time, will seek also authorization to enter into arrangements for production that will not begin until the fiscal year 1941. Such a program would better enable industries to size up their labor and materials requirements and materially cut down the lag between acceptance of and delivery under a Government contract.

[From the Philadelphia Ledger of May 11, 1940]

SKILLED LABOR NEEDED HERE

Philadelphia industry is suffering an acute shortage of skilled labor as industrial leaders push through extensive apprenticeship programs to train younger men for the day when aged hands will no longer be able to bear the brunt of increasing demands.

Particularly scarce in this area, plant executives report, are die and tool makers, large lathe and plane operators, template makers, draftsmen, grinders, and gage checkers. To meet present and future demands for workers, virtually every large industry here already has installed 3- and 4-year courses of practice-study.

ARSENAL NEEDS MEN

Probably the hardest hit locally is the Frankford Arsenal, which has sent out appeal after appeal for skilled mechanics and machinists. Facing a situation where it must compete with private industry to secure its labor—and private industry is jealously guarding what it has—the arsenal has jobs abegging at $6.80 per day and $2,200 per year.

With unemployment at its present level, it necessarily follows that there is no dearth of workers in the less skilled class and news of such shortages invariably brings forth an army of unemployed whose only claim to experience is that the applicants once hammered a nail or ground an automobile valve.

KEEP EYES OPEN

Several large industries, such as Westinghouse and SKF, who foresaw the trend, report that at present they have not felt the pinch although even they have their eyes open for the unemployed skilled man.

"We can't just pick them off the shelf," declared J. G. Morgan, manager of industrial relations at the Lester branch of Westinghouse. "Our products require a maximum of accuracy and we are training our own men for ourselves."

An SKF official, recently returned from a trip through the New England plants of his company, declared that everywhere plants "are crying for skilled mechanics and machinists." He said his company now has the largest class of apprentices in its history.

Refund to Railroad Employees

EXTENSION OF REMARKS

OF

HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

Mr. BATES of Kentucky. Mr. Speaker, on January 17, I introduced a bill, H. R. 7986, the purpose of which is to make it possible for the railroad boys in Kentucky, Louisiana, Alabama, California, Massachusetts, Rhode Island, and New Jersey to get refund on certain moneys paid by them into the State unemployment commission of their respective States.

It seems that these States passed laws creating a State unemployment commission, as did the other 41 States, but the 7 States named collected from the employer and the employee according to the provisions of their State laws. In regard to the railways, the other 41 States collected from the employer only. On July 1, 1939, the Railroad Retirement Board took over all railroad employees' compensation and requested that all State funds be turned over to it, which, as I see it, is wholly unfair to the railroad employees of these 7 States, where both employer and employee paid into the fund, by compelling them to pay from their salaries into a fund which they must share equally with the employees of 41 other States. In the State of Kentucky there are approximately 40,000 railroad employees, who paid into this fund $1,038,000, or an average of around $25 per employee. It seems to me that my railroad boys are being penalized to the tune of about $25 per employee for living in the State of Kentucky. I know the membership of this House will agree with me that the Congress had no such intentions when the Railroad Retirement Act was passed, and that it still has no such intentions. I have the firm conviction that the Congress will right this wrong, and I am appealing to you to help pass, this session, legislation toward this end.

Since the introduction of my bill, I have been striving to get the committee to take some action; not a week has passed that I have not, on two or three occasions, urged and pleaded for action. I was able to get a subcommittee appointed and a hearing by the subcommittee at which it was agreed that, since several had introduced bills after the introduction of my bill, someone from the Railroad Retirement Board, the author of the bill, which was apparently sponsored by the Board, and myself get together and work out an agreeable bill to all of us. I have called time after time and seem to find no interest except what I show myself, and all the while these boys are doing without their money that should never have been taken from them.

I have run into some of the oddest arguments in my efforts to do something about this I have ever listened to. One person told me he thought it would set a bad precedent; that if this were done it would be used as an argument for other refunds. This is about as flat an argument as I have ever heard. That is like your saying to John, when he asks you for that $5 you have of his, "Yes, John, I have your $5 and could give it to you, but if I do I have $5 that belongs to George and he will want his, too, so I cannot afford to let you have yours." Another argument is that not more than 60 percent of them will ever ask for it. That is downright ridiculous. Imagine any man, let him be a railroad man or any other, not going after $25 that is due him when he knows that money is waiting for him. And, granting that some of them would be reluctant to ask for it, is that any reason why those who do ask should not have it if it is due them? These arguments are mighty flimsy when you look at them, but the worst one and the most ridiculous one of all was made by the person who said that these men were just a bunch of roughnecks and spendthrifts, and that it would not do them any good if they got it. The very nature of the work they do requires them to be strong and robust and in good physical condition at all times. Twenty-three years of my life have been spent in a county where one of the greatest, if not the greatest, railroad yards in the world is located, and my daily contact with the railroad men has long ago convinced me, as it would you if you came in contact with them, that no better or finer group of men ever placed foot on God's good earth. I have seen them, when a neighbor was in distress, pass a hat during their 30-minute lunch hour and, I dare say, get a bigger donation than could be gotten under the same circumstances out of a similar sized body anywhere, not even excluding this body. And their wives, I say to you, I have never lived by a more wholesome, neighborly, Christianlike people than the fine womanhood found in the homes of these men.

I am for the railroad boys, I believe in them, and I love them, because I know that under those greasy overalls there beats a heart that is just as pure as yours or mine. For the sake of justice, for the sake of equality, I ask each of you to assist in getting this refund for these men.

David Lawrence Criticizes Roosevelt for Playing Politics With National Defense

---

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE BY DAVID LAWRENCE

Mr. DWORSHAK. Mr. Speaker, ever since President Roosevelt's fireside speech last Sunday night many Americans have been wondering about the exact status of a national-defense system described by its Commander in Chief as "being on hand or on order." David Lawrence, in the following article, sheds some needed light on the reasons for the President's unusual speech:

(By David Lawrence)

Uneasy over events abroad, the entire Washington situation is crystallizing rapidly into one of great concern lest America be caught napping in the swiftly developing maelstrom of world war entanglements.

President Roosevelt is on the defensive politically. Far from being an asset, the newly created emergency has already become a liability to the administration. The Republican Party will shortly ask the American people to change the national administration on the grounds of incompetence, just as the British turned out Prime Minister Chamberlain.

The particular grievance which is shaping up as the basis for an intense battle in the Presidential campaign is the unpreparedness of America at perhaps the gravest crisis that has come in a century in world affairs.

Mr. Roosevelt's speech last Sunday night alienated supporters rather than helped him. This is because when a President sees fit to discuss defense details and combines in his statement airplanes available and those on order so that the public cannot tell the difference, it is a sign that political considerations are guiding national policy rather than frank presentations of weaknesses.

CANDOR NEEDED FOR CONFIDENCE

Most people will go along with the administration when it ceases to play politics and indulge in adroit maneuvers based on the theory that peacetime methods will be sufficient to meet criticism. The truth is action and candor alone will bring confidence.

The latest step—the appointment of a seven-man council of defense in an advisory capacity—can only bring from American businessmen sighs of regret and poignant disappointment that the administration in Washington doesn't know its selections are recognized as window dressing. To put captains of industry into the defense council without giving them any authority to act and at the same time to put in that same defense council the very men who have been baiting business for the last several years is not to create or build confidence among the industrial men of the country. The President has made a grievous mistake.

The factories and their managements will cooperate to the utmost—their patriotism will take care of that—but industry cannot be sanguine about reaching the goal—efficient production. It may well be asked why it is that Germany—a bankrupt nation with a meager supply of gold—can build the biggest defense system the world has ever known. The reason is that the Nazis didn't use gold or money, but labor. A nation can get along without money if it can get enforced labor.

NO HOPE IN BLAME

In France the defense mechanism fell down because the left wing broke up armament production with laws providing a 40-hour week while German workers toiled 60 or more hours a week. America cannot build an adequate defense unless some of the left-wing legislation now on the statute books is modified so as to accelerate production in the defense industries. The President refuses to accept that view. He may prefer to take responsibility for a failure of America to get enough airplanes for defense, but it may be too late some day to fix responsibility on any one man, just as it is today in France and Britain. Nobody today can repair the mistakes made 2 and 3 years ago by an incompetent administration in Britain and France.

In America where criticism is unrestricted, the people may not wish to give the Roosevelt administration any more opportunities to bungle the defense program. They may demand an instant change in tactics or else there may be a change at the polls. In many respects it is a fortunate coincidence that a presidential campaign is at hand because the people will have a chance to vote on whether the defense record of the present administration should be upheld or repudiated at the polls.

G. O. P. CONGRESS MAY WATCH

Also, whether or not the President is reelected may become a question distinct from the necessity of electing a Republican majority in both Houses, because evidently the members of the President's own party are too subservient to his wishes to take care of the national security of the people of the United States by assuring efficient production. When the President says there is no emergency which requires modification of existing labor laws, he is committing America to an effort to build up its defense not only at high labor costs but on a basis that cannot possibly give America the planes, the tanks, the battleships, and the weapons of war needed at the earliest possible moment to protect the United States against any or all attacks.

Public opinion is something powerful enough to affect a President in times of crisis, especially when it manifests itself plainly. The trouble is that the facts have been camouflaged or glossed over. The people do not know how inadequate are our national defenses to meet the kind of emergencies that may arise. They are willing, however, to let bygones be bygones and forget the past if there is any sign that the new policies will assure the attainment of the desired result. It is because the administration prefers to play politics with national defense and refuses to open up the governmental power to all classes that business and industry will find itself pervaded with a sense of disappointment where there should be eagerness and enthusiasm and a high morale.

Relations With Russia

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

ARTICLE BY HON. ARTHUR H. VANDENBERG, OF MICHIGAN

Mr. VANDENBERG. Mr. President, I have discussed Russian relations in an article in Liberty magazine this week. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Liberty of June 8, 1940]

SHALL WE BREAK WITH RUSSIA?

(By Senator ARTHUR H. VANDENBERG)

It is about time the smug, complacent American attitude—the "it can't happen here" state of mind—gave way to vigilance and vigor in dealing with the problem of communistic treachery inside the United States.

That problem is no longer academic. It calls for elementary precaution, as would the protection of our homes against bacteria that mean death.

Upon treachery the technique of aggression is largely built. We know that now. We saw in Norway precisely how it works. It capitalizes treason, and glories in doing so. In Norway it happened to be Mr. Hitler's agents "who stole the livery of the court of heaven to serve the devil in." Mr. Stalin's technique, as the United States has already experienced it, is no different except, for the time being, in degree.

Norway can do nothing about it now. But it is not too late for the United States to do something about its own kindred jeopardy.

We want no vipers in our bosom. Yet we have them, and we know that their supreme purpose is to strike against us with fatal poison if and when Moscow signals. There may not be many of them—relatively. But there weren't many traitors in Norway, relatively, either.

In the United States the chief symbol of treachery is the notorious broken contract between Commissar Litvinoff and President Roosevelt. The Union of Soviet Socialist Republics—better known as Bolshevik Russia—has repeatedly and conclusively violated the terms of its agreement with the Government of the United States under which we "recognized" Moscow in 1933. It is continuously engaged, directly or indirectly, in a conspiracy to undermine the Government of the United States and ultimately to overthrow it by force. It not only believes in "world revolution" as an abstract objective; it is constantly attempting to promote this objective inside the United States.

This is not merely a matter of opinion. It is a conclusion of fact which is sustained by the official records of the Government of the United States. It is my opinion that we are guilty of complete folly if we suffer in silence and in acquiescence this violation of our rights.

I am not talking about going to war with Russia or about anything of the kind. I am proposing no desertion of the code of neutrality, to which I hope this country is permanently committed. I am talking about the fact that our diplomatic relations with Russia are based on a contract. We extended "official recognition" to Moscow on the basis of the specific pledges contained in the Litvinoff-Roosevelt correspondence of 1933. The pledges have been violated. The contract has been broken. Therefore there is no further justification for the relationship which was established, and which has been contingent upon the integrity of these pledges and the fulfillment of this contract. We should revert to the basis of relationship which existed prior to 1933.

If we are willing indefinitely to condone this breach, Moscow will get a wrong idea about its immunities under the American flag. On the other hand, plain talk and conclusive action now in respect to this matter which is wholly within our own jurisdiction and control and wholly within our obvious right may save a peck of trouble day after tomorrow.

The United States is the one and only republic in the New World which still maintains diplomatic relations with the Soviets. North America, Central America, and South America are a unit upon this score—with the single exception of our own country. If there were nothing else to awaken us (and there is plenty), we should be put upon notice by this unanimous anti-Russian attitude of united Pan America that we need to have a powerful reason for officially fraternizing with the Bolsheviks. There is no such reason. On the contrary, powerful reason runs the other way and recommends that we harmonize our attitude with that of our good neighbors in the Western Hemisphere. The distinction of being the only Bolshevik bedfellow in the New World must be as distasteful as it is lonely.

Of course it is none of our business what kind of government the Soviets have inside their own territory. They can be as communistic and as ruthless there as they please. But, by the same token, it is none of Russia's business what kind of government we have inside our own United States. We have no right to interfere in their internal affairs. They have no right to interfere in ours. That is what this question is all about.

When the Soviets took charge of Russia in President Wilson's time, we realized the impropriety and the hazard of having any official relationship with the heart and center of an ambitious world revolution. Secretary of State Colby, under President Wilson, declined to recognize Moscow in one of the most powerful state papers ever written. The Harding administration took the same view. Secretary of State (now Chief Justice) Hughes said: "There is conclusive evidence that those in control of Moscow have not given up their original purpose of destroying existing governments whenever they can do so throughout the world." President Coolidge next declined recognition on similar grounds. Then came the Hoover regime, and still the same consistent attitude, to which Secretary of State Kellogg gave expression.

Then came President Roosevelt and 1933 and the New Deal. Whatever it proved to be for us, it certainly did prove to be a new deal for the Hammer and the Sickle. President Roosevelt concluded to end this long-time breach. But he knew that he was dealing with treachery, so he sought to tie its hands. Commissar Litvinov came over and agreed to everything the President asked. They exchanged a series of international love letters, all dated November 16, 1933. Russia signed up to compose her debts to us.

Still more important—and fundamental to everything else—Russia agreed also to quit all relationships with internal revolution inside the United States or with any agencies over there or over here which should be engaged in "any act overt or covert liable in any way whatsoever to injure the tranquillity, prosperity, order, or security of the whole or any part of the United States * * * and in particular any act tending to incite or encourage armed intervention or any agitation or propaganda having as an aim the violation of the territorial integrity of the United States, or the bringing about by force of a change in the political or social order of the whole or any part of the United States."

On the strength of these unctuous assurances—despite the probability that they were not worth the paper they were written on—the President recognized the Union of Soviet Socialist Republics. We opened our gates, we extended our hospitalities to the agents of communism. Then things began to happen.

It did not take long to demonstrate that the leopard had not changed its spots; that the undependable Russia of yesterday was still the undependable Russia of today; that we were the victims of an atrociously bad bargain.

First, the debt negotiations promptly broke down. Russia owed us what is now $395,000,000. There were some desultory conversations on the subject—a sort of shadow-box pretense at preliminary good faith. But on January 31, 1935, the State Department issued an official statement which concluded: "In view of the present attitude of the Soviet Government we feel that we cannot encourage the hope that any agreement is now possible."

It never was possible. It never has been. There never has been any sort of agreement. Soviet Russia is just as much of a defaulter as she was on the pious day when she agreed to quit being one. Thus came the first disillusionment. But that was relatively inconsequential, because there were plenty of other defaulters. Six months later, however, we came to grips with the things that really count.

Our ordinarily placid State Department wrote Moscow that the Seventh All World Congress of the Communist Internationale—plotting its world revolution here as elsewhere—was guilty of "flagrant violation of the pledge given by the Government of the Union of Soviet Socialist Republics on November 16, 1933, with respect to noninterference in the internal affairs of the United States." It said the Government of the United States "would be lacking in candor if it failed to state frankly that it anticipates the most serious consequences if the Government of the Union of Soviet Socialist Republics is unwilling or unable to take appropriate measures to prevent further acting in disregard of the solemn pledge."

Russia rather contemptuously dismissed the protest as meaning nothing. She had what she wanted. She declined to admit guilt or to do anything about correcting the intolerable situation. But the State Department simply wrote another note convicting Moscow of "a clean-cut disregard and disavowal of the pledge by the Soviet Government." Incidentally, when Secretary of State Hull responded in January 1940, to my Senate resolution asking for this official record, he said that we had an "irrefutable case" against Moscow in 1935. Irrefutable! But nothing happened. We swallowed the offense charged, and carried on in our injured innocence. The offense charged was a participation in an effort internally to overthrow the Government of the United States by force.

In 1936 Rear Admiral Taussig, testifying before the House Appropriations Committee, said: "Members of the Third Internationale are very active in the United States in furtherance of their plan for world revolution, which includes the overthrow of our present form of government." I felt that this exhibit, coming as it did from a high officer of our own Government, carried with it an

authenticity which could not be ignored. So I called this testimony to the attention of our State Department. Nothing happened.

Now we come down to 1940. A committee of the House of Representatives to investigate un-American propaganda activities officially reported on January 3:

"Hundreds of pages of testimony have established the fact that the Communist Party of the United States can make no more than a superficial claim that it is a political party in the sense in which the American people understand those words. It is, on the contrary, a constituent member of the Communist Internationale and is its agent in the United States. The Communist Internationale in turn is completely dominated by the Communist Party of Soviet Russia. The committee feels that a careful examination of the facts justifies the assertion that the Communist Party of the United States is a foreign conspiracy masked as a political party. The committee is forced to conclude that in practice the Communist Party is actually functioning as a border patrol on American shores for a foreign power—the Soviet Union. Since the Communist Party of the United States has the avowed purpose of drastically changing the form of government of the United States, it is the opinion of the committee that the party's activities constitute a violation of the treaty of recognition entered into between the Government of the United States and the Government of the U. S. S. R. in 1933."

The record stands clear. There can be no denial of these cumulative implications. Communism in the United States is not a "political party." There can be no question that the Litvinov-Roosevelt agreements upon which Soviet recognition was based are worth no more than were the nonaggression pacts which were supposed to protect Poland and Finland. They are completely worthless. The Soviets long since abrogated the agreement under which we maintain diplomatic relationship. We alone still respect it. We do so at our peril. We thus invite internal subversion which is at war with every American conception. We not only invite this subversion; we actually license it. In the contemporary language of the State Department, this is "irrefutable."

It is not enough to say in reply that we are not afraid of what communism can do to us. That begs the question. One rotten apple in a barrel has been known ultimately to contaminate all the rest. But whether Russia can achieve the destructive purposes of communism within the United States is beside the point. The point is that the effort has been and still is continuous in spite of a direct and specific pledge to the contrary. The point is that Moscow has long since completely reversed the relationships with us which were presumed to have been established in 1933. We should face this fact and sever a relationship which has become a ghastly challenge to international good faith.

It is not enough to argue that, despite all this treachery, we had better maintain our diplomatic outposts in Russia for the sake of keeping ourselves more intimately informed regarding the trend of this menace. (We found recently that our outposts were not worth very much when we were trying to find out what had happened to our ship *City of Flint*.) For every outpost we maintain over there, they will maintain a dozen over here, because we are relatively only children in the arts of intrigue and infiltration. The privilege of maintaining our listening posts over there is as nothing compared with their privilege of maintaining subversive depots over here.

But the thing of paramount importance is the principle involved. We are victims of a broken contract—a contract which this administration deemed to be necessary as a prerequisite to diplomatic relations between the Government of the United States and the Government of the Union of Soviet Socialist Republics. The contract involves the internal sanctity of American institutions. This is a domestic problem. It relates to our own Government and to our own institutions and our own order of things inside our own United States. It has nothing to do with our external neutrality or with our detached status in respect to world affairs. It has nothing to do with peace or war. It is simply a case of quietly demonstrating that Uncle Sam is not the gullible chump which Moscow seems to think he is. It is past time for the United States to tell the world that we are not running a polyglot boarding house in which the vistors can foul our hospitality and get away with it.

Our Moscow Embassy should come home. Moscow's Embassy should go home.

Memorial Day Program for America

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

Mr. CLEVENGER. Mr. Speaker, like a lighthouse in a dark and stormy sea, in a land full of leaners on the Public Treasury, it may be refreshing to learn that there are oases in this New Deal desert where rugged individualism still lives, where Americans refuse to believe that our frontiers are gone and our full growth attained. Archbold, in Fulton County, Ohio, proves that "Little America," applied to that region in northwestern Ohio, deserves that honored appellation. From the Toledo Blade of May 29 I shall append the story of a heroic American town.

TOWN THAT REFUSES W. P. A. FUNDS WHIPS DEPRESSION—NEW HOMES AND BUSINESS ADDITIONS DOT VILLAGE THAT HAS NO BONDED DEBT; WILL BUILD NEW LIBRARY

ARCHBOLD, OHIO, May 29.—Archbold, which has no relief problem, has never accepted any W. P. A. assistance, and has no bonded indebtedness, is writing a new chapter in whipping Old Man Depression with a business and building boom that is envied by scores of other communities.

While remaining clear of debt, the village has accumulated a surplus of $7,500 in its water-plant fund and residents and former residents have subscribed nearly $2,000 for the site of a new public library for which Mrs. Helen McLaughlin, of Hollywood, Calif., a former resident here has donated $15,000.

Meanwhile, business firms and individuals have been prospering building new homes and enlarging business establishments. Predictions are made that, with homes under construction or contemplated this year, 45 new homes will have been erected here during the last few years.

FOUR MILLION-DOLLAR BUSINESS

Many improvements are under way at the Lugbill Bros. livestock auction yards, just outside Archbold, where 70 employees work regularly and $4,000,000 worth of business was enjoyed in 1939.

The firm is erecting a 26 by 90 brick and concrete addition to house additional cooling units and to provide more space for the processing of meats. A 10-inch well also is being drilled to provide a greater water supply for the packing plant and the new homes in the addition where the company helps employees to erect new homes.

Across the highway from the Lugbill Brothers' thriving business enterprise, three new business buildings are under construction. Riegsecker Brothers are completing a lumber sales room, 50 by 100; Earl Luty is erecting a garage, 26 by 100, and the third structure will house Nofziger's Dairy Store.

FACTORY SPACE DOUBLED

In Archbold proper, the Sauder Woodworking Co. is completing an addition that will double its floor space and enable the firm to increase its force. The company manufactures church furniture and reported that 3 months were required for it to complete one large contract.

The Archbold Ladder Co., the town's largest employer, reports 80 workers are employed steadily in the manufacture of ladders and other pine wood products.

The community is inhabited largely by Mennonites. The village proper had 1,168 inhabitants in 1930 and expects a count of 1,300 or more in the 1940 census.

Certainly, Mr. Speaker, this points the way out of our present difficulties—the old American way of private business and public thrift. These frugal, religious, industrious men and women of my district have never left the old, time tested American way of life. They know there is no substitute for sound practices either in public or private business.

May the myriads of crystal-gazers, starry-eyed do-gooders, and dreamy magis of the New Deal—the armies of Federal employees that are bedeviling and confusing American business, American labor, and American farmers, and citizens generally—be quickly disbanded, their mistakes liquidated, and this beloved land of ours put back in its natural and normal orbit to justify and glorify this Government of laws administered by men. There are undeveloped, undiscovered Acres of Diamonds throughout the length and breadth of America. Let us survey them, develop them, and use them for the betterment of our people; and roll back this fog of defeatism and frustration that has enveloped this land. We have a covenant with the honored dead from Lexington to Argonne Woods and Flanders fields that this Government of laws shall not be forfeit to one of men; that we move forward to new horizons for the boys and girls of America, steadfast in their faith in God and native land. Let no man sell his country short. Here she stands, still the envy of all the world.

"Fifth Column" Groups

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

Mr. BECKWORTH. Mr. Speaker, we Americans must take no chances with our Nation's destiny. We must fully recognize the necessity of taking further steps immediately to divest and rid America of all subversive elements and groups. We must segregate and weed out from the population of America all "fifth column" groups and those individuals not true to our principles and precepts of government. Certainly, America must acknowledge the fact that those who advocate the overthrow of our Government have no claim to the protection of this Government; to advocate the displacement of democracy in this country with another form of government should forfeit all privileges and immunities of those who so contemptuously identify themselves.

On both occasions since becoming a Member of Congress I have enthusiastically supported and voted for the Dies committee; I favor appropriating additional funds now or when needed to enlarge the scope of the work of the committee. I have supported and voted for every other measure coming before the House in the duration of my tenure to stamp out subversive elements and activities. I shall not deviate from this stand in the future.

No man coming into this country about whose allegiance to the principles of this Government there is a question should be permitted to freely roam and remain. This country is no place for those to come or to remain whose purpose it is to extoll the virtues of the dictatorships. This country is not the place in which to win their converts.

It is said George Washington, the night before the battle of Trenton, fearing someone might try to betray him and the cause for which he was fighting, said, "Put none but Americans on guard tonight." We are in a period in our Nation's history when true Americans, those on whom we can fully rely and wholly depend, must be on guard everywhere in our Nation all the time. Well may we afford to examine the governmental allegiance of those who urge us not to prepare and then express their admiration for the dictators and dictatorships.

For a period of more than 150 years the people of America have given themselves a Government under which prosperity and progress have thrived and over which God has watched and will reign. To perpetuate this Government and Nation is the duty of each of us. With those who are really true to our form of government alertly on guard night and day, our posterity will not be disappointed, for a Government giving freedom and opportunity will be handed down.

Recently I received a telegram from one of the several splendid American Legion posts in my district. I fully concur in the statements expressed in the telegram which I herewith include:

KILGORE, TEX., *May 28, 1940.*

Representative LINDLEY BECKWORTH:

When an individual or any group of individuals advocates the overthrow of our American form of government they forfeit their right to its protection. We strongly urge you to use your influence to have Congress pass suitable legislation at once to deal with all forms of subversive influence in these United States.

ROBERT LEE CRIM POST 280, THE AMERICAN LEGION.

George Washington in 1940

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

Mr. SHANLEY. Mr. Speaker, it is utterly amazing to reread the messages of our first President and find how germane they are to the problems of the day. Certainly his thoughts on preparedness, our merchant marine, Trojan Horses, and our industrial mobilization are sufficient prototypes of today's needs to warrant a reprinting of cogent extracts.

His first annual message says volumes, for it stresses the primary need—preparedness—but it goes beyond that and asks for a "uniform and well-digested plan." It then anticipates the need for industrial mobilization by asking for the promotion of "such manufactories as tend to render them independent of others for essential, particularly military, supplies."

Scholars and students have written volumes on critical and raw materials, educational orders, and the benefits of autarchy but the rarest of combinations, the superb warrior and brilliant administrator sets the stage for their thoughts a century and a half before in his eighth annual address. There he stresses the need of a powerful navy to protect our external commerce, and he points out that sincere neutrality is not enough. It must be fortified with a "naval force organized and ready to vindicate it from insult or aggression."

Then, in the greatest of administrations in the Farewell Address, he says, "If we remain one people," which means a united nation, destitute of "fifth columns," our course will be clear.

GEORGE WASHINGTON—FIRST ANNUAL ADDRESS, JANUARY 8, 1790

Among the many interesting objects which will engage your attention, that of providing for the common defense will merit particular regard. To be prepared for war is one of the most effectual means of preserving peace.

A free people ought not only to be armed, but disciplined; to which end a uniform and well-digested plan is requisite; and their safety and interest require that they should promote such manufactories as tend to render them independent of others for essential, particularly military, supplies.

ADDRESS TO THE SENATE OF GEORGE WASHINGTON, PRESIDENT OF THE UNITED STATES, JANUARY 11, 1790

We are persuaded that one of the most effectual means of perserving peace is to be prepared for war, and our attention shall be directed to the objects of common defense and to the adoption of such plans as shall appear the most likely to prevent our dependence on other countries for essential supplies.

SECOND ANNUAL ADDRESS, DECEMBER 8, 1790

The disturbed situation of Europe, and particularly the critical posture of the great maritime powers, whilst it ought to make us the more thankful for the general peace and security enjoyed by the United States, reminds us at the same time of the circumspection with which it becomes us to preserve these blessings. It requires also that we should not overlook the tendency of a war, and even of preparations for a war, among the nations most concerned in active commerce with this country to abridge the means, and thereby at least enhance the price, of transporting its valuable productions to their proper markets. I recommend it to your serious reflections how far and in what mode it may be expedient to guard against embarrassments from these contingencies by which encouragements to our own navigation as will render our commerce and agriculture less dependent on foreign bottoms, which may fail us in the very moments most interesting to both of these great objects.

ADDRESS OF THE SENATE TO GEORGE WASHINGTON, PRESIDENT OF THE UNITED STATES, DECEMBER 10, 1790

The critical posture of the European powers will engage a due portion of our attention, and we shall be ready to adopt any measures which a prudent circumspection may suggest for the preservation of the blessing of peace.

FIFTH INAUGURAL ADDRESS, DECEMBER 3, 1793

There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the repuation of weakness. If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the powerful instruments of our rising prosperity, it must be known that we are at all times ready for war.

EIGHTH ANNUAL ADDRESS, DECEMBER 7, 1796

To an active external commerce the protection of a naval force is indispensable. This is manifest with regard to wars in which a state is itself a party. But besides this, it is in our own experience that the most sincere neutrality is not a sufficient guard against the depredations of nations at war. To secure a respect to a neutral flag requires a naval force organized and ready to vindicate it from insult or aggression. This may even prevent the necessity of going to war by discouraging belligerent powers from committing such violations of the rights of the neutral party as may, first or last, leave no other option.

The considerations invite the United States to look at the means, and to set about the gradual creation of a Navy. The increasing progress of their navigation promises them to no distant period of the requisite supply of seamen, and their means in other respects favor the undertaking. It is an encouragement, likewise, that their particular situation will give weight and influence to a moderate naval force in their hands. Will it not, then, be advisable to begin without delay to provide and lay up the materials for the building and equipping of ships of war, and to proceed in the work by degrees, in proportion as our resources shall render it practicable without inconvenience, so that a future war of Europe may not find our commerce in the same unprotected state in which it was found by the present.

FAREWELL ADDRESS, SEPTEMBER 17, 1796

Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality we may at any time resolve upon to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocations; when we may choose peace or war, as our interest, guided by justice, shall counsel.

Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?

The Significance of the Centenary of Dentistry

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ADDRESS BY DR. J. BEN ROBINSON, DEAN OF THE DENTAL SCHOOL, UNIVERSITY OF MARYLAND

Mr. D'ALESANDRO. Mr. Speaker, at the convention of the American Dental Association held in Baltimore from May 18 to the 20th, the association celebrated the one hundredth anniversary of the founding of the first institution for the formal teaching of dental science and the dental art, and I ask unanimous consent to include in the RECORD a speech delivered on that occasion by Dr. J. Ben Robinson, dean of the Dental School of the University of Maryland, which is located in the Third Congressional District of Maryland, which I have the honor to represent.

The address is as follows:

Today the profession of dentistry pauses to observe suitably the founding of the first institution for the formal teaching of dental science and the dental art. Any attempt to emphasize the importance of the first dental college without due regard for the movements that preceded it, and other important developments coincident with its beginning, would not present a true picture; nor would the effort to establish the date 1840 as the beginning of dentistry conform to the facts of history.

No lasting institution is the work of a moment. Preparation is essential and as effective as immediate achievement. The inception and growth of institutions depend not on one individual but on many who make their contributions to the main theme without leaving a record of their services; when the time is ripe those of vision and creative resourcefulness marshal the accumulated materials of progress and organize the essentials into concrete, usable form. To the man of vision and creative ability go the rewards, the distinction, and the honor for achievement. As a consequence, celebrations such as this are too frequently designed to do honor to individuals and institutions rather than to principles which individuals and institutions represent.

Dentistry assumed the rank of a profession with the founding in 1840 of periodic dental literature, of formal dental education and of dental organization, the results of the immediate creative resourcefulness of two great American dentists. But the founding of the Journal, the College, and the Society cannot be regarded as the beginning of dentistry. It is true that the effective services of early American dentists resulted in the establishment of the basic elements that distinguished dentistry as a profession. But mere creative effort would have been barren without the aid of a science that had developed as a consequence of long years of earnest investigation and an art of practice that had been gradually perfected through the centuries. The pioneers who are today honored as the founders of professional dentistry did not create but rather adjusted an existing art and science to the then present needs of society and by interpreting dentistry in terms of greater usefulness established a permanent profession that has taken its place among the many indispensable institutions upon which modern civilization depends.

A rudimentary dental art and an incipient dental science existed among all ancient civilizations. From a humble beginning dentistry grew in strength and usefulness, showing at all points in history a strong tendency toward autonomy. Actually the seed for a distinct specialty of medical service was sown in ancient times; it germinated during the era which included the fifteenth, sixteenth, and seventeenth centuries; it sprang forth under the benevolent influence of Pierre Fauchard; was cultivated by American dentists of the eighteenth and early nineteenth centuries; and blossomed in all its usefulness in 1840. The beginning of professional dentistry 100 years ago was the consummation of many centuries of preparation.

The purpose of this celebration is to point to the past, to consider the present, and to arouse inspiration for the future. The centenary committee has worked diligently to create a picture that will give proper weight to these various viewpoints. It has taken as its theme the beginnings of the three fundamental factors of professional integrity: The Baltimore College of Dental Surgery, the American Journal of Dental Science, and the American Society of Dental Surgeons, which collectively are regarded as the tripod upon which professional dentistry rests. These organizations appeared in 1840 as the effective tools of professional service and progress. They ushered in a new era of cooperation and of scientific approach, as contrasted with ages of individual toil and uncorrelated effort applied toward the ultimate achievement of an ideal.

In the program prepared for you suitable recognition has been accorded dentistry's heroes, and plans have been made for receiving hospitably members of the dental profession who have been inspired to return to dentistry's birthplace. Hayden and Harris are canonized as immortals because they gave coherence, stability, and purpose to the dissociated elements of a profession and for these services we attempt to honor them. Baltimore is the Mecca for dentists of the world because it was here that Harris and Hayden did their great work and it is here that the Baltimore College of Dental Surgery is located, the only one of the three original institutions founded by Hayden and Harris that still carries on.

Other features of the celebration are designed to show the status of the profession as it now exists. They reveal the character of dentistry after a century of intelligent enterprise engaged in by numberless contributors whose zealous devotion has brought to a high degree of perfection the infant institutions of 100 years ago.

This is neither the time nor place for detailed reference to the progress made by dentistry in the hundred years. To do so would abuse your patience. But it is not too much to allude generally to certain notable advances made in connection with the growth of the 3 institutions founded 100 years ago.

Periodical dental literature that began in a modest way under professional auspices has made tremendous gains. The American Journal of Dental Science had a brief but brilliant career. At the end of 20 years commercial houses, through advantages they were able to employ, preempted the field, and dental literature was made the agent of commercialism rather than the servant of the profession. In the course of time there was an awakening to the evils of commercial domination, and under the benevolent influence and the strength of dental organization literature was restored to its rightful sponsorship. Today professionally directed periodical literature is serving the educational needs of the profession through more than 100 professionally controlled dental journals. Every phase of professional activity and of public interest is adequately provided for in the facilities these numerous journals afford.

Organization has contributed to the profession a certain strength and character predicted by those who designed the first Society. The American Society of Dental Surgeons had a precarious career and came to an untimely end. But the seed was sown and from its experience sprang more representative and more practical bodies. Today, in addition to the great American Dental Association with a membership of more than three-fourths of the dentists in the United States, there are active dental societies in all States and possessions, all Government services; and a host of special organizations spread throughout the length and breadth of the country. These have been pointed to service for securing legislation for the protection of the public and for the preservation of high standards of practice; for stimulating interest in continuous education of the dentist; and for providing recurrent opportunities for limited postgraduate study. They have also supported capably formal dental education, and have given substantial grants for the promotion of dental research.

The Baltimore College of Dental Surgery, the third leg of the tripod, or the first leg if you will, is the only one of the three original dental institutions founded 100 years ago that still exists. Dental education began under proprietary influences. This pioneer system of education was not confined to dentistry but was with few exceptions, the order in all the professions of that period. Proprietary education served the educational needs of many phases of society for many years. This system in the early days served a good purpose, giving form to dental education through an important period of its growth. But the proprietary system had its weaknesses.

Because of the technological nature of the dental art, dental education was peculiarly vulnerable to commercial aggression. Early in its history commercial influences were as conspicuous as they were damaging, with the consequence that educational standards not only failed to make progress but actually stood still. The advent of the university dental school served to a degree to check commercial influences. The dental educational council, projected in 1910, accelerated the trend toward better educational standards; in 1926 the report of the Carnegie Foundation on dental education in the United States and Canada was a most important factor in placing dental education on a sound footing. Today we can say with reasonable accuracy and security that dental education in America is permanently and almost completely under university authority and that it is meeting capably its educational responsibilities to the profession and to society.

The future toward which we look so hopefully is not one of doubt and uncertainty. Dental science and art are dynamic, and we may look to the future with confidence for a continuation of progress even to a greater degree. Dentistry will receive from society and from the university a support and an encouragement in proportion to its proved worth as this may be established in the opinion of those upon whom claims are made for assistance. Dentistry is no longer an experiment; it has proved itself; it will continue to grow in public esteem and usefulness in proportion to the earnestness and care with which we pursue the course laid down by our forbears. We look to the past with admiration, to the present with determination, and to the future with hope.

McMillan Scorns Hitler, Asks Solid Backing of Defense Plans

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE FROM THE CHATTANOOGA NEWS-FREE PRESS

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an unusually well-prepared and thoughtful article written by the Honorable T. H. McMillan, commissioner of education of the city of Chattanooga, which appeared in the Chattanooga News-Free Press on Sunday, May 26. The analysis made in this article is well worth serious consideration. It is one of the best discussions of some of the problems presently presented that I have read. Mr. McMillan is a capable student of international affairs and has given the effects of a possible Hitler victory discerning study.

[From the Chattanooga News-Free Press of May 26, 1940]

IF GERMANY WINS!

(By T. H. McMillan)

Should Germany, along with its totalitarian doctrines and Hitlerian principles, achieve victory on the fields of northern France, what would happen to the United States? Modern transportation and communication have so annihilated space and time that it is inconceivable for us to remain untouched. We cannot live apart from the rest of the world. What affects one affects all.

The German arms might be so exhausted that no immediate conflict would occur, but there would be immediate consequences. Already, and before the Reich has crushed the Allies, we are feeling these first results, fearing and dreading the plunge toward militarism, wondering about "fifth columns," increasing armament, watching the stock market drop, organizing to prevent spying and sabotage, while our papers flame with the triumphal boasts of Nazi leaders and the lightning accomplishment of Nazi legions.

Hitler's actual conquest of France and England would still further lower the pall of doubt and fear over the liberal governments of the world. Millions are now shaken in faith, and doubt the practical value of democracy. Tens of millions are wondering if democracy is not outmoded by the startling industrial and military efficiency of the Nazi idea. Our confidence in government by the people is being weakened, and all our thinking is being colored now by the stupendous effectiveness of a government by one man.

ENGLAND TO BE DESTROYED

If Germany wins, England will be destroyed. Two generations of Germans have been so saturated with hate that they believe the land of Shakespeare, Milton, Tennyson, Florence Nightingale, John Wesley, Gen. William Booth, and Cardinal Newman should be utterly crushed. A German peace will be merciless, for there is no place for mercy or generosity in Mein Kampf. Poland will disappear, as will Czechoslovakia, Norway, Holland, Belgium, France, and all nations who have resisted "Der Fuehrer," whom to oppose is crime and unpardonable offense.

America is next in line. The envy that coveted England's wealth and position cannot be satisfied. Envy is never content with gains but, like fire, expands with consumption. Envy is a disease, incurable, ever unsatisfied.

It is not possible for a great liberal nation to exist peacefully with a Nazi power. The very existence of a democracy is a condemnation of its opposite.

It is, therefore, inconceivable that the world could contain two national philosophies as differing in detail and as antagonistic in principle. The American idea is based upon truth, law, justice, and a maximum of liberty for the individual. The Teutonic philosophy is based upon deception of friend and foe, will of the leader, elimination of legal processes to the promotion of efficiency, and the absolute subordination of every right to the whim of the dictator. In Nazi reasoning there is no law or justice, only the desire of the head. Caprice becomes law. Sympathy, mercy, love, are sacrificed to obtain ultimate efficiency. Life, motherhood, honor, loyalty, religion, and all unselfish emotions are eliminated to achieve the ultimate in effectiveness. All human nature is pressed into the narrow mold of military aims.

BACK TO DARK AGES

Nazi doctrine is not new. It is the same barbarism exemplified by the brutal natures of the Dark Age conquerors. It is a reversion, not a revision; a descent, not an elevation. The cave man held might was right, stole because he had opportunity, and killed out of jealous rage. His neighbor could not deal honorably with him because he had no honor, no respect for truth. Nor has Hitler. The spirit of barbarism and nazi-ism are thus one and the same, but the Nazis are armed with modern inventions, organized to the *n*th degree, and equipped to handle death and terror with equal nicety.

Faced by the necessity of living with such a national, America has but two roads. One is the road to isolation in the hope that by living apart we may perhaps live peaceably with the barbarian. But neutrality did not protect Holland, Denmark, Norway, although no one can imagine more harmless neighbors. As early as last autumn informed columnists here and abroad seemed agreed that sooner or later the United States must meet totalitarian philosophy head-on, probably in Japanese form. Certainly any isolation, however magnified, would have to be utterly self-sufficient and would be extremely difficult to maintain. Many think it impossible.

The second choice is that of armed preparation for the inevitable clash. This course will be a terrible shock to our senses, for it involves a change in the entire habits and complete outlook of every individual. It involves a gigantic redirection of national effort, an adjustment of all social energies, as we attempt a rapid militarization of our resources. Adequate armies for defense and offense must be formed, along with air legions, mechanized units, organization for chemical warfare, ordnance, fortification of coasts and cities, reshaping of our aims and objectives, and fitting all our interests to the molds of Mars.

TO CHANGE LIFE IN UNITED STATES

One can fight efficiency only with efficiency. Our easy ways and liberal traditions would have to be surrendered in the emergency. Our hours of work would have to be lengthened, our nonessentials eliminated, our luxuries banned, our leisure utilized in production, and all our strength and wealth would have to be transformed into national protection.

Taxes would jump. In England they consume 25 percent of the national income now, while Germany is demanding an even higher percentage. Much of the money now turned toward highways, education, and all kinds of internal improvements would be redirected toward fighting planes, tanks, guns, ammunition, and the endless devices of death and destruction.

SCHOOLS TO TRAIN FOR WAR

The schools and colleges, which have tried to prepare young people for life, would have to reverse their procedure and prepare for military action. Every course of study would have to be revised toward war objectives while discarding our ideologies of peace and peacetime industry. Germany has closed half her halls of learning. To kill the enemy is the object of war, and every peaceful ambition has been subordinated to this single brutal objective.

The freedom of the press would go. So would the right to speak one's thoughts and ideas. These are the main characteristics of democracy, but they are high-priced luxuries when one is forced to bend every thought and every effort toward military success alone. To compete with the Nazi machine we would probably be forced to adopt most of the Nazi methods and practices. The Nazis take the child from the cradle and teach tiny nature to admire the grim aspects of conflict. To achieve equal military power, we might have to use the same process and indoctrinate the next generation with ferocity and craft in destruction.

ALL FREEDOM WOULD GO

Our minorities may well shudder at the dismal prospect. To meet totalitarian efficiency, we would be compelled to achieve complete harmony of political, religious, and industrial factors. Even sincere objection has no place in militarism. Our political privileges and freedom would have to be forgotten in the urgency of desperate strife. Our Government approves full separation of the church and state, but there is small room for the churches and their creeds of love and toleration when heads are bent toward war. Our churches would have to forego their present freedom of expression that the juggernaut might roll on. Heretofore religion has exalted the supremacy of conscience. There is little place for conscience in a nation in desperate endeavor and concentrated toward military excellence. Labor, too, would be forced to forego its wage scales, privileges, hours, and regulations. There is no privilege for labor in Germany. Only the will of Hitler. Only by matching his methods of production could we turn out the planes, the bombs, the tanks, the engines and machinery of total war. Capital would be conscripted, for it, too, becomes a slave of the militaristic state.

BLOOD-PURGING TO COME

To compete with Germany and its present leaders it is conceivable that an opponent might have to adopt even the most objectionable methods of the Reich—the concentration camp, breach of treaties, brutal suppression of dissenters, blood-purging, frightfulness, and wanton destruction. The terrible part of the situation is than to defeat the brutality of nazi-ism one is forced to practice the same despicable methods, to stoop to conduct outlawed by decency and international law. England and France are in straits today largely because they refused to emulate Hitler's disregard of right and law.

This picture faces America if Germany wins; and only by facing this prospect can democracy hope to place its millions on a competitive basis with the Nazi machine. Our transformation might be effected thoroughly, but after our war with nazi-ism was won we would face as difficult a task again—to turn our energies to peace again. There lies a terrible danger. Lives dedicated to war can never be reclaimed. Liberties once lost are difficult to regain. This is part of the price of militarism.

HITLER MUST BE BEATEN

America must revolt from such a future. It is contrary to the best in the American ideal. We do not want to kill. We do not want war. We want to till the fields, construct, invent, overcome disease, develop justice and order, create wealth, and solve the social problems of crime, poverty, unemployment, and social equality. But if Hitler wins, God help America, or any nation worthy of envy and unprotected by might. Hitler and his totalitarian allies have made international law obsolete; they have reestablished the savagery of the stone age. They have set up anew the tenets of tyranny and absolutism. Only by the utter defeat of such principles can the theory of democracy be restored. Only by such defeat can mankind again begin to study the fundamental problems of existence under self-rule.

This is the stake of the war. Meanwhile, the wastage goes on. Each day 10,000 young lives ebb downward into the sod of France, some to set up the Nazi ideal, some to preserve the ideal of liberty, justice, and equality. In America we shudder, but our determination becomes firmer. Our millions are being gradually drawn to a holy resolution—a renewal of the vow that "government of the people, for the people, by the people shall not perish from the earth."

Danger to the American System

EXTENSION OF REMARKS

OF

HON. JAMES M. SLATTERY

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM CHICAGO HERALD-AMERICAN

Mr. SLATTERY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Chicago Herald-American of May 24, 1940, by Robert P. Vanderpoel, financial editor, entitled "American System May Be Crumbling; Happy, Carefree Days Near End."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Herald-American of May 24, 1940]

AMERICAN SYSTEM MAY BE CRUMBLING; HAPPY, CAREFREE DAYS NEAR END

(By Robert P. Vanderpoel, Financial Editor)

The American system may be crumbling.

If it is, the disaster is occurring not in Washington, not in the United States, but on the battlefields of Europe.

As we have said before, if Hitler is victorious it is impossible to vision the future with any clarity. But of this we may be sure: The happy days of moderate expenditures for Army, Navy, and air force will be over.

For 8 years the German Nation has turned every surplus ounce of its energy toward building a mighty war machine. Its purpose from the start has been clear—conquest.

OPEN AND BRAZEN

So open and brazen has been the boast of the Nazi regime that the Germans are a superior race which must rule the world that other nations and other peoples looked upon it as too fantastic to be deserving of a busy world's attention.

The stories of Chamberlain and Nevile Henderson as written by themselves disclose a woeful, unbelievable ignorance of what was taking place in Nazi Germany. The United States only now is beginning to understand the significance to itself of the Hitler philosophy.

Hitler has declared that he can create revolution in the United States and take the country from within, just as he has boasted that he was willing to sign any treaty and break it the next day if it was to his purpose.

SAT IDLY BY

Hitler said that he would destroy the British Empire, and the British sat idly by allowing him to build the planes with which to fulfill his boast, permitting him to play at war in Spain at the expense of the Spaniards for the invaluable experience to be used when the real struggle came.

Is there any more reason why the United States should take Hitler lightly than there was for Britain and France?

Brazil, Hitler has declared, is the Germany of South America. Mexico is a rich plum awaiting German exploitation. The United States is a fat, wealthy, futile nation, rotten because of its lack of race purity, decaying from within because of its belief in democratic capitalism.

ARM TO SURVIVE

The United States today begins to realize that should Hitler be victorious it must arm to the teeth if it is to survive.

Already we are girding for the production of 50,000 fighting airplanes and increased armaments of all types. The cost of this great defense program—needed only if the philosophy of might makes right, of conquest, of treachery, prevails—must fall on the backs of the American people.

No; we cannot see the future. But a Hitler victory in Europe will mean that Americans, too, must sacrifice butter for cannon.

American businessmen will find that the danger to the American system lies not with the Government elected by an overwhelming vote of the American people but with the "fifth column."

NERO FIDDLING

Great Britain eagerly, almost unanimously, has given dictatorial powers to its Government in a desperate effort to avoid destruction. If the United States wishes to avoid a similar terrifying experience it would do well to cast aside today, before the emergency arises, selfish partisanship, greedy reaching for personal advantage.

There are a few American business leaders today who remind us of Nero fiddling while Rome burned.

The world is afire. Totalitarianism threatens to engulf this Nation. Yet these businessmen go up and down the country, like

schoolboys, storming against the annoyances, the irritations, of the most liberal political-economic-social system existing anywhere on earth today.

Memorial Day Address

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 30 (legislative day of Tuesday, May 28), 1940

ADDRESS BY HON. ERNEST LUNDEEN, OF MINNESOTA, MAY 30, 1919, AT ARLINGTON NATIONAL CEMETERY

Mr. LUNDEEN. Mr. President, General Isaac B. Sherwood, of Ohio, placed the remarks delivered by myself on Memorial Day, May 30, 1919, at the Arlington National Cemetery, Virginia, in the Appendix of the CONGRESSIONAL RECORD on July 16, 1919, volume 58, parts 1–9, Sixty-sixth Congress, first session, pages 8915, 8916, and 8917.

I stand today where I stood then. I have no need to change or take any word back. America first—absolute neutrality in the quarrels of Europe and the old world—is still my slogan and will be to the very end.

This distinguished general served 18 years in the United States House of Representatives. He was the last Grand Army of the Republic man in Congress. It was exactly 52 years from the first day of his congressional service, which began on March 4, 1873, and ended on March 3, 1925. He was a great patriot and brave soldier. He entered the Civil War as a private and came out a general. At Nashville he was left for dead on the bloody field. He fought in 44 battles of that civil conflict.

This was the last memorial service in the old amphitheater. Next year the exercises were held in the new and present amphitheater, and Gen. John J. Pershing was the first speaker there. The first speaker in the old amphitheater was General, Representative, and President James A. Garfield, of Ohio.

I ask unanimous consent to have this extension of remarks by Representative Sherwood printed in the CONGRESSIONAL RECORD of today.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mr. LUNDEEN. When the Athenean orator of old ascended the rostrum to address the Assembly of Athens, he first offered up a prayer to the immortal gods that no unworthy word might escape his lips. Today I am speaking straight from the shoulder and right out of my heart. What I say I say in all earnestness. It is perhaps my last word here, and I pray that no word unworthy of America and her mighty history may escape my lips.

In Independence Hall you will find two world maps. One, in black, shows a world at the close of the eighteenth century dominated by monarchs. Our first Thirteen States were then the only large territory governed by the people. Another map shows the spread of popular government at the beginning of the twentieth century. That map is almost white. The power and influence of our Republic gained steadily during more than a century, and during that century America remained in splendid isolation. Aloof from Europe, apart from all entangling alliances, America grew to greatness.

Washington, Patrick Henry, and Jefferson—these were our guiding stars. Under their leadership America challenged the world's greatest empire on the field of battle. We see them again, minuteman and continental, hurrying from forest, field, and farm. Husband and wife and children sobbing their farewells. The signal lights! The midnight warnings! The drums and the fifes! Then, carrying their long-barreled rifles with powder horns slung, with scanty provisions, they hurried forward. Over the hills and through the valleys they rallied around a new national standard. Then Putnam left his plow. Then Allen thundered his demands and John Paul Jones sailed the seven seas.

At last there rose a majestic figure, one destined to command the first Americans. From Quebec to Yorktown and the Carolinas the inspired word of Washington fired every American heart. They dared at Trenton; they died at Saratoga; they suffered cold and hunger at Valley Forge. They won immortality and a nation's liberty at Yorktown.

We are met together today as Americans. [Applause.] Party politics has no place here. Personal ambition is laid aside. We know only America and her glorious dead. [Applause.] Foreigners and all foreign intrigue aside, internationalism forgotten, we stand at the graves of those who made and preserved us a nation.

In national solitude we grew to greatness, our trade circled the globe. We preserved our independence. Other nations formed alliances; we stood free. Other lands joined in European intrigue; we stood apart. Our trade relations were never jeopardized by our political independence. In fact, we drew close to the friendship of all.

Providence placed us here to work out our great experiment in government, unfettered and unbound. We drew inspiration from our solitude. We builded a haven for the oppressed.

As it is with the individual, so it is with a nation. Christ walked alone the shores of Galilee. Mohammed in silence and solitude developed a new religion. Moses left the multitude and returned with the Ten Commandments. Dante alone, Demosthenes in solitude, Newton with nature, Linné with his flowers—these and other giant minds drew their inspiration far from the surging crowd. So pilgrim and pioneer, adrift from Europe and her seething politics, became the sturdy minuteman and continental, willing to suffer the agony of Valley Forge that America might never again be European.

Patriotism is love of country. It is not the love of some nebulous nothing. It cannot be turned into international channels. Concord and Lexington, Saratoga and Yorktown, Gettysburg and Appomattox, the precious blood of our hero dead, these, my friends, these purchased and preserved an independence never to be surrendered while an American still lives. [Cheers and applause.]

Many years ago, on the plains of South Dakota, a little burial party wended its way to an open grave. The fife and drum were playing, and strong men in blue, wearing medals of honor, fired three volleys. A bugler sounded taps, and then we turned away, but a small flag was left flying over that grave. It was my first knowledge of the Grand Army of the Republic. That day impressed itself strongly upon my mind.

And then came the glory of songs of that Grand Army, sung in our public schools, among these the Battle Hymn of the Republic, and a song written by an American private in time of war, while tenting at night on the old camp ground. It is well that this is so. The children of today will not forget these great songs of patriotism.

Noble women of every State, banded to help our heroes, veterans, daughters and sons of veterans of every war, upon you devolves the teaching of true patriotism, practical patriotism. We must be ever diligent in that duty; we must hand on untarnished these great orders dedicated to our common country.

Memorial Day! Oh, memories, glorious memories! It was the 2d day of July 1863. Gray uniforms filled the woods beyond and swarmed up the opposing slopes; batteries opened. The roar of artillery shook the ground. Cannon replied to cannon. And then the gray mass moved. Forward they swept into the open, down the slopes, and across the fields of grain. Now they charge with the rebel yell, bayonet to bayonet. The first line of blue goes down before them. On they come unchecked. Hancock rides up where the thin blue line of one shattered regiment holds the Union center. "What regiment is this," asks the general. "The First Minnesota," answers Colonel Colville. "Charge the enemy," orders General Hancock. Forward against the whole army rushes that lone regiment. They go down almost to a man before overwhelming numbers. But the charge is checked. Before they can resume fresh Union regiments fill the gap and roll back the enemy in flight. The day is won at Gettysburg. [Applause.] It was the high tide of the rebellion. From there it ebbed to final defeat at Appomattox. Memories, glorious memories! Mere lads many of you, yet men on the battlefield. Fighting on for 4 long years. You marched with Sherman to the sea, you scaled Lookout Mountain, you stood with Thomas at Chickamauga. In the trenches at Vicksburg, at Iuka and Corinth, Antietam, Shiloh, and the Wilderness, Cold Harbor, and Petersburg. In the cold and in the heat, in sunshine and shower, amid the hell of war, wounded and hungry, you never wavered, but on and on until the sword compelled surrender.

You were the backbone of the Nation. When you marched, the Nation moved forward. When you halted, our hearts hesitated. When you swept over hostile barriers, the Nation triumphed. [Applause.]

Men of the Grand Army, a Nation owes its life to you; the fathers builded, but you saved the structure. Others founded, but you placed the capstone. With iron will and courage sublime you marched on to victory. You were then, you are now, the Grand Army of the Republic. [Applause.] Your last battalions are now silhouetted against the evening sky. Veterans of the Grand Army, the people of America salute you. Death shall not destroy nor time dim the luster of your fame.

Sacred story tells us that Elijah gave his mantle to his followers, and they became inspired to do great deeds. May the mantle which you bore so nobly through so many desperate conflicts rest upon all who seek to emulate your example.

Bronze and granite will recite the story. History will record your names. But in our living hearts we will carry forever the memory and love of those who fought for liberty and union.

As the Nation honors and cares for the veterans of the Civil War, so we will honor and care for the veterans of the Spanish-American War [applause] and the veterans of the World War. I see my comrades of the War with Spain around me. The Nation will not forget the men who remembered the *Maine*. [Applause.]

The best way to honor the dead is to care for the living. [Applause.] Were the fallen to speak now, they would ask for their living comrades that larger liberty in industrial affairs which will make true democracy a happy reality of their daily lives. Were they to speak now they would ask for them economic liberty, the last and greatest of the rights of man.

The veterans of the World War want no desert grant or swamp privilege. [Applause.] They ask equal opportunity to develop our millions of idle acres of fertile lands. They want no crumbs of charity. [Applause.] Our boys, if given a fair chance, will win that confidence and independence which marks a sturdy race. Pomp and parade, receptions, and the cheers of the multitude, these pall upon men who faced death on the field or prepared themselves in spirit for that ordeal—men who now face the stern realities of the great industrial struggle. Glory is not a satisfactory substitute for bread. [Applause.]

How tenderly we handle the rent and riddled battle flags, splintered staff, and war-worn colors borne by the veterans of all our wars. You lay up the battered hulks of naval victory as proud mementos of their services, while at your very door stand the men who carried those flags and manned those ships, not less tattered and torn by service and splintered by hostile bullets.

The veterans of the World War met death in new and dreadful forms. A thousand death-dropping planes hummed and wheeled above them. The roar of giant guns, the rain of bursting shells, storms of choking poison gas, ceaseless war by day and attack by night, until the drum fire of death pitted the earth as would a new disease. Before that rain of shells forests disappeared, cities melted into dust, and through it all a roar and rumble as of a million bolts striking incessantly upon their line. In such a fire was the temper of their courage tried. Thus again America met the test of war. They turned the tide [cheers and applause], our boys; and let no beaten foe or jealous nation question that. [Applause.]

The broken frames of a wrecked humanity now say to you by their service and by their scars that as they cared for you in times of danger and peril you shall now do justice by them. Today our soldiers and sailors return from camp and battlefield to seek a livelihood. They did not shirk at Chateau-Thierry nor hesitate in the Argonne. They sailed the seas undaunted; they added new luster to American arms. We will not forget. [Applause.] The American people will remember the dead and care for the living. They took their lives in their hands and went forth to battle. You applauded; you promised; you sent them forth to battle for American rights upon the sea.

Men and women of America, it is for us to say that no soldier who fought our battle shall suffer from the cold hand of neglect [applause] nor from the cruel injustice bred of forgetfulness. Those who profited unduly from the war must now yield up the gold they coined out of patriotism. The burden of the poor is more than they can bear. Let the burden fall on the shoulders best able to bear it. It cannot be otherwise. They are entitled to a full fair share of their native land, good land [applause], not deserts or swamps; and while we pour our billions into the laps of foreigners, let us invest a billion or two for our American lads [cheers and applause], our bravest and best.

By the solemn act of the Government these men were called to follow the flag across thousands of miles of death-infested ocean into foreign lands. They upheld the honor of our country. [Applause.] Upon them were placed the burdens, hazards, and losses of a world war. Only by the act of the Government can they be restored to their rightful place in the community.

Memorial Day brings to mind all that our soldiers did for us. We take increased devotion from the ideals for which they died and recount the principles upon which they founded our Government.

Fellow citizens, I will read from our great chart of liberty laid down in the Declaration of Independence, the Articles of Confederation, and the Constitution. Hear the voice of the fathers: "We, the people of the United States." Evidently the fathers intended "a government of Americans, by Americans, for Americans." "In order to form a more perfect union," "establish a confederation and perpetual union." No wonder you fought to save that Union. "To establish justice, to promote the general welfare, to secure the blessings of liberty to ourselves and our posterity." The militia shall only be used "to execute the laws of the Union, to suppress insurrection, and repel invasion." No Army appropriation can be made for more than 2 years. Our forefathers sought to escape the fearful burdens of foreign wars. They left Europe to escape that burden, to escape unjust taxation, conscription, large standing armies, and all oppression.

It is provided that no title of nobility shall be granted by the United States. Those who wish to observe the spirit of this clause should refrain from humiliating themselves and their fellow citizens by accepting titles bestowed by fickle royalty. It is further provided that no officer of the United States can accept any emolument, office, or title of any kind whatever from any king, prince, or foreign state without due consent of Congress. Our Presidents are held in check by the provision requiring a two-thirds majority of the Senate to ratify all treaties. A majority of the Senate must confirm Presidential appointments to office.

The founders of the Republic were friends of progress. Within 10 years after the adoption of the Constitution no less than 11 new and vitally important amendments were added. These amendments guaranteed freedom of speech and of the press; they provided that there shall be no law respecting the establishment of religion or the free exercise thereof.

The right of the people peaceably to assemble and to petition their Government for a redress of grievances shall not be abridged. The people of the United States were made secure in their persons, houses, papers, and effects against unreasonable searches and seizures. No warrants must issue except upon probable cause, and no one shall be deprived of life, liberty, or property without due process of law. Speedy and public trials are provided by impartial juries, with the right to the assistance of counsel. Excessive bail must not be required nor unusual punishments inflicted. The people retain all power not granted by the Constitution. Thus the American citizen took the lead in human progress. [Applause.]

The first framework of the United States Government, the Articles of Confederation of 1777, provided a "perpetual union," so at the very forefront of our history as a Nation was laid down the principle of "the Union forever," a principle which the boys in blue in '61 so gallantly kept alive. [Applause.]

A strong and independent Congress was provided. In these days, when men cry down Congress, we may well remember that the first Government of the United States was Congress—aye, a Congress of one house of delegates. It was 10 years later that the executive and judiciary branches were added. It was Congress which declared our independence, adopted the Articles of Confederation and perpetual union, fought the War of the Revolution to a victorious end, and concluded a permanent peace.

Independence is the cornerstone of our national existence and the inspiration of our national life. The Declaration of Independence absolved us from all allegiance to the British Crown and dissolved all political connection between the United States and the state of Great Britain. Our Government was not a charter granted by some higher power; it was a declaration of the preexisting, inherent, inalienable rights of man, to secure which rights governments are instituted among men.

On yonder hill stands the Capitol of the United States, and over there the Executive Mansion. Let them look up to Arlington for their inspiration. Here on the hillsides of Virginia are resting the men who made America.

When passion and prejudice grow furious, when party spirit grows narrow, and all the evils of political strife disturb the true compass of our national greatness, let them look well to Arlington for their certain course. Oh, my fellow citizens, they did not die in vain while we fare hither to recount their ideals and the principles for which they fought. [Applause.]

Fellow citizens, it is time to complete our monuments to American heroes. Here stands the marble amphitheater unused. When Memorial Day, 1920, is here let it stand out a finished gem upon the hills. Over there Grant's unfinished statue is almost forgotten. His comrades demand its early completion. [Applause.] Lincoln's Memorial, the Memorial Bridge to Arlington, the preservation of the Mall planned by Washington, these, my friends, may well enter our thoughts today. To Washington the pilgrimage of Americans is constantly streaming, and here America must be at her best. We are proud of our Capitol, proud of the White House, proud of the city itself, but prouder still are we when mention is made of the men who made America. [Applause.] They rise above field and farm and factory as the true example of American greatness.

Arlington, the Nation's shrine. Here meet the people of every State, here lie buried men from every walk of life, of equal rank in death as they stood equal before the law in life.

Boys in blue and rebel gray, men of the Revolutionary days, and men of the *Maine*, private and general, white and black, but all Americans. Here shines the sun of forgiveness through the tears of the mourners and a Grand Army president opens the gate to Dixie land. Thirty thousand men now bivouac on these hills. No bugle call arouses, no drum beat calls to battle; only the rustle of the leaves in the wind and the voice of a child calling to the forest bird. We linger a little while and go away. This is our shrine. Here God inspires, patriotism flames anew, and here men highly resolve that liberty shall not die. As the trees and the grass of the hills entice the else forgetful rain to earth, so will Arlington forever bring to our people a practical patriotism.

And while we stand here today in beautiful, wonderful Arlington, American soldiers, sailors, and marines, a million of them, decorate the graves of the fallen legion across the sea.

A hundred thousand American graves in foreign lands. Brave lads who never flinched. An arrogant aristocracy and a mighty militarism went down before their irresistible armed rush. Many of these lads lie buried in central cemeteries decorated and cared for today, but what of the lad who died in his trench, the next explosion burying him forever. The missing brave whose American heart is forever stilled over there. The wind moans his requiem, and dewdrops are the tears. The friendly sun clothes his resting place with grasses green and covers him over with beautiful wild flowers. Nature does not forget the dead. A hundred thousand men—American dead. It is enough. Our living lads over there now demand their places in homeland [applause], motherland, God's own country. [Applause.] They are weary of Europe and Asia. The war is over and they want to come home. For them no mandatory nonsense, either foreign entanglements and new-made graves in Africa, Asia, or Europe. They are Americans, and they want to live and die in America, to stand on their own home ground. [Applause.]

In republican France, in imperial England, in bonnie Scotland, Wales, and the Emerald Isle, yes, in Germany, and Belgium, Switzerland, and Italy, in the drifting snows of Russia, in Siberia, and in the depths of the deep there sleep our brave.

God lights the stars, He made the blue, and the white light of distant suns, and all the radiant red of morning is His handiwork, and so we wove and intertwined all these and made our flag the banner of the brave and flung it sun-kissed and wind-tossed into God's free air, the one flag, the great flag all else beside.

Our country, we are proud of your glory. No slave, all freemen, and every man a sovereign citizen. We read the same Declaration of Independence, the same Articles of Confederation, the same Constitution, and the rule of the ballot is supreme. Men rise and fall on the tides of fortune, but the ship of state sails on through every storm. God has been good to America. Let us be humble lest we forget.

Comrades and fellow citizens, today we pause to honor our hero dead. They died to make us independent, to give us sovereignty, to preserve our Union, to plant our banner where all men might see and here take courage anew. Look about you and behold a sea of flags. Arlington is not forgotten; Arlington will never be forgotten. [Applause.]

Let no traitor lower our flag [applause], let no supergovernment be imposed upon us, let none question our sovereignty or seek to set aside our liberty and our independence.

They did not die in vain. Our people are true Americans, believing in the American Nation, in its everlasting and eternal independence. We will not suffer foreigners to lord it over us, neither shall those among us whose hearts are still in Europe be our leaders. We still remember our hero dead, we remember the fight they fought and for what they fought. We shall not forget. Let us follow in their steps. [Applause.]

Newark Airport

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

CONCURRENT RESOLUTION OF LEGISLATURE OF NEW JERSEY

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution recently adopted by the Legislature of the State of New Jersey:

An assembly concurrent resolution memorializing Congress of the United States and the War Department of the United States to investigate the conditions at Newark Airport, Newark, N. J., and the feasibility of this airport being placed under Government control as an integral part of the United States national-defense program

Whereas the President of the United States has requested that Congress make available a large emergency appropriation for the purpose of expanding the national defenses of the United States; and

Whereas Newark Airport, Newark, N. J., a municipally owned airfield, is one of the largest airfields in the country and is in the center of the metropolitan district of the East; and

Whereas the Newark, N. J., municipal authorities have announced the proposed closing of the control tower at Newark Airport due to failure of commercial air lines to adequately compensate the city of Newark; and

Whereas the closing of this control tower means practically the cessation of commercial aviation at this large airfield and the eventual decay of the field; and

Whereas it is the belief of the citizens of New Jersey that this airfield should be an integral part of the air-defense program for the New York and New Jersey metropolitan area: Now, therefore, be it

Resolved by the House of Assembly of the State of New Jersey (the Senate concurring):

1. That the Congress of the United States and the War Department of the United States be urged to investigate immediately the conditions at Newark Airport and the feasibility of this airport being placed under Government control as an integral part of the expansion program of national defense now under consideration, and that the city of Newark be adequately compensated for the transfer of the airfield and its facilities to the United States Government; and

2. That certified copies of this resolution be forwarded to the President of the Senate of the United States, to the Speaker of the House of Representatives, to each Member therein representing the State of New Jersey, and to the Secretary of War.

A Timely Word of Caution

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

EDITORIAL FROM DETROIT NEWS

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit News:

UNITED STATES PAPERS PLEASE COPY

We hope the newspapers of the country will advise their readers of Detroit's "Hire Detroiters" campaign and of its purpose. In doing so they will perform a humanitarian service and at the same time help to avert avoidable economic waste.

Detroit is not inhospitable. But in view of widespread publicity given the city's probably important role in the defense program, its government has had to take what steps it can to forestall the hardships that might come from a rush of workers here for the "war boom."

The fact is that Detroit is unlikely to experience any labor demand as a result of defense contracts which its own unemployed citizens will not amply supply.

Mayor Jeffries and the council, therefore, are asking industrial employers to "hire Detroiters." Employers cooperating in the campaign will require job applicants to produce Detroit election registration cards as proof of residence.

Workers in other places may be spared sore disappointment and financial loss if made aware that these steps are being taken.

Maj. Fielding Eliot Endorses a Department of National Defense

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

Mr. VAN ZANDT. Mr. Speaker, the American people are entitled to a survey of our national-defense policies as outlined in my resolution, House Joint Resolution 417. The intent of my resolution will determine the following pertinent facts:

First. The area we as a Nation are expected to defend.

Second. The cost of adequately protecting such area.

Third. The adequacy of our present national-defense system.

The demand for a survey of our national-defense policies has been widely acclaimed in business, industrial, and military circles. Chief among the exponents of this timely resolution is Maj. George Fielding Eliot, one of America's outstanding military analysts, who declared in a letter to me dated March 22, 1940:

I am in sympathy with the majority of the objectives set forth in paragraph 2 of House Joint Resolution 417, and feel very strongly that a thorough study of the whole national-defense structure at this time is imperative.

Major Eliot's voice blends with the chorus of distinguished Americans who are likewise qualified to speak on this issue so vital to the welfare of the American people.

Kings Canyon National Park

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1940

ARTICLE WRITTEN BY THE EMINENT NATURALIST, THE LATE JOHN MUIR, FOR THE CENTURY MAGAZINE IN 1891

Mr. GEARHART. Mr. Speaker, with the enactment of my bill for the establishment of the Kings Canyon National Park in central California, national park status was conferred upon one of the most beautiful scenic areas in the world. This great scenic region and recreational center is bound to become in time as famous as any similar mountain playground on earth.

Today the outstanding scenic qualities of this area are fully acknowledged. In the light of the bitter legislative contest which resulted in the creation of this newest park, it will be interesting to note what John Muir, the late eminent and dearly beloved naturalist, had to say concerning the unmatched marvels of this section of the high Sierras in an article which he wrote for Century magazine 49 years ago. Because everything that he said then is as true today as it was when he recorded his thoughts, I ask the consent of the membership of this body that this article from his pen be reprinted in the CONGRESSIONAL RECORD.

The unanimous consent of the membership having been indicated, the article referred to follows:

A RIVAL OF THE YOSEMITE—THE CANYON OF THE SOUTH FORK OF KINGS RIVER, CALIF.

In the vast Sierra wilderness far to the southward of the famous Yosemite Valley, there is a yet grander valley of the same kind. It is situated on the south fork of Kings River, above the most extensive groves and forests of the giant sequoia, and beneath the shadows of the highest mountains in the range, where the canyons are deepest and the snow-laden peaks are crowded most closely together. It is called the Big Kings River Canyon, or Kings River Yosemite, and is reached by way of Visalia, the nearest point on the Southern Pacific Railroad, from which the distance is about 45 miles, or by the Kearsarge Pass from the east side of the range. It is about 10 miles long, half a mile wide, and the stupendous rocks of purplish gray granite that form the walls are from 2,500 to 5,000 feet in height, while the depth of the valley below the general surface of the mountain mass from which it has been carved is considerably more than a mile. Thus it appears that this new Yosemite is longer and deeper, and lies embedded in grander mountains than the well-known Yosemite of the Merced. Their general characters, however, are wonderfully alike, and they bear the same relationship to the fountains of the ancient glaciers above them.

As to waterfalls, those of the new valley are far less striking in general views, although the volume of falling water is nearly twice as great and comes from higher sources. The descent of the Kings River streams is mostly made in the form of cascades, which are outspread in flat plume-like sheets on smooth slopes, or are squeezed in narrow-throated gorges, boiling, seething, in deep swirling pools, pouring from linn to linn, and breaking into ragged, tossing masses of spray and foam in boulder-choked canyons—making marvelous mixtures with the downpouring sunbeams, displaying a thousand forms and colors, and giving forth a great variety of wild mountain melody, which, rolling from side to side against the echoing cliffs, is at length all combined into one smooth, massy, sea-like roar.

The bottom of the valley is about 5,000 feet above the sea, and its level or gently sloping surface is diversified with flowery meadows and groves and open sunny flats, through the midst of which the crystal river, ever changing, ever beautiful, makes its way; now gliding softly with scarce a ripple over beds of brown pebbles, now rushing and leaping in wild exultation across avalanche rock dams or terminal moraines, swaying from side to side, beaten with sunshine, or embowered with leaning pines and firs, alders, willows, and tall balsam poplars, which with the bushes and grass at their feet make charming banks. Gnarled snags and stumps here and there reach out from the banks, making cover for trout which seem to have caught their color from rainbow spray, though hiding mostly in shadows, where the current swirls slowly and protecting sedges and willows dip their leaves.

From this long, flowery, forested, well-watered park the walls rise abruptly in plain precipices or richly sculptured masses partly separated by side canyons, displaying wonderful wealth and variety of architectural forms, which are as wonderful in beauty of color and fineness of finish as in colossal height and mass. The so-called war of the elements has done them no harm. There is no unsightly defacement as yet; deep in the sky, inviting the onset of storms through unnumbered centuries, they still stand firm and seemingly as fresh and unworn as new-born flowers.

From the brink of the walls on either side the ground still rises in a series of ice-carved ridges and basins, superbly forested and adorned with many small lakes and meadows, where deer and bear find grateful homes; while from the head of the valley mountains other mountains rise beyond in glorious array, every one of them shining with rock crystals and snow, and with a network of streams that sing their way down from lake to lake through a labyrinth of ice-burnished canyons. The area of the basins drained by the streams entering the valley is about 450 square miles, and the elevation of the rim of the general basin is from 9,000 to upward of 14,000 feet above the sea; while the general basin of the Merced Yosemite has an area of 250 square miles, and its elevation is much lower.

When from some commanding summit we view the mighty wilderness about this central valley, and, after tracing its tributary streams, note how every converging canyon shows in its sculpture, moraines and shining surfaces that it was once the channel of a glacier—contemplating this dark period of grinding ice, it would seem that here was a center of storm and stress to which no life would come. But it is just where the ancient glaciers bore down on the mountain flank with crushing and destructive and most concentrated energy that the most impressive displays of divine beauty are offered to our admiration. Even now the snow falls every winter about the valley to a depth of 10 to 20 feet, and the booming of avalanches is a common sound. Nevertheless the frailest flowers, blue and gold and purple, bloom on the brows of the great canyon rocks, and on the frosty peaks, up to a height of 13,000 feet, as well as in sheltered hollows and on level meadows and lake borders and banks of streams.

At the head of the valley the river forks, the heavier branch turning northward, and on this branch there is another Yosemite, called from its flowery beauty Paradise Valley; and the name might well be applied to the main canyon, for notwithstanding its tremendous rockiness, it is an Eden of plant beauty from end to end.

THE TRIP TO THE VALLEY

Setting out from Visalia, from the base of the first grand mountain plateau we can see the outstanding pines and sequoias 4,000 feet above us, and we now ascend rapidly, sweeping from ravine to ravine around the brows of subordinate ridges. The vegetation shows signs of a cooler climate; the golden flowered Fremontia, manzanita, ceanothus, and other bushes show miles of bloom; while great beds of blue and purple bells brighten the open spaces, the whole forming a floral apron of fine texture and pattern, let down from the verge of the forest in graceful, flowing folds. We have now reached an elevation of 6,000 feet. Down through the shadows we make our way for a mile or two in one of the upper ravines of Mill Creek. Climbing a steep mile from the mill we enter General Grant National Park of Big Trees, a square mile in extent, where a few of the giants are now being preserved amid the industrious destruction by ax, saw, and blasting powder going on around them.

We now descend to Bearskin Meadow, a sheet of purple-topped grasses enameled with violets, gilias, larkspurs, potentillas, ivesias, and columbine; parnassia and sedges in the wet places, and majestic trees crowding forward in proud array to form a curving border, while Little Boulder Creek, a stream 20 feet wide, goes humming and swirling merrily through the middle of it.

The next place with a name in the wilderness is Tornado Meadow. Here the sequoia giants stand close about us, towering above the firs and sugar pines. Then follows another climb of a thousand feet, after which we descend into the magnificent forest basin of Big Boulder Creek. Crossing this boisterous stream as best we may, up again we go 1,200 feet through glorious woods, and on a few miles to the emerald Horse Corral and Summit Meadows, a short distance beyond which the highest point on the trail is reached at Grand Lookout, 8,300 feet above the sea. Here at length we gain a general view of the great canyon of King's River lying far below, and of the vast mountain region in the sky on either side of it, and along the summit of the range. Here, too, we see the forest in broad, dark swaths still sweeping onward undaunted, climbing the further mountain slopes to a height of 11,000 feet. But King Sequoia comes not thus far. The grove nearest the valley is on one of the eastern branches of Boulder Creek, 5 miles from the lower end.

CHIEF FEATURES OF THE CANYON

Going down into the valley we make a descent of 3,500 feet, over the south shoulder, by a careless crinkled trail which seems well-nigh endless. It offers, however, many fine points of view of the huge granite trough, and the river, and the sublime rocks of the walls plunging down and planting their feet on the shady level floor.

At the foot of the valley we find ourselves in a smooth, spacious park, planted with stately groves of sugar pine, yellow pine, silver fir, incense cedar, and Kellogg oak. The floor is scarcely ruffled with underbrush, but myriads of small flowers spread a thin purple and yellow veil over the brown needles and burrs beneath the groves, and the gray ground of the open sunny spaces. The walls lean well back and support a fine growth of trees, especially on the south side, interrupted here and there by sheer masses 1,000 to 1,500 feet high, which are thrust forward out of the long slopes like dormer windows. Three miles up the valley on the south side we come to the Roaring Falls and Cascades. * * * On the east side of the fall the Cathedral Rocks spring aloft with imposing majesty. * * *

Next to the Cathedral Rocks is the group called the Seven Gables, massive and solid at the base, but elaborately sculptured along the top and a considerable distance down the front into pointed gothic arches, the highest of which is about 3,000 feet above the valley. Beyond the Gable group, and separated slightly from it by the beautiful Avalanche Canyon and Cascades, stands the bold and majestic mass of the Grand Sentinel, 3,300 feet high, with a split vertical front presented to the valley, as sheer, and nearly as extensive, as the front of the Yosemite Half Dome.

Projecting out into the valley from the base of this sheer front is the Lower Sentinel, 2,400 feet high; and on either side, the West and East Sentinels, about the same height, forming altogether the boldest and most massively sculptured group in the valley. Then follow in close succession the Sentinel Cascade, a lace-like strip of water 2,000 feet long; the South Tower, 2,500 feet high; the Bear Cascade, longer and broader than that of the Sentinel; Cave Dome, 3,200 feet high; the Sphinx, 4,000 feet; and the Leaning Dome, 3,500. The Sphinx, terminating in a curious sphinxlike figure, is the highest rock on the south wall, and one of the most remarkable in the Sierra; while the whole series from Cathedral Rocks to the Leaning Dome at the head of the valley is the highest, most elaborately sculptured, and the most beautiful series of rocks of the same extent that I have yet seen in any yosemite in the range.

Turning our attention now to the north wall, near the foot of the valley a grand and impressive rock presents itself, which with others of like structure and style of architecture is called the Palisades. Measured from the immediate brink of the vertical portion of the front, it is about 2,000 feet high, and is gashed from top to base by vertical planes, making it look like a mass of huge slabs set on edge. * * *

The next notable group that catches the eye in going up the valley is the Hermit Towers, and next to these the Three Hermits, forming together an exceedingly picturesque series of complicated structure, slightly separated by the steep and narrow Hermit Canyon.

East of the Hermits a stream about the size of Yosemite Creek enters the valley, forming the Booming Cascades. It draws its sources from the southern slopes of Mount Hutchings and Mount Kellogg, 11,000 and 12,000 feet high, and on the divide between the Middle and South Forks of the King's River.

Above the Booming Cascades and opposite the Grand Sentinel stands the North Dome, 3,450 feet high. Above the dome the ridge still rises in a finely drawn curve until it reaches its culminating point in the pyramid, a lofty symmetrical rock nearly 6,000 feet above the floor of the valley.

A short distance east of the dome is Lion Rock, a very striking mass as seen from a favorable standpoint, but lower than the main rocks of the wall, being only about 2,000 feet high. Beyond the Lion and opposite the East Sentinel a stream called Copper Creek comes chanting down into the valley. It takes its rise in a cluster of beautiful lakes that lie on the top of the divide between the South and Middle Forks of the Kings River, to the east of Mount Kellogg. The broad, spacious basin it drains abounds in beautiful groves of spruce and silver fir and small meadows and gardens, where the bear and deer love to feed, but (sic) it has been badly trampled by flocks of sheep.

From Copper Creek to the head of the valley the precipitous portion of the north wall is comparatively low. The most notable features are the North Tower, a square, boldly sculptured, outstanding mass 2,000 feet in height, and the dome arches, heavily glaciated and offering telling sections of domed and folded structure. At the head of the valley, in a position corresponding to that of the Half Dome in Yosemite, looms the great Glacier Monument, the broadest, loftiest, and most sublimely beautiful of all these wonderful rocks. It is upward of a mile in height and has five ornamental summits and an indescribable variety of sculptured forms projecting or countersunk on its majestic front, all balanced and combined into one symmetrical mountain mass.

THE VALLEY FLOOR

The bottom of the valley is covered by heavy deposits of moraine material, mostly outspread in comparatively smooth and level beds, though four well-characterized terminal moraines may still be traced stretching across from wall to wall, dividing the valley into sections.

With the exception of a small meadow on the river bank, a mile or more of the lower end of the valley is occupied by delightful groves, and is called "Deer Park." Between Deer Park and the Roaring Fall lies the Manzanita Orchard, consisting of a remarkably even and extensive growth of manzanita bushes scarcely interrupted by other bushes or by trees.

The largest meadow in the valley lies at the foot of Grand Sentinel. It is noted for its fine growth of sweet-brier rose, the foliage of which as well as the flower is deliciously fragrant, especially in the morning when the sun warms the dew. At the foot of South Tower, near the Bear Cascades, there is a notable garden of Mariposa tulips.

On the north side of the Valley the spaces that bear names are Bee Pasture, Gilia Garden, and Purple Flat, all lavishly flowery, each with its own characteristic plants, though mostly they are the same as those of the south side of the river, variously developed and combined; while aloft on a thousand niches, benches, and recesses of the walls are charming rock ferns, such as adiantum, pellaea, cheilanthes, allosurus, and brilliant rugs and fringes of the alpine phlox, Menzies penstemon, bryanthus, Cassiope, Alpine primula, and many other small floral mountaineers.

PARADISE CANYON

Ascending the Paradise Canyon we find still grander scenery, at least for the first 10 miles. * * * The walls of the canyon on either side rise to a height of from 3,000 to 5,000 feet in majestic forms, hardly inferior in any respect to those of the main valley. The most striking of these on the west wall is the Helmet, 4,000 feet in height; and on the east side, after the monument, Paradise Peak.

FROM YOSEMITE TO KINGS RIVER ALONG THE SIERRA

One of my visits to the great canyon was undertaken from the old Yosemite along the Sierra. We followed the old trail to Wawona and the Mariposa sequoias, then plunged into the trackless wilderness. We traced the Chiquita San Joaquin to its head, then crossed the canyon of the North Fork of the San Joaquin below the Yosemite of this branch, and made our way southward across the Middle and South Forks of the San Joaquin to a point on the divide between the South Fork of the San Joaquin and the North Fork of the Kings River, 10,000 feet above the sea. Pushing on with difficulty over the divide, we entered the upper valley of the North Fork of the Kings River, and traced its course through many smooth glacier-meadows, and past many a beautiful cluster of granite domes, developed and burnished by the ancient glaciers. Below this dome region the canyon closed, and we were compelled to grope our way along its forest-clad brink until we discovered a promising side canyon, which led us down into the North Fork, Yosemite, past a massive projecting rock like El Capitan. We at length made a way out of this little Yosemite by a rude trail that we built up a gorge of the south wall, and on to the crest of the divide between the North and Middle Forks of the river. Here we gained telling views of the region about the head of the Middle Fork of Kings River, vast mountains along the axis of the range, seemingly unapproachable, a broad map of domes and huge ridge-waves and canyons extending to the summits far to the west of us in glorious harmony. Tracing the divide through magnificent forests we at length forded the main Kings River, passed through the sequoia groves, and entered the great Yosemite on the 9th of October, after a light storm had freshened the colors.

DESTRUCTIVE TENDENCIES

At first sight it would seem that these mighty granite temples could be injured but little by anything that man may do. But it is surprising to find how much our impressions in such cases depend upon the delicate bloom of the scenery, which, in all the more accessible places, is so easily rubbed off. I saw the King's River Valley in its midsummer glory 16 years ago, when it was wild, and when the divine balanced beauty of the trees and flowers seemed to be reflected and doubled by all the onlooking rocks and streams as though they were mirrors, while they in turn were mirrored in every garden and grove. In that year (1875) I saw the following ominous notice on a tree in the King's River, Yosemite:

"We, the undersigned, claim this valley for the purpose of raising stock.

MR. THOMAS,
MR. RICHARDS,
HARVEY & CO."

and I feared that the vegetation would soon perish. This spring (1891) I made my fourth visit to the valley, to see what damage had been done, and to inspect the forests. I left San Francisco on the 28th of May, accompanied by Mr. Robinson, the artist. At the new King's River Mills we found that the sequoia giants, as well as the pines and firs, were being ruthlessly turned into lumber. Sixteen years ago I saw five mills on or near the sequoia belt, all of which were cutting more or less of "big tree" lumber. Now, as I am told, the number of mills along the belt in the basins of the King's, Kaweah, and Tule Rivers is doubled, and the capacity more than doubled. As if fearing restriction of some kind, particular attention is being devoted to the destruction of the sequoia groves owned by the mill companies, with the view to get them made into lumber and money before steps can be taken to save them. It seems incredible that Government should have abandoned so much of the forest cover of the mountains to destruction. As well sell the rain clouds, and the snow, and the rivers to be cut up and carried away if that were possible. Surely it is high time that something be done to stop the extension of the present barbarous indiscriminating method of harvesting the lumber crop.

THE TEHIPITEE VALLEY

By ascending the valley of Copper Creek and crossing the divide you will find a middle fork tributary that conducts by an easy

grade down into the head of the grand Middle Fork Canyon, through which you may pass in time of low water, crossing the river from time to time, where sheer headlands are brushed by the current, leaving no space for a passage. After a long, rough scramble, you will be delighted when you emerge from the narrow bounds of the great canyon into the spacious and enchantingly beautiful Tehipitee. It is about 3 miles long, half a mile wide, and the walls are from 2,500 to nearly 4,000 feet in height. The floor of the valley is remarkably level, and the river flows with a gentle, stately current. Nearly half of the floor is meadowland, the rest sandy flat planted with the same kind of trees and flowers as the same kind of soil bears in the great canyon, forming groves and gardens, the whole enclosed by majestic granite walls, which in height and beauty and variety of architecture are not surpassed in any Yosemite of the range. Several small cascades coming from a great height sing and shine among the intricate architecture of the south wall, one of which when seen in front seems to be a nearly continuous fall about 2,000 feet high. But the grand fall of the valley is on the north side. This is the Tehipitee Fall, about 1,800 feet high. The upper portion is broken up into short falls and magnificent cascade dashes, but the last plunge is made over a sheer precipice about 400 feet in height into a beautiful pool.

To the eastward of the Tehipitee Fall stands Tehipitee Dome, 2,500 feet high, a gigantic round-topped tower, slender as compared with its height, and sublimely simple and massive in structure. It is not set upon, but against, the general masonry of the wall, standing well forward, and rising free from the open sunny floor of the valley, attached to the general mass of the wall rocks only at the back. This is one of the most striking and wonderful rocks in the Sierra. (See plate VIII.)

THE NEED OF ANOTHER GREAT NATIONAL PARK

I fancy the time is not distant when this wonderful region will be opened to the world. * * * Some of the sequoia groves were last year included in the national reservations of Sequoia and General Grant Parks. But all of this wonderful King's River region, together with the Kaweah and Tule sequoias, should be comprehended in one grand national park. This region contains no mines of consequence, it is too high and too rocky for agriculture, and even the lumber industry need suffer no unreasonable restriction. Let our lawgivers then make haste before it is too late to set apart this surpassingly glorious region for the recreation and well-being of humanity, and all the world will rise up and call them blessed.

JOHN MUIR.

Permissive Military Training for the C. C. C.

REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1940

Mr. JOHNSON of Oklahoma. Mr. Speaker, several days ago I introduced a bill in this Congress to permit enrollees in the C. C. C. camps to be given military training of 6 hours per week. Under the provisions of my bill it is not required that all C. C. C. enrollees take military training, but the bill only permits those enrollees who desire such training to take it under the supervision and instruction of Army officers. I would not favor compulsory military training in the C. C. C. at this time. But for the past 4 or 5 years I have been urging that C. C. C. enrollees be permitted to avail themselves of this opportunity which I have long since been definitely convinced a vast majority of the enrollees very much desire. During the past few years I have visited more than 50 C. C. C. camps in some 15 States. I have been accorded the opportunity of not only talking publicly to the enrollees but also of discussing this matter of military training with hundreds of enrollees privately. I find that at least 95 percent or more are desirous of having this training. Many of the enrollees have expressed the opinion that in failing and refusing to give them the opportunity to receive this training this Government is not giving them a square deal. I have asked the chairman of the Committee on Labor for a hearing on my bill and am very hopeful of being accorded the privilege of appearing in support of this proposed legislation. I have also discussed the matters with others very high in authority and feel that this administration now looks with favor on my proposal to permit C. C. C. enrollees to receive this valuable training.

PROCEEDINGS

HELD IN THE ROTUNDA OF THE UNITED STATES CAPITOL

AT THE

UNVEILING OF THE PAINTING

DEPICTING THE SCENE AT THE

SIGNING OF THE CONSTITUTION OF THE UNITED STATES

Wednesday, May 29, 1940, at 3 o'clock p. m.

CONGRESSIONAL COMMITTEE ON ARRANGEMENTS

HON. JOHN N. GARNER, *Vice President of the United States*

HON. WILLIAM B. BANKHEAD, *Speaker of the House of Representatives*

HON. DAVID LYNN, *Architect of the Capitol*

PROGRAM

Concert, 2:30 to 3 p. m.—Selections by UNITED STATES NAVY BAND
LT. CHARLES BENTER, *Leader*

HON. WILLIAM B. BANKHEAD, *Speaker of the House of Representatives, Presiding*

Invocation—REV. ZeBARNEY T. PHILLIPS, D. D.
Chaplain of the Senate of the United States

Presentation of the Painting—HON. WILLIAM B. BANKHEAD
Speaker of the House of Representatives

Unveiling of the Painting—GRAHAM T. SMALLWOOD, *Sons of the American Revolution*; MISS MILDRED C. SHERMAN, *Daughters of the American Revolution*

The Star Spangled Banner—UNITED STATES NAVY BAND

Address—HON. KENT E. KELLER
House of Representatives

Address—HON. WARREN R. AUSTIN
United States Senate

Address—HON. ULYSSES S. GUYER
House of Representatives

Acceptance of the Painting—HON. ALBEN W. BARKLEY
United States Senate

Introduction of the Artist—HOWARD CHANDLER CHRISTY

March of the Constitution—UNITED STATES NAVY BAND

Benediction—REV. JAMES SHERA MONTGOMERY, D. D.
Chaplain of the House of Representatives

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:

Almighty and Eternal God, our Heavenly Father, Ruler and Guide of the destinies of nations, we commend unto Thee our blessed America, that Thou wilt ever keep her close unto Thyself, for out of her, dear Lord, Thou hast constructed a great and efficacious instrument for good in the world. Thou has placed us in the gateways of the earth; Thou hast mingled our blood from uncorrupted springs; Thou has touched us with the inspiration of human hearts, which is the great law, the great watchword of our Constitution.

Thou didst promise of old, dear Lord, that Thou wouldst make a new covenant with Thy people, saying, "I will put my law in their inward parts, and write it in their hearts; and will be their God, and they shall be my people." Remember, O Lord, this Thy covenant of old. May we reinvoke it on this

blessed occasion when an inspired people rededicates itself unto Thee and Thy service.

We commit unto Thy gracious keeping the President of the United States, the Vice President, the Speaker of the House of Representatives, the Congress, the judiciary, and all the departments of the Government of this our great land. O, give us wisdom and discretion; keep us pure, calm, and steadfast, and grant to us the strength to live an upright and a godly life. Bless Him who hast given us the benefit of Thy inspiration upon His work, for Thou, O God, didst bring forth at the creation of the earth shouts of joy from the children of the Most High; Thou, O Christ, was born in a manger tapestried with angelic forms and with the heavenly antiphon of peace on earth and goodwill to men resounding down the corridors of time. And so we ask Thy blessing upon this service of dedication in the nation's shrine of this masterpiece of beauty and historical import.

Grant that now we may undertake only that which shall promote the way of peace. Bless those nations that are at war; strengthen the patience of men; guide their instincts into holy and constructive living. And may our Nation, dear Lord, be the means of bringing back not only to rationality and reasonableness but also unto the highest, most righteous peace all the nations of the earth. Forgive our sins, our negligences, and our ignorances, and help us to go forth to all the world in Thy name and through the spirit of Him who taught us when we pray to say:

Our Father who art in Heaven, hallowed by Thy name; Thy Kingdom come; Thy will be done, on earth as it is in heaven. Give us this day our daily bread, and forgive us our trespasses as we forgive those who trespass against us; and lead us not into temptation, but deliver us from evil: For Thine is the Kingdom and the power, and the glory, forever and ever.

Amen.

Mr. BANKHEAD. As chairman of the Commission authorized by the resolution of Congress to provide for a painting depicting the signing of our Federal Constitution, and in accordance with a concurrent resolution adopted by both bodies providing for the unveiling and acceptance of the painting, I now call this convocation to order. The Chaplain of the Senate, Rev. Z©Barney T. Phillips, will offer prayer.

In a few moments there will be disclosed for your observation and, I feel confident, for your hearty approval and admiration, a reproduction on canvas of possibly the most significant event in the political and governmental history of our Republic.

It has often occurred to me in looking over the other great historic paintings which adorn this rotunda and this Capitol that it is a rather singular thing, if, indeed, not a grievous omission, that up until this hour no provision has been made for the perpetuation in enduring form of that scene of such transcendant importance to our people, as well as to the people of the world.

It was the concluding episode of the determined purpose of our ancestors who participated in the struggle for our independence to write into one document their conception of the structure of a righteous and enduring form of government for a free people. With the addition of the first 10 amendments, commonly known as the Bill of Rights, there was established our fundamental law, upon which there has been builded not only the oldest but likewise the most powerful democracy on the face of the earth.

Possibly after a lapse of 150 years after the signing of this Constitution, no more appropriate time than this could have been selected for the dedication of a perpetual memorial to those men of genius and high resolve and profound philosophy who made possible our great experiment in human freedom. And such observation is based upon the fact that today we are confronted with the menace of diabolical doctrines and powers which threaten to destroy the very foundations of democratic institutions everywhere on the face of the earth.

In a moment as we look upon the faces of those great men, the signers of the Constitution, let us as a united people highly resolve that no sacrifice will be too great, no hardship too burdensome upon the part of this generation, to preserve for our posterity and for the world the priceless heritage they bequeathed, in perpetuity, to their descendants.

Let us swear by the memory of the founders that if constitutional and representative government shall succumb in all other parts of the world, it shall and will be preserved inviolate in the Western Hemisphere. God give us the spirit and the strength to secure that supreme objective. [Applause.]

The Commission authorized by resolution of Congress to provide for a painting depicting the signing of the Constitution of the United States having fulfilled its duties pursuant to that resolution, this painting will now be unveiled by Mr. Graham T. Smallwood, representing the Sons of the American Revolution, and Miss Mildred C. Sherman, representing the Daughters of the American Revolution.

During the unveiling of the painting, the United States Navy Band played the Star-Spangled Banner.

Mr. BANKHEAD. The President of the United States was, of course, invited to attend the ceremonies but found it impossible under the pressure of his other public duties at this time to attend. I now have the privilege of reading to this audience the letter addressed to me as chairman of the Commission by the President:

THE WHITE HOUSE,
Washington, May 28, 1940.

Hon. WILLIAM B. BANKHEAD,
Chairman of the Commission to Provide a Painting of the Signing of the Constitution, House of Representatives, Washington, D. C.

MY DEAR MR. SPEAKER: We should all be immeasurably happier could this ceremony take place in another kind of world—in a tranquil world where men and nations alike were free to seek out peacefully their individual destinies.

But, tragically, the condition of the world is vastly different. Beyond the seas, the way of life so brilliantly outlined in the document that we salute today is under attack by force of arms unprecedented in human history.

And so I believe that I express the sentiments of every thoughtful and loyal member of this democracy when I say that the present occasion is one far less for rejoicing than for sober resolve: resolve that neither by moral unfitness nor neglect of our physical defense shall we permit the lamp of freedom to be extinguished in this land.

It was truly a momentous scene whose reproduction is to be unveiled in the Capitol. It marked the culmination of a prodigious, unparalleled, and amazingly successful effort to express in a charter of government the eternal spirit of a just and humane society. God grant that the day is not far distant when that spirit will be free to assert itself in the councils of all mankind.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

Mr. BANKHEAD. I take pleasure in presenting the Honorable KENT E. KELLER, a Representative in Congress from the State of Illinois, and chairman of the House Committee on the Library.

Mr. KELLER. Mr. Chairman, painting on wood and stone is known to be some thousands of years old, where fully protected. But there appears to be a feeling that pictures done on canvas are comparatively short-lived; that they soon fade and disappear. But the facts are that paintings on canvas are to a very high degree permanent if properly protected. There are a number of paintings on canvas now nearing 700 years of age, awaiting installation in the National Gallery of Art.

They are as fresh and colorful as the day they left the painters' hands. There is every evidence that these paintings will show but little, if any change at the end of another 700 years. The same will be true of this great canvas before us today.

It contains not only the finest and truest portraits of these men—the Signers of the Constitution—now in existence—all drawn to life size, perspective considered. These colors are as permanent in their nature as those in the pictures referred to awaiting installation in the National Gallery of Art.

When twenty centuries shall have rolled away, and when American millions have passed by and viewed their ancestors in that great act, these characters—these clothes—these men in the habiliments of their time will be as fresh and clear as they are before us here today.

House Joint Resolution No. 224 was introduced by Hon. ROBERT T. SECREST, Representative in Congress, on March 22, 1939. This resolution authorized the painting of the "Signing of the Constitution." It was reported by the Committee on the Library on March 25, Report No. 315. It was passed by the House of Representatives on April 3, by the Senate on April 17, and approved by the President on April 20, 1939.

The public resolution provided for a Commission, consisting of the Vice President, the Speaker of the House of Representatives, and the Architect of the Capitol, to select the painter to execute this work.

On May 19, 1939, this Commission selected Mr. Howard Chandler Christy to paint the "Signing of the Constitution of the United States." The price agreed upon was not to exceed $30,000, and that amount was agreed to between the Commission and Mr. Christy. The painting was to be approximately 20 by 30 feet in size.

About 5 years ago, Mr. Christy had begun an extensive study of this subject, the Signing of the Constitution, and 3 years ago had finished a small painting containing portraits of all of the signers. This painting was about 5 by 7 feet. It was exhibited on the floor and corridors of both the House and the Senate. It showed, to say the least of it, the intimate study which Mr. Christy had made of this subject of the Signing of the Constitution.

This first picture, contained in the upper part, an allegorically expressed idea—the spirit of the Constitution in relation to the people it was to serve. The figures representing this allegory, however, were entirely rejected by the Commission when they instructed Mr. Christy in the form which the painting was to take. He was instructed to follow strictly the historical facts in painting this picture, and this instruction he followed to the letter.

The artist sought and studied all available portraits and descriptions of the signers of the Constitution as the basis of his work. He found acceptable and authentic portraits of 36 of them which left only 2 of the signers of whom no authentic portrait was available. They were Jaco Broom, of Delaware, and Thomas Fitzsimons, of Pennsylvania. The figures of these 2 are painted in with their backs to the observer.

The painting, therefore, contains the portraits of George Washington, president of the convention and delegate from Virginia; John Langdon and Nicholas Gilman, of New Hampshire; Nathaniel Gorham and Rufus King, of Massachusetts; William Samuel Johnson and Roger Sherman, of Connecticut; Alexander Hamilton, of New York; Wil. Livingston, David Brearley, William Patterson, and Janathan Dayton, of New Jersey; B. Franklin, Robt. Morris, Thos. Fitzsimons, James Wilson, Thomas Mifflin, Geo. Clymer, Jared Ingersoll, and Gouv. Morris, of Pennsylvania; George Read, John Dickinson, Jaco Broom, Gunning Bedford, Jr., and Richard Basset, of Delaware; James McHenry, Daniel Carroll, and Dan Jenifer of St. Thomas, from Maryland; John Blair and James Madison, Jr., of Virginia; William Blount, Hu. Williamson, and Richard Dobbs Spaight, of North Carolina; J. Rutledge, Charles Pinckney, Charles Cotesworth Pinckney, and Pierce Butler, of South Carolina; William Few and Abraham Baldwin, of Georgia; and William Jackson, the secretary, with the two exceptions noted.

But to Howard Chandler Christy, this is not alone a work of art. It is the expression of a patriotism older than the Republic, of a family background from colonial days. It is a work of love and appreciation of his country, an expression of a subconscious recollection of the many battlefields on which his family contested for the establishment and maintenance of this Republic.

Mr. Christy was not only enabled to gather many portraits of most of these characters, which enabled him to paint the best possible portraits, but in many instances he located the original clothing which many of the delegates to this constitutional convention actually wore during that period. This painting shows that clothing with great precision and truth on the canvas.

Where the portrait did not indicate the size and physical characteristics of the man, Mr. Christy carried on an investigation along that line, which not only gave very complete data as to the actual clothing which these men wore, but the physical size and form of these signers of the Constitution.

This is notably the case in relation to George Washington and Benjamin Franklin.

The most comprehensive picture of any man is obtained from what the man, himself, said and did. For instance, George Washington was a man of great height and strength, trained by military service, athletic, a great wrestler, as shown by the historical fact that he was made an Indian chief because he could throw in a match any Indian wrestler between Virginia and the Ohio River. He was a splendid horseman, in the saddle much of the time; consequently there was little opportunity for him to develop any width of waist line.

At the age of 55, at the time of the signing of the Constitution, he stood over 6 feet 3 inches and weighed 190 pounds.

In color, his hair was red, eyes blue. He wore no wig, but his hair was powdered according to the fashion of the time. His clothing was rich but simple. In the painting they are exact copies of the original, including his shoes and knee buckles and watch fob, which can be seen in the Smithsonian Museum.

These known facts, together with the wonderful mask of Washington by Houdon (now carefully preserved at the Mount Vernon Museum) gave the artist an infallible physical portrait of the man as he was. Many people, seeing this portrait as it was being painted, have remarked, "That is Washington as I have always thought him to be."

Among other things, one common fallacy has been corrected. Many portraits of Washington, showing him with a quite full stomach, are in existence. When one considers his way of life and examines his clothing, such portraiture is clearly incorrect. So, upon investigation it was found that often another model posed for Washington's body. In one case Gouverneur Morris is known to have posed for the figure in a very important work, wherefore the large and untrue waistline.

The same painstaking research was made in relation to Franklin. Two years ago, the Metropolitan Museum of the city of New York held an exhibition of everything pertaining to Franklin. Portraits for which he posed personally, objects of furniture and clothing, and especially the plum-colored brocade costume with the finest lace embroidered waistcoat which he wore while in France, gave a good idea of his stature.

But the most comprehensive and descriptive material dealing with Franklin was what he, himself, had to say. Because of his direct simplicity, possessing that glorious singing quality of truth, bestowed by God on the day of his birth, Franklin wrote in a way that revealed his own glory.

He possessed a deep appreciation for creative art. He also possessed one of the greatest minds in all the history of mankind. It is said that Benjamin Franklin and Leonardo da Vinci were the greatest creative and artistic minds the world has ever known. No doubt, because of his great appreciation for creative art, he posed more than most others of his time for artists.

At the time of the signing, Franklin was 82 years old, a philosopher, inventor, humorist, wit, statesman, and so you see him in this picture—not a wrinkle put in—not a wrinkle left out. The face of any 82-year-old man, as he was—the first time it has been so painted. This characterization is a great achievement.

For the portrait of Hamilton, some 30 reproductions or paintings, busts, and bas reliefs were used, taking the best from each painting an entirely new portrait truer than any then in existence is the result. The best portraits of him are those by Trumbull in front and three-quarter views, but a profile was required for this place. He was 30 years old at

the time of the signing, and is here depicted in black satin with cut silver buttons, white silk stockings, powdered hair, and very handsome and animated as he really was.

Madison, who was 36 years of age, is represented by the fine portrait by Stuart.

For Gouverneur Morris, several portraits were consulted. He had lost a leg in an accident and is usually depicted wearing a peg leg. But since a peg leg had nothing historically to do with the signing, and since he stands back of Hamilton, this leg was not permitted to show.

Each character here represented was taken up and studied carefully, in order to get the best portraits possible. Inasmuch as the deputies knew that the signing was to take place, they considering it a state occasion, dressed up. Here they are, with their very best clothes and powdered wigs or hair, as the case might be.

Many studies were made in the chamber in Independence Hall in Philadelphia, where the signing took place. The light at the time of day and the time of year fell in just this way upon the men and the furnishings.

The original desk and inkwell, the famous "Sunrise" chair mentioned by Franklin, many of the chairs used by the delegates, the chandelier still in its place; the flags, the original Stars and Stripes, a famous dragoon regiment from Maryland and a New Hampshire regiment have their banners there. The curtains of green with gold facing, the cloths which covered the delegates' tables, the rose-colored silk rug, and other drapings are just as they were then, true in color and design.

The books on the floor near Franklin are three of Thomas Jefferson's finest, now of great value. The open Bible on the side table by Robert Morris is also of that period. All of these are at present in the Library of Congress.

Smithsonian Institution has the drum shown on the back wall.

The pen, or quill, with which Spaight is signing, came from the boyhood home of Patrick Henry.

Through the window can be seen the old Horse and Coach Tavern which was there at that time, and which the delegates frequently visited. The season of the year is indicated in the well-known row of walnut trees.

It is well here, perhaps, to make a suggestion of the origin and use of painting in the recording of great events of men, to indicate at least relatively the position this great painting is to hold in that great art of color, form, and action.

Of all of the arts—painting, sculpture, and architecture—painting is probably the newest. But it has already played a tremendous part in the giving of expression to the achievements of the periods in which the great paintings were made, just as this great painting is the ultimate of the works of this character at the present day.

How old is art? And what is the importance of it? Every one has noticed children in their attempts to make pictures of the things they see. It is, in fact, a universal aspiration of the human mind. The proof of this is very clearly and certainly illustrated by the fact that in what we consider the childhood of the human race at least 15,000 years ago, a great unknown artist of the Magdalenian epoch painted vividly a bison in the caverns of Altamira, Spain. The drawing is accurate, firm, and spirited. The pose and expression is proud and terrible. The coloring is still finely preserved and altogether appropriate.

Many other spirited sketches of men and animals of that remote period and even earlier have been found at far separated localities of Europe, Asia, and Africa.

Thus far America, though it has lately yielded to the search of the archeologist artifacts in stone and pottery dating from 15,000 years or more ago, presents no examples of the high artistic skill until near the time of Christ. But then there comes to light in Mexico and Central America a talent in carving in stone not inferior to the finest examples of carving in any age or clime. Moreover, immense architectural triumphs, as original and majestic as those of Egypt or Mesopotamia, astonish us.

But in the Egypt of 5,000 to 3,000 years ago, not only architecture but painting and the craft of the jeweler were of the highest order and permanence. Specimens of Egyptian jewelry from the tombs of her kings and mighty men are now preserved in the museum at Cairo which would grace the most exacting of today. Mural paintings of the judgment scenes, where the souls of the kings are weighed in the presence of the gods, are now to be seen in the rock tombs near Thebes, impressive in their solemnity and as fresh in their colors as if laid on but yesterday.

In all countries, in all ages since man arrived at a fair standard of culture, great historical scenes and notable triumphs have been recorded by the chisel of the sculptor, and the pencil and brush of the artist. Thus the dead yet speak from times far antedating the printed book.

How should we know, for instance, of the personal appearance of the apostles had not the eastern and Latin churches preserved, since the earliest centuries of the Christian era, minute direction for their portrayal? Their figures, always the same, are found in the illuminations of the earliest manuscripts, and on the walls of the Byzantine and Greek churches from the earliest times. To cite but two examples, St. Peter appears as a man of about 60 years, rather full in stature, with bald head except for curling, light-gray hair at the back, a short broad beard, majestic expression, and rather wide nostrils. St. Paul is smaller, less erect, somewhat younger, nearly bald, a somewhat longer beard of darker gray, small quick eyes, and a very determined and clever expression. Both apostles wear the seamless garment. Authoritative commands as to the delineation of the apostles, according to ancient usage, come down from the second council of Nicaea of the year 787.

The permanency of painting as a spirited record of human achievement is remarkable. In the galleries of Europe, in our own choice National Gallery of Art, soon to be opened, and in the priceless collections of connoisseurs, there are preserved canvases already 6 centuries old, which represent the acme of human genius. When war, with its brutal devastations, invades the calm precincts where these priceless gems are kept, great cost and pains are always taken, if possible, to hide them away beyond the reach of armies. We may hope that such loving ministrations will succeed in preserving the masterpieces of great artists like Raphael, Titian, and many others for the many centuries to come.

There is, nevertheless, a great value in works of painting less distinguished than these. Time lends historical importance to the portraits of national figures, and the gatherings which took place on notable occasions. How could we spare the portraits of popes and doges, emperors and kings, whose acts have changed the world? What would make up for the destruction of our paintings of the appearance of Christopher Marlowe, Milton, Luther, and others who have shaped human thought? Would great monuments in stone satisfactorily replace for us the portraits of Washington, Franklin, Jefferson, or Lincoln?

And who is not moved to emulation by the painter's depicting of great moments in human history? Washington crossing the Delaware, or suffering with his army at Valley Forge; the Declaration of Independence; Jackson at New Orleans; Paul Jones "just begun to fight"; Decatur in the harbor at Tripoli; Lee and Grant, so strikingly in contrast to present barbarism, as they met at Appomattox.

There are at least four great moments in that history which is our heritage which richly deserve to be set high before our memories. I allude to the wresting from King John of the Magna Carta at Runnymede in 1215; the compact of the Pilgrim Fathers at Provincetown Harbor in 1620; the signing of the Declaration of Independence in 1776; and the adoption of the Constitution in 1788. These are the bulwarks of liberty. Threatened on every hand, now is the time when the inspiration of these great moments should thrill us all to sacrifice all else for liberty.

We do not minimize the value of the teaching found in books, millions of which fill the great Library of Congress. We are proud of the provision so adequately and ingeniously worked out by The National Archives for preserving not only written documents of historical value but even the voice—

the manner—the actual appearance of the great leaders in the settings where they spoke on subjects during the present period.

But these great repositories, necessary as they are, are not entirely adequate to the memory of the great men, great peoples, and great occasions. We may well call on architecture, on sculpture, and on painting to elevate our minds and acts to noble pitches as we contemplate those greatest deeds and characters which most deserve our emulation.

The record of the bison on the wall of the cave shows that through their art we know the genius of men, although they otherwise may be long forgotten.

So may it be with this painting in the centuries yet to come. [Applause.]

Mr. BANKHEAD. I now have the great pleasure of presenting United States Senator WARREN R. AUSTIN, of Vermont.

Mr. AUSTIN. Mr. Chairman, ladies and gentlemen, the ceremony which we here perform commemorates the erection of one of the great beacons of civilization. For the people of the New World it stands almost exactly midway in their history. We have lived 150 years approximately in the light of that beacon. They, our great forefathers, lived 150 years before they were able to erect it. Here on this continent a people distressed economically and under the great fear of anarchy politically looked up to that beacon in hope, but with some misgivings. From the New World its beams were cast across the sea to the Old World, where mankind was also looking for light to take it out of the darkness which had been created by the tyranny of an entirely different principle of government than this great Constitution represented. Heaven ordained that the world should have the benefit of the most remarkable collection of great men, that is as it seems to us, the most remarkable gathering of great men the world has ever found assembled with one common objective. Yet their leader, Washington, was so modest that, in a letter to Bushrod Washington, evidently written about 2 months after the signing of the Constitution, he said among other things:

> I do not think we are more inspired, have more wisdom, or possess more virtue, than those who will come after us.

I wish I could believe that that had the element of prophecy in it, for I think today the world needs the guidance not only of a benevolent Creator but also of men who possess wisdom and virtue adequate to solve the grave problems with which the world is confronted today.

They not only established a government by their Constitution, they founded a philosophy, a philosophy that was the product of the ages. So far as our forefathers are concerned, what they put upon paper and subscribed on that eventful day, September 17, 1787, represented the evolution of 150 years of difficult political experience. They sought a fixed law to live by because they had suffered under the laxity, uncertainty, and evil of a fundamental law that was subject to fluctuation and change with the changing emotions of the monarch. From divine right of kings to moral responsibility of man they progressed. From absolute power they revolted and evolved the philosophy of limited and divided power.

As I looked at this picture first I imagined Hamilton inquiring of Franklin there, "What do you think we have created here?" And Franklin replying in effect, "A republic, if the people are competent to keep it such." [Applause.]

The thought is amplified in the following, which I have taken from The Constitution and Its Framers, by Coleman, a brief paragraph quoting Franklin:

> In these sentiments I agree to this Constitution, with all its faults, if they are such; because I think a general government necessary for us, and there is no form of government but what may be a blessing to the people if well administered; and I believe further that this is likely to be well administered for a course of years, and can only end in despotism, as other forms have done before it, when the people shall have become so corrupted as to need despotic government, being incapable of any other.

How wise do those words prove to be as we witness the mortality of republics in the Old World. Thank God for the fact that this Republic has lived a longer life in years than any other form of government ever lived in all the history of the world, and that it still promises to endure so long as the people of America are worthy of this form of government. [Applause.] For the maintenance of it, I take a quotation from Hamilton. What he is saying there to Franklin we can only conjecture, but we know that the thought reflected by his countenance as he leans toward Franklin is well expressed in the following:

> The Constitution is the compact made between the society at large and each individual. The society, therefore, cannot, without breach of faith and injustice, refuse to any individual a single advantage which he derives under that compact, no more than one man can refuse to perform his agreement with another. If the community have good reasons for abrogating the old compact and establishing a new one, it undoubtedly has a right to do it; but until the compact is dissolved with the same solemnity and certainty with which it was made the society, as well as individuals, are bound by it.

There is another figure in that remarkably beautiful memorial of this great event that appeals especially to me. It walked right out of the ensemble toward me, in effect, when I first looked at that painting. It is the figure, the countenance, and the stern eyes of Gouverneur Morris. There he stands, right in front of that window. He is No. 5 on your diagram. Of course, I would be interested in Gouverneur Morris. He meant so much not only to the United States of America as a great founding father, but he meant a great deal to the State from which I come and which I love—Vermont. I am yielding to the temptation to take your time long enough to quote from Gouverneur Morris on Vermont. It is a little bit whimsical, but it recognizes the remarkable perception of Gouverneur Morris. He was writing to his Governor—Governor Clinton—in 1778 in the midst of that contest for independence and recognition which Vermont made when she was striving so hard to be admitted into the Union. He said:

> I find clearly from the very best authority that without nice management we shall certainly lose the State of Vermont. * * * 'Tis absurd to reason against the feelings of mankind. Neither is it much to the purpose whether our claim is right; for if it be, the most which can be said for us is that we have right without remedy. What are their claims? Occupancy, settlement, cultivation, and the Book of Genesis. What their plea? Their mountains, their arms, their courage, their alliance. Against all this what can we produce? Why, forsooth, a decision of the king in council and a clause in the confederacy. How slender a foundation. But how are we to act? To give them up? No. We must go to the mountain if the mountain won't come to us. * * * It is under heaven the great thing needful to us, and though I laugh whenever Vermont is named, yet I could almost use the poetical occasion and say " 'tis laughter swelled with bursting sighs."

Now, it was this same statesman who recognized the fundamental disagreements that had characterized the making of the Constitution and who feared that many of the delegates would refuse to give their individual consent to the Constitution; therefore, in order that the action of the convention would appear to be unanimous, Gouverneur Morris devised the following formula:

> Done in convention by the unanimous consent of the States present the 17th of September. In witness whereof we have hereunto subscribed our names.

Thus he escaped putting any delegate personally upon the record, and we well remember that only 39 of the 42 delegates signed the Constitution and that at least 65 persons had been appointed as delegates to the convention. So that this great beacon of civilization was really erected by a moderate-sized convention.

I think that posterity as well as ourselves owes a great obligation of thanks to Howard Chandler Christy. He must indeed be a prince of personality to be able to put upon canvas figures and countenances so noble, so expressive as these which stand before us in this wonderful work of art. [Applause.] He comes to us not only with a great gift of beauty, but with a message of vital importance which he never could have transmitted through those eyes and lineaments there on canvas had he not been animated by a sentiment of deep devotion to his country. [Applause.]

Mr. BANKHEAD. I now have the pleasure of presenting the Honorable ULYSSES S. GUYER, a Representative in Congress from the State of Kansas.

Mr. GUYER of Kansas. Speaker BANKHEAD, Mr. Christy, honored guests, ladies and gentlemen: Literature and art are the mirrors that reflect a nation's life, the stream on whose bosom is etched the spiritual and intellectual life of a people. Since the Great War of 1914 there has been an evident decadence of the fine arts. However, there are notable exceptions. Mr. Borglum's giant sculptures at Mount Rushmore rival the massive grandeur of ancient Egypt, and now Howard Chandler Christy's historical painting commemorating the signing of the Constitution has no rival on this continent. Next to the signers of that document, I envy the man who painted that incomparable canvas.

After 150 years we at last have an adequate memorial celebrating the grandeur of the Constitution and our devotion to that powerful group of constructive statesmen who made it possible.

Someone said that there had been no painting since the war in 1914 which, by its beauty or thought had caught the gaze of the public eye. That no longer may be said, for here is a canvas that captures the imagination for its beauty as well as for its great historical significance.

I shall always consider it one of the rarest privileges of my life that I was permitted to observe this artist-patriot paint himself into immortality on this canvas. I saw it grow into a living thing pregnant with patriotic meaning and eloquent with the epic of the most historic drama ever enacted on the Western Hemisphere. Who can adequately estimate the value of the influence of this painting as generation after generation of American youth gaze upon this patriotic vision knowing, as they must, that whatever security of life, liberty, and property they possess depends upon what those wise statesmen wrote on those four precious pieces of parchment over there in the Library of Congress.

During that long sultry summer of 1787 those consecrated patriots struggled with the age-old problems of human liberty until, on the 17th day of September, they were ready to write their names into immortality by signing what was soon to become the Constitution of the United States. When these strong men, who will for centuries look from this canvas, gave us a government of law and not of men, they placed themselves among the immortals; and, judged by what they wrought, they were the greatest and wisest group of statesmen that ever surrounded the council tables of any nation in all the tide of time. Their work was performed in that classic Hall at Philadelphia which the artist has so faithfully portrayed.

And what giant actors played their roles on that consecrated stage. With what exquisite skill has the painter forever fixed upon this canvas the images of these Titans who so wisely wrought the fabric of our Nation's faith. Never did artist more realistically catch the spirit of the moving drama, the living motion, and the stately dignity of a superlatively great occasion to be transmitted to the vision of generations yet unborn that they, too, may look upon and know the breed of men who laid our foundations strong and deep.

There sits Franklin with the wisdom of the ages looking from his tired, age-dimmed eyes. Franklin, for whom, Mirabeau declared, "the worlds of science and philosophy contended." Close by his side is Alexander Hamilton, the first martyr of the Republic; Hamilton, a living dynamo of nervous energy, with his face aflame with the fire of creative and constructive genius; Hamilton, the only human being that Washington ever deigned to lean upon. And in the background sits quiet, unobtrusive James Madison, the personification of modesty and reticence and the impersonation of intellectual capacity; Madison, the "Father of the Constitution." Sitting over there to the right is Robert Morris, the financier of the Revolution, who was the victim of our first depression; Morris, who made his country rich but who was visited by Washington in a debtor's cell. Above Morris is James Wilson, superb lawyer whom Washington appointed as the first Associate Justice of the Supreme Court. Then, towering above all and dominating all is not only the daring leader of armies but also the master of men, the incomparable hero of the Republic, George Washington.

Now we dedicate it to the future, full of hopes and fears, at a time which may well mark an epoch in the history of mankind, at a time when we need the inspiration of these engineers of destiny to guide our steps and chart our way.

Here let it rest as a symbol of the spirit of the Constitution which they wrote, of equality under law, of a government of the people, in which the rights and privileges of the humblest citizen is guarded with sleepless vigilance and girded about with jealous care. That was what these master builders hoped to secure through the Constitution, and this canvas is a symbol of the triumph of their dreams.

Here let it rest while this Government which they founded remains to bless this Western Hemisphere. Here let it rest as long as stands this stately Capitol splendor-domed. [Applause.]

Mr. BANKHEAD. I now have the pleasure of presenting the chairman of the Joint Committee on the Library, who will accept the painting on behalf of the Congress of the United States, Hon. ALBEN W. BARKLEY, of Kentucky.

Mr. BARKLEY. Mr. Chairman, ladies and gentlemen, it now becomes my duty and privilege to accept, on behalf of the Congress, this painting about which we have been so eloquently told this afternoon. Before I officially accept it I want to make one or two very brief comments with respect to its significance and the circumstances under which the Constitution was written.

It is always an interesting form of speculation to try to fathom what might have happened in the world if something else had happened that did not. I realize how fruitless that speculation is, yet it is not entirely inapropos to call attention to the fact that the writing of the Constitution of the United States was in some respects an accidental occurrence. The Revolutionary War had been fought. The treaty of peace had been signed in 1783, recognizing the independence of the Original Thirteen Colonies. No effort was made to form what the Constitution in its preamble terms "a more perfect union" for 4 long years following the signing of the treaty of peace terminating the Revolutionary War. During those 4 years the Original Thirteen Colonies, or States, which had been united in their effort to establish freedom began to fall apart, to become dissevered, because of jealousy and local provincial interests; and in those days no less than in other days the local politician began to get in his work to create prejudice in the community against the general interests and the general welfare.

The State of New York, through her legislature, enacted a statute forbidding the importation of firewood into New York from Connecticut, in order to compel the people of New York to burn their own wood, and to keep out competition from Connecticut. Similar legislation was enacted forbidding the importation of garden truck, cabbages, potatoes, and onions, from Maryland and Virginia, in order to protect the producers of cabbages, potatoes, and onions in New York from the competition of importations from Maryland and Virginia.

The State of Maryland and the State of Virginia came almost to blows over the dispute, involving the navigation of the Potomac River between the two States. In order to make an effort to settle this controversy between Maryland and Virginia, a conference was held in Annapolis, 30 or 40 miles from this Capital. Out of that little conference to settle the dispute between Virginia and Maryland over the navigation of the Potomac River grew the Convention later in Philadelphia which wrote the Constitution of the United States, because the Thirteen Colonies, or States, in that 4 years of separation and disunion and jealousy of local interests, had come to recognize that there must be somewhere within America a centralized government with power to enforce its decrees for the general welfare of all the people.

As a result of this little conference at Annapolis the Convention met in Philadelphia. They did not meet to write

a constitution. There was not one of the 65 delegates who were chosen from the Thirteen Colonies, or one of the 42 who attended, who was commissioned by his State to write a constitution of the United States. They were sent there to amend the Articles of Confederation, under which they had lived for 4 years.

I mention this because I suppose those of us who are legalistically minded would say that the delegates to that Convention in the performance of their duty were guilty of ultra vires; in other words, they went beyond their delegated authority in writing a Constitution of the United States. They wrote it. They submitted it to the 13 States, with the provision that if 9 of them should ratify it a new Nation should be born in the western world—and how narrowly did the 9 escape giving their ratification!

When the convention met in Richmond, Va., to decide whether Virginia would ratify this new Constitution of a new Nation, George Washington was not a delegate. Patrick Henry was, and, although he had uttered those immortal words repeated by every schoolboy, "Give me liberty or give me death"—words which had inspired every Continental soldier who had fought under Washington—when the convention met in Richmond to decide upon ratification or rejection of the Constitution, Patrick Henry made the fight of his life against ratification, on the ground that if this Constitution were ratified, and the Nation were organized under it, people who had fought for 7 years to gain their liberties would thereby lose them in the creation of a centralized government.

It is also of importance to suggest that if Virginia had rejected it, in all probability, the Constitution would not have been ratified. Out of the total attendance of 65 in the convention in Richmond, the Constitution was ratified by a majority of 9, and when Virginia ratified the Constitution the required 9 ratifications were had. Thus, a new Nation under this new ordination was set up in the Western Hemisphere.

It is also of importance to note the fact that, although Patrick Henry, in his sincerity of heart and his effort to visualize the future of this country, predicted that a nation organized under this Constitution would lose the liberties of the people, I rejoice in the knowledge that for 150 years we have lived under it and we are still free; we still enjoy as much liberty as is possible in view of the complexity of our lives and the interdependence of all our people on one another for the solution of their great problem.

One hundred and fifty years is not long in the history of the world. H. G. Wells, in his Outline of History, says the world is 250,000,000 years old. I read a book not long ago in which the author said that the world was created 4,897 years ago at 9:30 o'clock in the morning. [Laughter.] No matter which or whether either of these historians be correct, 150 years is only a small speck on the firmament of God's eternity compared to the age of the world, yet in that 150 years we have grown from 3,000,000 people fringing the Atlantic seaboard, until today we are 130,000,000. We have grown from 13 weak and jealous little disjointed Colonies to 48 great States, more firmly united today than we have ever been before. [Applause.] We have grown from a pauper Nation, without standing or credit in the financial realms of the world, until today we are the richest Nation in all the world. We have grown from the weakest to the strongest. Under our influence more republics have been set up in the self-governing world than have been created in all the ages of man's history by all other influences combined. We have grown in power from the weakest and most insignificant until today we are the most powerful. Under that Constitution whose signing is depicted in this marvelous painting we have accomplished these things, and under that Constitution we will preserve our power and our strength; we will preserve it from all corroding influences and undermining forces from within; we will preserve it from any brutal juggernaut that may threaten it from without; and we will do it without surrendering our liberties and our conceptions of popular government. [Applause.]

In the Sistine Chapel yonder in the Vatican at Rome, there is a beautiful fresco above that chapel painted by an immortal man who had never before wielded a brush, Michelangelo. Michelangelo was older than Raphael, but Michelangelo was a sculptor. He was no less inspired because his tools were the chisel and hammer than was Raphael whose tools were the brush and the paint board. And when the Pope of Rome desired to have a great painting to adorn the Sistine Chapel, he asked Raphael to recommend a painter. It is a strange comment upon human nature to note the fact that Raphael, knowing that Michelangelo was not a painter, but jealous of him because of his greater reputation and notoriety, recommended to the Pope that he secure the services of Michelangelo to paint the painting in the Sistine Chapel.

When the Pope approached Michelangelo, he protested he was not a painter, that he was a sculptor, that he had never painted a painting, that he had chiseled out of cold marble the human form divine and the countenance of man, but he had never put upon canvas of any sort a painting. The Pope went back to Raphael and reported what Michelangelo had said. Raphael insisted, and finally, after much persuasion, Michelangelo said to the Pope:

> I will agree to paint this picture if you will allow me to remain within the Sistine Chapel undisturbed until I have finished it.

The agreement was entered into. For 3 years—36 months—Michaelangelo locked himself within the Sistine Chapel. His food three times a day for 3 years was brought to him by servants. He slept in the chapel. And at the end of 3 years he emerged, having accomplished that great painting in the Sistine Chapel because of his withdrawal into seclusion and the inspiration that was surrounding his soul, and in that divine atmosphere, communing no doubt with Almighty God, he produced this wonderful painting—this man who had never before painted a picture.

I am bound to conclude that in reproducing this wonderful canvas here, the man who has done it to some extent withdrew himself from the world. I do not know what the religious affiliations of Mr. Christy may be. I do not care what they may be. I know that he is a patriot, for no man less than a superb patriot could have visualized the scene in Philadelphia which this painting depicts. [Applause.] In its production not only did he commune with the spirits of our forefathers, but I am persuaded to believe that he communed with the spirit of Almighty God, to bring here this immortal painting, not only that we may look upon it, but that our children and our children's children for a thousand years to come may look upon it, and receive from it an inspiration that will cheer them on, and give them courage to fight for the things which it represents, and which our Nation represents.

It is in this spirit that I, as the Chairman of the Joint Committee on the Library, not only accept this painting on behalf of Congress, but express my pride in being able to accept it, not only on behalf of Congress, but on behalf of the American people, as a symbol of liberty, of equality, and of justice, and I accept it on behalf of all the liberty-loving people of mankind and all those who are depressed, oppressed, and distressed in this hour because of a lack of that liberty. [Applause.]

I congratulate Mr. Christy, and I believe I speak the sentiments not only of this assemblage here, but of all those who will gaze upon this canvas in the years to come, when I express our gratitude and our affection because he has given to us this symbol of creative genius, this symbol of a patriotic surge in the hearts of all true Americans, this symbol of unity of purpose throughout the future. [Applause.]

Mr. BANKHEAD. Now that you have had an opportunity to observe that great scene, I am certain you will agree that our Commission made no mistake in selecting the artist who has produced it.

A real American whose ancestors were contemporaries of the signers; this man, out of his great artistic skill, with infinite patience and superb patriotic fervor and consecration, has wrought on canvas an inspiring reproduction of a historic scene very precious to all our people. Future generations will view with pride and satisfaction the handiwork of its

creator—the gentleman I now have the honor to present, Mr. Howard Chandler Christy. [Applause.]

Mr. Christy rose.

The United States Navy Band played March of the Constitution.

Rev. James Shera Montgomery, D. D., Chaplain of the House of Representatives, pronounced the benediction:

The Lord bless thee and keep thee; the Lord make His face to shine upon thee and be gracious unto thee; the Lord lift up the light of His countenance upon thee and give thee peace, both now and evermore. Amen.

Economic Equality

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

ADDRESS BY MR. DAVID E. LILIENTHAL

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Mr. David E. Lilienthal, Director, Tennessee Valley Authority, before the Southern Newspaper Publishers' Association, at Mineral Wells, Tex., May 21, 1940, on the subject, The Restoration of Economic Equality Among the Regions of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Equality of opportunity is the cornerstone of the American way of life: "We hold these truths to be self-evident, that all men are created equal"; these are among the most resounding cadences of American speech. This foundation of our political ethics also underlies the American conception of economic justice. No man has a right to demand more than an equal chance; no one may justly be given less. And what is true of individuals is likewise true of regions. No region of the United States has a right to special privileges or immunities; the Nation may not in equity deny any region and its people less than equality of opportunity.

The people of the South and the institutions of the South have not enjoyed and do not today enjoy the blessings of equality of opportunity. This denial of equal opportunity for southern economic development is the most significant single fact in contemporary American life. Such a restriction upon the forward movement of millions of American citizens cannot become a permanent part of our national life without the gravest injury to our national sense of fairness and the impairment and ultimate exhaustion of our resources.

Here is perhaps the great issue of your generation and mine. For the kind of country we shall be 25 years hence will depend largely upon what happens to the South in the coming years. No nation, not even one as wealthy in resources as America, can indefinitely endure the economic suffocation of one-fifth of its people.

The restoration of equality of opportunity for the South will not be at the expense of equality for other regions; it is not a case of taking from Peter to pay Paul. To increase the standard of living and income in one region of our Nation does not require that another region be robbed of an equivalent income. Our common end is to find ways and means of increasing the level of income for the Nation as a whole. Under a wise administration of business and of Government an increase of income to one region stimulates economic opportunity everywhere. We have recently been reminded "that if the per capita income of each southerner were raised from its present $285 to the national average of $485, the Nation would have captured a new market half again as big as the entire export trade, and would be richer by billions."[1]

It is well known that the income of the people of the South is the lowest in the Nation and far below the national average; it is shockingly less than that of some regions. Why should this be true? Why should the per capita income in the State of Alabama, for example, or Louisiana, or Arkansas, or Mississippi be drastically less than that in Pennsylvania, say, or Illinois, or Connecticut?

If this were a naturally poor region, if little would grow in the fields of the South, if scanty rains doomed our crops or bitter winters destroyed vegetation, if we had no minerals in our hills and no timber would grow on our slopes—then we might resign ourselves and say that Nature herself had doomed us to a low income and there was no help for it. But Nature has been generous with the South in the two elements that can produce wealth—natural resources and capable human energies. What we call value, what we call income, results when human beings apply their labor and skill to the raw materials of Nature, whether they be products of the soil, of the forest, or minerals. The southern regions have raw materials in abundance; natural resources which compare at least on an equality with those of any other region of the country—some of the finest forests in the Nation, fortunate climate, ample rainwall, a wealth of minerals of every kind. And in human resources the South is equally endowed, with a population capable of transforming these natural resources into income.

WHY THERE IS LOW INCOME IN A RICH REGION

The answer to this puzzle of low income in a region that is a potential economic garden spot is not far to seek. That answer is steadily becoming understood at every crossroads and every fork of the creek throughout the South. The answer is found in two related facts:

First, that natural resources contribute to the wealth and income of a people only to the extent that those natural assets are transformed by manufacturing processes into a more valuable form of goods; and, second, that in the South we are still predominantly a producer of raw materials rather than a producer of the more valuable, hence greater income producing, manufactured commodities.

The fundamental readjustment we in the South must accomplish is to change our way of making a living from an almost complete reliance on production of raw materials. We must thoroughly learn the lesson that as a producer of raw materials we are draining our natural resources in return for inadequate compensation; but that if we can process and finish a greater proportion of those raw materials and receive the greater compensation which those manufactured articles will bring to us, then our income will rise to a more satisfactory level. It is a simple proposition, and it is coming to be better and better known, but we must keep hammering away at it untiringly.

A few specific illustrations will be helpful to clarify this point. Pulpwood is a raw material on which little labor has been expended. The farmer who cuts that pulpwood and hauls it to town gets $4 a ton. Thus, for that farmer to buy an $800 automobile, he would have to cut and haul about 200 tons of pulpwood. But when the pulpwood has been processed into wood pulp, it is worth five times as much as the farmer received for the wood, or $20 a ton, and it would require only 40 tons to purchase the automobile. When the pulp has been further processed into kraft paper, it reaches a value of $65 a ton. In other words, the raw material, timber cut from the land, has been multiplied about 16 times. Finally when the pulp has been manufactured into paper bags, it has a value of $150, has multiplied nearly 38 times in value from the farmer's truck, and it now requires only 5 tons for the purchase of a 2-ton automobile.

Another illustration starting this time with an article of greater value in the raw form would be cotton selling on the farm at 8¾ cents per pound. To purchase a $700 tractor requires the cultivation, picking, and hauling of 8,000 pounds of cotton. Converted into cotton yarn at 30 cents a pound, 2,300 pounds of yarn would be required for the tractor. If manufactured into broadcloth worth 44 cents a pound, 1,600 pounds of broadcloth would buy the tractor. Finally, if the broadcloth is cut and sewed into shirts worth $2 a pound, 350 pounds of shirts purchase the tractor.

The economic disadvantage of exchanging semifinished products for finished goods might be illustrated by another example. Consider that for a ton of bulk petroleum asphalt, which is one of the important semifinished products of the Southwest, at the refinery you could buy 65 electric light bulbs (at wholesale), but when this asphalt is sold as a ton of rolled roofing it has increased 23 times in value and could be exchanged for 1,500 of these same light bulbs.

The limited extent of manufacturing and processing in the South is revealed by figures published by the Bureau of the Census, which show that the value added by manufacturing to raw materials in the 13 Southern States is only 12 percent of the total for the Nation despite the fact that the South has 28 percent of the Nation's population. With 16 percent of the wage earners in the country the South receives less than 11 percent of the wages. This indicates a large number of unskilled wage earners, even in the relatively meager percentage of those employed in industry. The value of products manufactured in the South is only 14 percent of the total national value of production. Two industries in the South, refining of petroleum in the Southwest and manufacture of cigarettes in North Carolina, account for 22.6 percent of the total value of southern production. In only 2 of the 16 groups into which the Census Bureau has classified industry does the South's value of production indicate that it supplies the remainder of the Nation with goods in excess of its proportionate share, if based on population percentage—in other words, a share greater than 28 percent.

Some specific examples of the extent of the processing and manufacturing in the South will show why there is an imperative need for manufacturing of highly finished goods. There seems to be a popular misconception that the textile industry has moved en masse to the southeastern portion of the United States. The fact is that the textile industries which have moved South are only those which produce products requiring relatively little skilled labor.

The 10 Southeastern States accounted for only 22½ percent of the total value of products listed in group 2 of the 1937 Census of Manufactures entitled "Textiles and Their Products." This group has 93 subclassifications. In 31 of these subclassifications

[1] The U. S. A., Fortune, February 1940, p. 146.

there is no production at all in the Southeast. Eleven of the subclassifications account for 87.3 percent of the total value of all southeastern textile products. The remaining 50 subclassifications account for 12.7 percent of the value of the southeastern textile products. Of the higher classified textile goods listed, the Southeast is particularly deficient in production. As an example, only 11 percent of the men's shirts, 7 percent of the house dresses, uniforms, aprons, etc., and 0.6 percent of the dresses other than house dresses are produced in the Southeast.

Although the Southeast produced 41 percent of the total virgin aluminum in the United States in 1939, none of the higher-priced aluminum products, such as cooking utensils, airplane parts, automobile engine heads, and pistons, are produced in that area. Although in 1937 the Southeast produced 25 percent of the wood pulp in the United States, it furnished only 10 percent of the paper. Lumber is one of the principal commodities produced from the Southeast's vast forest resources, but only 17 percent of the furniture of the United States is produced in the Southeast.

Many more specific illustrations could be furnished, but the above will serve to indicate the opportunity for industrial expansion in the South.

Here then is the nub of our southern economic problem: How specifically, concretely, practically, may we substantially increase the amount of manufacturing of the raw materials which abound in this region, and thereby provide added value and added income for the people of the South? My answer I can state in two words: "Economic equality." Remove the economic inequalities and man-made disadvantages which burden the South, and in less than a decade the income of the South will be substantially raised from its present level, a level which we all know does not permit an American standard of living for millions of our people. Restore economic equality to the South and you strengthen the defenses of democracy in every other region and area of the United States. Restore economic equality to the people of the South and you create a volume of purchasing power which will stimulate business activity in every part of the United States, and particularly in those great centers of industry which lie north of the Ohio and east of the Mississippi. Restore economic equality and thereby release the pent-up energies of the South and you will not only create a more vigorous southern region but there will be more clocks bought from Waterbury, Conn., more harvesting machinery from Chicago, more insurance policies from Worcester, Mass., more automobiles from Detroit, Mich., more radios from New York. As one of our southern editors, Mr. Peter Molyneaux, has put it:

"* * * there is no region on the face of the earth where there is greater opportunity for the creation of new markets for manufactured goods by increasing the purchasing power and raising the level of life of the mass of the people, white and black, than is presented today in the cotton South."

It ought to be frankly recognized, of course, that if most of the new wealth added by the processing of raw materials is drained out of the area, if it is not retained and reasonably distributed in the hands of the people of the area, the benefits of manufacturing in the South will, in the long run, be slight. How such a result can be avoided is a subject that requires more extensive discussion than we have time for today. Suffice it to say that unless and until we find a way to increase our income, the problem of retaining it will never arise.

TWO BARRIERS TO EQUALITY OF ECONOMIC OPPORTUNITY

I have said that economic inequality is the essential cause of the South's present situation. What causes these inequalities and handicaps? The causes are several; I shall have time today only to discuss two, and to my mind the principal ones.

The first is the inadequacy of the industrial research in the southern region. Only with the aid of technical research are the opportunities for investment in local and industrial processing of raw materials uncovered. New industry comes out of the laboratory. The deficiency in industrial research is not a result of law, but of the force of economic circumstances; it can be removed by public and private effort. The second is a discriminatory structure of freight rates, imposing upon the efforts of the South to engage in the processing of raw materials a marketing handicap too great to be borne. This inequality, unlike that relating to industrial research, is removable, upon an appropriate state of law and facts, by public authority.

Both of these inequalities have been the subject of the program of action of the Tennessee Valley Authority. I should like to tell you what the T. V. A. has done about them. As I discuss the two activities of the T. V. A. relating to industrial research and discriminatory freight rates, you will observe that there is no substantial difference in economic status between the Southwest and the Southeast, between the area in which the T. V. A. functions and that portion of the South that lies west of the Mississippi River. On the contrary, there is an intimate community of interests. The fact is that all the interior regions of the United States are to a large extent "in the same boat" in their efforts to maintain and improve their standard of income.

I. RESTORING EQUALITY THROUGH INDUSTRIAL RESEARCH

The United States has great industrial research facilities, perhaps the best and most extensive in the world. Out of these great laboratories have come the ideas on which modern industry has been created and has grown to its present proportions. The South, however, does not have a reasonable share of the Nation's industrial research facilities. Only about 7 percent of the number of private industrial research laboratories with 4½ percent of the research personnel in the country are in the South.[2] This is undoubtedly one of the important reasons why the South, with 28 percent of the Nation's population, has only about 14 percent of the total value of manufacturing production.

Industrial research efforts center in and are financed by areas other than the South. It is natural that their efforts should be directed toward the solution of the problems of those nonsouthern areas and interests. This explains the fact that little industrial research effort has been devoted to the raw-material resources of the South, with a few exceptions, such as research on petroleum products. This is also why, when adequate research is done in the South, such as development of a single new use for its great timber resources, that of manufacture of newsprint recently started commercially at Lufkin, Tex., it is so unusual as to attract national attention.

The South suffers from the fact that most technical research is supported by existing industry. It follows, with existing industry excessively concentrated elsewhere, that private technical research in the South is limited and inadequate.

Moreover, only fairly large companies, as a rule, can afford the costs of modern technical research. This is an important handicap when we are trying to find ways and means to enable small manufacturing plants to operate successfully, or new plants to start up, in the small towns and communities.

For these reasons, the existing technical research structure of the Nation is not well adapted to supplying needed ideas for home-grown, small-scale local industry, the product of local initiative, local brains, and local capital. As a result, the tendency to concentration of industrial activity is accelerated, small local industry suffers, and economic opportunity is narrowed.

Here, then, is the connection between industrial research and the production of new income in the various localities of our country. Such income can come about only as resources and energies in raw material producing areas, such as the South and West, are more fully and profitably utilized than at present.

Research by private industry in the South, although inadequate to the resources and needs of the area, has nevertheless produced valuable and promising results. One which will occur to you newspaper publishers at once is the achievement I have already mentioned, in which you have participated, that of the Southland Paper Mills, Inc., in producing newsprint paper from southern pine at the new town of Herty near Lufkin, Tex. This is an example of how research has laid the foundations for a new southern industry. The well-known work of Dr. Herty's laboratory at Savannah, Ga., first proved to the satisfaction of investors that southern pine trees were suitable for newsprint. Public research by the United States Forest Products Laboratory has contributed to this development by adapting the semibleached sulfate pulp process for use with southern pine, a method followed at the Lufkin plant. Research by the private paper company to carry these laboratory and pilot plant results into actual commercial operation should also be credited with an important part in this outstanding achievement. A significant feature is that virtually all the leaders of the commercialization of this research development, beginning with Dr. Herty, have been southerners.

Another striking example of the value of research is the development of a new method of making cigarette paper, and the recent establishment in North Carolina of the first American mill to make cigarette paper on a commercial scale. Heretofore the immense quantities needed for making our cigarettes have been imported from France, where linen rags are used as the base, whereas the North Carolina plant uses the flax fiber directly. The Champagne Paper Corporation of New York is reported to have spent 5 years in research, at a cost of some $500,000, developing varieties of flax which have a fiber suitable for making the paper and which also yield plenty of seed, so that the crop would be a profitable one for farmers to grow. Machinery was also developed for preparing the flax fiber for paper making. As a result the new mill is now in operation, employing about 800 persons, and is reported to be capable of supplying a third of the needs of domestic cigarette manufacturers.

But research by private industry alone is not enough. There are a number of reasons why this is true. For one thing, there are products which are badly needed and which fit into the resources of the area, but where the prospects of an early profit appear insufficient to justify research by private enterprise. But the most important reason is the one which I have already cited, namely, that for the most part industrial research on new processes is supported by existing industry located in other regions. It seems clear to me, therefore, that private industrial research must be supplemented on an extensive scale by public research, research carried on in the public institutions of the South and carried on as much as possible in cooperation with southern business and commercial interests.

HOW T. V. A. HAS CONTRIBUTED TO EXPANSION OF INDUSTRIAL PROCESSING RESEARCH

T. V. A.'s program has been based on this conviction that supplementary public research is essential to the restoration of regional equality and strengthening of the whole Nation. What the T. V. A. has done in the field of industrial research over a period of some 6 years is now beginning to bear fruit. The chief

[2] Thirteen States: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia.

characteristic of T. V. A.'s work in this field has been a deliberate, conscious effort to find those technical processes that will help meet the needs for industrial and business opportunities in the South, based upon the resources of the region, and which will help farmers to find new sources of income to relieve the burden on their soil. In almost every instance T. V. A. research has been carried on with the closest cooperation with existing southern institutions, chiefly educational institutions, but in some instances business groups. I shall cite some specific examples of this work.

At the University of Tennessee is an engineering experiment station which has a $70,000 experimental plant with the latest chemical laboratory equipment devoted to finding new commercial outlets for products of the cotton plant. The story of how this experimental plant came into being and of what it has done and is doing should be of interest wherever cotton is grown.

All the talk about declining markets for cotton has related to cotton fiber. This emphasis has served to obscure the fact that there is in the South an industry based on other products of the cotton plant—oil, meal, meal cake, hulls, and linters. In a recent year close to 500 mills turned out some $200,000,000 worth of these products.

The first work of this engineering experiment station with later cooperation from the T. V. A. and others and with the support of the industry was to investigate the cottonseed-cooking process to determine whether established methods could be improved. The project appeared to present unique possibilities for constructive research, because no fundamental improvements in basic operating procedure had been evolved in over 50 years. This proved to be the case. A new type of pressure cooker was developed which could be used in a conventional cottonseed-oil mill. Results are a higher yield and quality of oil and of the meal and cake byproducts. The cooker is particularly valuable to the typical small mill without much skilled help, because it automatically facilitates processing efficiency.

Already the three major United States manufacturers of cotton-oil mill equipment are making this new type of cooker under an arrangement whereby income from licenses will go to finance further research. A public non-profit corporation handles the licensing and commercialization of this equipment.

Two cooker installations have been made in Texas, one in Oklahoma, three in Georgia, one in Arkansas, two in Mississippi, and one in Tennessee. In a number of cases operators have said they paid for the new equipment out of the extra profits of their first year's operations. Many other cottonseed-processing operations, products, and byproducts are presumably susceptible to improvement by research methods. Public research agencies including the T. V. A. are undertaking these further investigations.

T. V. A.'s technical efforts in the field of mineral resources furnish an important illustration. About 75 different minerals have been identified and located in the Tennessee Valley region by public and private investigations. Where profits were fairly predictable, private enterprise has already financed developments. But except for a few of the most valuable minerals, such as coal, iron, copper, feldspar, and zinc, there has been little research to determine the economic processing of ores which in their crude state offer little possibility for commercial exploitation.

The deposits of clay, called kaolin, in North Carolina, for example, have been known since Colonial days. They have been worked sporadically for the past 50 years, but no process was ever developed for refining the clay so that it could be used for high-grade white ware. For fine china, English kaolins were imported. The North Carolina industry languished. As a result of commercial research, in a T. V. A. laboratory at Norris, Tenn., carried on cooperatively with representatives of the ceramics industry, several American ceramic plants are using North Carolina kaolins. The war, of course, has accelerated the shift from imported materials. Last year 16,000 tons of kaolins refined by this new process were produced near Spruce Pine. Production this year will be doubled, and experts predict that, as a result of the Government's research assistance, this private enterprise will grow to four or five times its previous size. Concurrently, experiments in electric firing of kaolin were carried on in the same laboratory, and test ware was successfully produced. The work in electric firing operations, which may mean a whole new field of industrial possibilities as well as greatly increased use of electricity, is now being continued under the direction of technicians of the Bureau of Mines. Other local minerals—magnesium, talc, scrap mica, vermiculite—all these are under investigation. For each one of them our technicians appear to have discovered uses and methods of processing which will offer new opportunities for economic expansion.

A year and a half ago farmers around Cleveland, Tenn., brought truck after truck of strawberries from their farms to a building on the outskirts of the town. Here the berries were put into a machine of an entirely new kind, designed by T. V. A. industrial engineers. Six minutes after each batch of the berries was put into the freezing machine they were taken out, each berry frozen into a solid red marble. The frozen berries, 88,000 pounds of them, were then put into a refrigerated truck and hauled to a specially designed barge, also refrigerated to about zero temperature. This barge, loaded with these and other fruits frozen at the plant, then set off down the Tennessee River, the Ohio, and up the Mississippi to St. Louis, where the product, contracted for months before, was turned over to the purchasers at premium prices to test market acceptance. Weeks, or even months, later, when the berries were used, it was reported that they retained the taste and shape of fresh strawberries. This quick-freezing process is a great advance over existing methods. The same invention has been adapted with excellent results to the quick freezing of other fruits, to most vegetables, and to meats and poultry.

As soon as patent licensing arrangements are worked out, the equipment will be manufactured by private concerns and put on the market. Practical businessmen believe it will open new opportunities for local, decentralized industry. Even more significant is the effect of such a technical development upon the conservation of the soil and the income of farmers. Some of the crops frozen, like peas, are legumes which enrich the soil in which they grow. The matted roots of strawberry plants help prevent erosion. Frozen products bring adequate and stable prices, which tend to raise farm income. As they get more income from fewer acres, farmers keep the plow off the steeper lands that wash badly and sow them to sod crops. Here is a beneficent cycle under way: Science and engineering skill applied to technical problems of local industry and also helping the private business of farming.

The T. V. A. is cooperating in a number of other projects, the mention of which may be of interest. For example, at the agricultural experiment station in Mississippi a research worker is developing a cheap process for extracting protein directly from cottonseed. Excellent plastics are one type of product which has been made experimentally from this protein, and tests are under way to carry the process out on a larger scale and determine costs. It appears that a commercially feasible process may well ensue.

At Tuskegee Institute in Alabama, under the direction of the famous Dr. G. W. Carver, Negro research workers have long been at work in the field of industrial research, and recently the T. V. A. has been cooperating with this institution in a project, one of many under way at the institute, on the production of very cheap farm paints, from clays mixed locally with waste automobile oil which has been specially treated.

In the State Engineering Experiment Station at the Georgia School of Technology, promising results have been obtained in finding ways of making new fabrics from flax fiber on cotton-spinning machinery. This project has required the designing of new equipment for processing fiber flax. This development is paralleled by necessary growing and yield studies in the agricultural experiment station, without which the industrial demand for the flax fiber could not be successfully met. The T. V. A. is participating in this project.

T. V. A. IN PARTNERSHIP WITH OTHER PUBLIC AND PRIVATE AGENCIES IN RESEARCH ACTIVITIES

I have mentioned some of the public industrial-research activities which the T. V. A. has sponsored or in which it has participated. I want to make it clear that this program is not carried on by the T. V. A. alone, but in intimate partnership with the public technical institutions of the region and with the cooperation of business and farm groups. In some cases important projects were well under way and the T. V. A. was a junior partner. In other cases the initiative came from the T. V. A. which enabled some existing engineering college or agricultural experiment station to extend its program and make a contribution toward determining new opportunities for regional industry.

A considerable number of such activities are going on in the public-research institutions of the South. I am not familiar with all of them by any means, but there has recently come to my attention a publication of the Texas industrial research council of the University of Texas, which I am sure would interest those of you who have not already seen it. It indicates that at the University of Texas, as is true in a number of other institutions, research efforts directed toward removing the South's industrial handicaps are under way. Every one of these activities needs your encouragement. Most of us are little concerned, as a matter of dogma, with whether industrial research emanates from a private laboratory, a public laboratory, or is the joint product of private and public research. What hard-headed, realistic men in the South are interested in, it is my observation, is that this work shall go forward with redoubled effort on every front, so that the day may soon come when the South will no longer be predominantly a raw-materials producer, but may enjoy its fair share of the increased wealth and income which comes from the processing of its natural resources.

II. RESTORING EQUALITY BY REMOVAL OF INTERREGIONAL FREIGHT-RATE BARRIERS

Even if the handicap of inadequate industrial research should be overcome or mitigated, the South's road to balanced development is blocked by a second major obstruction. That barrier is a system of freight rates which deprive the South and other interior regions of an opportunity to develop their natural resources on a footing of equality with the Northeast. The timeliness of this issue is manifested by the fact that the Interstate Commerce Commission only a few months ago, for the first time in its long and notable history, ordered a comprehensive investigation of the interterritorial rates of the United States in a single proceeding—the so-called class-rate investigation. That timeliness is also demonstrated by the fact that both Houses of Congress have just denominated interregional rate discrimination as a form of illegal rate making.

On a visit to Austin a few weeks ago I was asked how it happened that the Tennessee Valley Authority, usually thought of as a water-control and power project, should have taken an active part in the railroad-freight problems of the Nation. That is a fair and natural question, and I shall try to answer it.

The problem of transportation economics as it affected the development of the Tennessee Valley region was one of the very first general policy questions considered by the T. V. A. Board of Directors. When the T. V. A. was barely 2 months old, at a meeting on August 9,

1933, the Directors, in the midst of the tremendous pressure of setting up a large organization, took time to discuss this question. The Board thereupon delegated to me initial responsibility for exploring the problem. I was aware, of course, that transportation charges are often a controlling consideration in the development of the business and farming possibilities of any community or region, but the specific facts of the situation were not available, either for the T. V. A. region or any other. The first job, as I saw it, was to get those facts. T. V. A. was fortunate in finding a technician to undertake this pioneering fact-finding investigation—Mr. J. Haden Alldredge, a native and resident of Alabama, an authority on transportation economics, who has recently been elevated to the Interstate Commerce Commission. In March 1936 Mr. Alldredge and his staff had completed their factual investigation.

The Board studied this report carefully, took outside counsel on it, and on May 27, 1937, transmitted it, as the law provides, to the President of the United States. The President, on June 7, 1937, sent the report, described as "The Interterritorial Freight Rate Problem of the United States," to the Congress, and it was ordered printed. This T. V. A. report has since been widely circulated and studied.

Since much of the current interest and discussion in this field was initiated by this Presidential report, I should like to indicate some of its conclusions:

First. The freight-rate structure of the United States is on a regional rather than a national basis. This regionalization of freight rates has the effect of erecting "Chinese walls" within the United States, which, in the words of Chairman Eastman of the Interstate Commerce Commission, "discourage unity of national action."

Second. We gave it as our opinion (I quote from the report) that "discriminatory or preferential rate unduly favoring some regions or territories as against others will surely operate to lower the future living standards of the American people * * *" since manufacturing and processing in disadvantaged areas outside the industrialized Northeast is "hampered, discouraged, and retarded despite the fact that certain areas in these (interior) regions possess, with the single exception of proximity to markets, all the economic factors necessary for a considerable industrial growth."

Third. Inequities and inequalities do in fact exist in the regional freight-rate structures of the United States. A considerable portion of the report is devoted to a statement of the facts supporting this conclusion.

HOW FREIGHT-RATE STRUCTURE DISCOURAGES PROCESSING IN THE SOUTH

These facts, the plain, simple, and unquestioned facts of unequal regional opportunity, stand as our most eloquent spokesman in the effort to establish the basic fairness of a national freight-rate structure. And because the facts in the T. V. A. report tell the story so much better than any amount of argumentation, let me recite some illustrative material. I shall append to the text of these remarks and file with the officers of your association certain maps and charts which will serve to state these facts in graphic form.

Freight-rate discussions are usually carried on in a jargon so technical that the average businessman feels the subject is hopelessly complex and beyond his understanding. But the essentials, stripped of jargon, are not complex and are readily understood. It is only necessary to remember that the United States, for freight-rate purposes, is divided into five major geographical divisions. The Southern States lie in two divisions known as southwestern and southern. The region in which manufacturing today is chiefly concentrated, the area north of the Ohio and east of the Mississippi, is known as official territory.

EXAMPLES OF REGIONAL INEQUALITY IN FREIGHT RATES

The rates on southern raw materials shipped into this concentration area of manufacturing in the Northeast are, generally speaking, about the same, distance considered, as the rates on shipment of the same raw materials within the southern region, and this has long been the case. Bear this in mind: There is no barrier to the movement out of the South of raw, unfinished products. As a matter of fact, the interterritorial freight-rate structure has long encouraged this draining out of our unprocessed raw materials. But observe what happens to regional equality when southern industry seeks to transport those same materials after they have been processed in the South. Rates on sulfur are about the same, whether the product is shipped into the so-called official territory or shipped from point to point within the South. But, when sulfur has, through manufacturing, become agricultural insecticides, a far more valuable product, the rate from southern territory to official territory is 70 percent higher for an identical distance than is the rate within official territory.

Rates on raw cotton from the South into the official territory are about equal to the level of rates within the latter territory, but when raw cotton is manufactured into fabric the southern rates are 10 percent above the official territory level. When these fabrics are further manufactured into oilcloth, the rates from the South to the North are 54 percent higher than within the official territory. The rates on crude sulfur from the Southwest into the official territory are 13 percent lower than the official-territory level. The rates on sulfuric acid, however, are 15 percent higher than the official-territory level, but the rates from the Southwest to official territory on agricultural insecticides made from sulfur are 70-percent higher than the official-territory level.

These are a few examples of many that might be of interest.

These denials of equal opportunity can be expressed in yet another way. A businessman in Peoria, Ill., let us suppose, asks for prices on an article shipped under first-class rating. There are, let us say, five sources of production, each at a distance of 930 miles from Peoria. The producer from Trenton, N. J., in official territory (north of the Ohio River and east of the Mississippi River) can quote a price based on a rate of $1.74 per 100 pounds; the Canadian producer in Montreal, Quebec, must figure in $0.20 more on his bid, for his rate of $1.94 per hundred pounds is 11 percent higher. Contrast with that the southeastern producer at Valdosta, Ga., who must figure $0.70 more freight in his bid, for his rate of $2.44 is 40 percent higher than the Trenton producer. Now a producer at Colorado Springs, Colo., in western trunk-line territory, must contend with a $0.93 differential against him, for his rate of $2.67 is 53 percent higher than the Trenton producer. But then we look at the Houston, Tex., producer located in the Southwest, and for the same transportation service on the same article over the same distance he is paying $0.99 more in freight rate for every hundred pounds he ships to Peoria, for his rate of $2.73 is 57 percent higher than his Trenton competitor. It is rather startling to note that the Canadian shipper can send his goods to Peoria cheaper than any producer of the United States, at an equal distance, except one who is located in the Northeast.

Another illustration, based this time on commodity rates, tells the same story. Paints, stains, and varnishes are produced in both Chattanooga, Tenn., and in Pittsburgh, Pa. For the Chattanooga producer to ship 443 miles to Muncie, Ind., a rate of 66 cents per 100 pounds is charged. The Pittsburgh firm can ship an identical distance to Danville, Ill., for 41 cents, an inequality against the southern processor of 61 percent. Likewise, metal alloys are produced in Sand Springs, Okla., and Philadelphia, Pa. To move the metal alloys from Sand Springs to Indianapolis, Ind., a rate of 79 cents per hundred pounds is charged for 671 miles. Philadelphia to Fort Wayne, Ind., is the same distance, but the rate is 50 cents per 100 pounds. The difference in the two rates is 29 cents, or 58 percent higher for the Oklahoma producer.

For my part, I have such confidence in the American sense of fairness that I believe such facts as these, once they are understood, will bring down the "Chinese walls" within our economic system.

What can be done, as a practical matter, to restore equality of opportunity to the interior regions? We must bear in mind that even though the fact has now at least been established beyond dispute that the interior regions are at a marked disadvantage, and though evil consequences to those regions and to the Nation flow therefrom, it does not necessarily follow as a matter of law that such freight rates are illegal and must be changed. That is a question for the Interstate Commerce Commission to decide upon the basis of evidence submitted to it. The Interstate Commerce Commission is a quasi-judicial body. Its decisions must be, and are, based not upon general economic principles or public policy, but squarely upon the facts presented to it and the acts of Congress that govern it. The issue of the legality of these regional disadvantages the Commission itself will decide. When that decision is made, the country can rest assured that it will be made on the merits and by an able administrative tribunal.

The decision of legality is for the Commission, but the facts of inequity and inequality are plain; nor can there be any longer any question as to the economic consequences which flow from such lack of equality of economic opportunity between regions of the United States. The only question left open is the one which the Commission, under the class-rate investigation, will decide—the legality of the continuation of such conditions.

CORRECTION OF FREIGHT-RATE INEQUALITY WOULD BENEFIT ENTIRE NATION

The restoration of equality of opportunity by a correction of this situation would, in my opinion, not only be beneficial to the South and the West, would not only tend to conserve natural resources, raise purchasing power in the South, give southern businessmen an opportunity to show the skill and resourcefulness they have, but would be a great regenerative force for the Nation. These "Chinese walls" of freight rates between sections of our common country have a depressing and sterilizing effect on the whole Nation. It is sound economics and sound public policy to remove every barrier to a free flow of commerce within the United States.

The T. V. A. Board of Directors a few days ago instituted another study which we feel will throw further light on this crucial issue. This report, like its predecessor, will be made to the President of the United States. We are now seeking to discover the consequences, in practical terms, of interterritorial freight-rate inequality upon the economic development in the interior regions, particularly the Southeast and the Southwest.

Industrial possibilities in the processing and marketing of the South's raw materials will be studied, and the effect of such regional inequality upon potential sources of new southern income will be spelled out. I believe this report will also contribute to a better comprehension of the factors that make for national well-being. In the preparation of this report our staff will consult and cooperate with other interested and qualified agencies in various parts of the country.

The class-rate investigation order of the Interstate Commerce Commission, issued on July 29, 1939, is epoch-making. The Commission has set aside funds for research into costs and other factors and has given every indication that this investigation will become one of the high points in the work of this supreme economic court of the United States. To those of us who live in the South the importance of this investigation can hardly be exaggerated. It will stand as one of the landmarks of history, taking its place

with us with such dramatic events as the invention of the cotton gin, and for the West with the first transcontinental railroad.

THE CLASS-RATE INVESTIGATION SHOULD NOT BE ABANDONED

There are those in the South who do not share these views. There are influential men in the South who are publicly and privately urging that the Interstate Commerce Commission abandon the class-rate investigation before a single fact has been educed. I do not desire to reflect in any way upon the sincerity or motives of these men. But with their point of view I differ and differ sharply.

It should be borne in mind in discussing the points in opposition to the Interstate Commerce Commission's inquiry that existing rates on raw materials or heavy semifinished products, known as commodity rates, are admittedly favorable to the South; that the investigation does not directly concern these rates; that the products which form a large percentage of the existing southern shipments, perhaps 50 percent, are the bulky, low-valued products; that in the maintenance of rates on these products southern shippers have the greatest stake; and that class-rate traffic moving at higher rate levels in the South is a relatively small percentage of the total volume of traffic because there is at present little high-grade manufacturing in the South.

Three principal points have been made in opposition to any general revision of rate levels which might result from the investigation announced by the I. C. C.

First, it is said that any lowering of rates on high-grade manufactured products, such as might result from the I. C. C.'s investigation, would necessarily result in raising many of the present low rates on existing traffic. To state this argument for an abandonment of the I. C. C.'s investigation is virtually to answer it. The South is no longer content to try to maintain itself on the meager compensation of a colony, as the mere producer and exporter of raw materials and low-grade goods. Nor is there any tangible evidence that the present level of heavy commodity rates will in fact be changed, if the rates on high-grade manufactured articles should be changed. In any event, this much is clear: Unless the inequalities in rates on high-grade, processed articles are removed, the future economic status of the South is unlikely to surpass its present status. We must never forget that we are concerned not only with present shippers and their rates, but about the future, about future business enterprise, future jobs, income; development tomorrow and a decade hence.

The second argument against the Commission's investigation is that any downward revision of the present rates on high-grade goods would adversely affect the railroads. Again this argument rests on the fallacy previously mentioned—that a continuation of the present state of affairs is satisfactory. A reduction in rates on high-grade goods would, if the I. C. C. should find such reduction warranted by the facts, afford equality of opportunity in the interior regions for the manufacture of high-grade goods. This would in turn create new traffic and new revenues for the railroads. Few who are familiar with the situation doubt that this new revenue would more than compensate for any reductions in rates to make this type of enterprise possible. In any case, it is not conceivable that the I. C. C. would sanction or establish any rate structure which would fail to consider the need of the railroads for revenue.

The third principal argument made against the class-rate inquiry is that if there are rates on particular articles that are inequitable, complaint may be made to the Interstate Commerce Commission, and those particular inequities corrected without a broad-scale inquiry into all rates. Those who urge the abandonment of the class-rate investigation point to the so-called Southern Governors' case before the I. C. C. as an illustration of the virtues of this method. This procedure is hopelessly slow and prohibitive in expense for the needs of southern commerce. The Southern Governors' case sought adjustment on 18 commodities, and after 3 years' effort and the expenditure of $75,000 reductions were granted on 11 of these 18. But there are literally hundreds of commodities in which the South's present and future businessmen and wage earners are interested, and even the 3 years required for the few commodities in the Governors' case is not a fair test. The southern coke case, for example, consumed 11 years before it was concluded. Such piecemeal, expensive, and protracted procedures greatly discourage the rise of smaller manufacturing concerns which hold so much hope for the future of the interior regions.

The newspaper publishers of the South represent a substantial business enterprise and a vital factor in community and regional leadership. Furthermore, you have perhaps more contact with the business leadership of the South than any other single group of men. The issues we have been discussing here today are peculiarly within the province of businessmen. Economic development is a subject that is constantly in the minds of live and creative men of business; the businessman's way of thinking, his familiarity with the compelling force of costs and competitive conditions, his insistence in his business on facts rather than mere opinions or generalities, give him a natural place of leadership in the working out of this issue. It would be a deep satisfaction to those of us in the T. V. A. who have tried to contribute to the facts and public discussion of regional inequalities if members of this group and businessmen generally through the South would more and more participate actively in clearing the road of these barriers to the fullest development of the South and the Nation.

American Foreign Relations Today

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

ADDRESS BY DR. J. F. ZIMMERMAN TO NEW MEXICO BANKERS' ASSOCIATION

Mr. HATCH. Mr. President, on May 16 Dr. J. F. Zimmerman, president of the University of New Mexico, delivered a very interesting address on the subject American Foreign Relations Today. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Two great difficulties confront us in discussing foreign relations. First, the great secrecy which has always surrounded foreign affairs. After the last war Woodrow Wilson wanted "open covenants openly arrived at," and efforts in that direction were made but without great success. Diplomacy is still a somewhat secret process in all countries—witness Welles' visit to Europe recently and, upon his return, not one word was given either to Congress or the public. Although the realm of foreign affairs controls the very lives of all citizens, it seems that it remains a mystery, difficult, and almost impossible to subject to any great degree of democratic control. Money, trade, international finance, military affairs, diplomatic negotiations, are all poorly understood by the rank and file, who consequently leave them to a few national leaders.

There is also another difficulty in discussing foreign affairs, namely, the danger that emotion and prejudice will predominate over intelligence and reason. Raymond Fosdick, in 1938, spoke of the "retreat from reason" in foreign relations. The description is appropriate, and the sad part of it is that it was applicable in 1838; and, if secrecy in foreign relations continues, still will be applicable in the year 2038.

Recognizing these two difficulties, I shall proceed to the discussion of American foreign relations today. Our country has had a long tradition of national isolation, broken occasionally, it is true. We might say that until 1917 conditions were favorable to a large degree of isolation; at any rate, that policy was considered basic to that time. The corollary of isolation was the doctrine of nonintervention in the affairs of other nations, coupled with the rather fixed notion of no entangling alliances with other nations, and more particularly with the European group. Even our Monroe Doctrine was, basically, a reciprocal nonintervention policy—we were not to bother with Europe's system of balance of power and war, and they were to stay out of our peculiar spheres of interest.

As a matter of fact, our foreign policy grew logically out of the fundamental differences between Old World and New World conditions. European powers have struggled for mastery for centuries, while on this continent the United States has maintained unchallenged supremacy. The smaller States of the Western Hemisphere have, at times, feared the imperialistic tendencies of Uncle Sam, but they have never yet sought to unite and create a balance of power against the United States.

In this fact lies the explanation of the tradition of the Americas as peace-loving peoples, while that of Europe is regarded as a warlike tradition. It is a matter of geographical and historical background rather than one of ethical and spiritual ideals. With no vital problems of natural frontiers, of ethnic minorities, of lost provinces, or of population pressures, our continent until recently has very easily pursued a peaceful path. Confronted by all of these dangers all of the time, Europe has pursued its course of international struggle and war.

Hence out of historic and geographic conditions arose our American diplomacy outlined by authorities somewhat as follows: Political isolation, nonintervention, neutrality, the Monroe Doctrine, the open door, and arbitration. This diplomacy attained its highest world achievements, perhaps, in the field of neutrality, and in the Hague Conventions of 1899 and 1907, which provided for the peaceful settlement of international disputes by mediation, by international commissions of inquiry, and through the establishment of the permanent court of arbitration at The Hague.

The first great step toward involvement in world affairs outside this continent began, strangely enough, in the acquiring of the Philippines. Our desire to help Cuba was not accompanied by careful thought of the final outcome, and we suddenly found that with the Philippines in our possession we had to take joint action with the powers of Europe in dealing with affairs of the Pacific and the Far East, though we still did not wish to take joint action on matters related directly to Europe. Then under

Theodore Roosevelt we participated in 1906 in the Algeciras conference, which was not of great international import since it only sought to settle the claims of Germany and France in Morocco. In the end, however, the settlement reached, favorable as it was to France, affected directly the balance of power in Europe.

Of course, our greatest departure from the policy of isolation and nonintervention was our participation in the World War of 1917, following the traditional counsel of Wilson in 1914: "To remain neutral not only in act but also in thought." Very gradually, under idealistic impulses bordering on religious fervor, we entered unconditionally into that struggle to "make the world safe for democracy" with all of our available resources, financial and military. Losing sight of more practical diplomacy in our high idealism, we did not require from our Allies before we entered that war any pledge that a victorious peace would result in the embodiment of those high principles for which we fought in the European order which was to follow. We may still argue academically as to the wisdom of going into that war, but our colossal blunder in not attaching vital conditions to our entrance is, I consider, undebatable. If we ever enter again into another European war, we should at least in advance of going in demand such agreements as to peace terms as will, as far as possible, avoid the mistakes and disappointments of 1919 and succeeding years.

As one views the situation since 1919, our attitude on the question of isolation or participation in European and world affairs is not easily explained. In general, the reaction following the World War was in the direction of withdrawal from participation in European political affairs. I regard it as unnecessary before this group to review the various phases of our participation in Europe's economic affairs. More recently, in the face of threatened war in Europe we tried to adopt a more safe and cautious policy of neutrality in the hope of staying out of the war.

We seemed to want to go back to the more normal and historical policy of staying out of the world affairs by modifying and correcting many phases of our policy adopted in the earlier years of the twentieth century. This trend has been especially notable since 1930. For example, we have definitely abandoned the former imperialism in Latin America and substituted the good-neighbor policy. We have also moved toward withdrawal from the Philippines and the far eastern obligations which these islands place upon us. Finally, we sought to remove some of the economic causes of unfriendliness between nations by means of reciprocal-trade agreements with countries in all parts of the world.

On the other hand, the trend toward greater participation in European affairs must not be overlooked. First of all we are confronted with the fact that as the present European struggle approached we witnessed, and as the war proceeds we are witnessing, the unprecedented verbal commitment of our President and the State Department to the interests of one group of European belligerents. Contrast this position with the words of Wilson in 1914 to the effect that we must even be neutral in thought, and we see at once the vital trend toward involvement in European affairs insofar as President Roosevelt and the State Department are concerned—in 1914 neutrality in act and thought, in 1939–40, legal neutrality which admittedly assists Britain and France, and verbal neutrality not at all.

President Roosevelt as early as 1938 spoke publicly of the desirability of quarantining certain powers, and more recently again in public utterances makes no effort to conceal his hopes for the success of one belligerent over the other. From the former tradition of neutrality, isolation, and nonintervention, we would seem to be rapidly approaching its complete contradiction, namely, one of direct participation and partial, if not total, intervention in the war in Europe. This at least as far as the President and the State Department are concerned, and there are indications that point to its approval by public opinion, if not as yet by the Congress.

It should perhaps be pointed out here that the desire to play an important role in European affairs has not always been foreign to our Government, and especially to some of our Presidents. Jefferson, it will be remembered, took up arms against the Barbary States. He determined while President to cease paying tribute to the pirates in that area, and upon the refusal of the European powers to join him in dealing unitedly with the pirates, sent a squadron of frigates to the Mediterranean and succeeded in bringing the Bey of Tripoli to terms. This may be regarded as an historical forerunner of Wilson's armed intervention in Europe in 1917. From time to time during our history also it appears quite obvious that some of our Presidents and Secretaries of State have moved close to the border line of intervention through the desire to have their names connected with some great master stroke in world diplomacy. Moved by visions of the grandeur of the United States as a great world power with superior moral virtue, some have been prone to give gratuitous advice at times to the other nations of the world. At times also these idealistic, and yet somewhat imperialistic, outbursts have been unaccompanied by careful consideration of America's long-time interests, and a thorough grasp of the most strategic factors affecting America's relation to world affairs.

In the present instance one does not question the sincere convictions of President Roosevelt and Secretary Hull. As in 1917, a real wrong is being done in Europe, and they are morally indignant against that wrong. Our country began with similar indignation in 1917, and a little later, to save the small nations and democracy, we went to war. And in that war for high ideals we shared in the use of conscription, poison gas, blockades which starved millions, and in a treaty vengeful, selfish, and cruel. All this to help small nations and save the world for democracy. But when all was over, the world was less safe for democracy than it had been for generations, and the small nations are not now in a very enviable position.

I believe it was in large part the high hope of some form of collective security through the League of Nations which would guarantee peace to Europe and mankind which led Wilson to decide in favor of war. Certainly no low motive would have impelled that great man to send American youth to the then Western Front.

It would appear that public opinion in our country is now about 100 percent opposed to Hitler's methods of blitzkrieg, oppression and cruelty, combined with Machiavellian diplomacy, in his war on small nations, and the soundness of this opinion cannot be questioned. From every moral consideration our sympathies are, and should be, with the small countries of Europe and with their defenders, the British and French Allies.

It may indeed be that since the first World War, our fate as a nation has been inextricably linked with that of the democracies of Western Europe, and that after almost a century and a half of struggle to live apart from the European system, we find it necessary now to be united again with those European bonds which we, after great struggle, severed in 1776 and the years immediately following.

If this does become America's future policy in foreign affairs, then it seems to me that we can scarcely look forward to a future in which we can escape Europe's gigantic struggles for power, or expect to keep the American continent free from future involvement in those struggles. Furthermore, it would appear that such a course will jeopardize any opportunity we might have following this war to exert our influence in Europe for the future collective security and peace of all nations. On the other hand, our country may rightly decide that to help defeat Germany now is a greater service to mankind and of greater value and interest to us than anything else which the future may hold in store for us.

Unable as I am to chart the course of our immediate future, I do wish to make here one observation as to our past. It seems tragic indeed that America decided after the last war that she could not help in the proposed plans for cooperative and constructive world peace.

I am troubled also when I consider that our country, which was largely responsible for the Court at The Hague, would not even become a member of the World Court at Geneva following the last World War.

Are we to hope that a brighter future will result from this war of "law against anarchy," of "democracies against dictatorships," than followed the other war to "make the world safe for democracy"?

Chamberlain, who stated the war aim for the Allies, said that it was to defeat Hitlerism, "that aggressive, bullying mentality which seeks continually to dominate other peoples by force, which finds a brutal satisfaction in the persecution and torture of inoffensive citizens, and in the name of the interests of the state justifies repudiation of its own pledged word." He also thus defined the peace aim, "A new Europe—not in the sense of redrawing the map according to the ideas of the victors, but a Europe in which the nations will approach their difficulties with good will and mutual tolerance." He referred also to his desire to make the necessary boundary adjustments in a conference between equals. The trouble is, however, that after the war there will not likely be equality between victor and vanquished, and more than likely there will exist neither good will nor mutual tolerance.

Hitler's peace terms for Europe as a whole contain the expressed wish "That the leading nations of this continent one day come together to draw up a statute that will insure them all a sense of security." But we fear that after the war what would bring a sense of security to one side would not seem like security to the other.

As I've said before, if we could remain at peace we might be able to do something looking toward the future peace and stability of Europe and of the world, and if we should decide to go to war, the greatest possible thought surely should be given to those fundamental principles upon which we would expect peace to be based and those principles formulated into a definite prewar agreement with our allies.

It goes without saying also that before going into this war our leaders should consider most carefully our present state of military preparations in the light of all recent developments in wholesale mechanized warfare on land, on sea, and in the air, calculating in every detail the possible contribution we can make to such a gigantic enterprise, and they should consider also most carefully the future of defense plans for our country and for this continent. These problems which relate to the vital strategy of war and preparations for future defense are of such a technical nature that I can only raise them as questions without offering suggestions as to their possible answers.

Frankly, I face this difficulty that while I am inclined to believe that the days of isolation and nonintervention have passed, or are rapidly passing for our country, nevertheless I have not as yet brought myself to the conviction that this is the time for international intervention on the scale that may be found necessary if we enter the war. It is quite possible, and even probable, that my difficulty arises out of lack of information. I am not aided in my thinking by promises that our boys need not go, that our resources will supply all the needs of our Allies, because I know that this

statement does not square with the history of the years from 1914–17. Would that all the people of our country knew that history. It is difficult also for me to construe as sound information the slogans such as "A world half slave and half free," "Quarantine the aggressor," "Law and anarchy," "Our frontiers are on the Rhine," etc., or the highly dubious though sensational prophecy that every inch of earth and every human being on the earth are in danger of being controlled by one leader of one nation of the earth. Such prophecies are surely not intended for citizens possessing mature minds.

It may well be, however, that our leaders have decided that these are the only available methods of inducing our people to do what they feel we must soon do. On such a basis such methods may be justified, and yet more frankness and more information would seem to be the better way to instruct our citizens as to their duty.

In spite of our almost unanimous sentiment against Hitler and of our genuine sympathy for the Allies, I question whether the majority of our people are yet in favor of going to war. Nevertheless, with our woeful lack of knowledge of the diplomacy of our Government and the strong language coming from our leaders almost every day, looking in the direction of war, emotion, and prejudice, I fear, will not be long in making difficult any further intelligent and reasonable consideration of the subject.

In conclusion, and by way of summary, I suggest:

(1) That traditional isolation is no longer sound as a permanent policy;

(2) That for 20 years now American participation in all steps looking toward collective security and peace would have been good policy and will be good policy after this war;

(3) That peace at any price never has been and never can be a tenet of sound American diplomacy;

(4) That unwise and untimely military intervention is dangerous, very dangerous in this highly militarized world;

(5) That before entering into war we give most careful thought to and plans for our future defense, deciding in advance just what we are going to defend. We need to know if we must defend continental United States, or the Western Hemisphere, or 300 or 600 miles into the oceans around this hemisphere, or the British Isles and France, or the far-flung empires of these two countries, or Hawaii and the Philippines, or the entire Far East. Our preparation for defense should be determined by what we plan to defend;

(6) That before entering into war we obtain more assurance than we now have that we are well prepared with bombproof ships, with adequate air force, with enough antiaircraft guns, with an adequate army adequately equipped, and finally with thorough coordination of all branches of our service;

(7) That before we enter into war we formulate definitely our peace aims, that these be incorporated into a signed agreement with our allies and made known to the other nations of the world.

Before we forego our present neutrality to take a more active part in the present European conflict, we should as a nation carefully define our reasons for entering the war. This should be done in no sentimental fashion but in a coldly realistic manner. No war should be entered lightly, but only for the gravest and most compelling reasons.

Our decision to go in or stay out of the war should be based solely on considerations of national interest. The last World War cost our own Nation $200,000,000,000, directly and indirectly, and we are not through paying for it yet.

What alternative use could we have made, for instance, of the money that 4 years of war cost this world? Dr. Nicholas Murray Butler has made an inventory of what we could do for mankind if we had that money today. We could buy 5-acre plots of land at $100 an acre, build homes upon the land costing $2,500, furnish them for $1,000, and give such a home scot-free to every family resident—in 1935—in Russia, Italy, France, Belgium, Germany, Scotland, Ireland, Wales, England, Australia, Canada, and the United States. Every city of approximately 20,000 people in those countries could have a $2,000,000 hospital, a $3,000,000 library, and a $10,000,000 university. With part of the balance invested at 5 percent, we could pay salaries of a thousand dollars apiece to 125,000 teachers and 125,000 nurses, and then we would have enough money left to buy up every penny's worth of property in Belgium and in Germany. Think of the social benefits the world has sacrificed to pursue a war which brought us all only a depression and more war.

To enter this war and see it through would probably cost us more than the last one. The toll in human lives would be infinitely greater, in all probability, due to the increase in effectiveness of modern armaments. The social and political consequences might result in the destruction of the traditional American way of life and the substitution of a native Fascism with all that would mean.

These considerations, which I am only briefly noting, make it incumbent on each of us to keep our head, to think soberly of the stakes involved, and to keep our hearts under control of our heads. However unfortunate a German victory might prove to England and France, and however much our sympathy goes out to them, our first duty is to ourselves. By keeping democracy alive and strong here in America, we will undoubtedly serve not only ourselves but the future of the world best.

We are living in the midst of a war age, in all the turmoil of its chaotic and destructive forces. America has been built by brave men, but also by men who had great vision. We should not become so engrossed, as children of this war age, as not to try to envision world conditions as they will be in the future. After this maddening time of war and bloodshed, there must be leaders of nations who can see the needs of a world which will, even though weary and wasted, still want truth and justice and love and peace. I hope America will produce such far-visioned leaders. We may be facing unprecedented provocations, the easy road may be to war, but in the long view of American diplomacy and America's obligation to itself and to the world, war might prove not to be the best road.

Development of Trade and Commercial Relationships With Brazil

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

EDITORIALS FROM VARIOUS SOURCES

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a few pertinent editorials dealing with the development of trade and commercial relationships between the United States and the Republic of Brazil.

The most important step taken in recent years to promote a better understanding between the people of the United States and the people of Brazil is that embraced in a plan of two-way publicity outlined by Hon. Edward C. Johnston, vice president of the well-known Western Newspaper Union.

Returning from a trip to South America, Mr. Johnston wrote an editorial article for the Boletin Linotipico, issued for South America by the Mergenthaler Linotype Co. The article, reproduced herewith, excited comment from all parts of the country. Newspapers in the United States encouraged the viewpoint of Mr. Johnston, and pledged support. Brazilian newspapers followed suit, and today the plan seems headed for fruition, and no doubt will contribute in an important way to the promotion of a better understanding between Brazil and the United States, and also promote the dissemination of constructive news about the United States in Brazil and about Brazil in the United States.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the Jacksonville (Fla.) Journal]

EYES TO THE SOUTHWARD

With Europe at war, Uncle Sam's face has been turned to the South instead of the East.

That is to say, that the people of the United States have been thinking more and more in terms of South America and less in terms of Europe.

Consequently, new impetus has been added to improving pan-American relations, and on this side of the Gulf we have been realizing just how close are the interests of the North and South American peoples.

But just how much do we know, even now, of South American affairs? Do we really understand their culture, their economics, their politics, their industry? Is the good neighbor idea, at the present time, much more than a friendly impulse, a sincere hope? It may be suspected that it is not, and that it is to the task of making the good neighbor policy a practical, realistic instrument of mutual welfare that we are under a real obligation to dedicate ourselves.

In the current issue of Boletim Linotipico, the Portuguese edition of the Linotype News, Edward C. Johnston, vice president of Western Newspaper Union, really gets to the heart of the "good neighbor" impulse and points the way to a practical implementation of the pan American ideal.

After noting the fact that the press of the United States is rapidly becoming conscious of a marked increase in things Latin American, and especially Brazilian, Mr. Johnston says:

"There is a fair flow of spot news by cable and radio in both directions—north and south. But this much is certain: In the columns of our newspapers and yours there is a dearth—almost a total absence—of authentic, background feature articles, appropriately illustrated, which constructively interpret to the readers the fundamental institutions, cultural and material, of our respective countries. Along this line the surface has scarcely been scratched. But a two-way channel is needed.

"Recently, representative Brazilian and North American publishers with whom I have discussed the subject expressed a keen

desire to collaborate in a reciprocal exchange of factual, authentic background feature material. Such an exchange as proposed would make this material available on a mutual and nonprofit basis to the publisher groups in our respective countries.

"Would not the cumulative effect of such a reciprocal program contribute most effectively to that cultural exchange and to the development of that mutual understanding which is so necessary between good neighbors?"

Mr. Johnston's idea is obviously sound. Cooperation between the United States and great South American republics must be based on deep mutual understanding of each other's culture, economics, politics, problems and methods in every field. And genuine understanding can be based only on accurate and complete information. An exchange of such information would be not only beneficial but is also absolutely essential.

[Editorial by Edward C. Johnston in Boletin Linotipico]

The press in the United States is rapidly growing conscious of a marked increase of reader interest in all things Latin American. Moreover, this reader interest in Latin America flows from a natural and proper desire on the part of our people to get better acquainted with their neighbors to the south.

It was my good fortune while in Central and South America recently to meet and renew personal friendships with many of your representative publishers. And without exception they told me of the great interest on the part of their readers in things North American. Apparently the same urge to get better acquainted with their neighbor to the north is held in common. Clearly, I think, publishers must now recognize their responsibility to furnish these interested readers the information they seek.

There is the familiar anecdote about Charles Lamb, who said, "I dislike that man." "But," came the reply, "you do not know him," and Lamb answered, "Of course I don't know him. If I did, I could not dislike him."

Someone has said, "We are apt to suspect those we do not know."

Publishers in the United States generally agree with their colleagues in Latin American countries that there should be a mutual effort to disseminate knowledge of each other's civilization. We need to share each other's knowledge of our history, our cultures, our fundamental institutions, our significant and historic personalities.

As I flew down the east coast of South America to Buenos Aires and up the west coast to Mexico City in the airplanes of that great developer of better relations "Panair," the speed achieved in travel shocked me. It forced the realization of how much smaller the world now seems. Literally the world has shrunk. Ideas which peoples of one country have held about peoples of another country, however distant, must now be adjusted at a much faster tempo, not leisurely and over decades. Never before has mass thinking altered so quickly, reacted with such speed to current events and stimuli.

Admittedly, radio is an effective medium for quick dissemination of "spot news" bulletins and for various kinds of entertainment, but the printed word is still the best medium for appeal to man's reasoning powers and in forming his convictions.

Increasingly, I am glad to say, the schools and universities in the United States are making available courses of study in the Spanish language and literature. Our own national heritage from Hispanic culture is realized and greatly appreciated.

This enthusiasm for educating ourselves more about the other Americas is not solely to achieve the satisfaction of greater knowledge. It flows from the urge of the individual citizen to contribute as best he can to making a better world through a progressive realization of the ideals that good neighbors among nations must have in common.

There is a fair flow of "spot news" by cable and radio in both directions—north and south. But this much is certain: In the columns of our newspapers—and, if I may say so, also in yours—there is a dearth—almost a total absence of authentic background feature articles, appropriately illustrated, which constructively interpret to our readers and to yours the fundamental institutions, cultural and material, of our respective countries. Along this line the surface has scarcely been scratched.

But a two-way channel is needed.

Recently representative Latin American and North American publishers with whom I have discussed the subject expressed a keen desire to collaborate in a reciprocal exchange of factual, authentic background feature material. Such an exchange as proposed would make this material available on a mutual and nonprofit basis to the publisher groups in our respective countries.

Would not the cumulative effect of such a reciprocal program contribute most effectively to that cultural exchange and to the development of that mutual understanding which is so necessary between good neighbors? I believe you will agree it would do so. Publisher groups are now carefully examining this proposal. Your comments and suggestions will be most welcome.

EDWARD C. JOHNSTON,
Vice President, Western Newspaper Union.

FOR A BETTER UNDERSTANDING BETWEEN BRAZIL AND THE UNITED STATES—THE WORK OF EDWARD C. JOHNSTON AND ITS REPERCUSSIONS

[Translation from the Portuguese of an editorial article published by A Gazeta, Sao Paulo, Brazil, March 18, 1940]

Intelligent and beneficial is the program which Edward C. Johnston, vice president of Western Newspaper Union and one of the most actively interested North American newspapermen, is sponsoring in favor of a better understanding between his and our country.

Good friendship and good neighborliness can surely never become tangible realities so long as our peoples continue to ignore each other and the work of their necessary approximation is limited to only one of its aspects—commercial intercourse; that is to say, so long as the ties of commercial interest are not supplemented by mutual understanding and comprehension and culturally we continue to live so far apart from each other as if we were not living on the same continent and were not coexisting in the same historical epoch.

Having visited our country frequently, Edward C. Johnston is well acquainted with us. Recently, since he reached again the North American soil, he has not lost an opportunity to show to us that spontaneous and sincere sympathy, having become, as it were, the "friend No. 1 of Brazil in the United States," so much has he done to make us known among his countrymen and so disinterestedly has he placed at the disposal of the Pan American crusade his influence in the political and journalistic circles of his country.

Even recently Mr. Johnston published in the Portuguese edition of the Boletim Linotipico an illuminating article on this important subject, which was reproduced in the CONGRESSIONAL RECORD of the United States at the suggestion of Senator LEWIS SCHWELLENBACH, of Washington State. Among many favorable editorial comments in the United States of America, the Jacksonville Journal, a very popular and important publication of Florida and southern Georgia, commented editorially on it at length. In his article Johnston brings the matter to a focus with rare success. He views it from a new angle in which idealism does not exclude but explains the aim, and the path to follow is traced with precision and clarity. The author is not satisfied with speeches, official declarations of cooperation, or with mere tourist excursions. In his opinion, the results will not be wholly satisfactory unless and until we learn to know each other better in greater knowledge and realization of our culture, our progress, our customs, our fundamental institutions, our way of life, and of significant characteristics of our existence. "It is with great pleasure," says he, "that I observe the colleges and universities of the United States offer increasingly more courses in the Portuguese language and in Lusitano-Brazilian literature. We in the United States recognize the values of that part of our national inheritance derived from the cultures of the Iberian Peninsula. This enthusiasm of ours to learn more about things Brazilian and of the other countries of the Americas is not solely inspired by a desire to widen our knowledge. It is rather prompted by the desire of all of us to better relations in this hemisphere by a realization of the common ideals of truly good neighbors. There is now a fair exchange of spot-news items by telegraph and radio, but there is an obvious lack of articles with authentic background and proper illustrations in the columns of our respective newspapers which would explain to the readers in a constructive manner the basic institutions of our two countries. In this direction the surface is scarcely scratched.

As is seen, the writer attributes to the press the most important and the greatest role in the work of bringing the peoples of our two countries together, suggesting a systematic exchange of background feature material between the Brazilian and North American editors. "Would not the cumulative effect of such a program," asks he, "contribute greatly to that cultural exchange and to the development of that mutual comprehension so indispensable between good neighbors?" And he answers, "I think that it would."

We also think that it would; and on that point we are in full agreement with the ideas of our colleague and with that of the editorial commentator of the Jacksonville Journal, being positive, as is the latter, that "genuine understanding can be based only on accurate and complete information," and also that in this case such background information is not alone beneficial but "absolutely essential." For that reason, the program of Edward C. Johnston should meet among us the widest echo and deserve the highest support.

Among the many who have visited us—politicians, journalists, businessmen—he was the first one to view the matter thus from its inception, and also the first one to look at it through a superior prism and to place it on a higher plane, without thereby committing the error of dissociating it from its other aspects.

BRAZILIAN VIEWS ON AMERICAN UNDERSTANDING

[Translated from O Observador-Economico e Financeiro, Rio de Janeiro, Brazil]

The North American commercial missions which have visited us recently have aroused interest in Brazil and throughout the United States, where the necessity for greater approaches with our country in the economic field is making itself felt from day to day, which movement is gaining new and valuable adherents. The situation created for the international commerce by the present European conflict is certainly contributing to the formation of that state of mind, which can only result in our mutual benefit provided we know how to profit thereby. On the Pacific coast, for instance, there is a great scarcity of articles which we are already producing. If we would organize our forces efficiently, we could produce and sell our exportable output to our Yankee friends under mutually advantageous conditions. Rubber, manganese, fibers, and vegetable oils figure in the first place on the list of possible increased sales, and alone in these items we shall have an immense field of action.

However, it must not be lost sight of that the commercial interchange is only one of the aspects of that work of approach, which is incomplete, inefficient, and to a certain extent counteractive if at

the same time care is not being taken to seize this occasion for strengthening the ties of mutual understanding between our two great continental nations, a task in which cultural comprehension is vital. On the contrary, so much depends on contingencies, on mere circumstances, thus resting on highly fragile bases to resist unforeseen vicissitudes. Nobody understands better the problem in its entirety than the vice president of Western Newspaper Union, an organization which serves with feature material approximately 13,000 North American newspapers. It has thus the possibility of sounding the national public opinion and to know by actual and direct contact the very opinion of the public on many diversified matters.

The articles written on that subject by our distinguished colleague, Mr. Edward C. Johnston, and which we had the opportunity to read in issues of Jacksonville Journal and in the Boletim Linotipico, and other journals, and which were reproduced in the CONGRESSIONAL RECORD of the United States on motion of Hon. LEWIS B. SCHWELLENBACH, United States Senator from the State of Washington, views the matter under a new light and suggests practical measures, worthy to be put into practice by all concerned. For Mr. Edward C. Johnston the fundamental principle is that the peoples of our two countries should learn to know each other better in the first place, and to do this not merely through statistics of their commercial turnover or through the study of their economic opportunities, but before all, through their achievements in the field of social and moral progress and cultural history and background. "It is vital," says he, "we should have a more intimate knowledge of the history, of the culture, of the fundamental institutions, and of the historic personalities of our respective countries. All of us," continues he, "are inclined to distrust peoples whom we do not know well."

We Brazilians, in our turn, have no reason to react any differently. It is therefore necessary to do all in our power that both peoples learn to know each other, and knowing each other better, we shall esteem each other the more and be disposed to make an effort at mutual collaborating and fraternal cooperation on the basis of the policy of true friendship and good neighborliness enunciated by President Franklin D. Roosevelt.

Johnston starts from the principle—and in that respect he is obviously correct—that true friendship and mutual understanding by the masses of our peoples are essential elements in developing commercial and economic relations, but neither the one nor the other is possible without reciprocal and disinterested comprehension; that is to say, unprejudiced and not dominated by immediate material gains. He is convinced that newspaper men and educators can probably do more for continental solidarity and for Pan-Americanism than businessmen.

"It is with great pleasure," says he, "that I observe that United States colleges and universities are now giving more and more courses in Portuguese and Spanish languages and in Lusitano-Brazilian literature. We recognize more and more the true values of our own national inheritance derived from the cultures of the Iberian peninsula. Our interest in things Brazilian and Latin American in general, is however, inspired not solely by the mere desire to widen our knowledge. It is rather motivated by the desire of all of us to better this world by a realization of the common ideals of truly good neighbors." That which up to now has been done in that direction, seems to him insufficient and inadequate. "There has been a certain exchange of spot news items by radio and by cable in both directions, north and south, but there is no doubt that in the columns of our newspapers as well as in yours there is a lack of feature articles having authentic background, which interpret in a constructive manner to the readers the fundamental and significant institutions of our countries." For that reason his suggestion of an organized and systematic exchange between North American and Brazilian newspapers of articles, authentic background features properly illustrated, all that kind of material tending to give to the readers here as well as there a clear and concrete idea of the past and of the present of these friendly countries. It does not involve, as Johnston clearly points out, any difficult undertaking; there is no doubt about that. Neither does it deal with a vague idea, without appreciable practical results. "There has never been any period of time as is ours," emphasizes he, "in which mass thinking has undergone so many and rapid changes with respect to current events. Preconceptions formed in one country about another may now be corrected with the greatest speed, and not with the slowness of bygone times."

Why then do we not avail ourselves of that rich experience for the benefit of making the effective approaches? Do not allege its needlessness or its slight importance—the contrary is exactly the case. Let us not be satisfied with official speeches made from time to time, nor with the restricted activity of our official publicity offices in the United States. In commenting on the articles of Edward C. Johnston, for instance, the editor of the Jacksonville Journal made a confession which by itself is sufficient to open our eyes and to call our attention to a reality: "How much do we know, even now, of Latin-American affairs?" asks this editor sincerely and earnestly. And he continues: "Do we really understand their cultural backgrounds, their economics, their politics, their industries? Is the good neighbor idea at the present time much more than a friendly impulse, a sincere hope?"

And as for us, if we will make an examination of our own conscience with the same frankness with which that editor made the examination of his, we likewise cannot escape the sad revelation that of the United States we know hardly anything more than is shown to us by the films of Hollywood, or by the might of their industry and of their finances. Their so intense social and spiritual life is completely strange to us.

Has the time not arrived to end this mutual ignorance and to strive earnestly to know each other better? Consequently, is right not on the side of Edward C. Johnston?

Communists and Nazis on Border

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

ARTICLE FROM THE WASHINGTON DAILY NEWS

Mr. LEE. Mr. President, in today's Washington News there is an article headed "Communists and Nazis Concentrated on Border." I ask unanimous consent to have the article printed in the Appendix of the RECORD, and, in connection with it, I call attention to a bill which I introduced yesterday, Senate bill 4071, which provides for the establishment of a series of observation stations along the Mexican border. A similar bill was introduced in the other House by Representative SNYDER some days ago.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, Friday, May 31, 1940]

COMMUNISTS AND NAZIS CONCENTRATED ON BORDER

EL PASO, May 31.—Communists, working hand in hand with Nazi agents, are distributed all along the northern border of Mexico, according to Gen. Juan Anreu Almazan, Mexican presidential candidate, who will be in Juarez June 9.

"People of Mexico know that the enemy they have to guard against is an outrageous band of foreign invaders who have come here lately to prepare—to make Mexico the center of agitation aimed against the United States and all of Latin America," he charges in a statement released by Manuel Reachi, a member of the Almazan campaign committee.

FACTIONS ARE NEIGHBORS

Influx of German and Russian elements into Mexico is tremendous, according to Señor Reachi. He said Communists and Nazis are working together throughout the country. In Mexico, he said, their leaders live together in the San Angel section.

German money, he said, is publishing the Mexico City magazine El Timon. Russian money is behind El Popular, Toledano's labor daily, he charges.

Mexico has a large German population, particularly in the coffee area of Chiapes, the tobacco districts of Vera Cruz and in the commercial centers of Mexico City and Monterey, he said. Señor Reachi said he has found the Germans almost entirely pro-Nazi and ardent supporters of Hitler.

Señor Reachi predicted that General Almazan will win the election by such a heavy majority that only the defeated candidates will be interested in starting a revolution to cover defeat. In any event, he said, there is no fear of any widespread revolutionary uprising. The Mexican Army, he said, is no longer a political machine since the days of Alvaro Obregon. He thinks it will not split over politics.

General Almazan, according to Señor Reachi, favors settlement of the oil controversy according to international law.

He quoted General Almazan as saying that if Mexican workers would display the same discipline and efficiency as the northern American workers, they could be paid the same wages and given the same working conditions.

WANTS FOREIGN CAPITAL

General Almazan had previously announced that he favors encouragement of foreign capital in exploitation of Mexico's resources. He also advocates a military alliance among American nations.

General Almazan favors continuation of the division of land among small holders, but he advocates previous payment for the land expropriated and he advocates that individual title be given to the farmers instead of to the Communal Ejido (community farms).

Attitude of Labor Toward National Defense

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

ARTICLES FROM THE WASHINGTON DAILY NEWS AND THE WASHINGTON STAR

Mr. HOLMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles clipped from today's Washington newspapers. One is from the Washington Daily News and sets forth the patriotic attitude of British labor, which now has a realization of the dependence of the national safety upon its patriotic cooperation with governmental policies.

The other article records the uncooperative action of some American workmen on American warships now under construction in this country.

The safety of our country today depends as much upon the patriotic cooperation of labor and capital to serve the national needs of our Government as it does on the Army and Navy and the brave men in the uniform of our country. I am as much opposed to the racketeers against honest labor and their subversive tactics as I am to profiteering in wartime industry.

My hope is that by publishing these two newspaper clippings the contrast between the present attitude of the British and some American workmen may be noted by all those concerned, and that the lesson which the contrast teaches may be learned now, and not after it is too late to serve a useful purpose. May we all now go forward together unselfishly in a unified resolve to serve and save the American people and their constitutional government, which should be the aim and purpose of all American patriots.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 31, 1940]

BRITISH LABOR UNITED, DETERMINED TO WIN WAR

(By William Philip Simms)

LONDON, May 31.—British labor, convinced that this is a people's war, is determined to defeat Germany at all costs. This, I can state on the best authority, is the position of trades-unionists and workers in general.

In the last few days I have found opportunity to talk with many leaders and members of the Labor Party and of labor unions. They were unanimous in their expressions concerning the war and its ultimate outcome, and even more resolute to win than they were during the first World War. The reason, I think, is that they regard it as "our war."

Today I talked with a group of unionists, Socialists, and Laborites. They thoroughly agreed with each other, and what they said agreed with what others had told me previously. The gist of it was this:

"This is not the Tories' war. It is labor's war—a people's war. It has been our war ever since Hitler rose to power.

"The whole Hitlerian concept is opposed to what British workers believe in. Hitler's concept is that the people exist for the government. Ours is that the government should be of, by, and for the people. Abraham Lincoln might well be the patron saint of British labor, for his brand of democracy runs strong in our ideals of statecraft.

"So Britain can't lose this war. Wars made by mere governments are easily lost, but a war backed by an entire free people can end only in victory, especially when behind those people are such economic resources as the British commonwealth of nations commands.

"The fact that British labor has voluntarily given up benefits which it took us a hundred years to win proves how much in earnest we are. We are working unlimited hours, 7 days a week, and doing it gladly.

"Capital is giving up all its war profits and labor is pulling its full share of the load without thought of increased pay. We refuse to take advantage of the situation to force higher wages or win advantages, even where these are long overdue.

"We refuse to do anything that might in any degree imperil the cause for which the Allies are fighting—for that cause is really ours.

"There are no racketeer leaders in British labor. We do not say that to reflect upon the American labor movement, which we know is inspired by ideals as high as ours. But apparently the rank-and-file of American labor has not been able to keep some unworthy men who are not really workers from gaining power in their movement. It is fortunate for us that this has not happened here, for confidence in our leaders is one great factor in enabling British workers to get unanimously behind the war effort.

"In Prime Minister Churchill and Ernest Bevin, the Minister of Labor and National Service, this country has two very big men. Both are realists. Both know what defeat would mean to the plain people. Both are bulldogs of determination, and the whole Nation stands back of them.

"British labor thoroughly understands the position of the United States. We don't want America to come into the war. We don't need American manpower. But we do need American planes and materials in vast quantity, and we do want America's moral support.

"British labor hopes that American labor will answer our appeal."

[From the Washington Star of May 31, 1940]

WARSHIP CONSTRUCTION TIE-UP IS THREATENED BY STRIKE OF 6,000—FEDERAL SHIPBUILDING WORKERS DEMAND WAGE INCREASE

KEARNEY, N. J., May 31.—A wage-increase strike of 6,000 union workmen at the Federal Shipbuilding & Dry Dock Co. threatened today to halt construction of four United States warships, important cogs in the national-defense program.

The strikers, members of Local 16, Industrial Union of Maritime and Shipworkers of America (C. I. O.), began a peaceful picket of the plant at midnight despite the urgings of union leaders to delay action pending further negotiations.

At the deadline hour, a crowd of 3,500 persons was congregated about the yard gates and 300 men began marching in a picket line. They carried no signs. Seventy-two guards and 35 maintenance men received union permission to work their regular shifts.

INSTRUCTIONS IGNORED

John Dempsey, national vice president of the local, said he told his men to reconsider their action because of the Navy ships under construction. An overwhelming majority voted to strike, however, he added.

No statement was immediately forthcoming from the management, but Dempsey said the company had agreed to close the plant today and meet with union delegates for further negotiation.

A 10-cent an hour wage increase and an annual week's vacation with pay were asked by the strikers whose contract expired Wednesday night. Dempsey said the union had rejected a company offer of a 2½ to 4 cents an hour increase. The present scale of pay ranges from 62½ cents to $1 an hour, it was stated.

LEADERS TO SUPPORT ACTION

Dempsey, who said he was joined in opposing the strike by John Green, national president, and William J. Carney, regional director of the C. I. O., asserted leaders would support the men despite their independent action.

Under construction at the yards are two destroyers and two cruisers. Two other destroyers were slid into wet basins recently.

National Defense

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

ARTICLE FROM THE ST. LOUIS POST-DISPATCH

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on national defense by Richard L. Stokes, published in the St. Louis Post-Dispatch of May 19, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch of May 19, 1940]

NATIONAL DEFENSE: UNITED STATES ARMY, PAPER PLANS AND THE ACTUALITIES—FOR LACK OF SUPPLIES ONLY 75,000 MEN WOULD BE QUICKLY AVAILABLE—THEORETICAL M-DAY FORCE OF 450,000 IS $76,000,000 SHORT OF HAVING THE MEANS OF WAGING WAR—$240,000,000 SHY FOR OUTFITTING PROTECTIVE MOBILIZATION PLAN ARMY

(By Richard L. Stokes, a staff correspondent of the Post-Dispatch)

WASHINGTON, May 18.—The ancient world was conquered and ruled for six centuries by means of the Roman legion, a unit of

heavy infantry, rigidly disciplined and highly trained, with a combination then resistless of flexibility and striking force. Poland's collapse, England's headlong debacle in Norway and the German drive into Holland, Belgium, and France suggest that the third Reich may have fashioned a modern equivalent from howitzer, machine gun, combat car, and airplane. This is the mechanized division, an instrument wielding a mobility and fire-power hitherto unknown to man. Of such divisions Hitler's army possesses at least 12. Their personnel of 150,000 or more represents the last word in skill, equipment, and morale.

By contrast the United States can muster today exactly a single mechanized unit. This is nothing so impressive as a division, but merely the third part of one—namely, a brigade. Its two regiments of former cavalry consist of 2,865 officers and men. They are supplied with 183 Springfields, 60 automatic rifles, 2,658 pistols, 1,186 machine and submachine guns, 12 mortars, 16 howitzers, 240 wheeled trucks, 40 half-trucks, 46 passenger cars, 112 tanks, 120 armored and scout cars, 7 planes, 160 motorcycles, and 2 ambulances. There are plans on paper for expanding the unit to 2 brigades.

AIR SPEED AND DEADLINESS WORKING AGAINST ISOLATION

In the opinion of Army authorities, the chance is growing that the Americas may sooner or later be put to their military defense against invasion. The armor of geographic isolation, once invincible, is thought to be disintegrating rapidly before the range, speed, and deadliness of the air arm.

Owing to Japan's secret construction of capital ships, the American Navy, it is said, may no longer constitute even a one-ocean fleet. Latin America, to whose defense against invasion we are committed by the Monroe Doctrine, and the United States itself, are regarded as acutely vulnerable to the Trojan horse. Allied loss of the war, in this view, might plausibly enough bring the American Hemisphere face to face with a coalition of Germany, Italy, Japan, and perhaps Russia—all of them fiercely predatory and murderously hostile to the democratic idea.

With such arguments in mind, as well as the penalties of unpreparedness which have shrieked almost daily from European news dispatches during the last 8 months, a factual survey of the Military Establishment of the United States may be welcomed as timely and valuable. For present purposes the Navy is left out of account. The report is based on conversations with responsible Army officers and members of the Senate Committee on Military Affairs, upon testimony of Army leaders before the House Appropriations Committee, and upon standard reference books such as Maj. R. Ernest Dupuy's World in Arms. Certain high lights of the situation leap to the eye.

The total trained and partly trained military manpower of the United States is estimated at 607,000. Corresponding figures for some other countries are given thus: Holland, 380,000; Switzerland, 450,000; Australasia, 687,000; Turkey, 700,000; Belgium, 790,000; Rumania, 1,208,000; and Yugoslavia, 1,380,000.

Because of lack of equipment, only 75,000 of these 607,000 men could be placed in the field tomorrow with a fair chance of coping with the latest developments of military warfare. It is the dream of Army chieftains to be able to call up at the declaration of hostilities an initial force of 450,000 men, fully trained and armed; and to have at hand, stored in arsenals, complete equipment for an additional 550,000 who would be recruited by enlistment within 90 days afterward under the so-called Protective Mobilization Plan.

HALF OF THE INITIAL FORCE WOULD REQUIRE MORE TRAINING

The proposed initial force is still $76,000,000 short of the full equipment, according to Gen. George C. Marshall, Chief of Staff. Half of it would be composed of National Guard units, which are calculated to require on an average from 2 to 3 months of intensive training to equal Regular Army standards. For outfitting the Protective Mobilization Plan Army, General Marshall declares, no less than $240,000,000 is lacking. The procurement of this material is regarded as having such vital urgency that he pleaded it should take precedence over increases of personnel, however sorely needed.

Outside of aviation, which in effect is being subsidized by Great Britain and France, the United States has virtually no munitions industry. Thence arises a time-lag of 15 months to 2½ years between the voting of a congressional appropriation and its translation into actual deliveries. In many cases the Army is only now receiving equipment authorized during the fiscal year 1938–39.

A case in point is the Garand semiautomatic rifle, which Army experts, in the face of criticism, still hold to be the most effective weapon of the kind in the world. It was standardized for production in 1936. Not until 3 years later, in May 1939, did funds become available through a congressional appropriation for 169,789 rifles. Today 40,000 have been delivered, including 10,000 for the National Guard. At the current pace of production the remaining 129,789 will not be ready till June 1942. Even then the supply will be 70,700 short of mobilization day requirements. Actual tests have proved that automatic rifles are twice as effective as machine guns against strafing aircraft.

BASIC FIELD ARTILLERY PIECE WAS GOOD GUN BACK IN 1897

The basic weapon of American field artillery is the French 75-millimeter gun, which was a revolutionary innovation in 1897. Last year 141 pieces were modernized to permit higher elevation and motor traction and to increase their traverse from 6° to 87°. About 600 others, out of a total quota of 1,439, are being brought up to date. Even in the French Army this flat-trajectory gun has been supplanted to a considerable degree by the 105 howitzer, which fires a larger shell and can search out entrenched targets. In their rearmament program the Germans adopted the 105 howitzer as major field weapon. Of such howitzers the United States Army has a few test pieces and 60 are being manufactured. It should be explained that American theory is based on open warfare and fast action against tanks rather than entrenchments.

In the field of motorization, the Regular Army's peace quota is 28,850 trucks and cars of a commercial type. About 15,000 of these were ordered last October. Deliveries started in January and will be completed this month. In addition, the Army began in 1939 a 5-year program at a rate of $2,800,000 annually, for the replacement of worn-out vehicles purchased in 1935 or earlier with P. W. A. funds. Even so, in case of hostilities the Army would still have to resort in part to the "shuttle" system, under which 1 battalion of a regiment is transported to the front while the other 2 wait their turn.

All of the artillery in the National Guard is motorized, but in June 1941 it will have on hand less than 14,000 vehicles out of a peace requirement of 44,000. There is a 5-year program in the National Guard also for the replacement of ancient motors, at a rate of $1,731,570 annually. According to General Marshall, "National Guard divisions are now tied immobile to the ground. They cannot maneuver as divisions. They cannot take the field as such, and yet they are a part of the initial protective force which must be able to move in an emergency."

FIXED COAST DEFENSES

Under the head of fixed coast defenses the United States possesses 62 forts in 19 harbors. In time of peace these are mostly in the custody of skeleton crews of caretakers. At the outset of war, in addition to some Regular Army forces, they would be taken over by 14 regiments of the National Guard. Some of the equipment dates from the Spanish-American War, and most of it is confined to 6-inch cannon. On the Atlantic, Gulf, and Pacific shores together there are perhaps 4 or 5 batteries of 16-inch guns.

By way of mobile coast defense, the Army is equipped with a very few 12-inch railway mortars and 8- and 14-inch railway cannon. There are no military highways or railroads, but plans exist for adapting commercial roads and rails to Army use. Our coast defenses as a whole are described as undermanned, understaffed, and underequipped. For their modernization, the War Department is asking $95,000,000—a process which would require between 3 and 5 years.

The Nation's total equipment of combat cars amounts to something like 350 tanks, with orders for 328 more, which are to be completed late in 1941. Of the tanks at hand 112 are concentrated in the solitary mechanized brigade. All are of light and medium weight, ranging from 9 to 17 tons. Excepting one or two for experimental purposes, we have no heavy tanks, for which the Army sees little prospect of use. Mobilization day requirements are put at 925 light and medium tanks. The Regular Army has 5 battalions and the National Guard 18 companies of tank troops.

ANTITANK MACHINE GUNS

Outside field artillery, the chief weapon available for resistance to enemy tanks is the .50 caliber machine gun. This is to be replaced with a more powerful arm, the 37-millimeter antitank gun. Of the latter 1,556 are needed. Funds are at hand for 744, leaving a shortage of 812.

While Germany is known to be producing at least 2,300 planes a month, the United States is not expected until next September to reach a capacity of 800 a month for all purposes—Army, Navy, foreign, and commercial. At present the Army has 2,800 planes in commission, including training and cargo ships. All of them are already obsolete, to the extent that they have no armor, antileak tanks, or 37-millimeter guns firing explosive shells. The Army's current program calls for 5,500 planes by June 30, 1942.

In Europe bombing has been practiced at heights of from 18,000 to 25,000 feet. The American Army has 174 antiaircraft guns, which, in Mayor LaGuardia's expressive phrase, "are not enough to defend Coney Island." These are mostly 3-inch guns, which are not regarded as effective against targets more than 18,000 feet above. For defense against bombers at higher altitudes the great cities would have to rely on combat planes and aircraft warning service. Technical apparatus for the latter has only recently been perfected, and $12,000,000 is asked for putting it in production. The Department's future expenditures on antiaircraft armament are based on a new 90-millimeter gun, which means a caliber of 3½ inches and an effective range of 25,000 feet.

16 ANTIAIRCRAFT REGIMENTS

There are 16 antiaircraft regiments, 6 in the Regular Army and 10 in the National Guard. Gaps in equipment are reflected by the current Budget's demand for $13,851,950 with which to purchase guns, fire-control instruments, searchlights, and sound locaters. This sum, it is represented, would equip 22 regiments completely and 15 others with the exception of searchlights and sound locaters. In all the country there is not a single adequate antiaircraft firing range. Practice is held mostly over coastal waters, where targets can approach only by sea and the element of surprise is eliminated. Pleas are before Congress for $294,000 with which to acquire a site of 25 square miles in the Mojave Desert.

With the hope of achieving economies and hastening production by 4 to 12 months, the Army in April 1939 sought to institute a program of educational orders under which 10,000 plants were to

be trained and equipped with machine units that could be expanded into mass production of about 1,200 essential commodities Congress authorized an expenditure of $34,500,000 during the fiscal years 1939, 1940, and 1941, and in addition $2,000,000 during each of the 4 fiscal years succeeding 1941.

Last year there was available about $15,000,000, including $2,000,000 diverted from other purposes, such as pay rolls of officers and men. With these funds the Army was able to cover 73 items. Its current budget of $14,250,000 for educational orders was cut to $2,000,000 in the House of Representatives. Unless the appropriation is restored by the Senate, it is predicted that during the next 12 months only six or eight factories can be "educated."

MINIMUM SAFETY REQUIREMENTS

The Army has estimated that for minimum requirements of safety in case of war the country should have on hand a two-year stock of 14 strategic materials which depend mostly on sources outside the continental United States, and of 15 critical materials which are obtainable only in part from domestic sources. The cost of fulfilling the program was placed at $200,000,000. In June 1939, Congress authorized an expenditure of $100,000,000.

So little actual money was forthcoming that the department last year junked the entire program of critical materials, including vanadium, optical glass, toluol, phenol, asbestos, cork, hides, platinum, iodine and wool. It also threw out of the window six strategic materials—antimony, coconut shell char for gas masks, mercury, mica, nickel, and silk. Rubber was turned over to a cotton-barter arrangement with Great Britain. Purchases were limited to chromium, ferrograde manganese, manila fiber, quartz crystal, quinine, tin, and tungsten. It is calculated that the nation's reserve of manganese is now sufficient for 1 year of normal peacetime needs, but that its stocks of rubber and tin are adequate for only 2 or 3 months of peace requirements.

227,000 IN REGULAR ARMY

Including 54,000 men in overseas garrisons and 31,000 in "housekeeping" or service commands, the Regular Army today has a strength of 227,000, with 1 cavalry and 5 infantry divisions. The personnel of the National Guard is about 234,000, grouped for the most part in 4 cavalry and 18 infantry divisions. Thus the suggested initial force of 450,000 on mobilization day would absorb both Regular Army and National Guard. According to Maj. Gen. John F. Williams, of Columbia, Mo., Chief of the National Guard Bureau, each guardsman at present receives the equivalent of 3 months' training a year, but the annual turnover among enlisted men is 40 percent.

The protective mobilization plan force of 1,000,000 men would include Regular Army and National Guard, plus 200,000 men who have had some training in the National Guard and 30,000 discharged soldiers of the Regular Army who form the Regular Army Reserve. The Officers' Reserve Corps and the Reserve Officers' Training Corps would be drawn upon for commissioned officers, and the Citizens' Military Training Camps for both commissioned and noncommissioned officers. Under best conditions, at least 300,000 of this force would consist of raw recruits. For its maximum effort, the War Department contemplates an Army of 4,000,000, to be raised under selective service. For this there exist 171,000 Reserve officers, but neither trained men nor equipment.

PUERTO RICO AND ALASKA

Under modern aviation conditions, Puerto Rico has become the vital Atlantic outpost of the Panama Canal. The island's military garrison consists of 5,000 men, chiefly two infantry regiments. The Canal's defenses include 4 infantry regiments of the Regular Army, 2 mobile antiaircraft regiments and other units to a total of 20,000 men. The zone has 2 permanent airfields, but only 2 or 3 of the 15 emergency landing fields considered essential to its air protection. Because the 3 double sets of locks are placed side by side, the Canal could be put out of action at 1 bombing by a few saboteurs. If an appropriation now pending is voted, and if work begins this summer, a proposed separate system of locks may be completed by 1946.

Hawaii, the pivot of national defense in the Pacific, is held by approximately 23,000 troops, including 1 infantry division of the Regular Army, 1 mobile antiaircraft regiment, and two infantry regiments of local National Guards. Regular Army units stationed in the Philippines consist of 1 cavalry regiment and 1 infantry division of reduced strength, a total of about 4,000 men. There are 6,000 Philippine Scouts, or native troops. A Philippines Commonwealth army of 30,000 is in progress of organization.

Alaska is known to Army men as "the Achilles heel of the United States," and the Aleutian Islands are described as "another Norway." On Kodiak Island the Navy is constructing a reconnaissance air base, and at Fairbanks the Army Air Corps has cleared 500 acres, at a cost of $300,000, to serve as a testing ground for cold-weather operations. Army leaders hold that an adequate military base at Anchorage would prevent other powers from seizing bases in Alaska, and defend the United States against attack from Asia along the Great Circle. Congress has just authorized $112,000,000 of "pork" under the guise of a rivers and harbors bill, but the House struck from the Military Establishment appropriation an item of $12,734,060 for starting construction of the Anchorage base.

APPROPRIATIONS

Since 1932 congressional appropriations for the War Department have totaled $4,215,807,426. The estimate for 1940–41 is $851,473,245, making a total for the 10-year period of $5,067,280,671. The point is made that a large part of the 1939 and 1940 appropriations have not arrived in the form of orders, and that the current Budget represents a per capita charge of only $6.54 a year for military defense.

In other countries the ratio of national income devoted to defense is declared to be as follows: Japan, 30 percent; Great Britain, 40 percent; France, 50 percent; and Germany, 60 percent. But the United States, it is affirmed, with the richest country in the world to safeguard and wide commitments to protect the rights of others, spent last year on Army and Navy together only 2 percent of its income.

Relation of Flood Control Project at Hartford, Conn., to National Defense

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM THE HARTFORD TIMES

Mr. MALONEY. Mr. President, I ask unanimous consent that I may have published in the Appendix of the RECORD an editorial which appeared in the Hartford Times of Hartford, Conn., on Wednesday, May 29.

This editorial clearly deals with a most important item on the subject of national defense, and I hope that, through the RECORD, it may be brought to the attention of Members of Congress. It definitely points out how a flood-control project at Hartford, Conn., presents a serious need in the matter of protecting our airplane industry and other industries in Connecticut.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Hartford Times of May 29, 1940]

DIKES, ETC., AND AIRPLANE ENGINES

The plea that Federal appropriation for the local Connecticut River dike extensions be granted hardly would need go further under present circumstances than to point out that airplane engines for the Army and Navy are not produced by factories which are closed because high waters keep employees from reaching them.

That, in the present urgency to speed the national defense, is all the argument that really needs to be offered for restoration of the items stricken from the flood-control bill.

In both 1936 and 1938 floods the United Aircraft plant was obliged to close, not because the buildings themselves were reached by floodwaters, but because highways were made impassable, and especially the single bridge over the Connecticut River which connects Hartford and East Hartford.

Precisely the same thing would be true today if this area were visited by a flood of the 1936 or 1938 proportions. If the Congress is really serious about speeding defense preparations it will give heed to this situation and some other matters related thereto.

The Hartford and East Hartford dike projects are not of the pork-barrel variety. They are vitally needed. They could be amply justified at any time, when it is considered that the 1936 flood caused damage estimated at $20,000,000 in Hartford. That justification is multiplied a hundredfold when the possibilities of war and the need of preparing against it are considered.

Without the dike extensions provided in the legislation offered by Senator MALONEY the system now partly constructed will not be complete. The extensions are needed, not only to make certain that floods will not close the United Aircraft plant, but they also are needed to assure that power supply will be uninterrupted and to complete the protection of Brainard Field. Hartford's airport already is headquarters for National Guard aviation. In the event of war, it unquestionably would become a center of military flying activities, and perhaps of naval, too, since it borders the river.

In passing, in view of the clamor for protection against possible invasion, the Federal Government might well take keen interest also in the pending proposal for an additional runway at Brainard Field, at present without provision for landings into the frequently prevailing southwest wind. Commercial planes more than merely occasionally are obliged to omit Hartford landings due to this lack. In time of war that might be tragic. If the country really is preparing for defense, the runway should be installed promptly. The second bridge over the Connecticut might also be hastened.

As to the dike extensions, let it be said that the need does not in any sense support the argument for removing the airplane-engine

industry into the Middle West or making extensions of it there. Too many other factors enter into that situation to make mere need of flood control a reason for removal or for nonexpansion here.

The local airplane-engine industry is not merely under the roofs of the United Aircraft Corporation. It is scattered over scores of plants all over New England, whose assistance is utilized because of the particular nature of their products or the especial skills which they command. At a recent aeronautical meeting in Hartford representatives of 60 or more such concerns, all essential suppliers of United Aircraft, were seated at a single table. The local airplane-engine industry includes these plants as well as a particular corporation. It could hardly be moved to another part of the country without taking also these other industries, unless manufacture were to be dislocated, delayed, and complicated rather than speeded, to say nothing of the loss of access to skilled labor. If much of this seems to have little to do with dikes, it is nevertheless important to consider in improving the national defense.

Civilian Conservation Corps in New York State

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

STATEMENT BY GUY D. McKINNEY

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the RECORD a statement by Mr. Guy D. McKinney, Assistant to the Director, Civilian Conservation Corps, regarding the Civilian Conservation Corps in New York State.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Civilian Conservation Corps program has now been in operation in the State of New York for a little more than 7 years. Over this period about 200,000 New York young men and war veterans have lived and worked for varying periods of time in the wholesome outdoor atmosphere of the C. C. C. camps. Under the competent supervision of Federal and State conservation authorities, these men have enormously advanced conservation programs in New York State and substantially aided many western States in putting their conservation houses in order.

The number of camps operating in New York has ranged from 129 in 1935 to 56, the number now being maintained. The number of men enrolled from the State has fluctuated according to the size of the Corps, as well as the demand for outdoor jobs by New York youth. At the present time the C. C. C. is able to give healthful employment to virtually every eligible New York young man between the ages of 17 and 23 who applies for C. C. C. enrollment and who is fitted for camp life. All told, some 18,500 New York men are now in the Corps, the majority of them in camps located within the State.

In the 7 years that the Corps has been operating, New York men have sent in excess of $36,000,000 home to their parents and dependents. This sum represents the aggregate of the $22 a month allotment checks which each C. C. C. youngster with dependents allots home each month. The young men and war veterans are paid $30 a month, $8 of which is kept by the enrollee for his personal expenses. In return for working 8 hours a day, 5 days a week in the field, each enrollee receives not only the $30 cash allowance for himself and dependents, but also shelter, food, clothing, medical attention, education and training, and work experience.

On the average, the young men who have enrolled from New York State have gained from 7 to 11 pounds during the first 6 months that they spent in the woods or on farms. The outdoor life, the camp routine and discipline, and the good food served have conditioned the enrollees physically, and greatly improved their health. It has taught them safety and sanitation rules. They have learned how to take care of themselves. Should any of these boys ever join the Army or Navy in event of an emergency, they will have a head start over youths who have not received such training.

The work which the youths and war veterans have done is of great importance to every citizen of the State. Working with the State conservation commission, they have planted new forests, protected existing forests and parks from fire and disease and insects, worked on flood-control projects, and developed new recreational facilities. In the Western States, New York young men have aided in protecting and conserving the Nation's timber supply. They have worked on reclamation, wildlife, grazing control, erosion control, and many other kinds of projects. Many of these boys, away from home for the first time, have enjoyed invaluable opportunities to see other sections of the country.

Among important work activities in New York State by enrollees working under State and Federal forest and conservation officials, has been the reforestation program being carried out on submarginal farm lands newly acquired by the State, and the protection and improvement of the State's splendid existing forested areas.

The forest camps operate under the direction of the United States Department of Agriculture, through the Forest Service, in cooperation with the State conservation department. Soil-erosion camps, which have been doing an important job combating soil losses on valuable agricultural land, operate under the supervision of the Soil Conservation Service. At the present time 27 camps are located on State-owned forest areas, 5 on privately-owned timber lands, and 6 on soil-erosion-control projects. The Department of the Interior supervises the work of 15 camps in State parks, 2 in national parks, and 1 attached to the Bureau of Biological Survey.

The reforestation program has resulted in the planting of a total of more than 154,000,000 trees, mostly in the central and western parts of the State. During the past year new acquisitions of land requiring reforestation brought the total area contracted for by the State to more than 450,000 acres. The C. C. C. camps also engaged in surveys connected with the acquisition program, thereby effecting large saving to the State.

In addition to the actual tree-planting job, C. C. C. enrollees spent 30,820 man-days of labor on the production of the necessary tree seedlings in forest-tree nurseries. C. C. C. boys engaged in all phases of the nursery program, including the collection of some 60,000 pounds of hardwood seeds from which to grow seedlings.

In order to improve the future value of large stands of timber, C. C. C. enrollees under the direction of forest technicians have covered 42,755 acres on timber stand improvement work, which consists principally of thinning operations designed to better the growing conditions of valuable trees.

The C. C. C. has greatly advanced the development of recreational resources within the two State forest preserves in the Adirondacks and Catskills. Work of this nature has been highlighted by the improvement of fishing in scores of trout streams. Fishing rights on more than 400 miles of such streams have been acquired or are under long-time lease by the State on privately owned lands. On these, and also on streams in State-owned forest areas, C. C. C. camps have carried out a large-scale project of stream improvement. Deflectors, rock cribs, and other streambed structures and improvements have been applied to stretches where needed, and trees and other vegetation planted. Work of this type aids the propagation and increase of game-fish populations. There has been a noticeable improvement of good fishing reported by sportsmen in areas where this work has been carried on. C. C. C. enrolees have aided in the production of fish stock for "planting" in these streams by constructing more than 100 new fish-rearing ponds.

Outdoor recreation in general in the Adirondack and Catskills Forest Preserves has been greatly facilitated by the work of the Corps. Since 1933 C. C. C. enrollees have developed scores of new camp sites and miles of foot trails and simple shelters for hikers and winter-sport enthusiasts. Ten camps continued recreational work in the forest preserve during 1939, and in six of these camps recreational work was the major part of their work programs. No timber stand improvement cutting is done in these forest preserves and no cutting of trees at all except where absolutely necessary in clearing rights-of-way for foot and truck trails.

Since the beginning of the C. C. C. program enrollees in New York have engaged in actual forest-fire fighting to the extent of 43,700 man-days. In the reforestation areas and on the forest preserve work included the construction of truck trails, fire lines, and water holes. A total of 462 miles of truck trails has aided transportation for fire-control forces; nearly 200 additional miles of telephone lines and newly erected fire lookout towers have also aided the fire-detection and communication systems.

Another contribution of New York's forest-conservation program has been the protection of the woodlands from tree-destroying insects and diseases. Since 1933, C. C. C. crews have covered a total of 3,000,000 acres on control measures aimed against insect pests in the extreme eastern part of the State, principally gypsy moths. The egg clusters of this insect are scouted for and destroyed. Work against tree diseases, covering about 1,000,000 acres, has largely been directed against white-pine blister rust. The spread of blister rust, which annually destroys much valuable timber throughout the Nation as well as in New York, is controlled by the eradiction of plants of the genus ribes, which act as the "alternate host" to spread the disease.

The camps operating under the supervision of the Soil Conservation Service have developed areas to demonstate practical methods of soil saving. Work of the camps has reduced the destruction of good agricultural soil through the construction of check dams and the planting of gully banks with trees, shubs, and grasses, and the construction of terracing.

In addition to the camps located in forest and soil-conservation areas, 17 C. C. C. camps are working in New York park areas at

the present time. At various times since the C. C. C. was organized, the corps has worked on 52 park areas of the State.

Its work is credited with advancing the conservation and recreational features of the park system by many years. Enrollees have provided more trails, beaches, picnic groves, cabins, and shelters and even a complete new park for the recreational needs of the Empire State's residents and visitors.

The new park is Margaret Lewis Norrie State Park, a 320-acre reservation on the eastern shore of the Hudson River, 9 miles north of Poughkeepsie. Here enrollees have constructed overnight cabins, which can be used by vacationists cruising on the river, an entrance road to the park, bridges, and numerous recreational facilities.

One of the most interesting projects in the State has been the establishment of a fine arboretum at Cornell University at Ithaca.

In Gilbert Lake State Park, enrollees have handled projects designed to encourage wildlife and have developed a number of duck ponds. This is probably the wildest and most natural park area in the central New York region.

In Clarence Fahnestock Memorial State Park, enrollees constructed a concrete core wall dam to impound water to form Lake Canopus, a body of about 100 acres. In Palisades Interstate Park, enrollees have also provided recreational lakes, and have constructed roads, truck trails, have graded fine slopes, and provided water-supply facilities.

Working from a base camp, enrollees have developed picnic and tent camp facilities, trails, cabins, parking grounds, and similar improvements in many of the reservations of the Thousand Islands region. In 1898 New York acquired 11 camp sites in this region for the use of the public. These areas situated on Lake Ontario and along the St. Lawrence River from Sacketts Harbor to Chippewa Bay are valuable State park property today.

Since establishment of the base camp, enrollees have completed topographic surveys of all parks in this region. At Cedar Point, Grass Point, and Kring Point State Parks, bathing facilities have been put in first-class condition.

At Grass Point, by way of experiment, several hundred yards of sand were dumped on the ice during the winter, and when the ice went out in the spring the sand spread itself evenly on the river bottom, making an excellent bathing beach.

Some of the parks in the region are being provided with bathhouses and latrines, sewage, water supply, and light systems, parking areas, gravel roads and trails, stone sea walls, entrance portals, trailer sites, tent platforms, table and bench combinations, and fireplaces. The picnicking and camp areas in all of them are being subjected to general clean-up operations, and many trees and shrubs are being planted.

The stone used in the buildings is quarried, cut, and laid by the boys of the Civilian Conservation Corps, who are also responsible for the carpentry and plumbing.

Green Lakes State Park, near Syracuse, has been provided with enlarged and improved recreational facilities including overnight cabins, picnic areas, foot trails, and park roads. A handsome recreational building has been constructed here by C. C. C. labor under joint supervision of the Central New York State Park Commission and the National Park Service.

In Allegany State Park, enrollees have constructed a modern camping center, including facilities for automobile trailers. Electric power, water, and sanitation systems and equipment for preparing meals are provided at each trailer site. Also in this park, enrollees carried on an interesting animal census in an effort to record the species and abundance of wild mammals in this huge recreation-conservation area and to determine methods favorable to their future increase. Bears, deer, raccoons, Canadian porcupines, mink, beavers, and other mammals and many varieties of birds abound in the 65,000 acres of this park. Enrollees have established a system of nature trails in the area to enable visitors to observe these native animals and also to study the plant life of the region.

At Selkirk Shores State Park on Lake Ontario, near Pulaski, enrollees have developed camp areas, enlarged picnic grounds, and installed water, power, and telephone lines. They have constructed sea walls to prevent erosion.

In three parks of New York's great Finger Lakes network—Fillmore Glen State Park, Fair Haven Beach State Park, and Cayuga Lake State Park—enrollees have provided extensive picnic areas, trailside shelters, and vacation cabins, and have transplanted thousands of trees and shrubs in extensive landscape projects. Construction of a nature trail along a wall of the deep gorge hewn through limestone and shale by the waters of Fillmore Creek was one of the projects in Fillmore Glen State Park, an area named for Millard Fillmore, thirteenth President of the United States, whose cabin birthplace is nearby. This trail includes many steps cut in solid stone. Beach improvements were made at Fair Haven, and a new contact station has been completed at Cayuga.

There has been a great increase of attendance at Letchworth State Park since enrollees extending the picnic-area system, erected cabins and fireplaces, and built roads and trails in the area. Much erosion control has also been carried on here.

At Hamlin Beach State Park, beach and shore-line development and protection have been the main work jobs of enrollees and include the building of jetties to prevent the periodic shifting of sand along the beach due to currents and storms. They have also provided picnic areas, tennis courts, baseball fields, and informal playgrounds.

Restoration of trails, damaged by floods, in the famous scenic gorge of Watkins Glen State Park consumed many man-days and enrollees have devoted time to developing camping, picnicking, boating, and swimming aids.

At Lake Taghkanic State Park overnight cabins have been constructed and a tent-camping area provided.

Saratoga National Historical Park project and West Point are the only two Federal areas in New York on which the Civilian Conservation Corps has worked under National Park Service supervision since the beginning of its program.

The camp at West Point was established April 1, 1935. To date the enrollees have built a community house, a mess hall, 4 picnic shelters, and 30 picnic table and bench combinations, besides developing 23 acres of public campground. They have restored the old Marine battery and razed 5 undesirable structures; made 6,000 feet of gravel walks, and nearly 16 miles of trails. Thirty acres of nursery areas have been developed for raising trees and shrubs, and 28,660 trees and shrubs have been moved and planted around new buildings and in recreational areas. Work has also been done in tree surgery, insect-pest control, dead-tree clearance for fire-hazard reduction, and various other projects. Enrollees worked both on the reservation and Constitution Island.

The camp at Saratoga National Historical Park project has been established little more than 6 months. Work plans call for topographical surveys, razing of houses and barns, removal of fences, obliteration of an existing 15-acre picnic area when plans for a new one are completed, landscaping of 250 acres, construction of 5 miles of roads, telephone and power lines, and water-supply system, development of a nursery, work in tree preservation, and exotic-plant eradication; and work in road maintenance, traffic count, and fire presuppression.

Saratoga Historical Park was authorized for establishment in June 1938. It will bring into the Federal park system the site of one of the most decisive military engagements in American history, the turning point of the American Revolution. The nucleus of the new area will be a 1,429-acre section of Saratoga Battlefield. Here, on October 17, 1777, General Burgoyne surrendered his entire army of more than 5,000 men to General Gates. Thus the British plan of cutting the American rebellion in two, by controlling the Champlain-Hudson line, met defeat, and this crucial blow brought France to the American side.

A Clear Issue

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, May 31 (legislative day of Tuesday, May 28), 1940

EDITORIAL FROM SALIDA (COLO.) DAILY MAIL

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial written by John M. O'Connell, appearing on May 21 in the Salida (Colo.) Daily Mail. While I do not concur in all of the conclusions reached by this very able writer, I am deeply impressed by his clear logic.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Salida (Colo.) Daily Mail of May 21, 1940]

A CLEAR ISSUE

The air is filled with talk about isolation, intervention, and neutrality. The Nation is in a state of hysteria. Calmer heads are warning us to keep our shirts on, but war propaganda is insiduous and powerful. We hear that "This is not our war," that "It is our turn next," that "We cannot stay out," that "We must go in at once," that "We must give aid to the Allies short of war," that "We are weak and can be invaded by air, land, or sea," that "We have nothing to fear."

Now is the time to be calm and to make a careful survey of the situation. We think the case can be stated in one proposition expressed in two forms:

First. Either the Allies are fighting for the peace and liberty of the United States, or they are not.

Secondly. The defeat of the Allies will make it impossible for the United States to live at peace with the dictators, or it will not.

If the Allies are fighting for the peace and liberty of the United States, and if their defeat will make it impossible for us to have peace, what are we waiting for? Evidently in that case it is our

duty to pitch into the war in Europe with all our moral, economic, and military strength. If it is our war we belong over there and the quicker the better. Why trifle with measures "just short of war," why get into it half way, or stick our big toe into it? Why not take the plunge and have it over with?

If the Allies are fighting our war, fighting for our peace and security and we fail them, we are a nation of ingrates, slackers, cowards. If they are fighting for us and we do no more than lend them our money and furnish them with airplanes and guns for their young men to use against the enemy, while our own young men, from behind their mothers' skirts, watch the brave British and French die, what kind of a nation are we?

But if the Allies are not fighting for the peace and liberty of the United States and if their defeat will not mean war for us against the dictators, what are we stewing about? Why should we send our young men forth to fight in a cause that is not ours? Why should we stick our nose into a neighboring fight that is no concern of ours? Why should we endanger our own form of government by engaging in a war that neither side will win, because even if they win they lose. Why should we immediately invite ourselves to be regimented and placed under a dictator, the plans for which were drawn several years ago, if this war does not affect us? Why should we gamble with the blood of our young men in a cause that is not our own?

So stands the proposition. If now we inquire into the underlying facts of the war, we shall find that it is the same old war that has been going on in Europe for at least 2,000 years. It is a continuation of the World War into which we were duped. It is a war for commercial supremacy in Europe and nothing else. It is not a war of honor, a war for liberty, or a war for security. It is a war for commercial power.

We know now that the World War was not fought to make the world safe for democracy. We see now how Turkey and Russia are lined up with their old enemies of the World War, and Italy is leaning that way. We see how Japan has veered from the side of "democracies" to the side of Germany. Are they still fighting for democracy? Were they fighting for democracy in the World War?

Only yesterday we read that Great Britain is trying to win the wicked Stalin to its side again, willing to forgive the invasion of Poland, Estonia, Latvia, and Finland. This talk of war for honor and war against dictators and war for democracy and the like, just don't add up.

In a world so full of nations that line up in war according to their own advantage, why should we be continually looking for a chance to get in and fight for democracy, honor, and other high principles?

Common sense tells us our duty is to obey George Washington's advice and keep away from that eternal fighting and intrigue in Europe. Keep our own home fires burning, guard this Nation with the biggest Navy, biggest airfleet and an efficient Army, and mind our own business. That's the prudent course.

If Germany wins the war, A. Hitler will rule the roost in Europe. If the United States gets into the war, win or lose, a Hitler will rule America. Our form of government will melt in the war. Our hope for the United States as a democracy is to stay out—away out.

England financed Hitler, furnished him with war supplies even while he was crushing Austria and Czechoslovakia. And now we are supposed to finance England in its war with Hitler. Barnum was right. The American people love to be fooled—but not that badly, we hope.

Mr. Farmer, Examine Both Sides of Public Questions During a Campaign Year

EXTENSION OF REMARKS

OF

HON. CLAUDE V. PARSONS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1940

Mr. PARSONS. Mr. Speaker, there appeared in the Appendix of the CONGRESSIONAL RECORD, page 2972, an article, inserted by the gentleman from Illinois, Congressman MASON, Republican, entitled "Pertinent Thoughts Bearing on the Campaign Issue of 1940." This was a typical Republican attack on the trade-agreements program. It was just a run-of-the-mine Republican statement. There was nothing unusual in the fact that it contained inaccuracies, misstatements of fact, and false inferences. For example my colleague from Illinois [Mr. MASON] condemned Secretary Hull's program by saying:

It virtually amounts to free trade.

Opponents of the trade-agreements program who can find no legitimate criticism against it fall back to the hackneyed criticism that it is virtually free trade. Apparently the author of this statement does not know that under the Trade Agreements Act the President is limited in all changes in duty to 50 percent of the Hawley-Smoot rates, and that is far from free trade.

The following figures clearly show how erroneous was the statement, "It virtually amounts to free trade":

Ad valorem equivalent on dutiable imports

	Percent
Average rate for Fordney-McCumber Act	38.5
Rate for 1938	39.3
Rate for 1939 (preliminary)	36.4

If the rates of duty under trade agreements are virtually free trade, the Fordney-McCumber Act, according to the above average figure, which was slightly lower than the rate for 1938, must have been a free-trade Republican tariff act.

Those who have opposed any reductions in duties also claim that since more than 60 percent of the imports into the United States enter free of duty, the United States is on a low-tariff basis and, therefore, there is no necessity to reduce duties in order to increase foreign trade. The embargo or prohibitory rates are, of course, diluted in this average figure. The obvious fallacy in the whole contention is that if the rates of duty are high enough for a complete embargo on all dutiable items, everything imported must enter free of duty, then we might point with pride to our liberal trade policy because 100 percent of our imports would enter free. Would that make us a free-trade nation? Even on this fallacious basis the following comparative figures show that the "virtually free trade" talk by opponents of foreign trade is not substantiated by facts.

Percent of imports entered free

Average under Fordney-McCumber Act	63.8
Hawley-Smoot Act, 1933	63.1
Trade agreements, 1939	61.4

With a smaller percent of the imports entering free of duty in 1939 than for the average of the Fordney-McCumber Act, what is there to this "virtually free-trade" talk under trade agreements?

The gentleman from Illinois [Mr. MASON] called attention to the fact that he had seen manufactured articles labeled "Made in Germany," "Made in Japan," or "Argentine beef" on the shelves in American stores. There was the inference that these products had gotten there by reduced duties through trade agreements. Now if he had been even superficially informed with respect to trade agreements, he would have known that there are no agreements with the indicated countries. As a matter of fact, Germany is positively penalized and prevented from receiving any benefit whatever from reduced duties. That implication was just 100 percent wrong.

According to the Tariff Commission about 3 percent of Japan's exports to the United States enter at lower rates of duty as a result of the most-favored-nation treatment which has not yet been modified with Japan. No duty reduction has been made on Argentine beef or any other kind of beef. The negotiations with Argentina were terminated more than 6 months ago. So this effort to prejudice farmers against trade agreements must fall flat on these three false counts. Farmers are so much better informed than my friend [Mr. MASON] that in an ordinary court proceeding he would be disqualified as a witness; his evidence would be incompetent, irrelevant, and immaterial.

Under the caption, "Failure after 7 years," an unsuccessful attempt, by manipulating certain average figures, the old game of "diluting the mix" was made to compare conditions under the old deal and under the New Deal.

The following comparative figures indicate what has happened to American farmers during 7 years of the New Deal:

	1932	1939
Farm cash income from marketings	$4,682,000,000	$7,711,000,000
Average farm price for all commodities, index (1909-14=100)	65	93
Average prices received by farmers for—		
Wheat (cents per bushel)	38.80	63.60
Corn (cents per bushel)	28.10	47.60
Beef cattle (dollars per 100 pounds)	4.25	7.03
Hogs (dollars per 100 pounds)	3.34	6.23
Butterfat (cents per pound)	17.90	23.90
Wool (cents per pound)	8.60	22.30
Cotton (cents per pound)	5.82	8.66
Tobacco (cents per pound)	9.30	13.60

A further diluted calculation of 5-year averages in an attempt to show imports and exports of agricultural products in an unfavorable light was cooked up by the gentleman. In reply to such statistical maneuvering, the following figures show (a) that American farmers were taken out of the foreign market from 1929 to 1932 to the tune of more than a billion dollars annually, and (b) that there was much greater competition for American farmers by foreign countries in so-called competitive agricultural imports during those new-era days:

Agricultural exports:	
1929	$1,693,000,000
1932	662,000,000
Annual loss in agricultural exports under Hawley-Smoot Act	1,031,000,000
Imports of competitive agricultural products:	
1929	1,017,000,000
1939	526,000,000
American farmers better off under the last year of trade agreements by	491,000,000

The following tables are evidence of the losses to the State of Illinois under the Hawley-Smoot Tariff Act and benefits under trade agreements:

Condition of agriculture in Illinois under the Hawley-Smoot tariff period and the trade-agreements period

Commodity	Illinois farmers' cash farm income received during 3 years under—		Gain to Illinois farmers, 1936-38
	Hawley-Smoot period, 1931-33 [1]	Trade agreements, period, 1936-38 [1]	
Cattle and calves	$131,563,000	$243,121,000	$111,558,000
Hogs	189,835,000	318,899,000	129,064,000
Sheep and lambs	11,737,000	18,308,000	6,571,000
Corn	133,865,000	287,368,000	153,503,000
Wheat	41,576,000	88,555,000	46,979,000
Oats	26,268,000	34,782,000	8,514,000
Barley and rye	2,054,000	3,076,000	1,022,000

[1] Since the Hawley-Smoot Tariff Act became effective in June 1930, the year 1930 has been omitted. Although the Trade Agreements Act was authorized on June 12, 1934, only 4 agreements had been negotiated by the end of 1935.

NOTE.—Figures do not include Government payments.

Where the Money Goes

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 31, 1940

EDITORIAL FROM THE BUTTE (MONT.) STANDARD

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Butte (Mont.) Standard, of May 18, 1940:

[From the Standard, Butte, Mont., of May 18, 1940]

WHERE THE MONEY GOES

For the first time since the founding of this Nation its living standard is slipping, economists say.

Previously, for more than 160 years, living conditions of the people of this country have been on the upgrade.

Looking at some figures dug up by economists we believe we see the reason. In 1929 the per capita income was $668 and per capita retail sales were $404. The per capita income for 1939 was $519 while the per capita retail sales was $283.

By comparison the people in 1929 spent much more for retail goods than they did in 1939. Where did the remainder of this income go? The obvious answer is that it went for taxes. The tax on the average earned dollar today is between 25 and 30 cents; in 1929 the tax on the average earned dollar was around 12 or 15 cents.

Storing of Cotton

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 31, 1940

Mr. COOLEY. Mr. Speaker, an act to facilitate the execution of arrangements for the exchange of surplus agricultural commodities produced in the United States for reserve stocks of strategic and critical materials was approved August 11, 1939, and an amendment offered by the gentleman from Massachusetts, Congressman MARTIN, was adopted and became a part of the law. The Martin amendment has the effect of requiring the Commodity Credit Corporation to reconcentrate 300,000 bales of Government agency cotton in New England.

The Martin amendment should not have been adopted, and the Commodity Credit Corporation should not now be required to reconcentrate such a large quantity of cotton in New England. I have, therefore, introduced a bill the purpose of which is to repeal the Martin amendment and to

provide a fair and just plan and policy for the reconcentration of cotton which is pledged to or owned by the Commodity Credit Corporation.

It is not the purpose of the bill I have introduced to require the Commodity Credit Corporation to reconcentrate cotton. I am very definitely in favor of cotton being stored in interior warehouses in communities where it is produced so that farmers and local merchants will not be deprived of exercising their rights in the selling and buying of the cotton in the event it is offered for sale. I am likewise thoroughly convinced that if and when it becomes necessary for the Commodity Credit Corporation to reconcentrate cotton which is owned by or pledged to the Corporation, the cotton should not be reconcentrated in large quantities in warehouses located in port cities but rather should be reconcentrated in domestic consuming centers so that it might be readily available for sale to our manufacturers. I am, of course, in favor of farmers being able to store their cotton at the lowest possible rate.

Even a casual examination of the record indicates that the Commodity Credit Corporation has favored the large warehouses in port cities and has discriminated against small domestic interior warehouses located in areas in which a large portion of our cotton is processed. Too much cotton is now reconcentrated in the ports and not enough is reconcentrated in domestic consuming centers. During the crop year 1938–39, North Carolina mills consumed and processed 1,789,458 bales and during the first 6 months of the crop year 1939–40, North Carolina mills, according to the best information I have been able to obtain, have consumed and processed 1,069,000 bales. With North Carolina processing in excess of 2,000,000 bales per year, the startling fact remains that the Commodity Credit Corporation has reconcentrated only approximately 900 bales of Government loan cotton in North Carolina during the last 12 months—not enough cotton to run the cotton mills of North Carolina for even 1 day. On the other hand, the Commodity Credit Corporation has reconcentrated cotton in Pacific, Gulf, and South Atlantic ports to such an extent that there are now stored in ports 1,820,517 bales against exports last year of 3,400,000 bales. In other words, North Carolina processed approximately one-half of the number of bales exported last season. It will be observed that there is enough Government reconcentrated cotton stored in ports to take care of the entire export trade for approximately 6 months as against less than 1 day's supply of Government reconcentrated cotton for North Carolina mills stored in North Carolina warehouses. This is the situation, notwithstanding the fact that there are warehouses in North Carolina that are offering not only competitive rates, but in some instances the lowest rates in the entire country, that is, 8 cents per bale per month for compressed cotton and these warehouses are Federal bonded warehouses and have reconcentration and free reshipping privileges.

According to a complaint filed on the 16th day of April 1940, pursuant to the provisions of the Federal Trade Commission Act, and by virtue of the authority vested in it by said act, some of the warehouses with which the Commodity Credit Corporation has stored large quantities of Government agency cotton are accused of engaging in an understanding and agreement, combination, or conspiracy among themselves to restrict, restrain, and suppress competition in the compressing and storing of cotton and of many other acts and practices to the prejudices of the public.

So we face the situation of having one governmental agency, the Commodity Credit Corporation, dealing on a large scale in the matter of the storage of cotton with the Federal Compress & Warehouse Co. and many other respondents named in the complaint filed on the 16th day of April 1940, while another agency of the Government, the Federal Trade Commission, in its complaint, is accusing the Federal Compress & Warehouse Co., and other respondents therein named of the worst type of racketeering and of a conspiracy in restraint of competition.

I, of course, do not know whether or not the Federal Trade Commission will be able to substantiate the charges preferred in the complaint, but at least the charges are of such a character as to warrant, justify, and require an inquiry and investigation by the Commodity Credit Corporation into the acts and conduct of the accused warehouses with which the Corporation is continuing to transact business on a large scale.

The complaint filed on April 16, 1940, is as follows:

[Before Federal Trade Commission. In the matter of Federal Compress & Warehouse Co., a corporation; Valley Gin Co., a corporation; Mississippi Valley Gin Co., a corporation; Tensas Parish Gin Co., a corporation; Madison Parish Gin Co., Inc.; R. L. Taylor, individually and as chairman of the board of directors of Federal Compress & Warehouse Co.; Binford Hester, individually and as president of Federal Compress & Warehouse Co.; E. F. Wade, individually and as vice president of Federal Compress & Warehouse Co.; Winston E. Chealrs, individually and as vice president of Federal Compress & Warehouse Co.; W. Dennis Brown, an individual; and Fred Schneider, an individual. Docket No. 4090]

COMPLAINT

Pursuant to the provisions of the Federal Trade Commission Act, and by virtue of the authority vested in it by said act, the Federal Trade Commission, having reason to believe that the Federal Compress & Warehouse Co., a corporation; Valley Gin Co., a corporation; Mississippi Valley Gin Co., a corporation; Tensas Parish Gin Co., a corporation; Madison Parish Gin Co., Inc.; R. L. Taylor, individually and as chairman of the board of directors of Federal Compress & Warehouse Co.; Binford Hester, individually and as president of Federal Compress & Warehouse Co.; E. F. Wade, individually and as vice president of Federal Compress & Warehouse Co.; Winston E. Chealrs, individually and as vice president of Federal Compress & Warehouse Co.; W. Dennis Brown, an individual; and Fred Schneider, an individual, hereinafter referred to as respondents, have violated the provisions of the said act, and it appearing to the Commission that a proceeding by it in respect thereof would be in the public interest hereby issues its complaint in that respect as follows:

Paragraph 1: The respondent, Federal Compress & Warehouse Co., is a corporation organized and existing under the laws of the State of Delaware, with its principal office and place of business located at 81 Monroe Avenue, in the city of Memphis, within the State of Tennessee. Said respondent is engaged in the business of compressing and storing cotton and in the sale of jute or burlap bagging and steel bands or ties for use in compressing cotton in connection therewith. In the conduct of its said business, respondent, either directly or indirectly through the respondent, R. L. Taylor, the chairman of its board of directors, owns and operates a large number, to wit, 80 compress plants located in the States of Arkansas, Louisiana, Tennessee, Mississippi, Missouri, and Texas. Said respondent, Federal Compress & Warehouse Co., through the means of subsidiary corporations, owned or controlled by said respondent directly or indirectly through the respondent, R. L. Taylor, is also engaged in the business of ginning cotton in the States of Mississippi, Louisiana, and Arkansas.

Said respondent, Federal Compress & Warehouse Co., causes the cotton compressed by it and the jute or burlap bagging and steel bands or ties sold by it and affixed to the said bales of cotton which it has compressed, to be transported from the States in which the respective compress plants are located to the purchasers thereof located at various points in the several States of the United States other than the State of the origin of such shipments and in foreign countries. There has been, and now is, a course of interstate and foreign commerce in said jute or burlap bagging and steel bands or ties between said respondent, Federal Compress & Warehouse Co., and the purchasers of said products located throughout the several States of the United States and in foreign countries.

At all times mentioned herein, said respondent, Federal Compress & Warehouse Co., has been in competition with other corporations, partnerships, and individuals likewise engaged in the compressing and storing of cotton and the sale of jute or burlap bagging and steel bands or ties used in conection therewith in interstate and foreign commerce.

Paragraph 2: Respondent, Valley Gin Co., is a corporation organized and existing under the laws of the State of Missouri with its principal office and place of business located at Blytheville within the State of Arkansas.

Respondent, Mississippi Valley Gin Co., is a corporation organized and existing under the laws of the State of Mississippi with its principal office and place of business located in the city of Jackson, within the State of Mississippi.

Respondent, Tensas Parish Gin Co., is a corporation organized and existing under the laws of the State of Louisiana with its principal office and place of business located at Newellton, within the State of Louisiana.

Respondent, Madison Parish Gin Co., Inc., is a corporation organized and existing under the laws of the State of Louisiana, with

its principal office and place of business located at Tallulah within said State of Louisiana.

All of the respondents described in this paragraph are engaged in the ginning of cotton and the operation of cotton gins, and in addition thereto, the respondent, Valley Gin Co., is engaged in the financing of cotton gins and the issuing of cotton-production loans. All of the respondents described in this paragraph are owned or controlled by said respondent, Federal Compress & Warehouse Co., either directly or indirectly through the respondent, R. L. Taylor.

Paragraph 3: Respondent, R. L. Taylor, is an individual and maintains his principal office and place of business at 81 Monroe Avenue in the city of Memphis within the State of Tennessee. Said respondent is chairman of the board of directors of respondent, Federal Compress & Warehouse Co.

Respondent, Binford Hester, is an individual and maintains his principal office and place of business at 81 Monroe Avenue in the city of Memphis within the State of Tennessee. Said respondent is president of respondent, Federal Compress & Warehouse Co.

Respondent E. F. Wade is an individual residing in the city of Little Rock within the State of Arkansas. Said respondent is vice president of the respondent, Federal Compress & Warehouse Co.

Respondent Winston E. Cheairs, is an individual and maintains his principal office and place of business at 81 Monroe Avenue in the city of Memphis within the State of Tennessee. Said respondent is vice president of the respondent, Federal Compress & Warehouse Co.

Respondent, W. Dennis Brown, is an individual engaged in the banking business and residing in the city of Lake Providence within the State of Louisiana.

Respondent, Fred Schneider, is an individual and resides in the city of Lake Providence within the State of Louisiana.

Paragraph 4: In the course of the production and marketing of cotton from the planter to the ultimate user thereof, cotton is, after it is picked, first transported to a cotton gin to be ginned. At the gin the seed is separated from the cotton and the cotton is loosely packed into bales and wrapped with jute or burlap bagging held in place by means of steel bands or ties. Thereafter the loose bales of cotton are transported to a compress plant for the purpose of compressing into tightly packed bales of smaller size and for the purpose of adding additional bagging and ties or bands to said bales. The compressing of cotton and the adding thereto of additional bagging and ties is a necessary step in the transporting in interstate commerce of cotton from the planter to the ultimate user thereof.

Paragraph 5: Said respondent, Federal Compress & Warehouse Co., and said respondent, R. L. Taylor, acting in cooperation with each other and through and in cooperation with the other respondents herein named, for more than 4 years last past, and particularly since February 27, 1936, have entered into and carried out and continued and are now engaged in an understanding, agreement, combination, or conspiracy among themselves and with and through the other respondents herein named, to restrict, restrain, and suppress competition in the compressing and storing of cotton and in the sale of jute or burlap bagging and steel bands or ties sold and used in connection with the compressing of cotton, and to create and maintain a monopoly in the compressing of cotton and the sale of jute or burlap bagging and steel bands or ties sold and used in connection therewith, in the respondent, Federal Compress & Warehouse Co.

Paragraph 6: Pursuant to said understanding, agreement, combination, or conspiracy, and in furtherance thereof, the said respondents have done and performed and still do and perform the following acts and things:

(1) Respondents, Federal Compress & Warehouse Co. and R. L. Taylor, have caused to be erected and have operated, and do now operate cotton gins, charging fees for ginning which are below the prevailing fees of competitors in the same territory and are below the actual cost of operation, for the purpose of and with the effect of driving competitors out of business, and of securing the cotton so ginned for respondents' various compress plants, and to enable respondent, Federal Compress & Warehouse Co., at its compress plants to sell the jute or burlap bagging and steel bands or ties sold and used in connection with the compressing of said cotton;

(2) Have attempted to induce and have induced customers of competitive compress plants to transfer their cotton to the compress plants of respondent, Federal Compress & Warehouse Co., by means of rebates in the form of drayage allowances granted to said customers;

(3) Have, at cotton gins owned or controlled by said respondent, Federal Compress & Warehouse Co., directly or indirectly through respondent, R. L. Taylor, refused to transfer or forward cotton ginned at said gins to compress plants other than compress plants owned or controlled by said respondent, Federal Compress & Warehouse Co.;

(4) Have transferred from cotton gins owned or controlled by said respondent, Federal Compress & Warehouse Co., directly or indirectly through respondent, R. L. Taylor, cotton which has been ginned to compress plants owned by said respondent, Federal Compress & Warehouse Co., without regard to, and against the direction and orders of the owners of said cotton;

(5) Have sought to obtain control of competing compress plants through the purchase from its stockholders of their holdings in the corporations operating said plants for the purpose of driving said competitive compress plants out of business;

(6) Have, through the individual respondents, Binford Hester, E. F. Wade, and Winston E. Cheairs, all of whom are officers of respondent, Federal Compress & Warehouse Co., and through the individual respondents, W. Dennis Brown and Fred Schneider, all acting as agents of said respondent, Federal Compress & Warehouse Co., attempted to acquire the stock of competing compress plants by means of threats and statements made to the owners of such stock in competing compress plants to the effect that the stock of said competitive compress plants which are generally owned by cotton growers and independent gin operators, will decline in value and be made worthless as a result of the activities of the Federal Compress & Warehouse Co. in erecting competitive gins and ginning cotton at figures below cost of operation, or free of charge, if such a course shall prove necessary to secure the cotton, and by the allowance of drayage and other rebates. By means of said threats and statements the respondents have caused great concern, anxiety, mental stress, and worry to stockholders in said competitive compress plants and have caused cotton ginners and cotton growers to send their cotton to the compress plants of Federal Compress & Warehouse Co. for the purpose of compressing, and having added thereto bagging and ties as hereinbefore described, rather than to competitive compress plants in which said ginners and independent cotton growers are stockholders.

(7) Have made threats to owners of cotton gins that they would erect cotton gins and gin cotton below cost or free of charge in competition with said independent cotton gins unless the owners thereof shipped the cotton so ginned by them to compress plants owned by the Federal Compress & Warehouse Co. in preference to competing compress plants.

(8) Have, by threats to erect cotton gins and operate the same below cost or free of charge, caused the owners of cotton gins who were also stockholders in compress plants owned by competitors of Federal Compress & Warehouse Co. to ship the cotton ginned by said gins and owned or controlled by the ginners to compress plants of Federal Compress & Warehouse Co. in preference to compress plants in which ginners were financially interested.

Paragraph 7: The individual respondents, R. L. Taylor, Binford Hester, E. P. Wade, and Winston E. Cheairs, are now and have been officers of respondent, Federal Compress & Warehouse Co., and as such officers have been in charge of the activities of the respondent, Federal Compress & Warehouse Co., and have participated in the activities hereinbefore set out in paragraph 6. The individual respondents, W. Dennis Brown and Fred Schneider, while not officers of the respondent, Federal Compress & Warehouse Co., have also participated in the activities hereinbefore set out in paragraph 6 and for that purpose have served as agents of respondents, Federal Compress & Warehouse Co. and R. L. Taylor.

Paragraph 8: The result of the acts and practices of the said respondents herein named as hereinbefore set out in paragraphs 6 and 7 has been, and now is, to substantially lessen, restrict, restrain, and suppress competition in the ginning, compressing, and storing of cotton and in the interstate sale of jute or burlap bagging and steel bands or ties sold and used in connection therewith throughout the several Southern States of the United States and in foreign countries, and empowers the said respondent, Federal Compress & Warehouse Co., to dominate the compressing of cotton and the sale of jute or burlap bagging and steel bands or ties sold and used in connection therewith and to increase the prices charged for compressing cotton and for jute or burlap bagging and steel bands or ties sold and used in connection therewith, above the prices which would prevail under normal, natural, and open competition, and also is to tend to create a monopoly in said respondent, Federal Compress & Warhouse Co., in the compressing of cotton and in the interstate sale of jute or burlap bagging and steel bands or ties sold and used in connection therewith.

Paragraph 9. The acts and practices of the respondents as herein alleged are all to the prejudice of the public and have a dangerous tendency to and have actually hindered and prevented competition in the compressing of cotton and the sale of jute or burlap bagging and steel bands or ties sold and used in connection therewith in commerce within the intent and meaning of the Federal Trade Commission Act, and have placed in respondent, Federal Compress & Warehouse Co., the power to control prices to be charged for the ginning, compressing, and storing of cotton, and for jute or burlap bagging and steel bands or ties sold and used in connection therewith; have created in the respondent, Federal Compress & Warehouse Co., a monopoly in the compressing of cotton and in the sale of jute or burlap bagging and steel bands or ties sold and used in connection therewith, in such commerce, and unreasonably restrained the ginning and compressing of cotton and the sale of jute or burlap bagging and steel bands or ties used in connection with the compressing of cotton, and constitute unfair methods of competition in commerce within the intent and meaning of the Federal Trade Commission Act.

Wherefore, the premises considered, the Federal Trade Commission, on this 16th day of April, A. D. 1940, issues its complaint against said respondents.

NOTICE

Notice is hereby given you, Federal Compress & Warehouse Co., a corporation; Valley Gin Co., a corporation; Mississippi Valley Gin Co., a corporation; Tensas Parish Gin Co., a corporation; Madison Parish Gin Co., Inc.; R. L. Taylor, individually and as chairman of the board of directors of Federal Compress & Warehouse Co.; Binford Hester, individually and as president of Federal Compress & Warehouse Co.; E. F. Wade, individually and as vice president of Federal Compress & Warehouse Co.; Winston E. Cheairs, individually and as vice president of Federal Compress & Warehouse Co.; W. Dennis Brown, an individual; and Fred Schneider, an individual, respondents herein, that the 24th day of May, A. D. 1940, at 2 o'clock in the afternoon, is hereby fixed as the time, and the offices of the Federal Trade Commission in the city of Washington, D. C., as the place, when, and where a hearing will be had on the charges set forth in this complaint, at which time and place you will have the right, under said act, to appear and show cause why an order should not be entered by said Commission requiring you to cease and desist from the violations of the law charged in the complaint.

You are notified and required, on or before the twentieth day after service upon you of this complaint, to file with the Commission an answer to the complaint. If answer is filed and if your appearance at the place and on the date above stated be not required, due notice to that effect will be given you. The rules of practice adopted by the Commission with respect to answers or failure to appear or answer (rule XII) provide as follows:

"In case of desire to contest the proceeding the respondent shall, within 20 days from the service of the complaint, file with the Commission an answer to the complaint. Such answer shall contain a concise statement of the facts which constitute the ground of defense. Respondent shall specifically admit or deny or explain each of the facts alleged in the complaint, unless respondent is without knowledge, in which case respondent shall so state.

* * * * * * *

"Failure of the respondent to file answer within the time above provided and failure to appear at the time and place fixed for hearing shall be deemed to authorize the Commission, without further notice to respondent, to proceed in regular course on the charges set forth in the complaint.

"If respondent desires to waive hearing on the allegations of fact set forth in the complaint and not to contest the facts, the answer may consist of a statement that respondent admits all the material allegations of fact charged in the complaint to be true. Respondent by such answer shall be deemed to have waived a hearing on the allegations of fact set forth in said complaint and to have authorized the Commission, without further evidence, or other intervening procedure, to find such facts to be true, and if in the judgment of the Commission such facts admitted constitute a violation of law or laws as charged in the complaint, to make and serve findings as to the facts and an order to cease and desist from such violations. Upon application in writing made contemporaneously with the filing of such answer, the respondent, in the discretion of the Commission, may be heard on brief, in oral argument, or both, solely on the question as to whether the facts so admitted constitute the violation or violations of law charged in the complaint."

In witness whereof the Federal Trade Commission has caused this, its complaint, to be signed by its Secretary, and its official seal to be hereto affixed, at Washington, D. C., this 16th day of April, A. D. 1940.

By the Commission.

[SEAL] OTIS B. JOHNSON, *Secretary.*

Mr. Speaker, I also desire to call attention to the following news article which appeared in a Cotton Trade Journal dated June 17, 1939, and to the headline on the article Federal Trade Stocks Swell a Million Bales in Last Year.

FEDERAL COMPRESS STOCKS SWELL A MILLION BALES IN LAST YEAR—R. L. TAYLOR REPORTS EARNINGS EQUAL TO LAST SEASON; PLANT IMPROVEMENTS COST $1,000,000

MEMPHIS.—Stockholders of the Federal Compress & Warehouse Co. Tuesday were told by R. L. Taylor, chairman of the board of directors, that the season ended May 31 had been a very satisfactory one and stock of cotton on hand was 2,624,139, or practically a million more than at corresponding date of 1938. Of the amount, 2,487,177 bales were loan cotton, leaving only 136,362 bales of "free."

Earnings for the year were reported about the same as for previous season, Mr. Taylor explaining that in order to take care of increased demands for storage it had been necessary to spend over $1,000,000 for improvements and expansion, large part of which was in building fire walls and practically doubling capacity of many plants. With acquisition of three of its smaller competitors and erection of new plants in Sikeston, Mo.; Hughes, Wynne, and Lepanto, Ark., now under construction or to be started shortly, the new season will start with bonded warehouse capacity of 4,250,000 bales.

High density compress machines have been installed recently at Tiptonville, Tenn., and England, Ark., and many other improvements made to meet growing requirements of the past futures season. Mr. Taylor said the physical condition of the company property was better than ever before.

In the financial statement presented cash on hand was reported at $536,632.98, comparing with $353,245.38 1 year previous. Real estate was carried at $1,326,403.65 against $1,310,685.74, with buildings, machinery, and equipment at $21,587,239.16 against $20,810,814. Total assets were given at $24,433,997.39, against $23,286,564.54.

On the liabilities side capital stock was unchanged at $12,500,000, while bills payable were $1,500,000, comparing with $650,000 a year ago, due to the program of expansion. Reserve for depreciation was increased to $9,608,991.88 from $9,261,094.20, while surplus dropped to $779,697.48 from $872,947.97.

During the year regular dividends of 40 cents a quarter were paid. An inquiry from one of the stockholders as to accruals elicited a reply that nothing definite could be said about such, although funds would begin to come from the Commodity Credit Corporation in August and even though a little borrowing from banks might be necessary there would be enough to pay off all loans and leave plenty for stockholders ultimately, figured by some present at several millions of dollars.

No changes were made in the board of directors or in list of officers at the board meeting which followed.

UNION COMPRESS MEETING

At the annual meeting of stockholders of the Union Compress & Warehouse Co. held yesterday routine reports were made and officers and directors chosen. Only two changes were made, K. D. Wells, of Vicksburg, made vice president to succeed Ernest Rice, and George Franklin, of Rayville, La., added to the board.

Officers are: Douglass W. Brooks, president; K. D. Wells, vice president; W. H. Willey, secretary; Norris Blackburn, treasurer and general manager; directors, A. M. Crawford, K. D. Wells, D. W. Brooks, George G. Harvey, Eric Hirsch, J. J. Marks, E. Rice, W. H. Willey, and George Franklin.

On February 20, 1940, I wrote Secretary Wallace the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 20, 1940.

HON. HENRY A. WALLACE,
Secretary of Agriculture, Department of Agriculture,
Washington, D. C.

MY DEAR MR. SECRETARY: For more than a year I have been trying to prevail upon the Commodity Credit Corporation to change its policy with regard to the storage of Government-loan cotton. I would like very much to have the benefit of an expression of your views with regard to the situation.

I am advised that during the entire life of the Commodity Credit Corporation only 6,900 bales of cotton pledged to or owned by the corporation have been shipped into North Carolina for storage. I understand that during the last 12 months only approximately 900 bales of Government-loan cotton have been shipped into North Carolina, 700 bales were shipped in from South Carolina, and 200 bales from Virginia. During the crop year 1938–39, North Carolina mills consumed and processed 1,789,458 bales, and during the first 6 months of the crop year 1939–40 North Carolina mills, according to my information, have consumed and processed 1,069,000 bales. It will be seen from these figures that the cotton reconcentration in North Carolina is not sufficient to operate North Carolina mills for even 1 day. Government-loan cotton, and I mean by Government-loan cotton, cotton which is pledged to or owned by the Commodity Credit Corporation, has been reconcentrated in Pacific, Gulf, and South Atlantic ports to such an extent that there are now stored in ports 1,820,517 bales, against exports last year of 3,400,000 bales. In other words, North Carolina processed approximately one-half of the number of bales exported last season. It will be observed that there is enough Government reconcentrated cotton stored in ports to take care of the entire export trade for a period of approximately 6 months, as against less than 1 day's supply of Government-reconcentrated cotton for North Carolina mills, stored in North Carolina warehouses. I know that there are warehouses in North Carolina that are offering not only competitive rates but in some instances the lowest rates in the entire country; that is, 8 cents per bale per month for compressed cotton. These warehouses are Federal bonded warehouses and have reconcentration and free reshipping privileges.

It seems to me that whenever it becomes necessary to reconcentrate cotton which is pledged to or owned by the Commodity Credit Corporation the cotton should be reconcentrated near the domestic consuming centers so that in no case shall the ratio of the total amount of Government agency reconcentration cotton stored in the ports of the Continental United States to the amount of cotton exported to foreign countries exceed the ratio of the amount of Government agency reconcentration cotton stored in the cotton-consuming States to the total amount of cotton consumed by those States. Especially is this true in view of the passage of S. 2697 at the last regular session of Congress, which clearly indicates that Congress looks with disfavor upon excessive reconcentration of Government agency cotton in ports and by the adoption of the Martin

amendment looks with favor upon the reconcentration of cotton near domestic consuming centers.

In keeping with the wishes of Congress as expressed in the passage of S. 2697, I hope that you will give consideration to a change in the policy of the Commodity Credit Corporation which has had the effect of taking cotton away from domestic consuming centers and shipping it to ports.

Notwithstanding the passage of S. 2697, the Commodity Credit Corporation has reconcentrated 300,000 bales of Government agency cotton in ports since August 1, 1939.

I have discussed this matter on numerous occasions with all of the officials of the Commodity Credit Corporation, but I am convinced that the situation will not be changed or remedied unless there is some change in policy, or unless an act of Congress is passed directing a change in the reconcentration program.

Sincerely yours,

HAROLD D. COOLEY.

Mr. Speaker, several members of the North Carolina delegation have from time to time conferred with officials of the Commodity Credit Corporation and finally, on March 6, with Secretary Wallace with reference to the reconcentration policies of the Corporation.

So that Members of Congress from Georgia, South Carolina, North Carolina, and Virginia may see just how the policy of the Commodity Credit Corporation is affecting the mills and manufacturers in their States, I submit the following table:

Cotton: Production, imports, and consumption in Georgia, South Carolina, North Carolina, and Virginia, last season, ending Aug. 1, 1939

[Bales, exclusive of linters]

	Georgia	South Carolina	North Carolina	Virginia
Production	855,721	649,132	390,416	11,083
Imports	491,790	722,877	1,399,042	127,240
Consumption	1,347,511	1,372,009	1,789,458	139,323

Total consumprion of all northern and New England mills, 975,908 bales.

From the above figures it can be seen that North Carolina last season had to import approximately 1,400,000 bales from Mississippi and States west of the Mississippi River. Also the consumption in North Carolina alone is approximately twice the amount consumed in all of the Northern and New England States.

Unless something is done by Congress at the present session, Commodity Credit Corporation is to reconcentrate in the Northern and New England States at an early date 300,000 bales. While the Commodity Credit Corporation has shipped into North Carolina less than 1,000 bales.

The situation is almost as bad in many other States.

I am also submitting the following letter received from an assistant general railway freight agent, which indicates that it will cost Carolina mills approximately $3 a bale more to purchase cotton reconcentrated at ports than cotton reconcentrated in close proximity to the mills:

SEABOARD AIR LINE RAILWAY,
Raleigh, N. C., March 20, 1940.

HON. HAROLD COOLEY,
Congressman, Washington, D. C.

DEAR SIR: It has been brought to our attention that you are interested in knowing the freight rate on cotton in carload lots of 50,000 pounds from Muskogee, Okla., to Greensboro, N. C., first when shipped to Houston, Tex., for transit and also when shipped to Carthage, N. C., for transit and then reshipped to Greensboro, N. C., as a final destination.

The through rate from Muskogee, Okla., to Greensboro, N. C., will not apply via Houston, Tex., and shipments handled via Houston are subject to a combination rate of 59 cents to Houston and 80 cents from Houston to Greensboro or a total rate of $1.39 per 100 pounds. These rates are published in Agent Peel's Southwestern Lines Tariff 208-F, I. C. C. 3202.

On the other hand the rate from Muskogee, Okla., to Greensboro, N. C., and Carthage, N. C., is 77 cents, applying to both destinations the same, authority the same tariff.

This through rate to Greensboro will apply via Carthage, N. C., subject to a backhaul charge of 2¾ cents per 100 pounds as published in Seaboard Railway I. C. C. A-7980, Cotton Transit Tariff, item 60 and rule 18 thereof. This makes a total charge of 79¾ cents against $1.39 via Houston. In cases where the cotton is reshipped from Carthage, N. C., within 90 days there is no transit charge. If cotton is held more than ninety days there is a transit charge of 2¾ cents per 100 pounds, authority rule 7 of SAL I. C. C. A-7980.

Trusting this is the information desired,

Yours very truly,

G. C. POOLE,
Assistant General Freight Agent.

Can It Happen Here?

EXTENSION OF REMARKS
OF
HON. ROBERT G. ALLEN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 31, 1940

ADDRESS BY DAVE BECK

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Dave Beck, international representative of the Teamsters' Union, given over radio station KOL in Seattle and broadcast over all stations of the Mutual System in Washington State on May 16, 1940. It was given under the sponsorship of the subversive activities committee of the State department of the Veterans of Foreign Wars.

Good evening, the news from Europe and Asia tonight should convince us in America that we can no longer sit in our house by the side of the road and let the rest of the world roll by.

If we do, an aerial bomb may bring our house cracking down around our ears. The world won't roll by. It will roll over us.

For centuries Americans have lived in a Garden of Eden. We have fancied ourselves secure behind the broad expanse of the oceans that guard our coasts.

Tonight that security is gone. We have seen the development of airplanes that vie with the speed of sound and of submarines which are almost battleships and can glide unseen to our shores beneath the water we think protects us.

Modern military science has all but evaporated the Atlantic and Pacific Oceans. They are little more than the moats of a medieval castle.

We are no longer safe from foreign aggression. Yet we lull ourselves into security every time the tide comes in. Some day that tide may bring in a fleet of foreign transports, and a hostile army will be on our shores.

Impossible, some people may say.

These same people said a few years ago, however, that another war was impossible. They watched with unbelieving eyes when Japan invaded China and when Italy slaughtered the Ethiopians and seized Albania. They were still in a daze when Soviet Russia trampled prostrate Poland and seized Latvia, Lithuania, and Estonia, and brutally assaulted Finland.

And, finally, when Germany climaxed her conquest of Poland, Czechoslovakia, and Austria with her unprovoked invasion of Scandinavia and the low countries, the whole civilized world gasped with horror.

Yet some people shrug their shoulders at the sight of Norway, Holland, and Belgium bleeding under the Prussian boot.

They say it cannot happen here.

Well, let's look at the facts and see who, or what, is to stop it.

In the first place, we have a one-ocean navy, which means that our Navy cannot defend both our coasts at the same time.

Up to now we have relied on the British fleet. But the British fleet has troubles of its own. It cannot help us now.

So, the protection of our shorelines rests solely on our own Navy, and the latest reports of the experts cast some doubt as to whether our Navy today is a match for the Japanese.

In other words, it is questionable whether we could stop the Japanese in the Pacific, even though we massed our sea power and left the Atlantic coast completely unprotected.

And if we lost in the Pacific both coasts would be at the mercy of an invader. Certainly our Army couldn't stop anybody. It isn't large enough, and it can't move fast enough.

We have only one mechanized division to defend 6,000 miles of coast line, not to mention two unfortified boundaries between Mexico and Canada.

That means that only one division of the United States Army can move faster than a man can walk. Our Army would be wandering around like the lost tribes of Israel if we ever needed it in a hurry

This is because Congress has played politics with the Army. Every Congressman wants a piece of it in his district, and so we find it

scattered across the country in obsolete posts, just as it was in the days when it protected the pony express.

Our air force is totally inadequate to maintain an effective patrol of our borders, to say nothing of fighting off an enemy air fleet. And in the entire 48 States we have only enough antiaircraft guns to guard the city of New York.

Who is to stop it from happening here?

We are a ripe peach, ready to be plucked, when the dictators of the world get through plucking the smaller peaches closer at hand.

The invasion of Norway, Denmark, Belgium, and Holland should have brought us to our senses. People didn't think it could happen there, either.

Those were peaceful little countries, minding their own business and trying to keep out of the politics and quarrels of Europe.

Yet overnight they became the victims of the greatest and most ruthless military machine the world has ever seen. The Nazi legions, unleashed by the madman Hitler, are overrunning Europe.

Will they stop there?

We know that 100 of Hitler's pilots are now flying commercial airplanes in South America. They know every foot of the terrain. They know where and how to drop a bomb in a sudden effort to blast the Panama Canal and put the United States Navy in cold storage.

Italian flyers are operating in South America, too, under the personal direction of Mussolini's son, who boasted of the fun he had in Ethiopia shooting down helpless natives from his war plane.

Italy is the ally of Germany. The Roman army marches again when Hitler says the word.

Also linked with Germany is the bloody dictatorship of Russia, the nation which really brought this war upon us by her treachery in conspiring with Hitler as he hesitated on the Polish frontier.

If Russia had not encouraged Germany at that time, the world might still be at peace. But Stalin craves bloodshed.

These three great militaristic dictatorships, with the possible aid of Japan, are now bent on dividing the world between them. They have armies of millions of men, air fleets of tens of thousands of planes, and they have perfected the technique of dropping troops from the clouds on a sleeping nation at peace with the world.

Let's not kid ourselves. It can happen here, and I think it will happen here, if the democracies lose to the dictatorships. And that is exactly what this war is, a struggle between democracy and dictatorship.

We are a democracy. That is why I, as a labor representative, am so deeply concerned with the trend of world affairs. I do not want to see the democratic processes of government wiped out. I do not want to see labor enslaved, as it is today, in Germany, Russia, Italy, and Japan.

Even if the dictatorships should have no hostile intentions toward us, what would happen to the American standard of living, based on the American wage scale, if the dictators should win?

Does anybody think for a minute that we could continue to pay labor our present wage scales in this country and compete with slave labor elsewhere throughout the world?

And does anybody think that if the dictators win Canada would remain free? Or Mexico? Why, even today the Nazis and the Communists are taking over Mexico. They are boring into that government and into its industries and labor unions so effectively that some morning we may wake up and find an enemy power south of the Rio Grande.

At the same time in this country the Nazis and the Communists are using the same tactics they are using in Mexico and which they used with such tragic results in Norway, Holland, and Belgium.

They are boring into strategic positions in the aircraft factories, in transportation, and in communications. Need I point out to you the havoc they could create for us in an hour of peril?

And only last week, officials of the Communist Party met in California and demanded that we cease at once all preparations for American defense.

What colossal effrontery. The Communists, who plunged one continent into chaos, are now insisting that this Nation do nothing to save itself from a similar fate.

The Communist agents are entrenching themselves in industry to see that we proceed very slowly, if we proceed at all.

These things, happening in the United States, are the same things that preceded the invasion of Norway, Holland, Belgium, and Denmark. Why should they be happening here, now, if nobody has any designs upon us?

Why are the Communists and the Nazis so anxious to get jobs in airplane plants and navy yards where they can sabotage our national defense?

Why are they striving for key positions in our communication systems? Why are they trying to control labor unions, and organize peace societies to persuade us not to be ready to defend ourselves? How much longer will we permit these spies to plot against us?

These questions concern me, as they should concern you, and as they do concern every student of international affairs and every man who saw service in the last war.

For that reason, I appreciate the invitation of the Subversive Activities Committee of the State Department of the Veterans of Foreign Wars to make this broadcast under their sponsorship.

As a member of the Veterans of Foreign Wars myself, and as a comrade of many of its members in the American Expeditionary Forces in 1918, I understand, as they understood, the perils that lie in unpreparedness.

The United States is an idealistic Nation. It never foresees the danger of war, until war is upon us. We have always paid a terrific price in human life for that weakness.

Do you realize that in the last war some men were sent into the front lines so poorly trained that they pulled the pin on a hand grenade and then stopped to read the instructions.

It is nothing less than murder to send such raw recruits into battle. Yet, if war should strike us, as it has struck a dozen other peaceful, idealistic nations, we would have to defend ourselves with raw recruits, untrained and virtually unarmed.

Some people ask why anybody should invade us? Why should anybody invade poor little Finland? Or Norway, Denmark, or Holland?

It is because the mad lust for conquest is ruling the world as the dictators of Europe and Asia combine to slaughter and conquer.

Had Britain and France, together with the Scandinavian countries and other free peoples of Europe, recognized early enough the dangers that confronted them, they would not now be faced with the imminent danger of the extinction of democracy and their free governments.

It is a realization of what has already happened that is causing the ablest minds of our country to ponder whether or not our future peace and security would best be preserved by joining the democracies in their fight for their lives.

There is a division of opinion on that question, but there can be no disagreement among anyone who loves this country that we must be prepared to defend ourselves from attack.

Personally, I am opposed to war.

But I do not intend to be an ostrich about it. We have too many ostriches in the United States who cover their heads so that they will not see what they do not want to see.

And so America finds herself in the midst of a world aflame, with nothing but a bucket brigade to fight the fire if it sweeps our way on a sudden shift of the wind.

This country must make some momentous decisions very shortly.

It is a part of the world that is plunging into an abyss. If democracy falls elsewhere in the world, it falls here. If the dictators can repudiate God, as they have repudiated Him in every land that has fallen under their blight, America will fall before the resistless wave of materialism and imperialism.

This is a war between two philosophies of government that can not be reconciled. It is a war to impress the tyranny of totalitarian government on every free nation.

It is a war to determine whether nations have the right to govern themselves, to develop their culture, solve their economic problems, and keep their church spires high in the sunlight as a beacon toward a better manner of life.

The democracies of Europe are fighting this war as our spiritual allies. But that may not be enough! We should be prepared to furnish them with munitions and supplies—and the ships to carry them in—if necessary, to roll back the red tide of atheism and anarchy.

We cannot, under any consideration, either spiritual or material, permit the democracies to lose this war. We must be ready to fight, as our forefathers fought, for a system of government where the minds and consciences of men are free. We must be ready to defend the processes of democratic government under which men may think, and speak their thoughts.

We must be ready to see that governments "of the people, by the people, for the people" do not perish from the earth.

Good night.

Panama Canal Zone Locks

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

Mr. COLE of Maryland. Mr. Speaker, on August 1, 1939, I voted against recommitment of H. R. 5129, a bill authorizing and providing for the construction of additional locks in the Panama Canal Zone for the purpose of adequately providing for the defense of the Panama Canal and for increasing its capacity for the future needs of interoceanic shipping.

I was convinced at that time of the necessity for additional facilities in the Panama Canal Zone to care for the passage of our new and improved naval vessels in time of war and for increasing commercial needs. During the recess last year I visited the Panama Canal en route from California to the east coast. The commanding general and the Governor of the Canal Zone extended many courtesies

to me, including a close and intimate view of the fortifications, locks, and general make-up of our responsibility in the Canal Zone. After this opportunity I was more convinced than ever of the necessity for the construction of these locks. No ships of other nations, whether ships of war or commerce, may use these additional facilities unless we permit them, but under the Hay-Pauncefote treaty we are compelled to keep the present Canal facilities open for any ships which may care to use them.

Yesterday, May 30, when the appropriation for this improvement was approved, was Memorial Day. After addressing community exercises commemorating the day in Towson and Taneytown, Md., under the sponsorship of my comrades of the Veterans of Foreign Wars and the American Legion, I hoped to return to Washington in time to make this statement during the actual debate yesterday. This not being possible prompts a statement today.

Our national-defense program will be helped very materially by this work being expeditiously performed. The President of the United States, the Army, and the Navy all say the additional locks are necessary and should be constructed immediately. I am glad the House saw fit to approve this appropriation yesterday thereby supporting the view I took last year.

West Point Patriotism

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

ADDRESS DELIVERED BY HON. J. BUELL SNYDER, OF PENNSYLVANIA, FRIDAY, MAY 17, 1940, IN THE ASSEMBLY HALL AT WEST POINT

Mr. SNYDER. Mr. Speaker, it was my happy privilege to pay an official visit to West Point Military Academy on Friday, May 17, 1940, in company with my colleague, the gentleman from Michigan [Mr. ALBERT ENGEL], a member of my subcommittee on Army appropriations. I wish that every Congressman could have been with us at West Point that day. Brig. Gen. Jay L. Benedict, Superintendent of West Point, and his staff showed us all of the activities at West Point and I am sure that you would say as we say that it is truly a great patriotic nation-building institution, building young men to help guide and direct the activities of the generation in which they will live.

Perhaps the greatest inspiration I ever had or ever expect to have was when the 1,760 cadets massed, shoulder to shoulder, in close formation in the assembly hall and with faces upturned toward where I was standing on the announcement balcony, stood as if they were statues, while I had the pleasure of delivering the following brief address:

General Benedict, gentlemen of the Corps of Cadets, at no time in history has your profession occupied a more conspicuous place; at no time in history has it been more apparent that the security of nations depends upon the intelligence, the ingenuity, the loyalty, the will and courage of its military leaders; at no time in the history of America has there been greater cause for gratification and pride in this great military institution of learning, from the graduates of which we always have been able to find in time of peril leaders of unsurpassed ability. I am confident that among this splendid group of embryo officers there are several Lees and Grants and Pershings in the making.

God forbid that there may come a time to prove that assertion, but it is comforting to the Nation to know that the leadership of the proper caliber is at hand if and when needed.

You men are alive to what is transpiring in Europe today. Probably the greatest military machine in the history of the world, directed by the most ruthless leadership, has been crushing with all the weapons of modern ingenuity, the smaller countries which border it or lie rather close by, and is now at grips on a vast scale with our former allies.

The duration of this latest phase is problematical. The ultimate outcome means much to America. It means much to each of you, both as future officers of our Army and in a civil sense—your homes, your loved ones, your freedom, your democratic form of Government. Should German arms triumph, there may come a challenge to America in many conceivable ways, and it is your duty, and my duty, and the duty of every loyal and patriotic American to pay heed to that menace and to prepare ourselves to resist it.

Adequate preparation is the best guarantor of freedom to conduct our own Government in our own way, and to rid this hemisphere of unwanted intrusion. I can assure you that the present administration at Washington is and has been pursuing, since 1934, a policy of better defense preparation because it feels that such a course is the only one which has promise of enduring peace. The President's fine message to the Congress on yesterday, to which it was my privilege as a Member of Congress to listen, was inspired solely by his desire and purpose to make it possible for us to pursue our own way, and that way is the uplifting and elevating course of peace.

You have a very large share in this policy. Readiness to ward off intruders means not alone the possession of adequate matériel, but a reasonable number of highly trained officers and men, the former to be alert, courageous, and thoroughly versed in the ways of modern warfare. By the past records of those who have preceded you, I am confident that we shall not find any of you wanting. I am very proud of you. May the Divine Spirit ever abide in you.

"Fifth Column" Jitters

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

EDITORIAL FROM THE RICHMOND (VA.) TIMES-DISPATCH AND REPLY BY HON. HOWARD W. SMITH, OF VIRGINIA

Mr. SMITH of Virginia. Mr. Speaker under leave to extend my remarks in the RECORD I include the following editorial from the Richmond Times-Dispatch and my reply thereto:

"FIFTH COLUMN" JITTERS

Every effort should be made, by constitutional means, to reduce to an absolute minimum the activities of spies and saboteurs in the United States, but there are mounting signs that some of those in responsible positions are ready for another witch hunt, such as we staged nearly 25 years ago.

Representative DIES, who has done some good work in rooting out subversive elements, but who has gone off half-cocked altogether too many times, appealed to the House on Friday in an hour-long speech for action against the American "fifth column." No doubt some sort of stricter enforcement of existing legislation is called for, and possibly new enactments are needed, in view of what has happened in Norway, Holland, and Belgium, but it is to be hoped that someone with a more balanced viewpoint than Representative DIES will lead the movement.

And as alarming as anything that has been said recently is the utterance of Representative HOWARD W. SMITH, of Alexandria, sponsor of a dangerous antialien bill which passed the House last year, and is now pending in the Senate. Asked on the floor Thursday whether a certain provision of the measure violates constitutional guaranties of freedom of speech and the press, Mr. SMITH replied: "I don't think so. If it does, we ought to change the Constitution."

Why? Does Mr. SMITH think that our Bill of Rights ought to be tampered with at a time when it is probably more important than it has ever been in our history? It is just this sort of doctrine which must be resisted at all costs in such critical days as these. There is plenty of warrant under the Constitution for dealing with members of the so-called "fifth column" (a phrase which originated in the recent Spanish civil war and refers to the enemy spies inside a city or a country who are ready to sell it out to an enemy). For Heaven's sake don't let's get ourselves into such a jittery state of mind that we are ready to scrap parts of George Mason's immortal document which has been incorporated in Virginia's and the Nation's Constitution for more than a century and a half.

No one could be more anxious than this newspaper to round up all criminal and traitorous elements and to keep them under lock and key where they can't damage the country. But we should be careful not to go to extremes or to swallow fantastic yarns, such as were circulated during the last war about many innocent people who happened to have German names. In other words, we should deal justly with all who are under suspicion. Any other course brings us into altogether too great similarity to the totalitarians themselves.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 31, 1940.

Mr. VIRGINIUS DABNEY,
Editor, Times-Dispatch, Richmond, Va.

SIR: The despicable deception perpetrated upon the readers of the Times-Dispatch by the editorial in your paper of May 19, entitled "'Fifth Column' Jitters" impels me, in the interest of accurate information to the public in these times of peril, to take notice of statements that in normal times I would ignore.

In your attack upon me, you characterize me as "sponsor of a dangerous antialien bill which passed the House last year." For the information of your readers, it should be known that the bill passed the House by a vote of 272 to 48. Its provisions, briefly, are as follows:

1. It prohibits subversive efforts to effect the loyalty and discipline of the United States Army (this provision was drafted and endorsed by the United States Navy Department, and endorsed by the War Department);

2. It makes it unlawful for persons to advocate the overthrow of the Government of the United States by force and violence;

3. It orders the mandatory deportation of aliens who unlawfully assist in smuggling other aliens into the country, of aliens who violate the narcotic laws of any State, of aliens who are machine-gun gangsters, and convicted criminals;

4. It requires the fingerprinting and registration of all aliens in the United States and of all aliens who may hereafter be admitted;

5. It excludes from admission to the United States aliens who are anarchists or who advocate the overthrow of the Government of the United States by force.

Your readers will agree with me that it is a dangerous antialien bill, but dangerous only to the subversive "fifth column" movement which has assisted in the destruction of so many European governments in recent weeks, and which apparently you seek to protect through your vaunted advocacy of the constitutional right of freedom of speech and of the press.

In your attack upon me, you further state that, when asked if a certain provision of the foregoing bill violated the guarantee of freedom of speech and the press, I replied, "I do not think so. If it does, we ought to change the Constitution." You carefully refrain from advising your readers what the certain provision referred to was. The question propounded to me was whether the provisions prohibiting any person from advocating the overthrow of the Government of the United States by force and violence violated the right of freedom of speech and freedom of the press, and I replied then as I would reply now, that, if it did, the Constitution ought to be amended. Of course, such a provision violates no right of freedom of speech or of the press. The Bill of Rights and the Constitution were never designed to protect treason.

This bill passed the House on the 29th day of July 1939, before the present war started, and it will be heartening to your readers to realize that, notwithstanding the carping criticism of some self-styled liberals, their Congress had the foresight, by a vote of 272 to 48, to pass such a bill, even before the emergency arose, and that every member of the Virginia delegation in Congress supported the bill.

For the further information of your readers, my so-called dangercus antialien bill was favorably reported by the Judiciary Committee of the United States Senate on yesterday without a dissenting vote.

People in responsible positions in Washington, devoting their energies to preparing to meet the emergency that has come upon us, have little time at present to meet flank attacks from those who should be giving us their wholehearted support in this hour of the country's peril, and I take notice of your publication only for the purpose of letting your readers be informed of the facts, which you should have given them, if you saw fit at all to notice my feeble efforts.

I trust that your belief in the constitutional guaranties of freedom of speech and of the press will lead you to accede to my request that this, my answer, be published in full and given as prominent a place in your paper as that given your unwarranted attack upon me.

Very truly yours.

HOWARD W. SMITH.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS
OF
HON. THOMAS F. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 31, 1940

Mr. THOMAS F. FORD. Mr. Speaker, although the question of continuation of the Reciprocal Trade Agreements Act for another 3 years has been settled, we are still being called upon to witness the spectacle of members of the opposition—the Republican Party—indulging in a torrent of statistical fallacies, bolstered by half truths.

If one were inclined to be charitable, he would characterize this onslaught as based on abysmal ignorance. But since the facts are so easily obtainable, one has to conclude that our friends are relying entirely on deliberate misstatement.

For the past few years there has appeared in the CONGRESSIONAL RECORD, from time to time, statistical tables purporting to show that trade agreements have increased the importation of agricultural products to the ruination of American farmers. Many of these tables are unquestionably deliberate attempts to mislead the public, because of the inference that shifts in trade have been caused by some governmental action.

RECOVERY REFLECTED IN INCREASED FOREIGN TRADE

An illustration of this type of statement was inserted in the CONGRESSIONAL RECORD of March 29, 1940, by the gentleman from Ohio [Mr. JONES], involving a selected list of increases in imports of some agricultural products for 1939 in comparison with 1938, with the categorical statement that trade agreements were responsible. If he were entirely fair, he would have to admit that these tables really show nothing about the effects of trade agreements. Anybody who professes to know anything about economic conditions in the United States must realize that the considerable business recovery in 1939 over 1938 was emphatically reflected in increases in our foreign trade.

What actually has been the effect of increased imports of agricultural products which we hear so much about? On this point Secretary Wallace, in his testimony before the Committee on Ways and Means and the Senate Finance Committee, in answer to charges of increased imports resulting from trade agreements said:

> It should only be necessary to point out that in all of the more important cases of increased imports, such as wheat from Canada, corn from Argentina, wool from Australia, and hides from Argentina there had been no change whatever in the tariff rates established in the Smoot-Hawley Tariff Act of 1930, to dispel the myth that trade agreements were responsible for the temporary rise in imports during the middle thirties.
>
> Imports into the United States of agricultural products similar in kind to those produced in this country were smaller in the most recent fiscal year, 1938–39, than in the first year of the trade-agreements program, 1934–35, and were less than half their average annual value during the entire decade of the twenties.

With regard to the effects of the imports of agricultural products on domestic agriculture, Secretary Wallace, whose department has carefully studied, and is best qualified to judge this matter, said:

> It is also a fact that some reductions have been made through trade agreements in the duties on agricultural products. But I do not know of a single case where such duty reductions have seriously inconvenienced American agricultural industry. As a matter of fact, in cases where a damaging influx of agricultural products might take place as a result of duty reductions meticulous care has been taken to see that safeguards were introduced to prevent such an influx.

FARMERS' CASH INCOME INCREASED

The persons who make for the CONGRESSIONAL RECORD such statements about trade agreements and imports are invariably careful to avoid mentioning the really significant fact about agriculture in the United States since the inauguration of the trade-agreements program—I mean the fact that American farmers' cash income from the marketing of their products was $7,711,000,000 in 1939, a gain of $2,433,000,000, or 46 percent, over their cash income in 1933, the last full year under the Hawley-Smoot Tariff Act.

Not only do the authors of such statements ignore, and what is worse, conceal pertinent and conclusive evidence, but they also resort to trickery, juggling, evasion, and direct misrepresentation in the very statistics which they quote, even when the figures as such are correct. Such tactics are not used in presenting an opposition viewpoint honestly held and truthfully supported.

CITES PRODUCTS NOT AFFECTED BY TRADE AGREEMENTS

Preceding the table which the gentleman from Ohio [Mr. JONES] placed in the RECORD was the following statement:

"The New Deal reciprocal-trade program was responsible."

That is a very definite statement, though fallacious, of cause and effect. The gentleman's facts did not support his statement.

For examples, the items and groups of items which the gentleman from Ohio listed after making the statement quoted above included the following, which have not been involved in any trade agreement, and, therefore, no trade agreement could have been "responsible" for the increased importations.

Item	Tariff status	Item	Tariff status
Canned beef	No change in rate of duty.	Chick-peas	No change in rate of duty.
Hides and skins	do	Canned tomatoes	Do.
Casein	do	Unmanufactured wool	Do.
Wheat	do	Unmanufactured cotton	Do.
Wheat flour	do	Flaxseed	Do.

Furthermore, the rates of duty have not been decreased on sago, tapioca, arrowroot, which are one the free list, or on barley-malt.

The above-mentioned items account for more than half of the total value of imports listed in the RECORD by the gentleman from Ohio [Mr. JONES] on March 29.

Moreover, the item, meat products, includes canned beef which is also given separately, so this is a duplication and inflates the total number and value.

More than half of the imports of both cattle and cheese, shown in the table of the gentleman from Ohio [Mr. JONES], entered under the Hawley-Smoot rates of duty, and so trade agreements could not have been responsible for all the increases. Such "padding" by opponents does not really make a better case against trade agreements even if we assumed that the imports are bad per se.

Imports of white or Irish potatoes are limited by quotas. The figures consist largely of seed potatoes imported for the benefit of American farmers.

The duty reduction on canned peas was limited to the high-price bracket, and thus the import data of the gentleman from Ohio [Mr. JONES] overstates the effects of trade agreements on this item.

FIGURES INFLATED AND FACTS IGNORED

When the table is examined in the light of facts, it appears that opponents inflate both their statistics and items by from 50 to 75 percent in an attempt to make an adverse case against the trade agreements. Which calls for the time honored observation: "Figures don't lie, but liars can figure."

The list of items not only included products which have not been involved in tariff concessions granted by the United States, but also includes the large farm exports such as cotton, wheat, apples, tobacco, and others produced in great surpluses in the United States. One of the purposes and results of the trade-agreements program has been to obtain concessions in foreign countries so that these may be exported. And the program is succeeding.

I have noticed that it is a common practice for opponents of trade agreements to give these highly misleading lists of imports, although the figures themselves may be correct, and then attempt to make one of the departments responsible. In this particular instance the Division of Foreign Trade Statistics, presumably of the Department of Commerce, was given as the source of Mr. Jones' information. I am sure that the Division of Foreign Trade Statistics of any Government department could not have been the source of the statement that the trade agreements were responsible for the increase in imports shown in that table. It is no doubt true that some reduced duties have encouraged larger imports into the United States. But these imports did not compete, but merely supplemented the domestic production of the articles.

The farmers of Ohio, or of any other State, will surely not be taken in by such ridiculous, partisan tabulations as that placed in the RECORD for March 29, 1940. A spirit of candor and fairness ought to suggest a proper clarification of the RECORD in this instance, and if it is not made every farmer constituent of the gentleman from Ohio ought to be informed as to how little their Representative knows about trade agreements, how poorly qualified he is to talk about them, and how ready he is to distort and misuse facts which have a direct and important bearing on the economic welfare of farmers in his own district and in the entire United States.

The truth is mighty and will prevail, but do not expect to get it from a Republican when he talks tariff. The tariff, that is the Republican conception of tariff, was, I venture to say, conceived in iniquity, fostered in corruption, and maintains whatever vigor it has today because statisticians are able, by trick and device, to make the worst appear the better.

Farm Tenancy Loans

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

Mr. MURRAY. Mr. Speaker, below is the table showing the number of farms bought by the Farm Security Administration through appropriations under the Bankhead-Jones bill.

If this money could be used to help the people that have distressed loans, much greater benefits could be attained than there has been by using these funds to purchase farms for new owners These funds could be used to keep the farmers of the Dust Bowl from going to the Rose Bowl and could be used in behalf of the real farm people already on the land. These loans are made for 40 years at 3 percent, when the average farmer must pay 3½ to 4 percent and pay taxes to help subsidize his competitor at a lower rate of interest for a longer period of time. This is unfair to the farmers on their farms, and is one of the cross-purpose schemes of the New Deal. Eighty-five thousand farms have been foreclosed by the New Deal, and 85,000 homes and means of making a living have been denied these rural families. At the same time their city cousins have had millions appropriated for city housing with $4,800 to $5,600 homes on which they did not pay down one cent. Why take 85,000 farm homes away from our rural people and spend millions for city housing that is subsidized by the Federal Treasury to the amount of $28,000,000 a year? This does not make sense nor is it human justice.

Farm-tenancy loans: Expenditures by States and by fiscal years

States and Territories	1938	1939	Total
Alabama	$131,471	$1,339,415	$1,470,886
Arizona	12,266	18,815	31,081
Arkansas	19,458	946,826	966,284

It Was Supposed He Knew

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

STATEMENT FROM THE LEAD (S. DAK.) DAILY CALL

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following pointed statement from the Lead (S. Dak.) Daily Call:

[From the Lead (S Dak.) Daily Call of May 25, 1940]

HYSTERICAL NONSENSE

(By Stanley Wood)

For 7 years now President Roosevelt has had practically complete control of our Government at Washington. He has had a rubber-stamp Congress and about 1,000,000 Government employees to carry out his policies, the chief one of which has been to spend the taxpayers' money. This has gone on long enough and to such an extent that it has come to be known as a personal government under a spendthrift administration. Nothing has stood in Roosevelt's way to carry out his policies. Almost totalitarian authority has been his along with blank checks for billions of dollars.

As Commander in Chief of the Army and Navy he has known what our military and naval weakness or strength was during all this period.

For 7 years he has known whether or not we were prepared to defend ourselves against attack.

Moreover, he has frequently asserted that he and his own State Department knew more about what was going on in other parts of the world than anyone else in this country, and no one disputed him except the late Senator Borah. Because of inside information he took the position that we should aid the British and French Allies in "measures short of war," with the result that he earned the bitter dislike of Hitler and was called a warmonger by the German press.

Most of us were and are for him in his "short of war" attitude against Germany or any other aggressor nation. But we believed that in taking this position, along with the appropriations of $7,000,000,000 for national defense, that our country had a sufficiently strong Military and Naval Establishment to have justified it.

This belief was fully justified because few heads of nations are foolish enough to adopt a foreign policy unless they are able to back it up at least to the extent of defending one's self successfully if the other nation resents such a policy and decides to fight over it.

That was the general situation until 2 weeks ago, when Mr. Roosevelt suddenly appeared before Congress with his startling message that we were wide open to attack and were without facilities to defend ourselves. The imminent danger of a quick German victory over the Allies and its grave consequences to ourselves under such circumstances resulted in a Nation-wide shock and, in some cases, even of hysteria. The most typical example of the emotional hysteria in some quarters was the proposal to call off the Presidential election this fall and, of all people, reelect Mr. Roosevelt. Another was to immediately effect a coalition Government.

We all agree on the urgent necessity for immediate and thorough preparedness which we mistakenly thought we already had. To say the least, Mr. Roosevelt is rather tardy in informing us about this supremely important item. We had thought from what he has been telling us for 7 years that the big danger to our security in this country was to be found in business and industry, to whom, it now seems, we must now turn for salvation and protection against assaults from foreign despots. Well, time is up for today, but it would seem that recent developments make it more apparent than ever that Mr. Roosevelt should not be renominated, and most certainly not be reelected.

The New Order, and Civic Slackers

EXTENSION OF REMARKS

OF

HON. DAVE E. SATTERFIELD, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

ADDRESSES BY HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. SATTERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses, The New Order, and Civic Slackers, delivered by the gentleman from Vermont, Hon. CHARLES A. PLUMLEY, before the Virginia Federation of Women's Clubs at Old Point Comfort, Va., on May 1, 1940:

A NEW ORDER

Madam President, and ladies of the federation, if I do not seem to be overawed by this breakfast assemblage of the daughters of the F. F. V.'s, you may attribute my complaisance to the fact that it is no unusual occurrence for me to be eating breakfast with the daughters of Virginia. Both of my sons married Virginia girls. I expect I am distantly related to at least a third of you, along the branches of the Ashby, the Brown, the Nelson, Shackelford, Wingfield, Warren, Cox, Frost, and other family trees.

I am not unappreciative of the honor you do me in inviting me to address you. I realize also the responsibility which attaches thereto. I have selected as a topic for this breakfast talk, "A New Order," and for a few minutes would like to direct your attention to a few matters and things which it seems to me deserve the considered attention of everybody. Let us look to the work the times reveal.

In the United States it has been taken for granted that since the founders of the American Republic placed a Bill of Rights in the Federal Constitution, the liberties of American citizens are forever secure. However, wherever we look, outside of America as well as in America, the inalienable rights of man are being more and more regulated and restricted, and nearly all the activities of life are being regimented and circumscribed. Everywhere the nations are beginning to set limits to freedom of action, and many are setting up the authority of the state as supreme in all things, both religious and civil.

A frequent recurrence to fundamental principles is absolutely necessary for the preservation of our precious heritage of liberty.

In these times, when human rights are treated as pawns on the chessboard by human governments, when every activity of life is regulated, restricted, and regimented, irrespective of constitutional guaranties to the contrary, it becomes doubly incumbent upon the citizenry to familiarize themselves with the principles and the struggle which in the beginning brought about the establishment of democracy and human rights.

Our only safety lies in knowing and understanding these fundamental principles, and in defending them at any cost. The inalienable rights of man, whether they be social, political, or economic, must be respected and preserved, no matter what the cost in inconvenience or hardships. And no monetary consideration of mere expediency, no consideration of personal advantage, of utility, race, color, or creed, should ever be permitted to interfere either temporarily or permanently with the supremacy of the soul and the conscience, or with the inviolability of the heritage of inalienable rights, which reside inherently in every human being.

We hear a good deal these days about the new order. May it not be true that it is not so much a new order of a world which con-

fronts us as a new disorder; a disruption of earlier conditions; a confusion of methods and chaos of schemes? Certain it is that civilization, as Matthew Arnold said of his time, is wandering between two worlds—one dead, the other powerless to be born. Sir William Osler, one of England's foremost scientists, said in 1919: "There must be a different civilization or there will be no civilization at all." There are many who agree with him. Certain it is that we all agree that with a civilization which stands in a position of immense advantage as compared with all those of the past, the responsibility for its future rests on the American people in a greater degree than on any other, because it has at its command all the resources, material and spiritual, from which our civilization and all proceeds.

I am not one of those who thinks this world is such an awful bad place in which to live, or that civilization is going to the dogs. We need not be unnecessarily alarmed at all of the changes we see. True it is that all change is not progress, but all progress is a change. The world is full of optimists who expect it to outlast all its troubles; full of men and women to whom a recognition of the difficulties to be encountered is a challenge to their ability to overcome them.

The progress which has been made in all lines of endeavor during the last 50 years is simply wonderful, but with this advancement have come problems of commensurate importance and ponderousness which must be met and solved.

The World War shook things to their very foundations, but after all, the eternal verities were not disturbed, the essential things of life remain, and the fundamentals are fast bedded in the rock on which civilization rests.

It is truly a wonderful age in which we live; the possibilities it affords every rational human being for enjoyment and accomplishment are simply countless in number, stupendously staggering in character and almost beyond our ability to comprehend. We find fault, however, with little things; are too narrow-minded; live too much in the past or the present. Build for ourselves and a near tomorrow, not for others and a far future, forgetting, as so truly stated by the poet, James R. Lowell.

"The future works out great men's destinies,
The present is enough for common souls,
Who never looking forward are indeed
Mere clay, wherein the footprints of their age
Are petrified forever."

To get an idea of whither we are possibly tending, it may be worth while to look for a moment at the history of civilizations of the past, the most glorious of which was that of ancient Greece. Historians attribute its collapse to the change or substitution of population, the decay of marriage and family life, exile and colonization, and almost perpetual warfare, Greek against Greek, and the final exportation of the Greeks on a great scale by their Roman conquerors as slaves, doing the clerical and professional work of the Roman Empire.

Rome lasted longer. It was established on a broader foundation and drew into its service the best energies and talents of all the peoples of Europe. Some of its emperors were made out of common soldiers from remote provinces, and some slaves became secretaries of state. The best talents of the civilized world followed the roads, all of which led toward Rome. Then marriage became unfashionable, children were regarded as a burden; pleasure, luxury, and production of elegant verse became the principal occupations of selected classes. Finally, The Mistress of the World reached her climax and the chaos of the early Middle Ages followed.

Then Spain became great, but its career, though wonderful and brilliant, was of short duration. Expelling the Moors and the Jews, the maintenance of a vast colonial empire, the life of luxury and other elements combined to start Spain along the line which the others had followed, and its power and glory declined.

Then France and England took up the struggle; and last of all Germany has made her bid for world domination.

This is a wonderful age in which we live. To be an American citizen is the greatest blessing which any of us can enjoy. To have a part in changing the course of history is the greatest opportunity with which any man or woman of any day or generation can be confronted. The responsibility rests upon each and everyone of us, and it is well to take thought of our situation and to endeavor to devise some way in which, by the proper discharge of our duty, we may guarantee to posterity the transmission of our civilization and that most priceless heritage, a democratic government.

CIVIC SLACKERS

Madam President, let me say positively and definitely, in order to relieve your minds, that this is to be no partisan political speech. Just an old-fashioned undiluted American Jeffersonian Democratic talk by a Republican Representative of that State which made possible the election of Jefferson as President.

Not so many of you knew that did you? And some of you do not believe it now. Well all you have to do is to take time out when you get home to study your history and you will find that in the Aaron Burr-Thomas Jefferson Presidential contest the election was thrown into the House of Representatives. You will also find that the vote of Matthew Lyons, Representative from Vermont, broke the tie and elected Jefferson.

There is a lot of other interesting early history that ties the two States together very closely. Apparently my boys knew all about it, as I have heretofore suggested today.

As I said, I do not intend to make a political speech here today, partisan or otherwise, but I have been asked to talk about the youth problem. So at the outset let me reiterate the statement I have made again and again, namely: That the best thing we can do for youth is to undertake to get back to real American thrift and economy in living—to get away from the idea that the Government owes us a living. We must get rid of the idea that youth and its elders too prevalently have today, that this is a good Government to live in because it is a good one "to live on and off from."

Time past seems nothing; time to come always seems long. So indulge not in vain regrets for the past, in vainer resolves for the future; act, act in the present.

How beautiful is youth! How bright it gleams
With its illusions, aspirations, dreams!
Book of beginnings, story without end,
Each maid a heroine, and each man a friend . . .
All possibilities are in its hands,
No danger daunts it, and no foe withstands;
In its sublime audacity of faith,
"Be thou removed!" it to the mountain saith,
And, with ambitious feet, secure and proud,
Ascends the ladder leaning on the cloud!

Today, in the midst of the greatest revolution the world has ever seen, there is only one unpardonable sin: Indifference. And there is another sin, almost as unpardonable as the first, and that is ignorance.

Before the throne of coming events it will avail you nothing to explain, "Well, I did not understand," or "So many things had happened I just could not keep interested." For you shall go down into the limbo of those who do not deserve to survive: "Who had ears to hear, yet heard not; and eyes to see, yet saw not."

In the olden days before the machine became an iron man Friday, people obeyed the law, "Work or starve." Today the slogan is, "Think or perish."

I might as well admit, first as last, that I have no patience with those who are living in the past and to and of themselves and their generation. What old fossils they are to permit themselves to think that the best has been, when everybody knows that the best is yet to be. They live in a past gone glimmering through the dreams of things that were, not realizing that the tender grace of a day that is gone will never come back to them, or that the past is dead and has no resurrection. They forget that the earth with its scarred face is a symbol of the past.

I say to them and in their interest, that beyond the East is the sunrise, and beyond the West is the sea. There is a realm where the rainbow never fades, where the stars are spread before us like islands that slumber in an ocean, while things and beings that pass before us like shadows will stay in our presence forever.

Youth is the stream of the new, washing against the rocks of the habitual and the old. It floods in a continual current of enthusiasms, of joy in existence, of hope, of fine expectation, of sharp awareness of evil and injustice, of headlong ambition to reap harvests that seem possible.

Youth is the idealist. It sees what may be builded out of what is. It is the impetuous engineer, knocking at the gates of thought, clamoring to be let in. It is progress, change, alteration, eternal striving ahead, and if it is inclined to trail off the discussion sometimes into poppycock, it has still, the seeds of vitality. It is that part of life which is irrepressible growth.

Age is the halfway house, where experience fructifies into caution. The aloe has bloomed but the fruit may be mellowing. Age has met disillusion and knows the garb of that foeman. It has pushed possibilities to the limit and feels ready to cry "halt," that it may consolidate its winning. Crabbed only when defeat has embittered it, or when fear has driven out generosity and implanted greed, it represents the realities which to youth are still touched with haze.

Age, nevertheless, is no practical realist when it deadens its ears to the news which the new generation has to tell it. To set oneself against the idealist merely because of a constitutional hatred for change is to prophesy one's own defeat. Hatred for change is not a qualification of the practical realist.

"Age is opportunity no less
Than youth itself, though in another dress,
And as the evening twilight fades away
The sky is filled with stars, invisible by day."

Change is everywhere. It is born into the world with our progeny. Every babe in the cradle is a potential revolution, the end of one epoch, and the beginning of another.

"Youth will be served; the gods we reared
In faith upon our altar stone
Now keep their vigil unrevered
In dusty corners, all unknown.
New idols rise at new demands
Above our crumblin' overthrow,
They pick and choose with ruthless hands—
As we did in the long ago.

"Youth will be served; we live to see
Our dearest deeds another's boast,
A butt for laughtered ribaldry
The dreams for which we suffered most.
They see no print of bleeding feet,
The heights we won on footsteps slow
They mount, unwitting of defeat—
As we did in the long ago.

"Youth must be served; one harvest's gain
The seed from which new harvest springs,
The fuller yield of golden grain
From our forgotten harrowings.
Their hands shall turn fresh furrow soil,
The bread we eat, they too shall know—
May they find gods to sweeten toil—
As we did, in the long ago."

Our form of government and our scheme of society, and God knows they need improving, are yet so immeasurably superior as systems to anything on this side of the world that no comparison need be made. Europe is not effete; it is mediaeval, much of it uncivilized, held back by inertia, when not held back by worse things.

During the thousand years that will be required for Europe to attain a real civilization, wars will come as wars have always come in the past. The masses in Europe are driven as cattle. So long as this is true they will be driven periodically into wars and wars will be abroad here periodically for another thousand years or more.

It is not for merely doctrinal reasons or for the satisfaction found in successfully defending a position, that we are concerned for the spread of democracy, nor merely because democracy is the only scheme of organization yet wrought out that keeps the door of opportunity open and invites all men to their fullest development. We are interested, because, disguise it as we may, and postpone the acknowledgment of the fact as long as we will, the human family will eventually have to admit that under no other system can the world be made an even reasonably safe place in which to live.

It is only autocracies, especially military autocracies, must be softened down by peace, which softening process has never been successful or destroyed by war; there is no alternative. An aggressive military autocracy either reduces the rest of the world to vassalage, overruns the whole world, or drenches it in blood, or has to be overcome. Think that over.

So upon those of us who comprehend just the beginnings of all that democracy stands for and may mean rests the responsibility of bringing our neighbors to a realizing sense of the blessings that are theirs and an appreciation of the fact that there are commensurate responsibilities for each one to assume.

The truth is we count our blessings too lightly, underestimate the value of our citizenship, and take too much for granted.

St. Paul said he was a citizen of no mean country. The Romans challenged the world with the slogan, "I am a Roman." What, then, should be the attitude and the state of mind of every American when he takes time to consider the vastness of the domains, the type and multitudes of peoples, and the wealth of all kinds, over which fly the Stars and Stripes of his country today? To no man or woman in the long history of mankind, and the story of world conquest in the rise and fall of nations, has it ever meant so much as it now means to you and me to be able to say, "This is my own, my native land."

But what have I done, what have you done—or are we doing—to deserve this priceless patrimony? American institutions presuppose not only general honesty, intelligence, and fidelity in the people but their constant and direct application to public affairs. Our system of government rests upon all the people, not upon a part of them. The citizen who is self-sufficient, a civic slacker, who shirks his duty in time of stress, not only evades and avoids his duty and his share of the burden but loads more on the shoulders of his fellows, whom he has betrayed. Talk is cheap; words at best are poor yardsticks. Men are measured by what they do. What they say all too often exposes them to the ridicule they seek to avoid, although they deserve it.

Our safety lies not in the name democracy—you might call it anything else—or in the form republican, it could be remodeled. Our safety lies not in these or all of them but in ourselves—in you and me and our fellowmen. This brings the responsibility right home to each one of us. That is just where it belongs and in the last analysis the responsibility for the fate of this Nation rests on the doorstep of every single citizen.

Isn't it about time for us to give ourselves a little going over? What kind of a citizen are you, anyway? Have you earned and do you deserve half the blessings you now enjoy?

Now, be as honest with yourself as you would wish others to be with you. What are you doing to conserve all that is good and to dispose of all that is evil and bad in your Government, to the end that these United States may be an increasingly better land in which to live—and in order "to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity," as your forefathers undertook to do?

What are we, the people, doing about all these things? That means me—it means you. Take it home and think it over. This is your Government; you helped to "make the world safe for democracy" and bragged some about it 'til the boys came home. Now the question is, Will democracy save itself? The responsibility is yours, and you cannot dodge it or shirk it.

The greatest problem of the day and generation in which you and I live, the greatest question that confronts this country today, or has confronted it for some time, perhaps since the 1860's, is the question before which all others shrink into insignificance—What shall we do with the indifferent citizen? or, to put it another way, What will the indifferent citizen do to the Republic? America has settled some tremendous questions, but as she settles this one, right or wrong, so shall the future of the American Republic be determined.

Are you, then, an indifferent citizen? Are you reaching out for all the blessings and comforts that can come to you through your citizenship, while you sit back disinclined to make any effort or sacrifice that discommodes your personal convenience; too lazy and too selfish, too shortsighted even, to be interested in saving yourself? Think it over!

War is awful! It is bad enough; but I would prefer to see this country of mine plunged into a righteous war, stripped of all its power, wealth, and glory in a fight in defense of principle and to maintain liberty, justice, and equality among men, rather than to see it sink out of sight and into innocuous desuetude, and see it go the way of the nations of the long dead past, through, and because of the spinelessness, indifference, and supineness of its citizens. One way there is honor—the other dishonor, which covers and buries us with disgrace!

If I have made you make this a personal matter and have given you something to ponder, whether you agree with me or not, then my message has reached its mark, and I am content.

In conclusion, let me say to you that "The fate of civilization has always hung in the balance. There are certain ideals of civilization which cannot be destroyed. Throughout the ages we have fought and striven onward and upward to establish and to maintain justice, mercy, and liberty, and we will ever fight to maintain them."

Industry Girds for Battle

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

EDITORIAL FROM BUCYRUS (OHIO) TELEGRAPH-FORUM

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bucyrus Telegraph-Forum, of Bucyrus, Ohio:

INDUSTRY GIRDS FOR BATTLE

In true American spirit American industry is beginning to fight back at the forces which for 8 years have been making unreasonable and unconstitutional demands in a fashion bordering too closely to totalitarian policies. Meeting recently in Columbus under the sponsorship of the Ohio Manufacturers' Association and the National Manufacturing Association, Ohio's industrial leaders, including several who attended from Bucyrus, joined in a national movement to protect industry's resources and industry's rights against any further governmental attack.

Keynote of the meeting was a demand for an about-face move on the part of the Government so that confidence might once again be restored. This is a fair demand. Industry is to be congratulated for its exhibition of patience and patriotic loyalty over a period of 8 years during which it reluctantly remained on the receiving end of governmental interference and took and obeyed orders from political bosses who know nothing about industry's aims or its problems.

It is industry's right to protect its own interests, and when industry protects its interests it protects, too, the interests of practically all American workingmen and every one of its large and small communities. When an attack is made upon freedom of the press, the newspapers of the Nation rise up in revolt. When an attack is made upon freedom of religion, the pulpit does likewise, and when free speech is attacked every red-blooded American is ready to fight. It is not selfishness for each one of these enterprises to fight for its own rights nor is it selfishness for industry to do the same.

Just as the American Constitution is the foundation of all of our lives, industry in one way or another is the foundation of their promotion. There is not a business, a profession, or any other enterprise in America that does not depend entirely upon industry. One industry can make a city; one can destroy a city. All this was recognized for generations in Washington until the

Roosevelt new dealers took over and attempted to substitute industrial knowledge and experience with untried and obviously foolish theories. Men who had made successes of their lives were branded as "economic royalists." This communistic rot was preached in so-called fireside chats, and at every opportunity. The purpose was to poison the workingman's mind against the man who was providing him with a job, his family with a home, and modern luxuries.

The people were told that the industrial system, in effect, was "all wet" and that the Government would soon correct the many "ills" that had existed and had been trampling the "forgotten man." So far the new dealers have failed to correct the ills, have failed to provide employment as promised—except at the cost of taxpayers—and have failed to show that there was anything wrong with the industrial system in the first place. One law after another was passed. Some of them were declared unconstitutional by the Supreme Court. In the meantime, industry did not know where it stood. One branch of government said one thing; the other branch another. All the while industry sat back and took the rap. Naturally, it did not advance, and naturally it did not expand in the face of ignorance from one day to the next what new tax would be levied against it to pay for silly theories.

Now industry is beginning to fire back. The time is ripe, for the average worker must know that behind him there must be capital and investment. In the railroad industry alone there is today invested $26,000 for each railroad employee; $9,000 is behind each automobile worker; $11,500 behind each steel worker; and $47,000 is backing up each electric-utility employee. These figures were cited at a Rotary district convention at Lima recently by Bennett Chapple, assistant to the president of the American Rolling Mill Co. Remove these investments and no American worker would be secure in his job. Nor would any American industry, for each industry employing 150 men means the support of 1,000 persons in a community, a plant investment of $100,000, a pay roll of $200,000, sales and service stations for at least 200 automobiles; a dozen retail stores, a 10-room schoolhouse, opportunity for at least a dozen professional men, $60,000 a year for railroads serving that community, a $300,000 agricultural market, a taxation valuation of around a million dollars, an annual expenditure in trade of a million dollars, and the numerous civic improvements necessary for the health, convenience, and protection of the 150 men and their families. This is what the "economic royalists" are giving to American communities. It is time that America awaken to the true facts and compare them with Government waste and foolishness.

America's Defenses

EXTENSION OF REMARKS

OF

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

RADIO ADDRESS OF HON. OSCAR YOUNGDAHL, OF MINNESOTA

Mr. MAAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the gentleman from the Fifth District, Minnesota, Representative OSCAR YOUNGDAHL, over radio station WJSV and the Columbia Broadcasting System, May 30, 1940:

AMERICA'S DEFENSES

Twenty-two years ago today this Nation was engaged in a great war, a war to "make the world safe for democracy," a war to end all wars.

Today we pause to pay tribute to those brave men who died for that noble ideal, while Europe's battlefield bears testimony to the futility of that resolve.

No nation ever entered a conflict with higher idealism, with more unselfish purpose or more noble motives than did the United States in 1917. We had no desire for imperial domination, no lust of ambition, no pride of power and might. Our sole desire was to give to the world the same right to live in freedom, in peace and happiness which we held as a heritage from our forefathers.

Our heritage had been won in the snows of Valley Forge, guaranteed at the "Bloody Angle" of Gettysburg. It was our heritage, our unchangeable right because thousands of brave men to whom we pay tribute today had died that we might live as free citizens of a liberty-loving democracy.

It is fitting that America today should pay tribute to her sons and daughters who have died in defense of her heritage of freedom. But today as we honor those sacrifices, we should at the same time make an accounting of that stewardship. We should search out our own duties and ask of ourselves what we are doing to carry on those ideals for which they died.

Our tears and our flowers are tributes of our love and devotion, but they are not sufficient. It is only by doing our own part to live up to and carry on the ideals for which they died that America today can pay tribute to her honored dead.

The world is again torn by wars, wars more terrible and more destructive of human life and property than anything that has ever been known to man. The powers of ruthless aggression and tyranny again are marching forward. Freedom and peace are trampled under the heel of totalitarianism and power. What then is America's part in this new world crisis?

Should we again send forth our sons to fight to make the world safe for democracy? Should we again cast our ideals with Europe's ambitions?

On this 1940 Memorial Day I say to that that America's place is in America. America's duty is not making the world safe for democracy. America's duty is to save democracy for the world. America's task is not the destruction of nazi-ism nor fascism nor communism in other parts of the world. America's destiny is the preservation of Americanism in America.

Close as Europe's wars have touched many of our lives, hate as we must the ruthless aggression of totalitarianism, I can see no reason for another A. E. F.

If totalitarianism, dictatorships, and the rule of might are to perish it will not be because America or any other nation has overthrown them at the point of a bayonet or a machine gun. It will be because the people themselves, guided and inspired by the example of freedom-loving America, living in peace and happiness, has caused them to throw off the shackles of dictation and assume for themselves the rights of self-government, of liberty, and right.

But it is not sufficient that we should only hold aloft the burning torch of liberty. We must be prepared to defend our American way of life against any conceivable enemy.

No nation comprising, as does the United States, but 6 percent of the earth's land surface and containing but 7 percent of the earth's population, enjoys the standards of living, the luxuries, and the glories of America without being coveted by forces of greed and ambition.

No nation whose people use 32 percent of the world's railroad mileage, 58 percent of the world's telephones, 36 percent of the world's developed waterpower, and ride in 76 percent of the world's automobiles could prevent covetous eyes from seeing its wonders.

No nation which produces with its 7 percent of the world's population, 60 percent of the world's petroleum, 48 percent of its copper, 47 percent of its steel, 58 percent of its corn, 56 percent of its cotton, 33 percent of its coal, and which has amassed more than 45 percent of the world's total wealth, can prevent dictators and aggressors from looking with longing eyes at those resources.

America then must be prepared to defend not only our ideals but our possessions, not only the rights but the fruits of freedom and individual liberty.

Congress now is engaged in appropriating $1,182,000,000 as a special fund for rebuilding our national defenses. Some of that already has been appropriated, more has been authorized. This huge sum is in addition to seven billions we have spent in the last 7 years on our Army, Navy, and air forces, the largest peacetime appropriations for defense in our history.

True we are told that our present armed forces are the best—the best equipped and the best trained—in all our peacetime history. Such assurance is not particularly reassuring. Our peacetime Army has never been anything but a skeleton organization. Assurance that it is the best it has ever been is not sufficient; it still is not big enough, sufficiently well equipped, nor trained for the defensive tactics this war in Europe has shown us as vital to any defense.

I know that Congress is united on the necessity of immediate adequate national defense. Congress is working as a unit toward the end that America must be prepared to successfully resist any conceivable attempt to invade our shores.

Determined as America is, however, to see our defenses in order, we should go about this business with calmness and deliberation, with both feet planted squarely on the ground and with a united demand that for every dollar of American money spent for defense, we get a dollar's worth of defenses. There is no need for the hysteria, for the near panic into which this country has been thrown the last 2 weeks.

Neither is there any need for a disruption or a discontinuance of the regular functions of our democratic system of government nor our traditions of long standing. Defense of democracy can never be adequately rebuilt by adopting the methods of dictatorships. Defense of democracy must be achieved through the regular functioning of democratic methods.

America is not totally unprepared. We have in our Navy 303 warships, of which 15 are battleships. They are manned by 155,000 officers and enlisted men plus 25,000 officers and enlisted men of the Marine Corps. Another 61,000 officers and men comprise the Naval and Marine Corps Reserve.

Our Army consists of some 227,000 enlisted men and 14,000 officers, of whom some 2,300 are airplane pilots. Close to 5,000 of the enlisted personnel are on air force duty, some of them are pilots.

The Air Corps has on hand at the present time 2,665 first-line planes.

The National Guard comprises another 251,000 officers and men, but this branch may be expanded by the Presidential order at any time to 400,000 officers and men.

In equipment some of our naval vessels are obsolete, others need remodeling and modernizing. We do not have sufficient tanks or antitank guns. Our antiaircraft equipment is inadequate and our air force needs not only more planes of the latest type but many more trained pilots.

Around this nucleus America must build a defense force adequate to protect us from any possible enemy. If the appropriation bills now before Congress will give us that adequate defense, then well and good. If more funds are required, then Congress should provide them. America must be prepared for any eventuality.

But let us not follow any false illusions. Adequate national defense is not going to be attained by the passage of some bills by Congress and the ordering of more airplanes and more guns and more explosives.

Adequate national defense is going to be had only by the sacrifice of each of us, of every man and every woman in every walk of life, by industry and by labor, by farmer and mechanic, by teacher and pupil.

Adequate national defense can only be achieved if we stamp out and forget those class hatreds and intolerances which we have seen engendered and augmented in recent years.

America cannot be defended by pitting labor against capital, rich against poor, the followers of one sect or one faction against those of another. America can be defended only when we all realize that we are all Americans, working, living, and sacrificing for the same high ideal, when we all pull together for the common ideals of all.

Armament costs money. One giant, long-distance bomber alone costs in the neighborhood of $350,000. A great battleship costs millions. Unless America is willing to sacrifice or to go without other things to pay for it, we will have no adequate national defense.

Today our national debt is dangerously close to, if not beyond, the legal limit of $45,000,000,000. We can provide great defense forces in one of two ways. We can tax ourselves to pay for them, or we can raise our debt limit and pass on the job of paying for our defense to our children and our children's children.

The delusion of an endless source of borrowed money which the Government may tap without regard to its repayment is as dangerous to this country's safety as a lack of guns or warships or airplanes. Financial bankruptcy is no less a danger to our democracy than is invasion.

In my opinion, Congress should immediately take up consideration of a new tax measure to pay for our defense program. Along with this new tax measure should come strict economy in Government expenditures.

America needs billions for national defense. Let some of these billions come through a reduction in luxuries and unnecessary expenses of government itself.

National defense means duty and work and sacrifice for every American citizen.

And now may I mention another phase of our defense which in my opinion is just as important as a strong force on land or sea or air? I refer to a defense against those "fifth column" and Trojan-horse tactics which are already among us, preaching and teaching the overthrow of our Government and the substitution of some alien "ism" for the American way of life.

Events in Europe the last few weeks have shown us the utter futility of great defense forces if a defense against those enemies within the country is neglected. Small nation after small nation in Europe has been delivered over into the hands of a foreign enemy by traitors and spies within their own midst.

Only those who will not see or think can believe that similar forces are not organized and at work in America. These alien agitators and propagandists are a more real and immediate danger to our democracy than any foreign invader.

It is just as important that Congress pass strict laws and regulations to curb and curtail the activities of these satellites of alien "isms" as the rebuilding of our armed forces.

I am a firm believer in the right of free speech, but I am no believer in the license of free treason. America has no place for any "ism" but Americanism. Let those among us who do not like our way of life, whose hearts do not thrill at the sight of the Stars and Stripes, who are not ready and willing to subscribe to and sacrifice for our ideals—I say let's send them back to dictatorships and the communes they love. We need and want none of them. Liberty is not license and freedom does not guarantee right of abuse.

America today needs a great spiritual revival. We need to rekindle our militant belief in the fundamentals upon which our Government was founded. We need to again rededicate ourselves to our ideals, to reaffirm our faith in God and his teachings. We need pride in the things for which we stand.

As this Memorial Day draws to a close America could make no better resolve than to carry on the ideals for which these loved ones gave their lives; to willingly and eagerly make any sacrifice necessary that America and her heritage shall not perish; to keep America a bright light of freedom and happiness shining as a beacon to all the world that in America peace and democracy and freedom shall live forevermore.

Enforcement of the Immigration Laws

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 31, 1940

LETTERS AND ENCLOSURES FROM THE SECRETARY OF LABOR AND AN EDITORIAL FROM THE WASHINGTON POST

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and enclosure received by me from the Secretary of Labor, together with an editorial from this morning's Washington Post:

[From the Washington Post of May 31, 1940]

MISS PERKINS HITS BACK

In an open letter addressed to Representative TABER, Secretary of Labor Perkins answers his charge that she has "steadily and steadfastly failed and refused to enforce the immigration law and continuously admitted and kept here those who were not entitled to stay."

As the agitation over the Bridges case revealed, certain Members of Congress have very little regard for the rights of aliens under our laws. Their irritation is directed against the Secretary of Labor because she has consistently emphasized those rights and called attention to the dangers of dealing arbitrarily and hastily with alien groups. The stress thus laid upon fair dealing and humane treatment on the part of the authorities does not imply ineffective enforcement of the laws, as some Congressmen too hastily conclude.

In her able reply Secretary Perkins is not content with a categorical denial of Congressman TABER's charges. She notes the steps that have been taken under her administration of the immigration laws to prevent illegal entry and speed deportation of aliens illegally in the country.

It is certainly desirable to have these innovations called to public attention. Perhaps the Secretary of Labor has been too modest in failing to publicize her achievements and too tolerant of unfair criticism.

The reason for her customary silence in face of attack—so markedly in contrast to the explosive tactics of certain members of the Cabinet—is revealed in the letter to Mr. TABER. So long as her personal competency alone is challenged, Miss Perkins explains, she does not believe it in the interest of the public "to raise personal objections to the free expression of opinion, however unfavorable."

But unsubstantiated charges of deliberate failure to enforce laws, for whose administration the Secretary of Labor is responsible, are not merely personal attacks. They concern not only the head of the Department, but all the major officials and minor Government employees who help to administer the immigration law.

In reminding Mr. TABER that his attack was made under a rule of immunity, the Secretary of Labor makes a suggestion which should be heeded. It is that their protected status implies for Congressmen a self-imposed obligation to avoid misrepresentation in bringing accusations which reflect upon the character or competence of administrative officers who cannot speak for themselves.

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington, May 31, 1940.

Hon. MARY T. NORTON,
House of Representatives, Washington, D. C.

MY DEAR MRS. NORTON: This is to acknowledge your letter of May 27, requesting information in connection with the administration of the Immigration and Naturalization Service since 1933.

I know of no better way to furnish you with the facts concerning its administration than to forward you a copy of a letter I wrote on May 27 to Congressman TABER in reply to statements made by him.

Very truly yours,

FRANCES PERKINS.

MAY 27, 1940.

The Honorable JOHN TABER, M. C.,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN TABER: I have just had called to my attention your speech in the House today with regard to the reorganization order transferring the Immigration and Naturalization Service to the Department of Justice. You are quoted as having said:

"We are going to vote for this reorganization plan because the President has not the patriotism nor the courage to remove the Secretary of Labor, a notorious incompetent, and one who for the last 7 years has steadily and steadfastly failed and refused to enforce the

immigration law, and continuously admitted and kept here those who were not entitled to stay."

I have no objection to your expressing your opinion about my competency. That is a matter of personal judgment and you are unquestionably entitled to yours. I feel, however, that I must raise objection to that part of your statement which professes to be a statement of fact, namely, "That I have for the last 7 years steadily and steadfastly refused to enforce the immigration law and admitted and kept here persons not entitled to stay." This statement is not true, nor is it a mere expression of opinion.

The immigration law has been enforced faithfully and effectively during the last 7 years. For the first 4 of these 7 years the Immigration Service was in charge of the Commissioner, Col. Daniel J. MacCormack, an officer in the United States Army with a long record of effectiveness, efficiency, and patriotism. I appointed him for these reasons and directed him to enforce the law fairly and faithfully. We were confronted on the threshold of our duties with not only certain undesirable situations of administration which had been denounced by the Wickersham committee, appointed by President Hoover, but by clear evidence of corruption in certain offices. It was our duty to correct these things and we did so. We directed our attention not only at the deportation of aliens not legally entitled to remain in the country, but also took vigorous steps to prevent the illegal entrance of aliens, including the smuggling of aliens, falsification of immigration documents, fraudulent activities in naturalization proceedings, all of which were found to be going on under the administration of the law.
